BONNIE DUNDEE.—Mine manager's report for fortnight euding 6th December:—No. 7 tribute: At the commencement of the fortnight this party cleaned up a crushing of 19 tons 15 cwt. of stone for a yield of 8 ozs. 6 dwts. 9 grs. smelted gold. We have now let them that portion of the No. 6 tribute that was not worked out by Whiteway and party the former tributers. They started stoping on Tuesday, the 25th November, in about 2½ ft. of reef; they have about 12 tons broken; they will crush about 20 tons during next week. In the No. 5 lease the tributers have completed the cutting down of the rise, and have laid skids down for bucket road; they have started stopiug, and have about 10 tons in the paddock. The stone is well mineralised, and judging by appearance should be payable. In the compauy's stope, from the back of No. 6 south-west level, there are about 10 ins. of reef in 15 ft. of formation. As this stone did not crush up to expectations, I considered it advisable to stop any further stoping here, and put the men in the winze to drive towards No. 7 level to break through as soon as possible. I think it will be advisable to let this stope on tribute. The winze from No. 6 south-west level has been sunk a further depth of 3 ft., making a total depth from level 77 ft. At this point, owing to the reef going down on the hanging-wall and the footwall dipping off much steeper, thus making a very large formatiou, we had to cross-cut to get the hanging-wall a distance of 10 ft. before we could start to drive towards the No. 7 level. The distauce between the hanging and footwalls at the bottom of wiuze is 16 ft. We have opened out and driven a distance of 8 ft. north-east towards the No. 7 level. Have had an average of 1 ft. of good stoue in both winze and level; about the same amount in faee at present. I have had six men in three shifts in the winze during the fortnight. I expected to have made better progress with this work, but owiug to the ground having been unusually hard, was not able to do so; the end of level still in hard ground. Have driven No. 7 south-west level a further distance of 23 ft., with six men, making a total distance from the old uuderlie shaft, 97 ft. The ground has been very hard, and bad for blasting, and will continue about the same until we break through to the level from winze, as we are evidently in the same hard bar of ground with both faces. We have a further distance of 26 ft. to drive before we break through. I hope to do this in about eight days. Have not had much stone in the level during this driving, I think owiug to the hard ground. We have raised 14 tons of quartz for the fortuight; 9 tons of this from the winze; total quartz in hopper, 22 tons. The small amouut of stone raised for the fortnight is owing to the fact that we cannot start to stope to any advantage until we break through to winze, when we shall have a good reef to start stoping on, and be able to ituru out a considerable quantity should the reef coutiuue its preseut size. We still have an average of eight hours pumping a day to keep the water out. Machiuery in good order.

BRATSBERG.—Mining report for week ending 24th January.—Hoffnung Mine: No. 2 adit level is now worth ¾ ton per fm.; No. 1 rise in the back 1 ton per fm., and No. 2 rise 1½ tons per fm. There is no change at No. 3 adit level, and the rise in the back is still yielding 1 ton per fm. No. 4 level is looking very promising, and worth 1 ton per fm. The rise against Ball's shaft is holed, but there yet remains the squaring of the ground. The hoist for operating in this shaft has been overhauled and refixed, and when the miners have finished their work we shall lengthen the sliding timbers, when all will be complete for hoisting the stuff from the workings at this part, and for the re-sinking of Ball's shaft below No. 4 level. Johannes Mine: Good progress is being made in cross-cutting towards the Johannes lode from the level west on Howard lode. The level east on the latter is now yielding about ½ ton per fm. Surface work and remarks: Satisfactory progress in rebuilding the dressing-house is being made, and, weather permitting, I hope that a good start will be made in fixing the roof timber-work by the end of the current week, that is to say, for the jigging department. Labourers are now engaged in taking down the burnt roof and ore shoots over the crushiug house, and making ready for the timbermen.—J. D. HOLMAN.

CORTEZ.—On January 15th shipped 12 bars bullion, containing, as per our assay, 16,130 57-100th ozs. fine silver, and 12726-1,000th ozs. gold.

CUMBERLAND (6th Dec.)—I beg to submit progress report for month of November.—Sinking No. 2 shaft: The depth of shaft has been increased duriug the past month by 33 ft., the total depth below No. 6 level being now 90 ft. 6 ins., leaving 33 ft. more to sink to complete the contract of 110 ft., which will be finished by the end of the year, when No. 7 level will be opened, aud a drive pushed on northward as speedily as possible. There has not been any stone in the shaft during the month until a week ago, when a fresh make was met with coming in on the north side of the shaft; it is 18 ins. thick at present. The nature of the stone is favourable for carrying gold, but so far as it has been exposed it does not contain much of the gold-bearing mineral. Winze: On the 8th of November a contract was let to sink a No. 1 winze north at No. 6 level, to sink 100 ft., to connect with No. 7 level, the contract price beiug 17. 17s. per ft. Work was started on the 10th ult., and up to the 28th a depth of 42 ft. had been suuk. For the whole of that depth there has been a solid compact body of ore 3 to 4 ft. thick, but I regret to say that so far as proved it is almost barren; it is the same body of ore that was cut in driving north of No. 6 before we got under No. 2 winze. I believe that when No. 7 drive north is advanced a little beyond this winze that payable ore will be met with. Cross-cut: At a point about 150 ft. north at No. 6 level a cross-course was passed through, which gave out a good deal of water. Thinking it might be possible to meet with a cross lode here, I started a cross-cut into the hanging-wall during the month, and drove a distance of 12 ft., and met with a body of ore 18 ins. thick, laying at right angles to the lode we were working; it did not carry any mineral, and cut out after driviug a little distance further. There was no driving done either north or south at No. 6 level duriug the month. Stopes: The north end of stopes over No. 6 has proved very disappointing. The remark of hanging-wall stone, as mentioned in previous reports, really looked very promising when cut, so much so that I one day picked out a good specimen stone that came from there, so that I thought there was every probability of meeting with a body of good payable ore from that point upward, but the little good ore we had suddenly narrowed to about 10 ft. in length, and as we got higher it almost cut clean out, so that stoping was discontinued, and all hands discharged except contractors engaged in development. Iu regard to the good ore worked near No. 2 winze continuing downward below No. 6 there was no positive proof met with in driviug No. 6 north that it did so. The good ore worked under No. 5 level was in the shape of the letter V reversed, A, down to a depth of 50 ft. below No. 5. From that point down to No. 6 the ore was split up into thin veins mixed through a formation 6 ft. wide, and was all to hand pick after blasting. A portion of the ore met with in driving No. 6 before getting under No. 2 winze was worth 1 oz. per ton of quartz, which was payable. This body of ore was from 1 ft. to 3 ft. thick, and went down under foot. The winze now being sunk from No. 6 to No. 7 is going down in the south end of this ore body. On gettiug under No. 2 winze with No. 6 drive a patch of good ore was got 1 ft. thick, the remainder being mixed through the formation; beyond this point to preseut end of drive small patches of payable ore were met with at intervals of a few feet. No. 5 north: The drive during the month was advanced a further distance of 31 ft. by day labour, making 71 ft. driven since re-starting; the heave, as shown on sketch sent with last report, was met with, but did not carry any ore on the north side of it. Battery: In the early part of the month 154 tons were crushed for a return of 67 ozs. 5 dwts., with 80 ozs. taken from copper plates, made the total of 147 ozs. 5 dwts. We have now the whole of the grinding appliances running on tailings from one of the old heaps of O'Brien and Co.; we are sure of making a profit from them, but canuot say how much till the final clean-up at the end of the year. Management: You have been already advised by cable that I am leaviug the employ of the company at the end of the year, and I must say I am leaviug your employ with a great deal of regret. The Cumberland Mine duriug the past three years has been a great disappointment to you as well as myself, the mine having such a record during previous years. Naturally, much better results were expected from it than have been obtained, and the past few years' labour proviug so unremunerative, I may, perhaps, feel it a little more keenly than most people connected with the mine. There are people in such cases who would blame the manager for the non-success of the mine, but I am glad to say that to my knowledge there have been no reflections cast ou me for the non-success of the past, and I must say I have no fault to find with the treatment I have received from you. I am not bettering my position in regard to salary at present by leaving the Cumberland Company, neither am I leaving because I have lost faith in the mine, for I have not, and I have every reason to think that the Cumberland will be a good mine in the future. The only reason I can give for leaving at the present time is that I am disheartened on account of my non-success so long. As I am going to take charge of the Big Reef Mine at Finigan's, I will not be out of the Etheridge district, and if you should desire any advice of mine, either in regard to the Cumberland or any other mine, I shall be most happy to give it at any time.—W. STRAUGHAN.

DAY DAWN BLOCK AND WYNDHAM.—Report for fortnight ending 6th December.—No. 9 level: The contractors have driven a further distance of 17 ft., making total distance from eastern boundary 520 ft. There are 6 ins. of black mineralised flucan in the present

end on the footwall side of the formation, with bunches of quartz. The indications are favourable for a reef. No. 7 level : There is no change in the stopes above this level. The stone is considered payable. No. 6 level west : This level has been driven 10 ft. during the past fortnight ; total distance from the cross-cut, 22 ft. The formation is diorite. No. 5 level west : The reef in the stopes is 3 ft. thick of payable quality. On the hanging-wall the reef will average 2 ft. thick, of medium quality. No. 4 level west : The hanging-wall reef still yields payable stone. No. 2 underlie shaft : The contractors have sunk a further depth of 6 ft., making a total depth of 294 ft. below No. 1,108 ft. plat. There is no change in the country since last reported on. No. 3 underlie shaft : The cross-cut has been driven 18 ft. for past fortnight, making total distance from the shaft 38 ft. The ground is hard red granite.

DAY DAWN P.C.—Report of Mr. Thomas Lester for fortnight ending December 20th :—The output of quartz is 1,343 trucks ; to the Excelsior mill 1,152 tons, to the Defiance mill 64 dray-loads. A report of progress then follows of extreme length, showing that the various points in the mine are fully up to the average.

EMERALD (19th Dec.)—Work in the canal is progressing favourably. Lots of ground in the part marked "Truto Tovar" has been worked off and sent down to the river, which has enabled us to work in rock in that part upwards to the bridge, within 5 metres distance of the first best vein. During the last four weeks we have, in a length of 100 metres, lowered the canal 2 to 3 metres, and also have doue the widening of the same, 2 metres on an average, in a length of 130 metres, by a depth of 6 metres on an average. Number of hands at work 120.

EMMA (17th Jan.)—I have to report progress at the mine for the week ending to-day as follows :- In my last report, which is under date of 10th inst., I mentioned that we had commenced drifting in the vein from near point of intersection upraise from No. 4 level and winze from Cincinnati level in the north-west part of the mine ; this drift has been advanced 10 ft. following the vein, but without showing any material change ; the vein holds its width, and the character of veiu matter continues as per report of 10th inst., viz., softirou with a little good ore intermixed, but it is so completely intermixed with the iron that it is quite impossible to save separately. I have not yet commenced cross-cutting the vein at this point, but will withiu a few days, or as soon as some necessary work at point of connection is made, that is, in the way of straightening, and widening and completing shoots. I am confident that upon thoroughly developing this part of the mine ore in much larger quantity will be found ; this development work will be pushed as rapidly as possible. On the Cincinnati level 63 ft. south 45 degs. east from top of winze we have started a cross-cut towards the footwall to cut the vein developed by the winze from Cinciunati level ; this cross-cut advanced 9 ft.; the ground, though hard, is considerably saturated with mineral and is quite seamy. I expect to cut the ore channel withiu 40 ft. of starting poiut. Drift from old Emma tunnel shows vein fully 4 ft. wide, of ore and ledge matter mixed ; the ore is so much mixed with the ledge matter that we have been unable to stope any first grade ore, but have been compelled to break the mass this week, aud save it for treatment in concentrating mill ; have mined some 20 tons of this quality. The ore occurs in small pockets and is of good grade, and gives every indication of opening into a regular vein. I have also resumed work on No. 3 level south-east; have worked one man in cross-cut from this level towards hanging wall ; advanced 4 ft.; t otal 113 ft.; the rock is still hard but mineralised ; this cross-cut should be continued to hanging-wall. I shall also resume work in face of this level as soon as men can be spared from other parts of the mine without increasing the force. I have succeeded iu getting teams to the mine and am now shipping ore ; will get, I hope, at least 30 tons down the canyon to Wasatch before another storm.—Wallace.

— Cablegram received 2nd inst.:—"New cross-cut from Cinciunati level, mentioned in Wallace's letter of 17th, in 35 ft.; just cut vein, carrying ore, not across it yet ; prospects very flattering other points. —Bennett.

ESMERALDA (20th Jan.)—The manager reports :—The face of the drift 575-ft. level Durand is now out 1,469 ft. ; progress for the week, 41 ft. At this point a second upraise will be made to conuect with the ore body. By this means we shall put ourselves in a position to rapidly take out ore, and at the same time prospect the ledge between the two levels at this point. This raise should cut the Durand ore body about 100 ft. up.

FLAGSTAFF (17th Jan.)—Since my last report I have been exceedingly lucky in discovering a large body of ore in the south-east drift. I have opened it up some 8 ft. ; at present it is 7 ft. wide, which extends both upwards and downwards. I shall still continue driving iu on it to see to what extent it will hold out. I am putting it with the second-class ore, but it is improving at every foot we go, and I think that it will lead to a rich body of ore, as it is going in the right direction and in good ground for rich ore. The drift is now in 50 ft. ; last week work, 13 ft. The new stope is looking better than it did when I wrote last. The ore is still continuing on up towards the sixth level, and is all first-class, carrying the yellow crystallise with silver-lead. I put two men at work at the breast of north-west drift to clean it out, and started to sink on a small seam of ore, and had not sunk more than 4 ft. when it opened up a seam of rich ore running off in a southern direction, carrying plenty of yellow crystallised carbonates with silver-lead. This seam is 20 ins. wide, and 2 ft. thick. I cannot say positively what it will amount to yet, as I have not had time to explore it since we came upon it ; will know more in a few days. I have not done anything with seventh level this month, as the man I had at work there had to go home ; his family are sick ; he has not come back yet. I have only had 11 men at work since the new year ; will put on three more in a short time. Number of tons of ore mined the past week 71, viz., 41 first-class, and 30 tons second-class.—A. L. Swope.

GLENROCK.—Extract from letter of Mr. W. J. Farrell, datod 25th December ; received, 2nd February : Actual result of crushing not yet to hand, but expected to be about 100 ozs., of retorted gold from 200 to 215 tons. Must not take this as any criterion of the mine's future productions or output. It is an excellent return seeing that the greater bulk of the quartz has come from an entirely new shoot or discovery from any yet worked, broken down promiscuously by contractors in extendiug top level, no care taken in separating quartz from mullock. Since commencement of work ; open cutting accomplished, main top level extended 100 ft., and uprise riscu upon and timbered for a considerable distance, and whilst doing this dead work, 400*l*. worth of gold has been won. Top tunnel now being extended to catch the main lode, main shaft being sunk to depth of low adit. Thence driving back to meet the contractors, from the tunnel's mouth, and at the same time forwards to catch the golden stone left underfoot in the upper levels.

GYMPIE GREAT EASTERN (24th Dec.)—Fortnightly report :—I am pleased to inform you that we have cut the 1 South Great Eastern reef at the 730-ft. level ; there is a grand show of quartz here, but up to the present I have seen no gold iu the reef. There is nice gold in the hanging-wall leader, the country being more favourable near it for gold. There is about 2 ft. of grey mullock between the reef and the leader. This, I believe, to be the cause of our not getting gold in the reef. The reef is about 20 ins. thick ; then there is about 2 ft. more of mullock between the reef and the footwall. There is from 2 to 3 ins. of quartz on the footwall ; in all there is over 6 ft. between the walls at present. If the country was slate the most part of it would be crushing stuff. We should have the slate in another 30 ft. of cross-cutting and raising—that is, if it keeps its course. You are aware that this reef is very flat ; there is only 40 ft. to rise from where we cut the reef to the winze sunk from the 580-ft. level. That means 150 ft. to reach the winze from where we cut the reef in the level, or 250 ft. to our eastern boundary. On the whole, the present show looks very promising, and I believe it will ensure a good future for the mine, though it may be poor for a time. The cross-cut has been extended 16 ft. ; total, 365 ft. from the shaft. At present I am taking it in 7 or 8 ft. wide, in order to make room to start drives north and south as soon as possible. All our work is confined to this cross-cut at present. I have the air boxes in now, and a uew truck road laid down. There will be no work undergrouud for two days, as the boiler of the winding-engiue has to get a patch on it. John Milne, the engineer of the battery, will do it. The machiuery has been cleaned and overhauled and the boilers washed out, aud some brick work repaired at the battery. For the four weeks ending 17th December, 1890, there were 645 tons of quartz raised and crushed for a return of 597 ozs. 9 dwts. 6 grs. of smelted gold. Everythiug about the mine, winding engine and battery is in fair working order. There are 26 men employed, 17 on the mine aud nine at the battery.—J. James.

HARRIETVILLE (26th Dec.)—The following progress has been made during the past fortnight, viz. :—Mons Meg Mine : The cross-cut west of the level north of tuunel J has advanced 9 ft. ; total, 13 ft. ; a little gold is still beiug met with, but the footwall has not yet been reached. The rise at the back of the 50-ft. level above tunnel J has advanced 5 ft. ; total, 85 ft. ; the lode here is 10 ft. wide, and is of average quality. The south drive 100 ft. above tunuel J has been extended 8 ft., making a total of 178 ft. ; the lode is 6 ft. wide, and still widening, and carries stone of fair quality throughout. Returns : We cleaned-up on the 23rd inst. after 18 days' crushing for a yield of 257 ozs. melted gold, from 486 tons of ore and 70 tons of sand treated. We also saved 5½ tons of pyrites, assaying 4 ozs. of gold per ton. Guerdon : Tunnel J has been extended a further distance of 12 ft., making a total of 349 ft. from the Mons Meg lode. At 344 ft. we passed through a well-defined lode, 4 ft. wide, which carries colours of gold at the point of intersection. This lode is of promising appearance, and will be driven upon so soon as practicable. It is, I think, what is known as the Guerdon No. 2 lode, on which a little work has been done near the surface. South Mous Meg : The drive north of the lower tunnel has advanced 24 ft. ; total, 24 ft. ; the lode is 3 ft. wide, and still carries a little gold. Tiddledee Mine : The drive south of tunnel D towards the Mous Meg has been extended 17 ft. ; total, 861 ft. ; the lode is now 5 ft. wide, and carries a little gold. The efflux of water is daily increasing, and I think that we shall soon begin to drain the Mons Meg workings. New lease : The winze below the drive south of tunnel D on the new shoot is now 10 ft. deep ; the lode is 2 ft. wide, and shows very fair gold. The stopes above this level are producing stone, valued at about ½ oz. per ton, and are supplying 10 stamps at the mill. Tunnel C has advanced 19 ft. towards the new shoot ; the ground is fairly soft. Tuunel B has been extended a further distance of 21 ft. towards the new shoot, making a total of 169 ft. from the Jackass main lode ; the ground is hard at present. Returns : The returns from this mine on the 23rd inst., after 18 days' crushing, are 80 ozs. 10 dwts. from 255 tons of ore ; also 2½ tons of pyrites, assaying 4 ozs. per ton. Machinery : All the machinery is working satisfactorily. Furnace : The roasting furnace is now completed, and we shall immediately commence to treat the pyrites and blanketings, of which we have now about 120 tons on hand. All work has been suspended until the 29th, on account of the Christmas holidays, most of the men having gone to their homes.—T. G. Davey.

MOUNT ZEEHAN (22nd Dec.)—The manager writes :—77 tons of first-class ore were shipped last week from Hobart, and the balance, 30 tons, is on the way to Hobart. We have at surface ready for bagging about 20 tons first-class ore. Montana—Mining progress for the week : The west cross-cut has been extended 17 ft. 6 ins. ; total, 236 ft. 6 ins. South drive : I am pleased to state that the ore body here is improving under foot, carrying about 12 ins. of galena the whole width of winze. The opeu-cast stope is still carrying galena, but more mixed with country, producing a larger quantity of second-class ore. We have now about 40 tons second-class ore here, produced from the last 100 tons exported.

MYSORE REEFS (14th Jan.)—Fortnightly report.—Harvey's shaft : We have completed taking out the ground for tackle, and commenced to sink a winze below the 460-ft. level north. This wiuze is being sunk by hand labour. We are down 2 ft. ; the quartz is of low grade, worth, according to assay samples washed, from 2 dwts. to 3 dwts. of gold to the ton. Cross-cut east of 460-ft. level : Since the men completed blasting out the side of level to make room for tackle, they have continued this cross-cut for 8 ft. 6 ins., which has now reached a distance of 23 ft. 6 ins. from the level. A little quartz is appearing in the breast of the cross-cut, and I am hoping in a few feet more driving to intersect the band of quartz and pyrites that we are driving on in the intermediate level south between the 320 aud 400-ft. levels. The 460-ft. level south : We have driveu iu this direction 10 ft., and are now sinking below the level for a small cistern for donkey pump, and cutting out the footwall to bring back the water from the north level preparatory to resuming the sinking of the shaft. Intermediate level south betweeu the 320 and 400-ft. levels has been advanced 7 ft. 6 ins., now 20 ft. from cross-cut ; the lode is of greater width than the drivage, composed of quartz and

pyrites, and very difficult indeed for blasting. A sample from it gave, according to assay, 6 dwts. 12 grs. of gold to the ton. We have also driven north 9 ft., the end is in a mass of low grade quartz, worth, according to assay, 4 dwts. of gold to the ton. I have suspended this for the time, and put the men with the rock-drill to blast out the lode behind the south end. Stopes in back of 400-ft. level: Lode 12 ft. wide, and worth about 6 dwts. of gold to the ton. Stopes in back of 320-ft. level: The lode is 6 ft. wide, and worth, according to several samples washed, 5 dwts. of gold to the ton.—M. SCANTLEBURY.

MYSORE-WYNAAD AND MYSORE WEST.—Report for fortnight ending 14th January:—Tank Mine—North shaft: This shaft has been sunk 4 ft. 6 ins., making a total depth of 95 ft. 6 ins. from surface; the bottom is now in rock, which requires blasting, so that progress has been slower. We have no lode in the shaft at the present moment, but I expect to get into it again. We shall not be able to do any sinking this week, as the whole time will be taken up fixing the pumps, &c., in the shaft, and I hope to start the engine about next mail day. South trial shaft: The cross-cut west on this shaft was advanced 6 ins.; total distance, 24 ft. 6 ins. from shaft, and suspended on the 6th inst. South shaft: This shaft has been sunk 11 ft.; total depth, 36 ft. Sinking is now suspended to put in timber; this will, I expect, be completed in about a week, when we shall resume sinking. Assays: I have made two assays of samples from north shaft taken at a depth of about 82 ft. No. 1 gave 2 dwts. gold per ton; No. 2 gave 13 dwts. gold per ton. Surface: All the work in connection with the pumping engine at north shaft is in a forward state, and I hope to start it in about a week from to-day. All other work is making satisfactory progress.

NEW CALIFORNIA.—Mine report for the first half of January:—Main shaft down to 2,069 ft. Sinking in the shaft has been resumed with quite an encouraging outlook. Ore seems to be coming in from the east, on which side of the shaft bottom we have 14 ins. in width of vein stones from which assay from 8 dwts. to 1 oz. in gold. The 2,000-ft. level drift east of shaft in 42 ft. The lode in the easterly drift is from 2½ ft. to 3 ft. in width, and milling 5 dwts. per ton, which will barely pay yet, but is quite encouraging. The 2,000-ft. level drift west in 556 ft.: This point is as last reported, and cannot be very far from the rich ground we are mining just above. The 1,900-ft. level, No. 2 winze (1,900-2,000). Stopes and winze west of shaft in 45 ft. We are sinking at this place for connection with the 2,000 west drift which is now only 82 ft. behiud this winze. The bottom shows a 2½ ft. vein of good ore. The 1,800-ft. level (1,800-1900), intermediate drift, east of No. 3 winze (west of shaft). The good showiug in this working continues, and the stopes coming on just behind this drift are turning out a good quantity of smelting ore. The 1,500-ft. level, south vein east of junction (west of shaft): The last returns from these workings gave us over ½ oz. gold per ton, which will pay well. The width of the vein continues regnlar, and though small it is rich. The 1,100-ft. level, east of shaft, stopes and raise for stoping ground: The ore in these workings has fallen off, and we have suspended work here for the present.—A. RICKARD.

NEW DEVALA-MOYAR (13th Jan.)—The 116-ft. level, drive east: We have extended this drive 7 ft. during the week, making a total distance from No. 1 winze of 72 ft. We have heads in the rock here which enable us to make better speed, but the reef is still of no value. Drive west: The ground here shows a slight improvement, and I resembles what we have iu the level above, but it is very hard for boring, and we have only been able to drive 4 ft.; total distance, 103 ft. The stopes are as usual; we have hopes of getting more hand drillers soon. Crushing is being carried on at the mill, but our water supply is diminishing very early this year owing, no doubt, to the light monsoon which was 50 ins. short of the average. All machinery is working will.—R. B. JOHNSTON.

NEW EBERHARDT (18th Jau.)—The mine manager reports:—Number of tons of ore extracted and assorted, 24 tons; assay value of same, as per mine samples, $44 per ton. The general appearance of the mine remains unchanged. We are breaking the usual amouut of ore, and the same is of a good milling igrade. The quartz team is hauling ore from the mine to the mill, it having commenced on the 12th inst.. or Monday last.

NEW HOOVER HILL.—Report to January 20th.—Provost shaft: The ore around these old workings is getting too poor to work. Sinking below the 50-ft. level, the ore continues about the same, and paus $6 per ton. I have stopped the men from cross-cutting east, as we have cut through the veiu and there is no improvement. I have put the men to drive south on the vein.

NORTH MEXICAN MILLING (16th Jan.)—The mill runs nicely, and if I have no bad luck will get along without drawing any further on London. So far I have got chlorination up to 80 per cent. with 6 per cent. salt, but I will improve on this as soon as I can coucentrate my time to the roastiug alone. As it is now I have to break all the hands in, consequently my time and attention has to be divided. The ore I am working now assays 45 ozs. I think we are all right now, and all anxiety will soon be over.—O. HOFMANN.

— (20th Jan.)—The mill is running, but the belts beiug all new stretch a great deal, especially as the English belts have more and better rubber. This stretchiug requires cutting and tightening, which necessitates quite frequent stoppages of the works, as not all the belts get slack at the same time. Afterwards we will not have these annoying stoppages. This is the reason that the returns in the first two weeks will be less. Besides, machinery standing so long wants a little time to get into good running order. I burned what precipitate (sulphides) I had, and sent them to Macmanus, 19¼ lbs. They are very good, assaying 17.179 ozs. to the ton.—O. HOFMANN.

OSCAR.—Hodgkinson's lode: We have great pleasure in handing you this report, because when you compare it in conjunction with the one sent last week, agaiust those of earlier dates, you will find a very great improvement has taken place in the value of the quartz now being raised from this lode. Another important feature is, we find as we advance north in the 200-ft. level, and under the poiuts where the lode in the upper workings was apparently lost or thrown from its original position, that although we find a marked depression has taken place at this depth, the lode after running almost flat to the east is again assuming its original direction, which leads us to the conclusion that we in a short time can confidently report that the lode is as intact beyond the depression as before we met with it. Our deepest point is the shaft 60 ft. below the 200 ft. levels. The lode is 5 ft. wide, and dipping more perpendicularly than hitherto. The quartz is of a striped bluish character, about 2 ft. wide, and assays this week 13 dwts. 1 gr. gold to the ton.

PAHANG CORPORATION (20th Dec.)—Development: As regards Pollock's lode, the bottom drive is looking well. The middle tunnel has been delayed this month, owing to the necessity for timbering. On Campbell's the lode in none of the drives is sufficiently good to stope, and if it does not improve this month (December) I shall stop work upon the lode. Reuan drive has much improved since we started, and being accessible to the tramway is well worth proving. We now come to Willink's—A drive was started here sometime back on what was supposed to be (and I now find was) Willink's lode. When some distance in the direction of the drive was altered and 117 ft. was cross-cut and driven in this direction. Having surveyed this and found that the direction of the original drive was correct, I stopped the cross-cut and recommenced the drive, and am now close to No. 1 winze on Willink's. From No. 1 winze I have commenced to drive towards No. 2 winze. No. 2 drive is very near No. 3 winze, where the rich stone was found. When this drive communicates with No. 3 winze it will free it of water and open up some 60 ft. of backs in the rich stone for stoping. No. 4 winze (Willink's) is rather a puzzler. It lies out of the line of Willink's lode to the south, but has a sharp underlie to the north; whereas Willink's lode in No. 3 winze underlies almost vertically. I am of opinion that it junctions with Willink's at a depth. We now come to Nicholson's lode. The only work being carried on there at the present time is a drive to the east. This drive has so far opened up no grouud worth stoping on, but it prospects the lode, and I do not feel at present justified in stopping it as so much has been said of its value. You will remember that the winze sunk upon this lode was drowned out, and it remained to either erect expensive pumping machinery upon it or put in a cross-cut to unwater the lode. I find upon survey that a cross-cut would have to be driven over 700 ft. to get below the old workings, and before commencing such a long and expensive work I should like to have the opiniou of the mine manager I expect shortly from Queensland. We now come last, but not least, to Jeram Batang. The only workgoing on there now is, as you see by the mining report, one cross-cut. We are pushing on this cross-cut as fast as possible, and have at last persuaded the Chinese to work three shifts. If when we cut the lode, which should happen in February, it turns out promising, it will be advisable to either commence another cross-cut or sink a shaft upon what I believe to be the same lode some half-mile distant from the present cross-cut. It will also be advisable to erect 10 or 15 head of stamps there, as there are some thousand tons of old Chinese leavings well worth crushing. Until we have proved that the lode is good in depth, I do not care to do this. The amount of stoping done during the month was iusignificant, viz., $215.17, the work being delayed in Pollock's owing to its being necessary to timber. The samples for assay are taken every hour from below the stamps, and of course infinitely more reliable than under the old system of picking at random a few stones from the lode, or out of each truck. You will notice that, with the exception of ore from No. 3 winze, Willink's, the average is very low, viz., 1.00 per cent.; Willink's is a brilliant exception, viz., 7.95. The loss is not so great as might be expected from such very indifferent dressing appliances, viz., 0.15 per cent. The quality of the oxide produced during the month, ranging from 68.50 per cent. to 71.20 per cent., is also creditable. We are now baggiug the fine oxide separately from the coarse, and marking the bags A and B respectively.—A. H. NEILD.

RUBY.—Report upon the mines for the week ending January 17th. —Dunderberg. We have seven men on day's pay and 10 tributers at work here. The quartz in the 500 level is not showing much improvement in drifting, so I have started to sink on it. There is no particular change in the 700 upraise, except that the ore is getting better and softer; we have now followed it up about 7 ft. from where it was faulted. The 700 incliue sunk 10 ft.; total, 76 ft. Lord Byron: We have two men on day's pay aud 13 tribnters at work here. We have about 15 tons of ore assaying about $125, and the tributers have about 20 tons of $80 to $90 ore, and about 50 tons of $40 to $50 ore. The ore in the bottom of the winze is looking well. The progress is rather slow as we have to hoist it twice and run it through 900 ft. in a tunnel. During the week I thiuk I will make arrangements to run the drift on the 165-ft. level a distance of 100 ft., thereby extracting the ore at less expense, and prospecting the grouud at the same time. Of conrse the ore-body is not very large, but from the looks of the cave in which it is in I expect it will lead to something better. Bullwhacker: We have six men at work extracting the usual amount of ore. During the week they got some assays above the nsual average.

VISO (31st Jan.)—Monthly report:—Our month having ended to-day, I have measured the underground contracts, aud carefully examined and set the work for the coming month. In the past five weeks we have, in the aggregate, driven the different levels 120 yds., all of which has been done on the several lodes, excepting 12 yds. of cross-cut in country rock, which, considering our circumstances, is very satisfactory progress. At both our deep adit levels we have had full pares of men cross-cutting the lodes at these places, in order to prove their width and value, which has not yet been accomplished at either point; these operations will, therefore, be continued during the ensuing month, or until the country rock is struck. As far as yet seen, these lodes are remarkably massive and yield a little tin, but their full value can only be stated when cut through, and opened to a greater length. In the Mi Amor concession we are driving the adit level south-east on the new lode referred to in my last report, but have not yet found any tin in it worthy of note; I think, however, it is worthy of trial, having no doubt of its having yielded the rich deposit of alluvial tin fouud in this part of our property. The new adit at San Antonio is advancing rather slowly, the lode being hard quartz rock. I am glad, however, to state that within the last few days it has much improved in value, and at present yields sufficient tin, of excellent quality, to pay the cost of driviug. The severe weather which has prevailed during the past month seriously hindered the tributers in the alluvial washing, and our tin dressing in general, but with the favourable change which has taken place they are returning to their work, and if it continues I hope soon to be able to seud home a small parcel of tin for sale.—R. R. NANCARROW.

ZARUMA.—In sending extracts from the manager's last letter, dated Decemher 27th, Mr. A. P. M. Rivolta, the secretary, states:—The falling off in the returns for November and December appears to be due to inefficient labonr, but this difficultly Capt. Bryant expects to be only temporary. The gold for November has been sold, and realised 825*l*. 18s. 2d. The annual general meeting will be held as

usual about the end of April, when the accounts for the past year will be presented.

DOLCOATH MINE.

SELLING TIN AT THE TIN TICKETING.

AT Dolcoath meeting, on Monday last, Mr. Heard, in the course of the business, said there was one matter he wished again to bring before the meeting, and that was the question of tin ticketing. A large and important mine like Dolcoath ought, in his opinion, to sell a part, at all events, of its ore by ticket. Capt. Josiah Thomas had stated two or three years ago that if the mine were entirely his own he should sell part of the ore by ticket. There could be no doubt that, on the whole, ticketing had been a benefit to Cornish mining. He did not agree with all that had been said on the subject—there was always a good deal of rubbish mixed up with common sense—but he defied anyone to prove that the mines had not, on the whole, profited by ticketing. At the present time about 6,500 tons of tin were being sold every year in Cornwall by ticket. Supposing they only benefitted to the extent of 3*l*. per ton; that showed that the adventurers in Cornish mines received nearly 20,000*l*. a year more than they would if the tin had been sold by private contract. (Capt. Josiah Thomas: There is one little word there—"supposing.") (Laughter.) Mr. Heard: Yes, supposing, sir, supposing. Continuing, Mr. Heard said he would ask Capt. Thomas whether he did not think that in selling Dolcoath tin by private contract his hands had been strengthened by the prices obtained at the ticketings. There was a time when there was only one firm of tin smelters connected with the committee of that mine; now most of them were members of smelting firms. Like Cæsar's wife, the committee should be above suspicion. (Laughter.) If he were called upon, as an umpire, to recommend a course of procedure with regard to this ticketing question, he should say by all means sell a portion of your ore by ticketing. Another important consideration was that the lord of the mine was in favour of it, and the recommendations of the lords and their agents should always be carefully considered, though they might not in every case be endorsed or adopted. He believed that if he proposed a resolution on the subject there would be a large majority in favour of recommending the executive to sell part of the ore by ticket, and he hoped that someone else would say a few words on the matter.

Capt. Josiah Thomas said that so far as the lord of the mine or his representative were concerned, he believed they were quite satisfied if the adventurers made what they considered the best price for their tin. Some two years ago Mr. Marriott mentioned the matter, and said that he should be glad to know the opinion of the shareholders with regard to it. They came then to no conclusion whatever; in fact, they would not take the trouble to discuss the matter. As far as he (Capt. Thomas) was concerned, he was of the same opiniou that he had always held. He should sell a portion of the tin by ticket, and the other portion by private contract. He believed that would be the opinion of most managers in the county if they were left unfettered. Sometimes, however, they were not allowed to do what they liked by committees, who thought they knew better, though Capt. Thomas questioned whether they did. If the course he favoured were pursued, they would have practically two markets open to them. He very seldom referred to papers, especially the *West Briton*, but he had had his attention called to an article in that journal containing some absurd statements. One of these was that since the introduction of the ticketing system, mines which ticketed got about 5*l*. per ton more for their black tin than it fetched before, and those which did not ticket 3*l*. per ton more. "Does anyone think," asked Capt. Thomas, "that we are foolish enough to throw away 2*l*. per ton?" He knew for certain that they were making as good a price by private contract as they would by ticket, if not a better. Mr. Heard could not think that Mr. George Williams, who held so many shares in that mine, and who, with his brother, knew as much about the tin trade as anybody, would throw away money like that. He (Capt. Josiah) had, in fact, said over and over again that they got a better price than they could at the ticketing. This newspaper statement might not affect them much in the county, but it might have an injurious effect outside. Then, again, in the article it was stated that if only a portion of the tin were sold by ticket, there would be a danger of the badly-dressed tin and the slimes being ticketed, while the good tin would be sent to the smelting-house. If anyone connected with that mine were capable of such dishonourable conduct as that, they were not fit to be entrusted with the management of that mine or with anything else. (Hear, hear.) As he said before, if he were left to himself, without the advice or control of anyone else, he should sell partly by ticket, and partly by private contract. If they would leave this matter in the hands of the committee, no doubt they would act in a manner which would be satisfactory to all. (Hear, hear.)

Capt. Bishop (of East Pool) agreed with Capt. Josiah Thomas. He knew that, according to outside opinion, there was a margin fixed by the smelter between the standard and the selling price, and that, owing to the introduction of ticketing, that margin could not be so great as it used to be. Those who ticketed, it was said, profited by this, and those who did not were left in the lurch. Of all this he (Capt. Bishop) did not believe a word. They would not have a better price for tin if they ticketed for all the lot. The best way to put the matter to the proof would be for a manager to compare the prices that he got by private contract with those he got by ticket, and see how much difference there was. If Mr. Heard was proved to be right, they were wrong, but if he were wrong, perhaps he would not be "heard" on that subject again. (Laughter.)

Mr. Wickett suggested that as Capt. Bishop was selling East Pool tin both by private contract and by ticket, he should give them the result of his experience of the two systems.

Capt. Bishop said he should not do that. He should only answer questions relating to East Pool at meetings on that mine.

The Chairman (Mr. Rabling) supposed that Mr. Heard, after what had fallen from the manager, would not move a resolution, but that he would leave the matter in the hands of the executive.

Mr. Heard assented to this course, and remarked that he felt he had not altogether laboured in vain. He felt assured that the shareholders would endorse the opinion expressed by Capts. Thomas and Bishop, and, last of all, by his humble self, that it was desirable that part of the tin should be sold by ticket.

PACHUCA MINING CO., LIMITED.

SPECIAL REPORT BY AN EXPERT.

MR. A. GROTHE, of the United Mexican Company, writes:—"In accordance with your instructions I visited your mines in the Pachuca District, and on my return advised you by telegraph to continue the present workings at an expenditure of about 90*l*. per week." He states that there are several healthy-looking veins on the claims, which in course of time may acquire great importance, but for the present the interest centres in the veins, of which the outcrop is to be seen near the mouth of the San Miguel shaft, and the Carretera vein, which runs by the west side of the Sta. Inez claims and cuts the other nearly at right angles. As to the existing works, he says: On the San Miguel claim an old shaft has been cleaned out, timbered, and continued, having reached at the present time a depth of 85 metres under the surface, without counting a few metres sump. As the shaft is located at as low a point as is consistent with safety, any drivings from the bottom must necessarily undercut the hills on both sides at a rapidly-increasing depth, thereby increasing the chances of finding good ore. The work of renovating and securing this shaft must have been a costly one, but the result of that expenditure has been that you have now a very fine shaft, well timbered, secure and roomy, so that both unwatering and hoisting can be done on a much larger scale than required at the present time. A splendid 35-h.p. Roby engine is erected at the mouth of the shaft, and has sufficient power to deal with three times the amount of water, and extract a considerable quantity of ore besides. To drive the 65 metres until the Carretera vein is reached should not require more than six months, as a progress of 2.50 metres can easily be made per week. I understand that up to the present you have spent in actual working and machinery about $50,000, which would all be lost to you if you stop working at this stage, and would be to the advantage of any one denouncing the mines after you leave them, which, I am sure, would take place immediately. So far you have proved nothing, but if you continue in the manner indicated, you will either find the ore in paying quantities, or at any rate obtain such encouragement that a further expenditure is fully justified. The mines situated on the same belt have spent many times more than you will have to do on mere explorations before they began to get a return, and are now carning very large dividends. The whole of the circumstances in connection with your property are such that I must strongly advise you to persevere. In conclusion, I am glad to be able to bear testimony to the thorough and business-like methods of your manager, Mr. F. Bawden, who is quite qualified for his task, and takes great interest in its ultimate success. I shall be in London in the beginning of November, and will gladly give you any further information or assistance.

WAIHI GOLD MINING CO., LIMITED.

ALL THE SHARES TAKEN—ARRANGEMENTS PERFECTED AT THE MINES.

5th February.—The directors report for the information of shareholders that the local board in New Zealand have engaged the services of Mr. Robert Spratt as their consulting mining engineer and inspector. Mr. Spratt's engagement includes making a monthly visit of inspection to the mine, and a monthly report to the board upon the mine and plant, and giving to the local board advice and assistance in connection with the mine and works. The board hope for the best results from this arrangement. That on the 26th January last they received telegraphic advices from the local board that the holidays at the new year had preveuted resumption of work at the mill until the 6th January; that a run of 11 days to 17th January gave a result of 1,150*l*. That the mill has since been running day and night with 20 head of stamps, that work on the new engine was progressing favourably, and the local board hoped to start 10 additional head of stamps, makiug 30 head of stamps in all, in the beginning of March (next month). The directors had intended deferring the extension of the plant for several months, but upon the urgent recommendations of the local board and Mr. Spratt, who pointed out the importance of proceeding with the work during the summer weather, the directors have authorised the immediate construction of an additioual water race, which, added to the preseut water power, would give water power sufficient to drive 50 head of stamps. During the dry season for several weeks auxiliary power might be required, which auxiliary power, however, the new engine would provide. The board have also authorised the extension of the reduction plant to 50 heads with all the necessary pans, settlers and accompaniments. This work they hope to have completed during the New Zealand summer, and that the full battery of 50 heads will be at work in July next. The mail advices to 29th December last state that the mine is looking well, and that the battery and plant is in good order. The directors, with great pleasure, inform the shareholders that the whole issuc of 44,000 new shares have been taken by shareholders at par.—C. AKERS, Secretary.

D'ERESBY AND GWYDYR (4th Feb.)—No. 10 levels: Since my last report we have had a great improvement in the south crosscut. On Saturday we cut into some loose sparry ground with spleudid cubes of lead in it, some lying loose in the friable spar. We are not into a regular course of ore yet, but the indications are strong euough to justify us in expecting it any day. The end driving uorth from shaft also looks very kindly, with spots of lead and blende in it. No. 9 levels: The eud driving south from No. 1 winze under this level still produces good strings of lead, worth ½ ton per fm. The stope going up north of shaft is worth 1 ton of lead per fm. A borer hole put through from sump in bottom of No. 8 shows we have 4 ft. of grouud to communicate, which hrings the back of this stope to within 2½ fms. of the No. 8 level. No 8 level: The end driving north from shaft is not produciug enough lead to value at present, but the ground is unchanged, and the lode may improve again. I intend to continue the driving. The stope working in south end of this level is producing abont 15 cwt. of lead per cubic fm. Surface: We are making good progress with the dressing aud clearing of the stuff which had accumulated, and machinery all working well.—H. NOTTINGHAM.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

Investors in all classes of Stocks and Shares should read Mr. Thos. Thompson's Mining and Investment Circular, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

Lester and Hook are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

Lester and Hook advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

Telegraphic Address: — "LONGEVOUS, LONDON."

MEMBERS OF THE MINING EXCHANGE.

BURRELL, BRADDOCK & CO.,

Stock and Share Brokers, Mining and Financial Agents,

STOCK EXCHANGE BUILDINGS,

90, QUEEN STREET, MELBOURNE,

Undertake Agencies for Investments in AUSTRALIA, and negociate the purchase of Mining Properties.

Personal inspection by a member of the firm of all properties under negociation, thus ensuring the safest guarantee of the *bonâ fides* of mines, &c.

REFERENCES.—MESSRS. BURRELL & COMPANY, 117 and 118, Leadenhall Street, London, E.C.

Bankers: THE COMMERCIAL BANK OF AUSTRALIA.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

Board.

Sir CHARLES METCALFE, Bart., Chairman.
B. B. TRENCH, Esq., Deputy-Chairman.
L. Balfour Burns, Esq. | Major J. W. M. Cotton.
Sir Stuart S. Hogg. | Richard Smith, Esq.

Head Office.—19, ST. SWITHIN'S LANE, LONDON, E.C.

South African Office.
NATAL CHAMBERS, JOHANNESBURG.

General Managers in South Africa.
W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

Bankers.—THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.
THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

RECOMMENDATIONS FOR CURRENT ACCOUNT:—

INDIAN CONSOLIDATED,
MYSORE REEFS,
NINE REEFS,
MYSORE WEST,
DEVALA MOYAR.

All recommendations this month have, up to the present, been correct, and large profits to our followers the result.

We make Mines a special study, and invite correspondence, whether business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly, irrespective of account day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. Clients may rely on fair treatment at our hands. We are members of the Mining Exchange, and subject to the rules and regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Perplexed.—We rather advise a sale, and with the proceeds purchase Mysore Reefs.

Investor (M. N.)—The company has now gone into good hands, and may yet prove a profitable concern. At present hold your shares.

Industrious.—Sell even at a loss, as we expect they will fall still further.

C. C. W. (Grimbsy).—Be careful to take a profit immediately it is shown on them.

G. G. E.—Purchase while they are so low. Have already paid dividends.

S. A. B. (Colchester).—It will give ample funds for further development. In our opinion the shares should *not* be sold just now.

J. Banks.—No. 1. Fairly good speculation. Nos. 2 and 4. Do not advise them at present high figure. Nos. 3, 5, and 6, are likely to be reconstructed.

Christopher.—Owing to the discovery, and not, as you think, a rig. Certainly, hold your shares.

G. P. O.—Cannot go lower and, in our opinion, should be kept.

L. J. A.—The dividends are paid quarterly, and the shares we consider a good investment.

Support.—Yes. Take up the shares at the account. The amount is so small that it would not be worth while to carry them over.

Sorrowful.—You must await the result of the liquidation.
Minister.—The "bears" are circulating the rumour. The shares dealt in are partly paid, therefore, those held by the foreigners would be very difficult to dispose of, as they are fully paid.
S. D. C. (Cardiff.)—Hold the low-priced Indians, but sell the Africans named, with the exception of Sheba.
X. Y.—Should improve after the final call is paid.
Inquirer.—We have not previously heard of "The Ute and Ulay Mines, Limited," and until more information is forthcoming, cannot advise you to have anything to do with them.

The Mining World.

LONDON: SATURDAY, FEBRUARY 7TH, 1891.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

ENGLAND AND PORTUGAL IN AFRICA.

MR. CECIL RHODES, the Premier of the Cape Colony, and the moving spirit in the De Beers Company, and other important South African undertakings, arrived in England a few days ago on important business connected with British interests in South Africa, and since his arrival he has had more than one interview with Lord Salisbury. One of the news agencies professes to give some account of the deliberations which have taken place between the two Premiers; but beyond setting forth more or less accurately the views which Mr. Rhodes is known to hold, there is really nothing in the account conveying any real information to the public. Rumours of the most absurd kind have been circulated, not only by people who are supposed to have a nodding acquaintance with Mr. Rhodes, but by newspaper correspondents in Paris and Lisbon, while the *Siècle* professes to be able to state that the following proposals have been or will be made by the British South Africa Company to the new Mozambique Company :—1. The Manica plateau remains Portuguese territory, but the occupation by the British shall be continued for the purpose of maintaining order 2. The Portuguese Government concedes to the British Company the right of working all the gold mines in the Manica district in consideration of a royalty of 20 per cent. on the revenue obtained from such mines. 3. The British Company guarantees a yearly sum of 1,000,000f. towards the construction and maintenance of a Portuguese railway from Manica to the coast *viâ* Poungoua. 4. Upon all British merchandise conveyed from the coast to Manica, *viâ* Poungoua, a fixed duty of 3 per cent. *ad valorem* shall be paid. It is, of course, very much easier to make statements and to circulate rumours than to prove or disprove them; but, for our own part, we attach no sort of importance to anything that has so far appeared with regard to the Cape Premier's mission. In the first place, the subject matters of the conversation between Lord Salisbury and Mr. Rhodes are not merely those of the status and powers of the British South Africa Company, they include a variety of questions of national policy full of intricacies, and requiring the most delicate handling. And, in the second place, the statesmen who are engaged upon the questions at issue between the Chartered Company and the Portuguese are too sensible of the responsibility attaching to them to go blabbing about, even before anything can have been settled. The two Premiers are no novices in diplomacy, and they are not the sort of men who, as the phrase goes, give themselves away. We would, therefore, advise our readers to take *cum grano salis* the statements that have already appeared, and that are pretty sure to appear in the future about the Mozambique Company and its concession. When any decision is arrived at, it will be known, and we hope promptly, through Parliamentary channels.

HOPEFUL OUTLOOK FOR MINING SHARES.

THERE have been few times in the history of mining enterprise in this country when the outlook for investors in mining shares has been so full of hope as it is just now. We are quite aware that in using the phrase "investors in mining shares" we are, according to some of our guides, philosophers, and friends, guilty of a solecism. We are told that a man who puts his money into mining shares is a speculator—not an investor. In our view, however, a man can be either. He is a speculator if he merely buys for the rise, or sells for the fall, if, in Stock Exchange slang, he is a "bull" or a "bear"; but if he purchases to hold he is just as much an investor as, for example, the man who places his capital in home railway stocks. No doubt the risk is usually greater in the one case than the other; but so also is the reward, where the investor has made a judicious selection, and has operated in a common-sense manner. However, "What's in a name?" Whether own readers be dubbed speculators or investors, what they will do just now, if they are well-advised, is to purchase and take off the market some of the mining shares which are now offering at prices greatly below their intrinsic value. In some branches of the Stock Exchange the difficulty is to get a sufficient selection to pick from: in the Mining market the difficulty is to choose the best when so many promising shares are to be picked up at but little better than waste-paper value.

We need not refer to such shares among the Indians as Mysore, Ooregum and Nundydroog. Those companies have proved the value of the properties so completely that the shares need no commendation. Balaghat, too, has improved so rapidly that its success is practically assured, and the price of the shares has risen considerably, though it is still lower than it should be. The Goldfields of Mysore continues to attract a great deal of attention, and rightly so; but apart from these more or less high priced shares, the prospects of such companies as Mysore Reefs, Mysore West, and Wynaad, and Indian Consolidated, to say nothing of Champion Reef, certainly seem to us to warrant the expectation that their quotations will rise in the near future. It is not many years since Mysore shares were bought and sold at a few shillings each; they have since been to 9½*l.*, and will very probably be at that figure again. Then if we turn to the Queensland group of mines, we shall have no difficulty in selecting advantageous purchases. Gympie Great Eastern, Day Dawn P.C., and New Queen, for examples, are paying regular dividends, while the mines are being developed in a very satisfactory manner, and yet the shares are quoted at from a quarter to a half of their nominal value. Day Dawn Block and some of the other properties appear to be approaching the dividend stage again, and the Etheridge United Company is at last furnishing evidence that some of its mines, at all events, are well worth working.

Then, if we turn to the American Continent we shall also experience no difficulty in "spotting" some substantial dividend-yielding properties, and some which promise to be in that condition before very long. Among the former we need only mention the names of such companies as Yankee Girl, New Guston, Montana, Frontino and Bolivia, Colombian Hydraulic, Tolima, and Richmond, and among the latter Callao Bis, Emma, Flagstaff, American Belle, Colorado, and Palmarejo. The list could, of course, be very easily extended, but we keep our readers so fully informed week by week of the chief features in the progress of the principal mining companies that it is only necessary in times like the present just to direct attention in a more or less general manner to the undertakings whose prospects appear to us to warrant the expectation of an early advance in prices. We do not speak of that, however, as the main inducement to purchase just now. It is a consideration that should not be left out of sight; but by far the more important consideration is that of permanent productiveness, and in the instances we have cited there seems to be every reason to anticipate lasting and profitable results. With money so cheap and so plentiful, it is not likely, we think, that the range of mining prices will remain much longer at the present depreciated level.

A STRANGE ELECTRIC CO.—A WORD WITH THE COMMISSIONERS OF SEWERS.

UNTIL the prospectus of a concern styling itself "The City of London Electric Lightiug *Pioneer* Company, Limited," was issued we were under the impression that the present Lord Mayor, before assuming office, had given some sort of promise that he would not become a director of any new public joint-stock enterprise during his mayoralty. It is, therefore, with some surprise we see his name figuring at the head of this company's prospectus, and to this feeling there must be added one of regret that it is associated with a concern that proposes to enter into the benefit of contracts made, being made, or to be made, with the City authorities. We are quite sure the Lord Mayor would lend himself to nothing in the nature of a "job," but we own to a feeling of sorrow, due to the respect we have for his high office, that his name should appear upon such a prospectus as that of this so-called "Pioneer" company. Viewed from the investors' standpoint, it cannot be recommended. One is at a loss to know why it has been called into being. It seems formed to do the work of already existing companies, but this can hardly be so seeing that in its first paragraph it proclaims its own impotence. It is formed to "initiate the supply of electricity" in the City of London, with the intention of forming a larger company, "with adequate capital," to secure the whole monopoly of electric lighting for the City. The extraordinary part remains that this monopoly for two out of three of the divisions has been secured already by other companies. The simple-minded reader will ask, "Why cannot these companies fulfil their own contracts, or, if unable to do so, why did they go to the expense of getting them?" It is at this point the promoting company might step in and give some valuable information not to be found within the four corners of the prospectus. The promoting company is a concern styling itself "The Electric and General Investment Company, Limited." The ambitiousness of the title is in inverse proportion to the figure it has so far cut in the commercial world. The present attempt to emerge from obscurity does not seem to argue much for the wisdom of its board, though we are bound to own that to catch a real live Lord Mayor shows them not to be destitute of the sportsman's scent.

What is the position? The Electric and General Investment Company conceives and brings forth the present so-called "Pioneer" company; the "Pioneer" company enters into contracts to acquire those obtained from the Commissioners of Sewers by the Brush Electrical Engineering Company and

the Laing, Wharton and Down Syndicate, for the purpose of doing the work, or part of it, which those companies ought to be well able to do for themselves ; but in the distance there is seen the spectre of the still larger company that is to swallow up them all. We invite the attention of the Commissioners of Sewers to these points, and ask them to re-consider the whole matter in the public interest, in view of the pockets out of which the profits of all five companies are to come, for we suppose that philanthropy is not the guiding motive of any one of them. The Commissioners of Sewers made contracts, so it seems, with the Brush Company and the Laing, Wharton and Down Syndicate, and was it within the scope of the bargain that these contractors could re-sell them to a *third* company, which third company is promoted by a *fourth*, and which fourth is to be succeeded by a *fifth*, "with adequate capital" to acquire the whole lot? If this be the way the Commissioners of Sewers let their contracts, the estimation in which the public hold that body will certainly undergo a change, and a change for the worse. From the investor's point of view we think the prospectus unworthy of serious attention. There is too much financing about the whole matter to induce us to recommend the shares. Had the Brush Company, or the Laing Syndicate, wanted capital they might boldly have appealed for it on the faith of the contracts said to have been secured, but we do not see any adequate reason for the intervention of the Electric and General Investment Company, the "Pioncer" Company, or the larger company "with adequate capital" that is to follow.

DON PEDRO—PAST AND PRESENT.

THE PAST.

The shares of the Don Pedro Company have within the past few days been as high as 30s. This is another illustration of the advantages that may, and often do, attend a mining re-construction. The operation was painful to all concerned—painful to the management, who had to get in the money, and even more painful to the shareholders, who had to part with it. We do the directors simple justice when we say that they had hard work to get the whole of the shares taken. Less than justice could also be done to the shareholders were it not added that they have shown more than an ordinary supply of that patience under tribulation, which, it is said, ultimately overcomes all things, though not unfrequently it overcomes those who have to endure it. They have been wandering in the wilderness of prospects and promises for a couple of decades, but there were three years of their history, as we shall presently show, which were brilliant indeed.

It was in the year 1862 that the Don Pedro North del Rey Gold Mining Company was formed to acquire the Morro del Santa Anna Estate, containing on the south-west side the Morro Santa Anna rock lodes, and on the north-east the "jacotinga" formation, in which the Maquiné Mine is situated. The ground was selected by the late Capt. Thomas Treloar, whose mining history was perhaps as remarkable as that of any expert who ever breathed. For several years this gentleman continued his work of exploration, and in 1865 discovered the auriferous formation at Maquiné. The produce in the August of that year was 1,545 oits., and in September 3,486 oits. It should be explained that au oitava is the eighth part of an ounce troy. Operations were coutinued with varying success, but the result from March, 1865 (when the vein was discovered) to the December following, was 14,949 oits. of gold. 1866 was a year of great interest, and substantial progress was made, as may be judged from the fact that the total produce was 70,348 oits., obtained from 12,779 tons, or 5½ oits. per ton. After charging to revenue the entire expenditure, including the cost of new stamps, buildings, &c., to the amount of about 4,500*l*., there was an available balance of 10,040*l*., out of which a dividend of 14 per cent. was paid.

Needless to say that the spirits of the shareholders were high at the opening of 1867, but they were higher still at its close. In that year the gold returns amounted to 182,397 oits., or 21,045 ozs. troy, realising 79,044*l*., leaving an available profit of 54,421*l*. 3s. 9d., or upwards of 100 per cent. on the paid up capital. The dividends amounted to 92 per cent., and 3,500*l*. was placed to a reserve fund. This extraordinary result was eclipsed by that of 1868, when the gold won (204,652 oits., or 23,613 ozs. troy) realised close upon 90,000*l*., and the profit on the year's operation was 60,573*l*. The dividends paid during that year were also 100 per cent., and 3,500*l*. was added to the reserve fund, whilst the preliminary expense account of 2,500*l*. was extinguished. In 1869 the gold amounted to 201,581 oits., or 23,242 ozs. troy, and realised 87,999*l*., and the dividends paid were 100 per cent., whilst 1,000*l*. was added to the reserve fund. It was about the middle of this year the first difficulties with the water began to present themselves, and the requisition for permanent iron pumping machiuery to be sent out as quickly as possible seemed to foreshadow the years of adversity through which this famous company has since passed. The report spoke of "a splendid lode in depth," which the water was rendering it difficult to work. The weight of the machinery in Capt. Treloar's requisition was 170 tons, and it never seems to have occurred to those on the spot that this could not be conveyed at that time over a country, roadless and almost pathless. The machinery had to be sent out in pieces, and proved unsuitable when it arrived. No provision seems to have been made in the prosperous times for the difficulties that occurred, but the explanation has been given that "The management became, as it were, demoralised by the riches which had been discovered, and in their eagerness to keep up large returns of gold, and dividends of 100 per cent., the future was either forgotten or disregarded." Even in this year (1869), with the 201,581 oits., dividends amounting to 100 per cent. were again paid, but the returns were obtained under different conditions, both as regards development and prospects. Even since 1869 the Maquiué Mine has yielded 694,733 oits., or nearly 3 tons of gold, but no dividends have been paid to the shareholders.

THE PRESENT.

As to the present position aud prospects of Don Pedro, we leave Mr. John E. Dawson, who has been secretary from the commencement until now, to tell the story to our readers as he told it to one of our representatives, who saw him in the course of the week.

When was the company re-constructed?

In 1884. The interval between the payment of the last dividend and that re-construction (1869-91) has been filled up by repeated attempts to carry out the plausible but, as the event proved, impracticable measures of the different mauagers to surmount the water difficulty. The real question before us has never been the value of the mine — of that we have no doubt —but how to work it below the water level. It is now 25 fms. below adit, and it is not too much to say that if the pumping, mining, and hauling operations had been carried out under favourable conditious, not only would the output have been greatly increased by reason of more ground being laid open, but the total results would have compared favourably with those between 1865-69, when 100 per cent. divideuds were paid. When the company was re-constructed in 1884, Mr. J. N. Gordon, who had been for 22 years the St. John del Rey superintendent, was appointed managing director, but the appliances he furnished were found to be unsuitable, and after several attempts to supplement them, first by a steam engine and then by a new 35 ft. Coruish wheel, it became evident that the whole of the previous arrangements would require to be changed. It was then that I ventured to submit a plan to the board, which, on being favourably reported upon by Messrs. MacDermot and Duffield, mining engineers, was adopted. That was 1889, and since the adoption of that method the work has been successfully carried through, with the results the recent news has recorded. The pumping appliance, owing to the courtesy of the manager, Mr. Touzeau, has been christened "Dawson's wheel." When put to work its success was at once demonstrated. The mine was speedily drained, the bottom level cleared, and the lode reached, respecting which this telegram (handing it in) gives the latest details:—"Sampling the lode; generally rich and large; 5 ozs. per ton, plentiful; since when a rich line has been discovered in the southern part of No. 8 shoot." I should say that the manager is a Yorkshireman, with a French name. He is a first-class man in every respect, with the indomitable courage of the Englishmau and the skilled mind of the Frenchman. The greater the difficulties he has encountered the more has he been determined to overcome them. There is, however, still much to be done, and shareholders must not be impatient for dividends.

How do you deal with the ore when you raise it?

The treatment of the mineral has been by what is called "strakes work." The gold is perfectly free, and is washed over blankets. The heavy particles are caught by the blankets, and the lighter ones (the sand) are carried off by a stream of water. We have hitherto required few stamps, only a small percentage of the ore requiring anything more than washing. The cost of raising and returning ore, including that of management, amounted formerly to about 21s. a ton, so that any ore which yields above 2½ oits. will leave a profit. The shareholders can thus pretty well calculate, with a reasonable output, whether the ore is paying or not. Experiments on a comprehensive scale will now be made to ascertain whether some labour-saving appliance cannot with advantage be introduced, but in the meantime, pending the result of such iuvestigation, we purpose treating the mineral under the old system. When I tell you that the average during the three or four brilliant years of the company's history was 10 oits. to the ton (over an ounce), you will understand how substantial that profit ought to be. Into this question I need not go. The returns from the Maquiné Mine in the past tell their own tale more eloquently than I or anyone else can relate it.

IMURIS MINES.

We deeply sympathise with the management of this concern in the exceptional and cruel circumstances in which they have been placed. Their manager, Mr. Farrell, was brutally murdered at the very time the chairman, Mr. Whittall, was on the spot. An occurrence so dreadful we do not happen to remember ever having taken place in connection with any other English mining company. It is true the directors had some reason to complain of the deceased manager's reticence, but his honesty was never doubted ; and when his accounts were examined they were found in order, although, from the materials at haud, without the explanations which Mr. Farrell could have given, it was difficult to prepare a balance-sheet apportioning to each head of expenditure its proper amount. Mr. Seymour was actually on his way to take charge of the mines and relieve Mr. Farrell at the time the latter gentleman lost his life. Apart from

this deplorable occurrence, the company really appears to be working its way to a solid and substantial success. Mr. Seymour has already won the confidence and esteem of the board, whom he has assured that the railway, upon which almost everything depends, will be finished about May. The company possesses a large amount of mineral property, the titles to which the chairman saw properly transferred while he was on the spot. Altogether, the impression produced upon Mr. Whittall's mind by his visit was that the company "possesses a very valuable property."

NEW EBERHARDT AFFAIRS—THE CHAIRMAN'S VISIT TO THE PROPERTY.

When Mr. Clipperton arrived at the mines on his recent visit he was received with great cordiality by the manager, who assured him that not since 1874 had a director visited the property. Mr. Clipperton, who only succeeded to the chairmanship on the death of his late lamented friend, Mr. Bladon, is therefore the more to be complimented on the energy and devotion which led him, in the depth of a Nevada winter, to face a journey full of fatigue and hardship in order that he might tell the shareholders, as he will do next Wednesday, by word of mouth, what he, as their chairman, actually saw during the time he was on the property. Mr. Clipperton appears to have viewed everything with critical care, and we venture to predict that his statement at the forthcoming meeting will be one of extreme importance, and it will have at least the merit—denied to those that have emanated from the chair during the last sixteen years—that it will be based upon actual observation. The chairman took with him Mr. Hooper, the American partner of the well-known firm of mining engineers, Messrs. Bewick and Moreing, and that gentleman supplemented as an expert the labours which Mr. Clipperton conducted simply as a shrewd and capable business man. The Eberhardt shareholders do not need to be told that they own two distinct properties widely separated from each other—in the first place the Eberhardt and Aurora, and in the second the Monitor and Gore. Mr. Hooper recommends, in regard to the latter, that only a few men shall be kept at work exploring, and that practically the full strength of the company shall be concentrated upon the former. This is a policy the board seem disposed to adopt, and it is one that will commend itself to many old shareholders, not a few of whom strongly objected to the Monitor speculation from the first. The course of operations, as set forth in the circular all the shareholders have received, seems to be based on common sense, and it is an open secret that the manager, Captain Read, who has been with the company for 20 years, and who is now in the prime of life, is delighted with the proposed change of front. He deplored the decision by which the company abandoned the old Eberhardt workings, and is confident that with a free hand he can yet make the developments from its costly tunnel pay. Most of the original shareholders have shuffled off this mortal coil, but if Captain Read can do anything for those who remain, their blessing will not be withheld. On good authority we know that the blessing of the righteous man availeth much; and surely that of the long suffering shareholder counts for something.

INDIAN CRUSHINGS.

MEXICAN EXPLORATIONS, LIMITED.—A GOOD BEGINNING.

For a company only 12 months in existence, it must be owned that the record of work done, as related by Mr. Seward Brice, Q.C., (the chairman) to a crowded meeting, on Monday, was somewhat remarkable. The company started free from all obligations and liabilities. It had to be the author of its own fortune. It acquired no big properties for which it had to pay, and though its sphere of operations was definite, it must be admitted it was wide. Thanks, however, to prudent and skilful management it has already created a valuable business good-will, and has declared the satisfactory dividend of 10 per cent. amongst its shareholders, who number nearly a thousand. It has conducted with much success a trade in wood, which has already proved to be lucrative, and promises to be still more so during the current year. It made a substantial profit out of a land operation in the City of Mexico, and has secured, on highly advantageous terms, an interest in several important mines. Much to its own advantage, and upon security of apparently the most adequate kind, it has financed the Palmarejo company, the shareholders of which may now await tranquilly the completion of the railway and the dispatch to the coast of the undoubted mineral resources of this remarkable property. One of the financial operations in which it will probably engage during this year will be the establishment of a bank for Central America. An institution of this kind is very much needed, and we quite agree with the chairman that it will attract a large part of the business of local banks, for the simple reason that it will inspire greater confidence. In support of this statement, the fact mentioned in Mr. Hunter's letter of 12th December may be stated, that the company's bills sell like bank notes, and that for "nearly every bill of exchange I have obtained 23 per cent., as compared with 19 per cent. of other persons." A French company has been brought out, which is doing well. The arrangement with Palmarejo we have already hinted at; and it has an interest in a silver copper mine in Mexico. The company is, in fact, both a trading and investing concern, and from the foregoing summary, but much more from the full report of Monday's meeting, which appears in our present issue, the reader will come to the conclusion that the directors, who have held 90 board meetings during the year, have already placed the affairs of the "Mexican Explorations, Limited," upon a substantial and profitable basis.

THE BRIGHTON RAILWAY.*

The experienced writer of this *brochure* has put within 100 pages all that it interests the public to know with reference to the Brighton Railway. In the first place we congratulate him on having giving the enterprise its true name—the lengthy one it adopts, "London, Brighton, and South Coast Railway," being considerably improved by Mr. Lawson's abridgment. He describes in every needful detail the peculiar features of its system, which embraces 435 miles actually owned, but 476 miles really worked over. The author shows clearly the exceptional advantages it enjoys, not excluding the almost entrenched position it occupies. Its great monopoly of Brighton has often been threatened, but the counsels of the railway Ahithopels have always come to foolishness, and so it remains in undisputed possession of "The Queen of Watering Places." Of course, the allegiance paid to this "Queen" is due to Her Majesty's proximity to London, and to this point Mr. Lawson is not slow to call attention. Whether the Brighton Company has the largest suburban railway system in London is a point we are not prepared to dispute with one who has been at such special pains to investigate the facts, but we should think that the Great Eastern has the best. Be that as it may, it is unquestionable that the Brighton Company's traffic is growing in all departments, and that the expenses are not increasing in the same ratio. For example, Mr. Lawson states that in the last five years the receipts have increased at the rate of 73,000*l.* a year, but the net increase has been 55,000*l.*

Mr. Lawson might perhaps have drawn more attention to the management of this concern, and in doing so could truly have said that it has greatly improved of late years. Many of the old irritating restrictions, conceived in stupidity and brought forth in ignorance, have been abolished, and so called "concessions," which have been infinitely more to the advantage of the company than to the public, have been granted. For example, express fares have been abolished; Saturday to Monday tickets are now issued to Brighton; and the best patrons of the railway—in other words, the third class passengers—are better catered for in every sense of the word; whilst we also think the trains are more punctual as well as more frequent than of yore. The direction of Mr. Laing, of late years especially, has been of an enlightened and far-sighted description, whilst his speech at the recent meeting shows that though old in years the lessons of experience have not been lost upon him, and that, to use a common expression, which, however, covers a wholesome truth, he sees the side upon which the railway shareholders' bread is buttered. A few of the old absurd restrictions still remain, like the cobwebs in an otherwise swept and garnished chamber. For example, the holder of a day ticket to or from Brighton cannot select his own time for commencing his journey, but has to submit to that appointed for him by the company. There is also coming perhaps a day when, as on the Midland—the real pioneer of the railway system—third-class passengers will be conveyed by all trains, not excluding those to which Pulman's cars are attached. When these reforms take place, the Brighton Railway will be an even much better property for investors than Mr. Lawson describes it as being to-day.

AFFAIRS IN SOUTH AFRICA.

Kimberley, 11th January, 1891.

Railway Extension.

One of the most cheering features connected with the future of South Africa is undoubtedly that of railway extension. The rooted prejudices of the Boers have at last been overcome, and the day is not far distant when we shall be able to travel by rail from Cape Town through the Free State and Transvaal northward to Delagoa Bay and eastward to Durban. Rapid progress is now being made in all directions. Orders have not yet been given for the extension from Vryburg to Mafeking, but it is expected the earthworks will shortly be commenced. It is generally believed that when the line does reach Mafeking it will stop there at least for some time, and the reason is not far to seek. The promoters of the Chartered Company

* "The Brighton Railway: Its Resources and Prospects." By W. R. Lawson. London: *Financial Times*, Telegraph Street.

have abandoned the intention of pushing the line still further northward in consequence of the discovery of the route from Pongwe Bay being within the range of practicability, the Mashonaland goldfields being thus placed within 400 miles of the sea. In a certain sense this is considered to be a rather heavy blow to the route from Cape Town to Mafeking, but, on the other hand, so strong is the general belief in the future of the Transvaal that already it is contemplated that so soon as the line reaches that town it will be at once carried westward into the Transvaal to Johannesburg by way of Malmani. The result of the conference recently held at Bloemfontein is that the line is to be pushed on to the Vaal River immediately, and sanguine people entertain the notion that by the time it reaches the Transvaal frontier the Netherlands Railway Company will meet it with the line from Delagoa Bay. What is quite certain is that the collapse of business at Johannesburg during the past year has opened the eyes of all classes, even the slow thinking Boers, and everybody has come to the conclusion that nothing but a railway right through the country can ever place the gold industry on a substantial basis. Then again, the Natal people are pushing on their line with might and main; and, lastly, the long deferred connection in this colony between our eastern and western systems will be commenced in a few weeks. This connection I have long been persuaded will be one of the utmost importance to the colony generally and East London in particular. Simultaneously with the construction of this line there will be two other important sections carried out, the one to connect the Indwe coalfields, by far the most valuable coalfields yet discovered in South Africa, and what is called the Bethulie extension, which will tap the splendid grain districts of Basutoland. So that you see we are by no means restricted in our commercial enterprises to either our diamond or our goldfields. In the Indwe we have a magnificent deposit of really good useful coal, which will be capable of being distributed all over South Africa by the end of the present year; and, as to Basutoland, and what is called the Conquered Territory, everybody who knows anything of that part of South Africa has been aware that for years past they have been looked upon as the granary of this country, and yet the land has up to this time been lying comparatively idle, owing to the want of an outlet. In the early days of the diamond fields the farmers in the Conquered Territory used to carry onions to Kimberley and get 50s. a bag for them, but since the opening of the railway from Cape Town they have been completely shut out of the market simply because we can now obtain onions from the western province at 15s. per bag.

The Market.

There cannot be a shadow of a doubt that our share market is hardening. It is true but little business is done, and the reason is obvious. For the past six months business was restricted, because everybody wanted to sell, and nobody wanted to buy; now the saddle is on the other horse: lots of people are anxious to buy. Orders are coming in every day from all parts of the country, but holders hang on like grim death. The fact is that reaction is setting in gradually but solidly. Everybody feels that we have had a terrible lesson. All the bogus companies are disappearing, winding-up, liquidating, and otherwise making as decent an exit as possible, whilst all the really good companies are settling down quietly to legitimate work. As I write the actual figure of the December output has not been published. A week ago it was confidently asserted that it would reach the predicted 50,000 ozs., but I fancy it will be some 3,000 ozs. short of that. Man proposes, but Providence disposes. No one could foretell the heavy downpour which fell all over the Randt during the last days in December. As is often the case in this country at this time of year nothing can withstand the volume of water that falls in a few hours, and in a very short time the strongest built dams are swept away with terrific force. This has happened at Johannesburg, and the consequence is that some of the largest companies on the Randt could not crush during the last week of December, hence the short fall in the output. Nevertheless we shall not be very far short of 500,000 ozs. for the year 1890, and I venture to predict that the output for the half-year ending 30th June next will be over 300,000 ozs. As for the mines round about Barberton I am strongly of opinion that there will soon be a silver lining visible in the cloud that has hung over that district during the past two years. Quotations for even the very best stocks there are altogether mislcading, for the very good reason that people will not sell. One stock that I know of is quoted regularly at 3s., and that has been the figure for the last six months. The other day a speculator, just to test the market, offered (rashly as some of his friends thought) 10s. for 500, but he could not get a single share. I record this fact to show the strong confidence that is held in some of the best Barberton stocks.

Mashonaland.

A prospector, who is with the Chartered Company in Mashonaland, thus writes of the goldfields in the neighbourhood of Hartley Hill, a spot which will be easily found in any good map of the country:—"It is not so much the country that is claiming the attention of the public as the gold which is known to abound so freely. The country is a perfect network of reefs running in every direction. There are dozens of them whose positions I have not been able to define. It is simply an impossibility to walk a dozen yards without trespassing upon your neighbour's rights. To use Dr. Jamieson's own words, 'The country consists of not one but 50 Randts,' and this opinion is shared by one and all who are here. Bring home a piece of quartz from where we may, and it gives a pan. One thing is certain. If there is such rich gold beneath as is proven upon the surface, Mashonaland will in a very short space of time become one of the richest countries in the world. Already, upon several of the reefs, shafts have been dug a depth of 30 ft., and in almost every instance the reef has been traced down with little or no variation in thickness. At present everyone is living in the highest state of expectancy, and we are anxiously awaiting the thousands to roll in. But at present all is expenditure. Of course time will prove what is to be the outcome of the company's great scheme, and little, or nothing, can be done during the fall of the drenching rains, lasting from the beginning of December to the end of March. After that time matters will be pushed on with all possible haste, and the true value of the mines will be ascertained. Several reefs have been tested with most satisfactory results. From the west bank of the Umfuli a sample of unselected surface quartz gave 4 ozs. to the ton." The writer then proceeds to give some particulars with reference to "old workings" with which the prospectors come across almost every day. All who have seen these "old workings" agree that they cannot from certain indications possibly be of modern workmanship, whilst some affirm that they date as far back as the days of King Solomon.

THE WELSH GOLD MINE CASE.

The Court of Appeal a few weeks since decided against Mr. Pritchard Morgan, M.P., in the case which arose out of the demand of the Government to exact a royalty upon the gold yielded by the Gwynfynydd Mine, now the property of the Morgan Gold Mining Company. Mr. Pritchard Morgan conducted his own case with conspicuous ability; though having himself sold the property as a gold mine, it was a little curious that he should have relied upon the two statutes of William and Mary. As one of the judges put it, Mr. Morgan, by his endeavour to escape from royalties by means of these statutes, had been attempting to use for the protection of a gold mine which contained a little lead, enactments which were solely intended to protect lead mines which contained a little gold, and to prevent them from being locked up and their ores withheld from the public for fear that they might be overweighted by Crown royalties and a licence. The result of the action was a foregone conclusion; but as the question at issue was one of real public interest, we think Mr. Morgan should have been let off without having to pay the costs. If Wales were really a gold mining country, yielding large amounts of the precious metal, the Government would probably be justified in taking a fair royalty, so as to lessen the burden of public taxation; but under the circumstances the right of the Crown might very well be left in abeyance. The amount of the royalty is, of course, a mere bagatelle, scarcely worth the red-tape that must be used in collecting it; and it is absurd, for such a trifling consideration, to impose a barrier in restriction of the development of an industry which, to say the least, might give employment to a large number of miners. In principle we do not dispute the justice of the decision, but as a matter of common sense we cannot but think that the Crown authorities should, if they are free to do so, leave the Morgan Gold Company unfettered. If the authorities have not the power they could easily obtain it.

MR. THOS. THOMPSON'S MINING AND INVESTMENT CIRCULAR.

The circular for February, issued and written by Mr. Thomas Thompson, is largely devoted to Loma affairs. We were curious to see, in view of the low prices that have lately ruled for Lomas, whether the author repudiated his offspring, or sang its praises in the minor key. Of neither the repudiation nor the low pitched tone is Mr. Thompson guilty. On the contrary, all that ever he said of Loma he repeats and doubly emphasises. Instead of deploring present quotations, he rather regards them as an inducement for those who are influenced by his advice to buy them, and he predicts with confidence, "a considerable improvement." He is right in saying "they can hardly go lower," and right, probably, in speaking of the present prospects of a considerable advance. It is within our knowledge that large purchases have lately been made in view of the latter contingency. We note what he says about Gravel Gold, a mine that is rapidly coming to the front, and also the information relative to Colombian Mines generally. The circular, as a whole, offers much room for reflection on the part of investors, and summarises a good deal of important mining information.

THE SOUTH AFRICAN TRUST AND FINANCE CO., LIMITED.

There are now so many shareholders in South African companies who are resident in this country that a scheme by which they can be represented at the meetings of those companies, and so have their views expressed, is likely to meet with a considerable amount of support. This appears to have been the case with the South African Trust and Finance Company, Limited, the first directors' report and

statement of accounts of which has just been issued to the shareholders. This document deals with the operations of the company from its inception (24th January, 1890) to 31st December last, and it truly remarks:—"The period which the accounts embrace has been one of depression, intensified by the financial crisis which occurred towards the close of the year. It has therefore been necessary for the board to exercise great caution, and the opportunities for the transaction of profitable business have been limited." Notwithstanding this, however, the company appears to have done fairly well. The depreciation which has taken place in some of its securities has been more than counter-balanced by the appreciation in others, and on the 31st December, 1890, their market value was about 1,650*l*. in excess of the cost price at which they are entered in the balance-sheet. This appreciation is an unrealised profit, and has not been taken credit for in the accounts. The realised gross profits of the company were 6,951*l*. 5s. 7d., which, after payment of working expenses and the Government duty on registration, left a balance of 2,234*l*. 2s., which the directors recommend should be carried forward to the credit of next account. This result for the first year we think will be satisfactory to the shareholders, and as the objects of the company become better understood there is no doubt its business will increase. We may mention that in addition to representing shareholders at meetings in South Africa, as stated above, the company undertakes the skilled investment in South African mining, land, or other securities for European investors; the professional and confidential reporting upon companies and properties, and generally advising European shareholders and others in South African ventures; the financing or advancing moneys to corporations. companies, syndicates, or persons in South Africa; and the purchase and sale of properties, and all classes of South African securities and interests.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

THE Money Market has been very depressed, owing to the abundance of capital offering, and the more favourable course of the bullion movements. Since the dividends were paid, and the South Indian Redemption money released, the plethora has been increased by the progress of the liquidation of the Baring estate, and with the 4th of the month a large amount of bills fell due, and were paid by the Bank, thus adding to the market supply. The operations of the Chancellor of the Exchequer have also added a million, but against this the Revenue collections have absorbed a considerable total. Discount has fallen away, and is now about 1⅞ per cent. for three months' bills, while money, although meeting with rather more inquiry than last week, is barely so good at 1 to 1½ per cent. Following the Bank of Germany, the Austro-Hungarian Bank has reduced its rate of discount from 4½ to 4 per cent. The return of the Bank of England, in spite of an export of 150,000*l*. in gold, shows an increase of 147,000*l*. in the bullion, but as the note circulation increased 334,000*l*., the reserve is less by 187,000*l*. at 17,411,000*l*. (against 13,440,000*l*. last year), but this includes 3,000,000*l*., which will probably be returned to France before the issue of the next return. The public deposits have increased over half a million, but the private deposits have decreased 1,179,000*l*., so that the proportion is rather better at 45¾ per cent. Three months' Bank bills were quoted to-day 1⅞ per cent. and under, there being now no export demand for gold in the bullion market, but bills have continued scarce. Money at call and for short loans was offering at 1 per cent. without borrowers.

At the Bank to-day 32,000 sovereigns were taken for South America. Bar silver was unaltered.

Business at the Stock Exchange during the past week has been almost at a standstill, even investment business being affected. The Italian Ministerial crisis is not looked upon with any anxiety, as it is generally believed that the Triple Alliance will not be affected, and the stock, in fact, stands higher now than for months past. At Home the "Ripon" Emancipation Bill has been defeated by a majority of 33. In the States the Free Coinage Bill still hangs fire, and in all probability will not be passed. The railway reports published up to now show how largely the increased cost of materials, fuel and wages have absorbed the increase in the gross takes, but some have been able to show larger net results notwithstanding. The Metropolitan District Railway will pay 1 per cent. on the Preference, and carry forward 10,000*l*., while last year no distribution was made, and only 6,000*l*. was carried forward. The North-London Railway will distribute 7½ per cent., place 10,000*l*. to reserve, against 7,500*l*., and carry forward 6,160*l*., as against 5,514*l*. Both the Great Western and North-Western Companies announce dividends at the rate of 7¾ per cent., as compared with 8 per cent. last year. The Funds, together with Indian Government securities, have risen ¼ to ⅜, but Colonial Inscribed were not so good. In Foreign Government bonds the changes were slight, but nearly all of a favourable character, Italian being particularly good. The "heavy" home railway stocks have risen, Great Western leading with a rise of over 1 per cent, and others about ½ per cent. Brighton "A," Sheffield, and Great Northern were hardly so good, however. A general advance is shown in United States Railroad securities. Lake Shore has risen 4, Milwaukee, New York Central, and Union Pacific 2, and the rest ½ to 1. Grand Trunk stocks also show gains of ½ to 1, and Mexican were ½ to ¾ better on the expectation of a reduction in the freight rates between Liverpool and Vera Cruz, and the delay in the opening of the Inter-Oceanic Line. Breweries, particularly American, have been active and good, but Miscellaneous securities, as a rule, disclose but insignificant alterations.

The Stock Markets to-day have been idle, but one or two important features transpired. Brazilian bonds were heavily sold, and fell from 74 to 69½ on supposed extensive sales on Paris account, but on the telegrams proving forgeries the price as quickly recovered. The Midland dividend was a most favourable surprise, an increase of ¼ per cent. being announced, the distribution this time being at the rate of 7 per cent., as against 6¾, and the stock was put up 2⅜ in consequence. The Funds were rather better, but Rupee Paper was lower. In the Foreign Market, Italian, after a temporary weakness, closed ¼ higher, but Argentine and Buenos Ayres issues ½ down, the premium on gold having risen to 228 per cent. The Scotch Railway stocks were dull, but the "heavy" lines advanced on the unexpected dividend of the Midland Company. The American Market has lost yesterday's advance in response to lower prices from New York, but the toue, nevertheless, was steady, with an exceptional advance in Reading and Union Pacific issues. Both Grand Trunk and Mexican stocks reacted a trifle owing to speculative realisations, and in the Miscellaneous departments the tendency was hardly so good. Bell's Asbestos, however, rose ½, while most Banks show a further loss on their threatened independent action.

Annexed are the final quotations to-day:—Consols Account, 97 7/16, 97 9/16; Egyptian Preference Three-and-a-Half per Cent., 94¼, 94½; Egypt Unified, 98, 98¼; French Four-and-Half per Cents., 104½, 105½; Hungarian, 92, 92¼; Italian, 92⅞, 93⅛; Mexican 92, 92½; Peru Corporation, 10½, 11½; Peru Preference, 28, 29; Russian, 99, 99½; Portuguese, 55⅛, 55⅜; Spanish, 76 3/16, 76 5/16; Turkish, 1871, 98¾, 99¼; Turkish Defence, 102, 102½; Caledonian Railway, 119⅝, 119⅞; Great Eastern, 92, 92¼; Great Western, 164¼, 164½; Brighton "A," 158¾, 159; North Western, 179⅛, 179⅜; Metropolitan, 78¼, 78¾; Metropolitan District, 30¼, 30¾; Midland, 152¼, 152½; North British 51⅝, 52⅛; North Eastern, 166½, 166½; South Eastern "A," 91¾, 92; Mexican Railway Ordinary, 45¼, 45¾; Grand Trunk 9⅝, 9⅞; Grand Trunk First Preference, 63¾, 64; Grand Trunk Second, 43⅜, 43⅝; Grand Trunk Third, 23, 23¼; Canadian Pacific, 75¼, 75½ xd.; Denver 19⅜, 19⅝; Erie, 20½, 20¾; Milwaukee, 56⅝, 56⅞; Lake Shore, 115, 115½; Louisville, 77¼, 77½; Atlantic First, 33⅜, 33⅝; Ontario, 17½, 17½; Ohio, 18¾, 19¼; Norfolk and Western, 57, 57¼; Reading, 16¼, 16¾; Reading 5 per Cent. Bonds, 56, 57; Union Pacific, 47½, 47¾; Wabash Preference, 19½, 20; Ottoman Bank, 14⅝, 14¾; Anglo-Telegraph Ordinary, 48¾, 49¼; National Telephone, 4½, 4¾; Hudson's Bay, 18½, 19; Suez Canal, 96, 97; Guinness, 313, 316; Allsopp's Ordinary, 42, 44; Bryant and May, 14, 14½; Bell's Asbestos, 12½, 12¾.

SOUTH AFRICAN CRUSHINGS.

THE FOLLOWING IS A COMPARATIVE STATEMENT OF THE CRUSHINGS SO FAR AS ALREADY ANNOUNCED.

	January.	December.
	ozs.	ozs.
Forbes Reef	570	308
Oriental and Sheba Valley	830	271
Ferreira	4,033	—
May Consolidated	2,078	2,025
Simmer and Jack	2,445	2,563
Ni-Wot	600	580
May Deep Level	717	—
Central Langlaagte	610	675
City and Suburban	881	900
Heriot	246	300
Nigel	1,103	1,108
Durban Roodepoort	877	1,406
Stanhope	667	369
Jubilee	1,019	1,056
Geldenhuis Main Reef	425	432
Jubilee	1,019	1,056
Langlaagte Estate	4,600	4,750
Salisbury	400	530
Transvaal Gold Exploration	1,300	1,150
Edwin Bray	396 first crushing.	

LEAD ORE SALE.

Date.	Name.	Tons.	Rlsd. per Ton.	Purchaser.
Feb. 3.	South Darren	15	12 5[illegible]6	Nevill, Druce & Co.

WOODHOUSE AND RAWSON UNITED, LIMITED.—The directors have declared an interim dividend at the rate of 15 per cent. on the ordinary shares and 8 per cent. on the preference shares, in respect of the profits to the 30th December last. In reply to various enquiries as to the prospectus offering the new capital, the directors state that they hope to issue it early next month.

MIDDLESBOROUGH STREET RAILWAY CO., MIDDLESBOROUGH KENTUCKY.—The directors announce that the satisfactory progress made in traffic during the last six months enables them to declare an interim dividend of 4 per cent., which will be paid on the 14th of February to all stockholders whose names were on the register on, the 27th of January last.

FRAUD UPON LONDON STOCKBROKERS.—The fall in the price of Brazilian stock on the Stock Exchange in London is attributable, says a Reuter's Paris telegram, to the following circumstances:—A large number of forged telegrams containing orders to sell were sent off this morning from Paris to the principal stockbrokers in London under the forged signature "Camondo." The real M. Camondo, on being apprised from London that orders which he had never given had been executed, discovered that he had been made the victim of a wholesale fraud, and immediately informed the police. The object of the orders in question was to disturb and depress the market for Brazilian securities.

REPORTS OF MEETINGS.

SOUTH-EAST MYSORE GOLD CO., LIMITED.

THE MINE, 500 FT. DEEP, CONSIDERABLY BETTER THAN WHEN AT 295—ORE NOT REFRACTORY—THE MANAGERS ADVISE THE BOARD TO PROCEED, AND THE LATTER TAKE STEPS TO DO SO BY RAISING FURTHER MONEY ON DEBENTURES.

A SPECIAL MEETING of this company was held at the City Terminus Hotel, on Thursday, to pass a resolution with reference to a further issue of the present series of debentures.

Major-Genl. G. de la Poer Beresford (chairman of the company) presided.

Mr. JOHN GARLAND (secretary) read the notice of meeting.

THE CASE FOR FURTHER FUNDS.

The CHAIRMAN: Gentlemen, I have not very much to say to you. Our capital is nearly expended, but we have power under the articles of association to raise fresh funds, though before doing so we thought it better to come to the sharcholders and get their sanction, and what we now propose is to ask you to authorise the raising of this fresh capital in such a way as the directors may think fit. We have a right to issue debentures, and by so doing can prove the mine to a greater depth than we have hitherto done. We have driven north from the present shaft 214 ft. We have over 80 ft. of a lode with good indications, said to be very promising, and likely to open out well. We have driven south about 60 ft., and are still in hard ground, but being at the 500-ft. level we hope soon for better news. That is all the statement I have to make regarding the mine, but if any shareholder wishes for further iuformation than that which will be contained in the address Mr. John Taylor will deliver, he will be happy to furnish it in reply to subsequent questions. The resolution I have to propose is, "That this meeting having heard the statement of directors on the present position of the company approves of their borrowing such further sum as they may think proper in addition to the amount of debentures outstanding, for the purpose of continuing the developments and progress of the mine until the value of the lode in depth in the board's opinion has been fully tested." I need not say that the board will do nothing without the advice of the managers, Messrs. John Taylor and Sons. (Cheers.) The present amount of debentures outstanding is 3,000*l*. We can pay that without raising fresh capital.

A SHAREHOLDER: On what terms do you propose to raise the money?

The CHAIRMAN: We have not considered them. That point must be left to the directors.

A SHAREHOLDER: Has any gold been sold since the last meeting?

The CHAIRMAN: I think not. We have not had any crushings since then.

A SHAREHOLDER: Is is proposed to issue further debentures?

The CHAIRMAN: They will be of the same series, of which there are now 3,000*l*. outstanding.

Mr. MARTIN WOOD: I was going to put that very question. It seems that this loan is to be on debentures, and that these will rank the same as the present issue precisely.

The CHAIRMAN: They are the same series, and there will be no disadvantage to those existing.

Mr. WOOD: There are preference and ordinary shareholders, and this is an additional liability. Could you give us some idea of the amount that will be required?

The CHAIRMAN: If we find the indications are bad we will not throw away your money any more than our own. If we find them better, and the prospects improving, of course we will go on with the working of the mine — always acting under the advice of our managers.

Mr. WOOD: I think the shareholders would desire a fuller statement than that which the chairman has made.

The CHAIRMAN: I have invited you to ask questions for that very purpose.

Mr. WOOD: Seeing the fortunes of the company have hitherto been so bad, could you not approach the origiual concessionaires with a view to getting some return? It is a large sum that they had paid (80,000*l*.), and I think, as they are in a certain sense partners in the undertaking, some concessions should be had from them.

VIEWS OF MR. JOHN TAYLOR.

Mr. JOHN TAYLOR (who was heartily received): I think it may be more agreeable to you that I should say a few words rather than that you should put questions—an opportunity which will not be denied to you after my remarks, and your questions will then elicit any further information that may be desired, which I shall be only too happy to give if it be in my power to do so. It may be more convenient, from your point of view as shareholders, to address you now than for me to wait for you to cudgel your brains to ask questions that may possibly be anticipated. The history of this mine is a short and simple matter. On July 7th last I made a statement to the meeting as to the condition in which the mine was then. I told the shareholders plainly what our view was, that if they desired to obtain success

THEY MUST SINK DEEPER.

We impressed that view on your directors, and advised the sinking of the main shaft to a depth of 500 ft. I said at that meeting of July 7th that I thought the proving of the vein at that depth would show you something decisive, and I now think you will agree with me that it has done so. The reports of the superintendent, and from our agent, Mr. Scantlebury (who has inspected the property, and who is keeping watch over it on your behalf), must have clearly shown you that there is a decided change in the character of the vein at 500 ft. deep, as compared with what it was at 295 ft. The chairman has mentioned that the 500-ft. level has been driven north 214 ft. That distance is given in a telegram, which he has not read, because he would think there is very little news in it beyond what you have seen in the printed reports. The telegram gives you this much information, however, that the level has been driveu 214 ft. north and 60 ft. south. The lode at the 500 ft. has been about 2½ ft. wide, and half of that has been quartz containing gold most persistently—not as rich as you will read of in the other mines upon the Colar field, but from 3 up to upwards of 13 dwts. in these 18 ins. of quartz. (Hear, hear.) The vein is decidedly improving in value in its general charaetcr at the iucreased depth. Capt. Scantlebury has told us that it is letting out a considerable stream of water, and he says the walls are good, and, in his opinion, there is

NO DOUBT ABOUT IT BEING THE TRUE FISSURE VEIN

we have supposed it was from the beginning—from the time, that is, when we first became connected with this company. In addition, he tells us what may prove to be a very important feature, which is, that there is no lime, or but a very small proportion, or iron, associated with the quartz at this depth, which was seen in the upper levels. He says:—"I can wash more gold out of one sample at this level than out of 20 at the 295." That implies a material alteration, not only in the strength and condition of the vein, but in the charaeter of the stuff in a further siuking of something like 200 ft. (Cheers.) Mr. Hodgson, whom you all know, tells you, what must be perfectly clear, that you are now about to prove what you have beeu expending a considerable sum of money upon. It is very evideut that you are on the point of proving that the lode is either not worth pursuing further, or that it offers every inducement to explore it in depth. Now with regard to that, we can only take the experience of other mines on the field. Fortunately, there are several whose workings have proved beyond doubt that they are profitable and of a character to induce any of you to embark further money. The experience of these mines, in the first instance, has been that they have had to get beyond the old workers, who went down to 250 ft. in this very mine, and in one placc to 260 ft. We have the absolute proof in other places in the field that the followiug of these old workers in depth and the prosecution of the veins below has been eminently satisfactory. It appears to me that you are in this position, that you can, by a further moderate expenditure, test whether or not your mine is going to follow the extremely good example of the others, or whether it is not.

SHAREHOLDERS ADVISED.

You all know what has been doue in the other mines, and I can only tell you that, after the expenditure of money aud time that has elapsed in carrying out the business you have in hand, I could not thiuk of doing otherwise than advise you to support your directors in pursuing the policy they have now before them to a certain further extent. (Cheers.)

A SHAREHOLDER: How far is this mine from the Mysore?

Mr. TAYLOR: It is a parallel vein—not the same vein. The distance is about half a mile, or 2,500 ft.

A SHAREHOLDER: Can you tell what the cost of reduction per ton of ore will be, so that we may judge from the telegrams whether there is a chance of the mine paying?

Mr. TAYLOR: The cost of reduction will not take you very far, as you will require to know that of mining and milling as well, and it all depends on quantities. The figures which are published in connection with other companies working on the same field will show you that that varies considerably. In the case of a company working large quantities, probably 5 or 6 dwts. will pay the whole expense, but the smaller the quantity the larger the ratio of expenditure will be. I am afraid that is a question put too soon—that is, before we are advanced enough to answer it.

QUARTZ NOT REFRACTORY.

I have said enough to indicate that the quartz at the increased depth is not of a refractory character as compared with what it was at surface, and I look upon that as a very important point. (Cheers.)

A SHAREHOLDER: Seeing the directors were authorised to issue 25,000*l*. of debentures, and did issue 3,000*l*., how does it come to pass that it is now necessary to ask for further powers?

The CHAIRMAN: We issued a great deal more than 3,000*l*., but at our last meeting in July we asked for fresh capital. We were then questioned as to why we were wanting so much, and answered that we wished to clear the mines of debt and pay off the debentures. We have legal advice that we cannot issue these debentures without coming to you and getting your sanction, or else it might place us in a dilemma, and hence the meeting.

Sir ROPER LETHBRIDGE, M.P.: As one of the directors, selected by the shareholders a year or so ago, in order to assist the further development of this mine, I would like to say a few words in support of Genl. Beresford's motion, which I will formally second. In my opinion, what we have done of late is most important, for we have secured the

EXCEEDINGLY VALUABLE AND IMPORTANT SERVICES OF MESSRS. JOHN TAYLOR AND SONS

as our managers. To that object my first efforts were directed when I joined the board at your request, and by your wish, and, therefore, I feel entitled to say that in doiug so I carried out your views, and now wish to congratulate you on having obtained the most effieient advice that we could possibly have secured. You have heard from Mr. Taylor what is known of the prospects of the mine, and what is his opinion of the policy your directors will be wise in following, and you will be wise in supporting. I feel we could have no better guide than Mr. John Taylor, and I think you will agree with me also that the resolution I second is both wise and opportune. (Hear, hear.)

After some remarks by Mr. VEARS,

Mr. MARTIN WOOD asked whether the new debentures would be on the same footiug as the old?

The CHAIRMAN: There are no new and old debentures; the present is a portion of the issue of 25,000*l*., which will be offered on the same terms.

Mr. WOOD pressed his question as to obtaining some concession or assistance from the origiual vendors.

The CHAIRMAN: I would be glad to get something back, but do not see how it is to be managed. The origiual company that sold this property is in liquidation. "Eaten bread is soon forgotten," and I do not think it will be of any use to approach the liquidator of the old company. I have to express regret at the absence of Mr. Hamilton, which is caused by the death of a relative in Scotland.

A SUGGESTION.

Mr. RAYNAR ST. STEPHENS: It seems from the remarks of the chairman that there will be some difficulty in getting any concession from the original vendors, but could not something be done with the property to the north, which, as far as surface appearances go, presents as good prospects as any property on the Colar field? You have a large extent of ground, and the whole of the work as regards the South-East Mysore is concentrated below the middle of the property to the southern border. You have at least 2,000 ft. to the north of the Raynar shaft, and there is no doubt that there is not a better tract of ground anywhere. If this were to be sold it would be of great benefit to the company in a variety of ways. The lodes are strong and thoroughly worth developing.

The CHAIRMAN: The suggestion is very good, but we want a purchaser, and if you can get a bid for it you will be doing the company an essential service.

Mr. ST. STEPHENS: There are numerous enquiries for Indian gold properties. (Hear, hear.)

The CHAIRMAN: We did think of that some time ago, and were in negotiation, but it fell through. We would be glad if anyone were to come forward as a purchaser now.

The resolution was carried unanimously.

Mr. VEARS proposed a vote of thanks to the chairman and directors, whom he complimented upon attending the meetings regularly, and upon doing their best for the shareholders, although, so far, no dividends had been declared.

LATEST REPORT.

(13th Jan.)—Fortnightly report of mine agent.—The 500-ft. level north is now 166 ft. from shaft, and has been driven on a continuous shoot of quartz for a length of 100 ft.; the lode in the present end is 4 ft. wide, composed of decomposed schist and lodey matter, with 2 ft. of quartz on the footwall, and worth, according to a sample I washed this morning, 3 dwts. of gold to the ton. I am under the impression that the end is now getting into the wide shoot of quartz seen in the 295-ft. level near the shaft. A few blasts will prove whether this is so or not. The 500-ft. level south is extended 45 ft. from shaft; the rock is exceedingly hard and difficult for blasting, but better progress has been made during the past two weeks than hitherto. I am anxious to see this end pushed ahead as fast as possible, as I feel sure that this hard ground will soon change, and when it does the shoots of quartz seen in the upper levels will be met with. I do not see that anything can be done for the present to advantage than to drive with all possible speed these two ends.

WHEAL METAL AND FLOW.

MACHINERY PUT IN REPAIR UNDER THE VIGOROUS DIRECTION OF CAPT. THOMAS—A CALL OF 1s.

THE adjourned meeting of this company was held at the Offices, Gracechurch Buildings, Gracechurch Street, London, on Thursday.

Mr. J. H. Collins presided.

The notice of the meeting was read by Mr. C. B. PARRY, the secretary.

AGENTS' REPORT.

20th January.—Since the last meeting of the adventurers we have drained Watson's engine shaft to the 35-fm. level below adit, which is the bottom of this shaft. To carry out the above work we were obliged to drop pitwork from adit level to the 35-fm. level, which necessitated our making and erecting shears and capstan for more economical working. In draining the shaft we have had considerable trouble and a great deal of water to contend with. We have drawn the spare pitwork to surface, cased and divided the shaft, and repaired footways, &c. We have cleared the 27-fm. level, and are preparing to drive it east on the celebrated Old Metal lode, which produced large quantities of tin at a shallow depth. The lode in this end is about 18 ins. wide, composed of peach and mundic and a little tin. We shall push on this level with all possible speed. We shall also, as soon as practicable, drive the 27-fm. level west. We have erected a new six head stamps at Blue Bridge, which is at present working very satisfactorily. The returns of tin have not been so much during the last four months on account of the very severe frost. The last parcel of tin sold contained such a large quantity of mundic that we had to erect a burning house to burn the tin before selling; this will be completed this week. We have on the mine at present about 6 tons of tin unsold, and which must be burnt before selling.—F. W. THOMAS, S. P. CURTIS.

The CHAIRMAN said: This meeting is adjourned from that called for the 22nd, when we found that for various reasons we were unable to decide the business before us. I went down to the mines last week, as I promised, and looked very carefully into the whole state of affairs there. I found the shaft drained below the 27, and that level was being driven eastward. The lode had a good appearance, but not so good as I remember it in the 35 before our accident. I hope before long to hear that the water is out of the 35, and that all four ends are being driven as proposed in Capt. Thomas's letter of December 20th. I cannot say that I altogether approve of the substitution of stamps for pulverisers to a large extent, which has taken place since my last visit; however, the thing is done, and we must make the best of it. The sand from the Flow looks better than I have ever seen it. We have 34 stamps, one pulveriser, five large concave buddles, 141 frames, and a great many strips, tyes, and pits in use in getting out the tin, and all in good order, besides three small stamps and two pulverisers at Roseladden, lower down the valley. There is an abundance of sand, a tramroad to bring the stuff to the stamps, and a tinny lode at the 35-fm. level. We have the burning-house completed and in operation, so that there will really be no excuse for the tindresser if our tin does not fetch a good price in future. Altogether, taking things as they are—and without reckoning on any improvement in the mine (which may yet be fairly expected), and without any material increase of our working cost, I think we ought to get at least 5 tons of tin per month, worth 50*l*. per ton, which would pay all expenses and even leave a small profit while we are searching for the rich parts of the Metal lode. The Chairman concluded by inviting discussion.

VIEWS OF SHAREHOLDERS.

Mr. SIMMONDS: You referred to the driving at the 27 and also to a level at the 35—have we one at the latter point?

The CHAIRMAN: Yes; but I suppose the water is still in it.

Mr. SIMMONDS: Is it worth while to drive at the 27-fm. when we shall shortly be deeper?

The CHAIRMAN: I approve of Capt. Thomas's recommendation to drive both levels where we have a fair chance. We had a letter from Capt. Thomas to that effect on the 9th December, in which he says, "We propose now to drive east and west on Watson's engine shaft at the 27-fm. level and 35-fm. level on the old Metal lode. The cost will be for the next six months about 360*l*., and the extra coal bill, 120*l*. With sundry other work (100*l*.) the total will be 590*l*. This, of course, is in addition to the ordinary labour cost. I presume I must do the above work, and shall proceed with it unless I hear from you to the contrary." The committee approve the plan, and it is being proceeded with.

Mr. SIMMONDS: Our arrangement when this company was brought out was that we were not to expend more money on exploration than we made out of the Flow. I went into this as a commercial affair, and not as a mining speculation, but if we are going to develop the mine it will cost a great deal.

The CHAIRMAN: Not at all. You must keep the pump going, and the only extra expense is working with both hands instead of with one, whilst you have all the chances of coming upon something rich.

Mr. SIMMONDS: What does Capt. Thomas estimate the returns will be?

Mr. WAGSTAFF: You state that the tin, at the present time on the Flow, is richer than before.

The CHAIRMAN: Yes; I think the Flow is better than ever I have seen it.

Mr. WAGSTAFF: Then how is it our returns are so much worse?

WHAT HAS BEEN RAISED.

The CHAIRMAN: They are about the same. I have taken out of our past accounts a summary of the tin raised. In 1886 we obtained 52 tons; 1887, 42 tons; and in 1888-89 we had 101 tons, and in 1890, 46 tons, besides some tons on the Flow now. I think we have been practically at a dead level in that way, but the time has come when we should go on no longer in that fashion.

Mr. SIMMONDS: Some time ago we laid out money to increase the returns, but our figures show that they are stationary.

The CHAIRMAN: Does Capt. Thomas believe that this estimate of 5 tons of tin per month is obtainable without increasing the labour costs? My belief is that for the kind of stuff we get from the Flow we want both stamps and pulverisers. I believe in stamps, but I think we also want pulverisers, though I know they give trouble. Those we have were badly fixed, and they have been changed for stamps. My view is that we might have bought new stamps, and the pulverisers should have been so fixed that they would work without breakages. Had they carried a drum, and put on a belt instead of the spur gearing they did employ, they would have worked well.

Mr. WAGSTAFF: I told Capt. Argall precisely the same thing, and showed him how we were losing power for nothing.

The CHAIRMAN: I should like to have the opinion of the manager, whether without increasing costs he can give us 5 tons a month in the future.

VIEWS OF THE MANAGER.

Capt. F. W. THOMAS: I do not like to say so positively. I am sorry I could not come to the meeting a fortnight ago, as our meeting at Dolcoath prevented me. I did not know even that Mr. Collins was about to visit the property, or I would have met him on the mine, though I saw him after he had been over it. The statement of accounts, as presented at the last meeting, no doubt surprised the shareholders, but I had not seen it until Mr. Parry handed me a copy last Monday night. I knew the returns of tin not being so large, the accounts would be more unfavourable than usual. But I thought that what had been written would conclusively have shown how, under the circumstances, we could not have done better. We estimated that there were 5 tons of tin on the mine. Now, formerly we used to burn some of the tin at Great Fortune burning-house, but Great Fortune is closed down, and we thought the expense of carting so great that it was better to put our own burning-house in order and do the best we could. I wrote to the committee on December 9th, and immediately ordered the burning-house to be put into repair. The tin we estimated there was about 6 tons, of which we sold yesterday 32 cwt., at a price of 48*l*. 12s. 6d., which must be considered very satisfactory. We have a large quantity of stuff containing tin, which we have not been able to treat in the burning-house, and, in addition, the severe frost we had for six consecutive weeks has thrown us back. That is the reason the loss has been so great in the last four months. Mr. Collins said he should not have advocated stamps being put up instead of pulverisers, but I thought I laid the whole matter clearly before the adventurers last March when I told them that the pulverisers were bought from the Red River Company, that they were not in good repair, and that they cost upwards of 16*l*. a month in shoes and other appurtenances. We have been working "quick motion stamps" at Dolcoath, and, being one of the largest shareholders here, I thought it well to put up stamps, which I do not think have cost (except for the accidental breakage) for real work 5*l*. since July. There is a great controversy in Cornwall as to pulverisers *v.* stamps, but I shall stick to stamps myself until I see better pulverisers than those that are at present in use. I certainly do not suggest further expenditure on pulverisers. When I took office the frames were in a dreadful condition, and it took long to put them in order, but I believe they are now doing their work well. The mine was taken over in a very dilapidated condition. When we get the water out we shall commence to drive the 35-fm. level.

The CHAIRMAN: The question of pulverisers *v.* stamps is much canvassed in Cornwall, and a difference of opinion between myself and Capt. Thomas on the subject does not imply anything personal. (Hear, hear.) I admit it is cheaper to put up stamps and work them, but my experience is that, although that is the case, the quantity of tin you do not get with the stamps and do get with the pulverisers much more than makes up the difference—at least, that is my conclusion, though I may be wrong. We have now a pretty fair plant in good condition, and the heavy extra expense is over.

JUSTICE TO CAPT. THOMAS.

Capt. Thomas: You will agree with me that a great deal of work has been done during the last 12 months.

The Chairman: There is no question about it.

Capt. Thomas: I think we now have 4½ tons of tin on the mine not burnt. The slime tin has not been dressed for eight weeks. I think the burning-house, as now put in order, will do all we want at present.

The report was unanimously adopted.

A Shareholder: What is the balance against us?

The Chairman: About 1,000*l*., against which we have 4½ tons of tin, which would reduce it to about 750*l*., and a call of 1s. will provide 600*l*.

Capt. Thomas, pressed by various shareholders, said: I decline to guarantee a return of 5 tons of tin a month, but I will go so far as to say that we ought to get 4½ tons.

A CALL OF 1s.

Mr. White moved, and Mr. Simmonds seconded, a call of 1s. per share, which was agreed to, and after some further conversation the meeting closed.

THE IMURIS MINES, LIMITED.

A CRUEL AND COWARDLY MURDER DEPRIVES THE COMPANY OF ITS SUPERINTENDENT AND DISORGANISES AFFAIRS—THE DELAY IN RAILWAY CONSTRUCTION—PROVED MINES AND GOOD PROSPECTS FOR THE FUTURE.

The first ordinary general meeting of this company was held on Monday, 2nd February, at Winchester House, Old Broad Street.

Mr. James Whittall (the chairman of the company) presided.

The Secretary (Mr. Dundas Pillans) having read the notice calling the meeting, the report of the directors was taken as read.

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen, I regret very much that it has not been in the directors' power to present to you as complete a form of accounts as they could have wished. You will most probably have heard of the assassination of our late superintendent, Mr. Farrell, which took place in the month of October last at the mines, at the time that I was there. I visited the property in consequence of the somewhat brief and scanty reports furnished to the board from time to time, both as regarded the construction of the railway, and the accounts being wanting in details.

THE CRUEL MURDER OF MR. FARRELL,

however, necessitated the closing up of all that gentleman's papers, and I found it impossible to arrive at the full particulars required. There is no doubt, however, that all monies have been honestly and economically expended, as I was in time to go through the books with Mr. Farrell and his accountant. The only difficulty was to ascertain the amounts which should be placed respectively to capital expenditure and to development work, eventually to go to profit and loss account; but a settlement of these questions will not be difficult to arrive at, and in the next report they will be satisfactorily adjusted. The final call of 5s. per share was, as you know, made on the 1st November, and the balance due to the vendor was handed over to his attorneys before the announcement of his death, so that now all obligations are completed.

DELAY IN CONSTRUCTION OF THE RAILWAY.

Another matter that requires some explanation is the delay that has taken place in the completion of the railway and the mill. It will be within your recollection that a year ago the directors led the shareholders to hope that the railway would be completed about last September, and that they would be at work at the end of the year. Still, the month of February in another year has come round, and we have to ask your patience for a little longer. The first disappointment that we met with was the continual illness of Mr. Thompson, who, you will remember, accompanied me to the mine on my previous trip, and he was then appointed consulting adviser. Well, gentlemen, awaiting Mr. Thompson's return to convalescence, the board thought that your property would be in safe hands under Mr. Farrell, who possessed such a large interest in the undertaking, and claimed the superintendence of the mine, according to his agreement, until a suitable successor was obtained.

"DELAYS, DISPUTES, AND STRIKES."

Unfortunately, Mr. Farrell was not equal to the occasion, and in order to save the cost of labour he endeavoured to work with too few men, and moreover he was not in touch with those under him, the result was delays, disputes, and strikes; and last, but not least, the railway has proved a much greater undertaking than was at first contemplated. During all this time your board were looking out for a suitable successor to Mr. Farrell, but they found it easier to want than to succeed in finding one, and it was only in the month of September last that we came across Mr. Seymour, who very fortunately arrived upon the property just in time to succeed Mr. Farrell before his death.

A WORD OF PRAISE FOR THE NEW SUPERINTENDENT.

Well, gentlemen, in Mr. Seymour the board are of the opinion that they have secured an excellent superintendent, and from the short experience we have had of him we feel sanguine that under his able management it will not be long before we overtake all arrears. Mr. Seymour leads us to hope that the railway and the mill will be ready and in working order about the month of May. After leaving Mr. Seymour in full charge of the mine, I started for the City of Mexico, in order to secure the zone, which we had applied for, giving us the right to prospect over an area of 20 miles by 16 miles, which cannot be encroached upon by others, of course not excluding prior denouncements, which, so far as could be ascertained, were of no moment, if any. Such zones are granted to companies who have shown their *bona fides* by fulfilling their previous engagements to develop the country, and as an encouragement to them to extend their operations. They are generally granted for a period of 15 years, and carry with them the privilege of selecting any 15 claims or mines before the expiration of that period. In addition to the mines which your company already possesses,

THE SHEBA, THE IMURIS, THE OPHIR, THE SAN JOSÉ AND THE ERIN MINES,

we have already tried several other outcrops, all of which show such good results that there can be no doubt whatever that the whole area is one mass of vast mineral wealth which should greatly add to the value of the property. In order to hasten the acquisition of these claims, and as local technicalities had to be coped with, we decided to get our lawyer to apply to the Governor of the State for the zone, but before I left Mexico I had the satisfaction of knowing that it was legally transferred to this company, and only required the confirmation of the Senate which General Pachica, the Minister of the Interior, confidently assured me would be granted with as little delay as possible.

VISIBLE ORE, AND WORK FOR TWO OR THREE YEARS, IN SIGHT.

Now, with regard to the mines themselves, I have only to repeat what I have often said before, that I have no doubt whatever that the company possesses a very valuable property. In the Imuris Mine alone there is ore visible which only requires stoping to provide employment for the uext two or three years. I am well aware that estimates cannot generally be relied upon, but it is the unanimous opinion of those authorities who have visited the property that the ore upon the dumps and ready to be taken out is of the value of from 350,000*l*. to 400,000*l*., and I must say that I most thoroughly believe it. (Cheers.) Then, in addition to that, there are also the Sheba, the Erin, and San José Mines, all of which give great promise, although not developed to the same extent, and there is, therefore, every reason, I think, for taking a highly favourable view of the company's position and prospects. Before asking you to pass the report and accounts, I invite, and shall be pleased to answer, any question you may have to put to me to the best of my ability. (Cheers.)

Rev. C. E. Few: Can you tell me, Mr. Chairman, if you have any large samples of the ore in bulk that gives you any idea of the estimated value of the ore?

The Chairman: I may say that 10 tons have been sent over within the last three or four months, and that ore has realised 32*l*. per ton; another quantity was being sent over, but, as you know, what has prevented us from bringing over large supplies was the expense which was caused by the absence or rather the non-completion of the railway to your property. All the materials are out there for the railway, and, indeed, the line is completed to the extent of 6½ miles now, and traffic is running over it. The line has been altered from its original direction by the making of a tunnel through the Sheba, which will effect a saving in distance of about 4,000 yds., and in money of several thousand dollars.

A Shareholder: Will it be the intention of the company to work these concessions themselves, or dispose of them to subsidiary companies?

THE QUESTION OF SUBSIDIARY COMPANIES.

The Chairman: As I stated in my speech, we have 15 years granted to work out these claims, and I know of two or three good mines already in the zone that we have control over, and I think it advisable that it should be left to the discretion of the directors whether they shall work these properties themselves, or arrange with subsidiary companies for the treatment of the ores.

The resolution was then put to the meeting, and unanimously carried.

The appointment of Messrs. Cooper Bros. and Co. as auditors of the company for the ensuing year having been approved by the meeting,

THANKS.

A cordial vote of thanks was accorded to the chairman and directors for their services, and the proceedings terminated.

UNITED ALKALI CO., LIMITED.

ORIGIN OF THE COMPANY.

A meeting was held at the Lime Street Hotel, Liverpool, yesterday.

Sir Charles Tennant, honorary president, was asked to preside.

The Chairman of the Directors (Mr. John Brock), submitted a statement of the present position and prospects of the company, in the course of which he said that the undertaking

ORIGINATED ENTIRELY WITH THE MANUFACTURERS THEMSELVES.

It was not a scheme devised by outside financial agents or promoters proceeding to buy up the various works with an eye to securing a large profit to themselves, and who were compelled to pay for the works and businesses such prices as the proprietors thereof chose to demand. The United Alkali Company was a combination of manufacturers, organised solely by themselves for their own mutual protection, and without the payment of one single penny of promotion money. Some seven years ago the manufacturers of bleaching powder tired of the warfare which they had been carrying on among themselves for several years. The buyers of their goods called it healthy competition, but to the manufacturers themselves it meant too frequently serious loss.

COMBINATION.

They had accordingly determined to unite in a voluntary association, reduce the quantity made, and so raise the price. After six years' working this arrangement came to an end from causes inherent in a mere voluntary agreement, and the old warfare began again, with its resulting loss. This decided certain members of the trade to try and put their industry on a sounder and more rational footing, and by consolidating the various works in one united undertaking endeavour to obtain a fair yet remunerative price for each article manufactured, rather than a very high one for one article in order to pay for the loss on all the rest. As the time drew near for introducing the scheme to the public and raising the capital required, they were met with one of the most serious financial crises

this century has ever experienced. The Bank rate advanced with alarming rapidity. Financial advisers gravely shook their heads and predicted absolute failure, and counselled at least six months' delay, counsel which it was impossible for them to follow, as they were under engagement to incorporate the company on or before 1st November, or run the risk of having some of their agreements cancelled. It was well known that some proprietors considered they had agreed to accept too low a price for their property. In addition to these financial troubles they were assailed with the most

VIOLENT OPPOSITION IN THE PRESS.

They decided not to swerve from their original purpose, except that, instead of advertising the proposed issue of capital, they would circulate their prospectus privately among friends and customers of the manufacturers. Up to the present time the general applications reached the large sum of 1,774,250*l.* out of about

3,000,000*l.* AVAILABLE FOR SUBSCRIPTION.

In addition to this, most of the vendors agreed to take in payment for their works a larger proportion of shares and stocks and a smaller proportion of cash than their agreements specified. Indeed, some of them agreed to take the whole of their purchase money in shares and debentures. They were then at the present moment in this position. The vendors had taken, in part payment of that property turned over to the company, stock and shares to the large amount of 5,391,200*l.*, and the general applications amounted to 1,774,250*l.*; together, 7,165,450*l.*, leaving 1,334,550*l.* still to raise to complete the capital and debenture stock of 8,500,000*l.* This balance they intended to offer unreservedly for public subscription immediately. And now for a moment let them see

WHAT THE PROPERTY CONSISTED OF.

They had in all 48 works, 45 of which were chemical works, and three salt works; 42 of these works were in England, four in Scotland, and one each in Ireland and Wales. They controlled the Leblanc departments of five others and had working agreements with several more, in which articles were manufactured similar to those produced in the works of the company. In the great majority of the works the plant was of the most modern construction. Some of the works had been entirely remodelled within the last five or six years, and had had large sums spent on them. In 15 of the works entirely new and extensive plant had been erected for the extraction of sulphur from waste material. There were in, or connected with the works, and owned by the company, scores of miles of railway, upwards of 2,000 railway waggons, and about 60 locomotives. The fleet consisted of eight steamers and 88 other vessels. They had, in addition to the chemical and copper works, extensive brick and pipe works, quarries of limestone and building stone, a considerable number of houses and cottages for managers and workmen, and a large land acreage, much of it freehold. It had suited critics to represent the Leblanc industry as played out and superseded by the ammonia soda industry. As he was addressing others as well as manufacturers, a word of explanation might not be out of place. The two material elements of salt were soda and chlorine. By the Leblanc process both these elements were extracted from salt and made into commercial commodities. By the ammonia process soda alone was extracted and chlorine wasted. The ammonia process manufacturer could make carbonate of soda cheaper than they could, but at the cost of wasting the chlorine. Chlorine, in their hands, became a valuable product. They had

CANDIDLY STATED IN THEIR PROSPECTUS

that carbonate of soda was produced more cheaply by the ammonia process. There were three firms who manufactured soda ash by the ammonia process in this country outside their company, whose total production was about 115,000 tons per annum. The production of carbonate of soda by their company was about 140,000 tons per annum. To this they added the amount of the three other leading heavy chemicals made only by the company, and left out of calculation the thousands of tons of other chemicals they annually manufactured. They arrived at this, that the annual production for sale by the company of these four heavy chemicals was upwards 565,000 tons, as compared with about 115,000 tons made by the three firms who manufactured only by the ammonia process. In other words, that the company was to-day producing about 83 per cent. of the whole. If, however, they went further, and compared the total output of the three firms he had referred to with the total output of that company they found that the company stood for over 90 per cent. of the whole. In the future of the undertaking they had the greatest confidence. The returns from the various works indicated that they would have a prosperous year, and they confidently anticipated that, after paying debenture interest and preference dividend, and setting aside a considerable sum for a reserve fund, the holders of ordinary shares would receive a substantial dividend.

The proceedings concluded with votes of thanks to Sir Charles Tennant and Mr. Brock.

THE NITRATE AGREEMENT SIGNED.—The Chilian nitrate producers have at last completed their agreement for the reductiou of the output, only one firm of small account having stood out of the combination. In brief, the undertaking is to limit working to seven months out of the 12, and the hope is that production and consumption will then so balance each other that prices can be raised to a paying basis. The blockade of the Chilian coast will, in view of this policy, be favourable rather than otherwise. It is possible that the Government—when it has breathing time—may interfere with this artificial restriction, but the plea of the producers is that a reduction is inevitable in any case, and if not by mutual understanding, then by mutual destruction.

DRILLS FOR IRON AND COAL MINES.—To reduce the cost of drilling in their Ironstone Mines, Messrs. Bell Brothers, Limited, of Middlesborough, have, for some time past, been experimenting with a view to obtain the best motive power for working the drills. A new drill has been designed under the superintendence of Mr. A. L. Stevenson, and 14 months ago a Priestman oil engine was obtained to work it. The results have been so satisfactory that it has been decided to adopt this system more extensively, and a further order, it is said, has been placed with Messrs. Priestman Brothers, Limited, of Hull, for three of their 5 h.-p. patent oil engines.

SAMUEL JAMES'S REPORT ON MINING MARKETS FOR THE MONTH OF JANUARY, 1891.

THE MINING MARKET.—Since my last monthly remarks were issued an important improvement has to be recorded in this market. The reduction in the Bank rate, the low prices at which shares were obtainable, the various discoveries reported in several mines have all helped to call attention to the mining market. In my last I said, "the market closes with a decidedly firmer tendency, and I shall be much surprised if January month does not bring higher prices for a large number of mining shares." I call attention to my recommendations then and the prices now ruling for the same securities. Generally the rise has been steady, and great strength has been exhibited in the quotations for shares, but in some few instances prices have advanced by leaps and bounds. For sensational advances the mining market stands pre-eminent, it being no uncommon occurrence to have to record rises of 100 to 400 per cent. In what other market of the Stock Exchange can the same be said? Mining is, of course, very speculative, and the unknown always will be; but I maintain when a proper amount of care has been exercised in ascertaining the value of a property, and given a body of business-like directors with a thoroughly responsible manager, mining operations should show as large a percentage of successes as any other commercial industry. No doubt in times of great prosperity many worthless properties are foisted upon the public; it is, therefore, indispensable they should obtain the advice of someone acquainted with the property, or ascertain who are the men to compose the board of directors, before parting with their cash.

SOUTH AFRICAN SHARES have attracted considerable attention, and several advances have to be recorded in properties, especially those showing better prospects and increased development. The Exploration and Land Companies still offer, in my opinion, the best inducements for large profits.

INDIAN GOLD SHARES for some time have been inquired for at improving prices. Quite a *furore* was experienced for the shares of the Goldfields of Mysore, within the past few days. It would not surprise me to see this market further harden.

COPPER SHARES have fluctuated considerably, and unless the French or some other equally enthusiastic people are prepared to purchase at present high rates, it appears to me that many of the present quotations will further decline. Copper statistics are not in buyers' favour at present.

HOME MINES have been weak, and shares offered for sale in larger numbers than usual. The Dolcoath dividend was not considered satisfactory, and did not help the market, for although Capt. Josiah Thomas stated the mine was looking better than at the last meeting, the price has declined since the dividend was declared about 7*l.* per share, equal to a depreciation of 32,900*l.* in the selling value of the mine. The death of the late Mr. Geo. Williams, of Scorrier House, who was a very large shareholder in some Cornish mines, is keenly felt, and until his interest in the various mining properties is disposed of, I fear we shall look in vain for higher quotations.

ALMADA.—Since my last these shares have again advanced. The capital issued is only about 44,000*l.*, and profits are being earned, so that should the improvements recently announced continue, this mine will ere long enter the dividend list. But for the scarcity of labour, firewood and water at present, larger returns and bigger profits, would undoubtedly be announced. The silver obtained during December was valued at $11,568, and pig lead valued at $2,773, or a total production for the month of $14,341. These shares are, in my opinion, still worth purchasing for a rise. Extract from the superintendent's letter, dated 30th December, 1890: "The high grade of the ore, the handy width of the lode, and compactness of the pay-streak, are all circumstances that promise handsome profits in the near future."—2s. 3d. to 2s. 6d.

AMERICAN BELLE.—I am glad to find so large a number of my clients followed my advice and secured shares in the above at par. It must be gratifying to them to find their shares command a premium, and that the first month's output leaves a profit of about 5,500*l.*, or equal to a dividend of 15 per cent. But this is not all the good news, as the portion known as the National Belle is greatly improved, and a fine body of ore of better grade has been struck in the Hudson property, and the prospects for greatly increasing the monthly profit are all that can be desired.—2s. 3d. to 2s. 9d. pm.

CALLAO BIS.—A good market existed all the month for these shares, and at one time 9s. 6d. was eagerly bid, but the return announciug 456 tons, yielding 343 ozs., was considered unsatisfactory, and the price declined to 7s. 6d. It is announced the smaller returu is due to the ore beiug very refractory. Doubtless, as depth is attained, proper machinery will have to be provided for treating the ore, as more sulphurets may naturally be expected.—7s. 6d. to 8s.

CHAMPION REEF.—The report published this week has given much satisfaction to shareholders, the cause being the improving value of the lode in Garland's shaft, which now assays 3 ozs. 15 dwts. iu the north end, and 2 ozs. of gold in the south end. In Dalyell's shaft also an improvement must be noticed, the lode now carrying gold.—24s. to 26s.

CUMBERLAND GOLD.—This mine up to the present has been a great disappointment. Ore bodies have been found, but have been so mixed with poor patches that the cost of raising the ore has exceeded its value. More money is now required, and it is proposed to issue 13,000 preference shares. These shares are entitled to a cumulative dividend of 10 per cent. per annum., and in addition will rank *pari passu* for dividend with the ordinary shares. The terms are liberal, and with a good lode discovered would make a favourable investment.—1s. 9d. to 2s. 3d.

DICKENS CUSTER.—For some months past a considerable quantity of pay ore has been extracted, and the time must now be approaching when regular monthly returns will take place. The stope in the 30 ft. tunnel has been yielding a small quantity of very rich stuff, which has assayed at times over $100 to the tou. A winze is being sunk in the bottom of this stope, and the lode is wideniug and maintaining its value. From No. 3 tunnel a good quality ore is being extracted, and shows further signs of improvement.—6d. to 1s.

ETHERIDGE UNITED.—The reef still keeps large, averaging 5 ft. in thickness. The manager estimates it will probably yield 1 oz. to the

ton, and this return would warrant his engaging and employing a larger number of miners, as there is considerably more ore in sight. These shares may be considered at present values a very good purchase.—1s. 3d. to 1s. 9d.

FLAGSTAFF.—The latest postcard received from the office states :—"Have fine body of ore, 12 ft. wide, 14 ft. long, all first-class ore going down towards seventh level." For the first time we have something definite from the company. The ore is *first* class, and we have the width and length of this little chimney of ore. Will the mountain yet bring forth a mouse ?—9s. 6d. to 10s.

FRONTINO AND BOLIVIA.—In my last I said, "Hold on to your shares, as I expect bigger profits still." How quickly my anticipations have been verified the return announced this month will show. During November 831 tons of ore produced 2,222 ozs. of gold, which, with 833 ozs. purchased from tributers, were valued at 7,699*l*., less costs 4,305*l*., giving a profit for the month of no less a sum than 3,394*l*. Now, as it only requires 6,361*l*. to pay a dividend of 1s. per share. it is very easy to calculate the next dividend will be larger than the last, viz., 8d. paid in December.—24s. to 26s.

GLENROCK COMPANY.—The circular just issued by this company is most disappointing and totally at variance with the information previously afforded to sharcholders when we were asked to sanction the purchase of the Premier Minc. *Then* we were told Professor Black estimated there was enough quartz in sight to last 25 years, crushing 300 tons per week, aud he could not accept less than 18 dwts. as the yield per ton. *Now* we have paid for the property, Mr. Farrell says: "It is, nevertheless, absolutely necessary to intersect the reefs at depth, and so secure a continuous supply of quartz for the reduction works." Again Mr. Farrell states : "No very considerable quantity of ore can be expected until the adit now being driven is completed." Much is made of a new reef discovered since the property was acquired, but even this does not satisfy, as the directors, fearing gold was not to be obtained from the mine in paying quantities, have concluded arrangements for acquiring two river dredging claims. Can anything be more ridiculous than to see directors driven from pillar to post as if they had no settled plan for the proper workiug of the property. Apparently the only anxiety is to spend the capital somehow.—2s. 3d. to 2s. 9d.

GOLDFIELDS OF MYSORE.—The great Champion lode of the Mysore district is rapidly dipping westward, and it is now well-known that this lode can be cut by sinking a perpendicular shaft near the Mysore boundary. Recent operations carried on by the Mysore and adjoining companies have fully established the enormous value of this company's property. Thcy have the exclusive mining rights over nearly 13 square miles in the very heart of the Mysore Colar goldfield. It is reported negotiations are now being opened with a view of selling a slice of ground about 1½ miles in extent to the Mysore Company for a very large sum in cash. Other companies are, I am told, also in treaty for portions of the property containing the Champion Reef, and altogether a very large sum will be at the disposal of the directors, who have. for years past, been so carefully conserving the shareholders' interests. For some months I have, in my bi-weekly lists, advised a purchase of these shares.—32s. to 34s.

GRASKOP.—The meeting held in January was considered satisfactory. The milling statement contained in the directors' report, which was circulated amongst the shareholders prior to the meeting, was to me most interesting, as it showed the progress of the mine since Juue, 1889. One could only be gratified by notiug the improvement in the quality of the quartz now raised as compared with the quality on the above-named date. Then it was only worth about 9 dwts. per ton, but uow the yield is over 18 dwts. per ton, and I have no doubt when deeper operations are carried on, judging from the past history of the miue, the quality will further improve.—2s. 3d. to 2s. 9d.

INDIAN CONSOLIDATED shares have remained remarkably steady in the face of an almost general advance in Indian shares. Although no improvements have lately to be chronicled in connectiou with the Colar workings, the shareholders are satisfied they have an improving property, and one that will later on repay them for all their outlay and patience. No. 1 new shaft has been sunk to a depth of nearly 190 ft., and the lode is expected to be met with very shortly. Any day may now bring news of a good discovery.—4s. 3d. to 4s. 9d.

JUMPER'S GOLD.—The sting of the last report is iu its tail. Why directors should stop crushing for January month, and only inform the shareholders it is done iu order to effect some improvements, is a mystery to me. Of course. if milling operations are not carried on during January an increased output will naturally bc expected for February.—2⅝ to 2¾.

LA LUZ.—The manager, Mr. Hilton, has been instructed to push on developments with all possible expedition. Independent testimony of the great value of the property has just been received from Sen. Juan Ammann, who successfully managed the mines for the origiual vendor.—1s. 3d. to Is. 6d.

LA PLATA continues to yield a monthly profit; that for December being $1,420, the best for the year. The manager says the mine continues to look well.—9d. to 1s. 3d.

LA VELERA.—For years past extraordinary reports of the value of this property have been circulated. The tiine is soon coming when we shall be able to estimate their worth, as any day a cable may arrive giving the result of the first run with the new smelter.—19s. to 21s.

MOUNT LEYSHON.—During the second fortnight of January 600 tons were crushed, which yielded 320 ozs. of gold of the estimated value of 750*l*., which should leave a fair profit.—8s. to 8s. 6d.

MYSORE GOLD shares have been steadily inquired for at further enhanced prices. The public must bear in mind the dividend to be distributed in March will be the balance of earnings for 1890, and should, therefore, be a good one. The last report affords interesting reading for shareholders, the mill samples being favourable, and the number of points in operation increasing.—6$\frac{3}{16}$ to 6$\frac{5}{16}$.

NEW-DEVALA MOYAR.—Thc re-construction scheme has been most successfully carried through. All the shares having been applied for and allotted, plenty of working capital is now available for pushing forward the developments. The manager reports on the 6th January : "I shall get crushing started again to-morrow." The directors are very hopeful that a better class of ore will soon be met with.—1s. to 1s. 3d.

NEW QUEEN GOLD.—The last return was announced as 195 tons, yielding 189 ozs. gold. This was not considered satisfactory. The directors wired for an explanation, which came to hand as follows : "The clean up is small owing to air compressor broken down. There is nothing wrong at the mine. Crushing looking better at the present time."—7s. 3d. to 7s. 9d.

PIGG'S PEAK.—As foreshadowed in my last report, the absence of any return for December exercised a considerable influence upon the price of shares, which during the early part of January had touched 40s., but rapidly receded to 21s. 3d. Quickly the price recovered to 35s., only again to fall to 30s., which may still be considered a high price for a property, about which so little is known as to its developments and reserves. The capital, 250,000*l*., is fairly large, and when it is remembered that the preference shares carry a cumulative preferential dividend of 25 per cent., and, after that shall rank equally with the ordinary for dividend, the prospects for holders of ordinary shares are not too bright.—29s. to 31s.

ROMAN GRAVELS.—Shares are very scarce, and it was with some difficulty I managed to secure some last month for a few clients at 3s. The ground in the 150 cross-cut is much harder, and the whole breast shows strings of carbonate of lime, both of which indicate our near approach to the lode. The managers say, "We hope to have very good news to send you next week." These shares should be purchased at once, as if a good lode is cut in the 150 it may result in the mine again paying dividends.—2s. 9d. to 3s. 3d.

SHEBA GOLD.—A large demand for these shares was experienced last month and prices again advanced. The meeting held some days ago appears to have passed off in a most satisfactory manner. Nobody seemed to care to know why the date for the commencement of the crushing operations was once more deferred. Now it is believed everything will be ready to start on the 1st March ; perhaps the first of the next mouth would have been a more appropriate date. I think those who take their profits now will get in lower down between this and the publication of the news giviug the result of the first clean up.—23s. 6d. to 24s. 6d.

TRANSVAAL GOLD.—In April last I called particular attention to these shares, which were theu selling at 9s. 6d., and urged upon the directors the importance of a more vigorous developuent. The news afforded to the shareholders is of the most meagre description, and is certainly not calculated to give them an adequate idea of the value and extent of their property. It is now stated a sufficiently large block of shares has been purchased to make it worth while to introduce them into the Kaffir market, and much sport is expected. The only idea the shareholders have of the value of their property is that the directors are enabled to pay off 50 per ceut. of the debentures, and that the few tons raised *assay* a very high value. When will the directors meet the shareholders, and afford them all the information it is their duty to give respecting the present developments and value of their property and the present financial position ?—18s. to 19s.

OF THE 22 COMPANIES favourably mentioned by me in my last report, I find 17 have advanced in price, 1 remained stationary, aud 4 declined to a trifling exteut. I venture to thiuk there is no mining circular issued where a larger proportion of gains can be pointed to, or where more reliable information is given. I think it only right to mention to the investing public, that auyone acting on the information contained in this circular should in all fairness scnd their orders to me. Such orders will at all times command my immediate and most careful attention.

My clients are supplied each month with my Mining Share List, believed to be the most complete issued in London or elsewhere. It shows at a glance the following particulars, viz., names of mines currently dealt in, prices last and this month, capital, shares issued, last dividend declared, par value, and amount paid.

I shall be happy to supply this list to applicants on receipt of stamped addressed envelope.

SAMUEL JAMES.

14, Angel Court, Throgmorton Street,
London, E.C.
February 3rd, 1891.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

OOREGUM ORDINARY AND PREFERENCE SHARES.

SIR,—I confess I am too obtuse "to see the points" put forward by your correspondent, "The Compiler of the Charts," as having convincing weight.

His remarks as to the ordinary shareholder's position in the event of the judgment being that the issue of shares at a discount is legal —a rather big mouthful to swallow—are correct enough; everything would be perfectly plain.

But suppose, as not uulikely, the appeal judgment endorses that of the Court below—what then? Your correspondent says "it would be most inequitable." Really we must put ethics aside ; *we* have nothing to do with inequitable law—that is a matter for *Parliament*. If it be true that "hard cases make bad law," the converse is equally true that good law, in the sense of correct exposition, involves hard cases. The compiler says : "To call the preferences only 5s. each, with a 2½ per cent. priority, would not be agreed to by the present holders." Then they must take action against the original allottees.

He further asks, if judgment be given that the preferences issued at a discount is illegal, what can the board do? In matters of legal decision there is not much choice usually, and should the judgment of the Court below be affirmed, the directors and original allottees will have to look to it, and the preference shares will either have to come in on a 5s. basis, as is most likely, or the other 15s. must be provided by the original allottees, discovery being easy. In either case

the ordinary shareholders will be benefited—the point at issue between myself and your correspondent.

Do not suppose I do not think such a solution would be hard on the original allottees ; that goes without saying.—I am, &c.,

ORDINARY SHAREHOLDER.

Weymouth,
Feb. 4th, 1891.

NEW GOLD HILL CO., LIMITED.

SIR,—In view of the recent rich discoveries in the 160-ft. level west of Barnhardt shaft and in the Martin shaft, one of the directors intends leaving for Gold Hill next Thursday, the 5th inst., and it is hoped that shortly after his arrival at the mine he may be in a position to telegraph his views on the improved prospects of the property and with regard to the railway developments in the district. Upon the receipt of such advices the directors will lose no time in communicating such to the shareholders.—I am, &c.,

RICH. L. HOBBS,
Secretary.

3rd February, 1891.

THE MEXICAN INGUARAN COPPER CO., LIMITED.

SIR,—For some 12 months past I have been the unfortunate owner of 100 shares in the above company, and duriug the whole of that time I have never received any report of works in progress, nor have I seen any account of the company's doings in any mining or other journal ; in fact, as far as I am concerned the company might as well be non-existent. The shares are nominally quoted at from 1s. 6d. to 2s. 6d., but are quite unsaleable even at those prices. I think most shareholders will agree with me that it is high time the company woke up and reported progress, or, probably, retrogression.—I am, &c.,

DISGUSTED.

ATLAS TIN MINE, DEVON.

SIR,—As little has been recently heard of the progress or condition of the above, it may interest shareholders to hear an opinion formed, after a recently made visit to the property, by the undersigned.

Some of the ground above the shallow adit has been partially stoped away, with fair results, but the lode in the winze sunk below that adit shows a decided improvement, and far better results throughout.

The lode going down is well defined, of good size (*averaging* fully 3 ft. 6 ins.), and producing reasonable quantities of rich tin ore.

I think the shareholders have a good future before them so soon as the work of development now in progress is carried out. I also noticed upon the dressing-floors a parcel of tin just ready for the market. I enclose my card, and subscribe myself

Yours truly,
A SHAREHOLDER WITH A BELIEF IN DEVONSHIRE TIN MINING.

ADVICE TO HOLDERS OF LOW-PRICED FOREIGN SHARES.

SIR,—My friends, the gratuitous advisers on the "bear" tack, are at it still. A few weeks ago you were good enough to allow me a few lines in your paper to warn holders of miscellaneous mining shares agaiust being "advised" out of their property at the low prices then ruling, and I would now ask liberty for a word of special warning to holders of *Almada and Tirito* and *Gold Hill* shares. The capital of the Almada Company is exceptionally small ; the shares are quoted 2s. 3d.—2s. 9d., but cannot be purchased under 3s. 3d. or 3s. 6d. To my knowledge, a large dealer a few days since refused to take an order at the former figure. I do not think I am unduly sanguine in believing the price will shortly reach 10s., whilst a much higher range is freely spoken of by keen men, who are likely to know.

The Gold Hill Mine promises to become one of the *great* mining prizes of the uear future. Within the last week a further large buying order is to hand from residents near the mine, and I am informed this, as other recent purchases from the same quarter, is for investment, and not speculation. That these shares will be nearer 5*l*. than 2*l*. 10s. before the end of 1891 is more than probable.

I would give a hint to your readers not to part with Potosi, Esmeralda, or any of the Colombian alluvial mines. There is a big rise at hand.—I am, &c.,

TENAX.

London,
February 3rd, 1891.

THE BENGAL (CHOTA NAGPORE) GOLD MINING COMPANIES.

SIR,—The last mail has brought the most favourable news from Calcutta, dated the 13th of January, with regard to the position of the Bengal Gold Companies. The week previous to the dispatch of the mail had seen auother active period for the purchase and sale of the shares in question. It is reported that the tone of the market had become much more healthy than when the gold fever was raging a few months ago. Then it was all wild excitement ; now there is apparently an absence of such feeling, and the rise and fall in the shares is based ou something more solid than mere rumour.

The progress made by the Pat-Pat Company has done much to establish this feeling, and the report that is shortly expected from the Sonapet Company is awaited with keen interest, and its arrival will, no doubt, influence the market one way or another, and as far as matters have gone, indications point to a rise.

The first crushing of quartz from the Pat-Pat property has shown a yield of over 3 ozs. to the tons, thus placing the existence of gold in paying quantities beyond a doubt. Things, therefore, go to show that the Bengal Goldfields are extremely rich, and as active operations are now being vigorously conducted, news may come any day which will send the shares up to their former prices.

Another favourable sign is the fact that Mr. Bosworth Smith, who is recognised as one of the leading authorities in Europe, or, at any rate, in India, on mining matters, has entered into an agreement to stay out in India until the year 1892, in connection with the Sonapet Company.

Appended to this is given two statements, one giving details of the several companies, their capital, agents, &c., and the other the business done in the shares on the 13th January last.—I am, &c.,

ANGLO-INDIAN.

THE directors of Bellingham and Co., Limited, have declared an interim dividend on the preference shares at the rate of 6 per cent. per annum, and on the ordinary shares at the rate of 8 per cent. per annum, payable on the 12th inst.

PARTNERSHIP.—Mr. R. Schram, engineer, 17A, Great George Street, states that he has admitted into partnership Mr. William Harker, who has for some years been his chief engineer. The style of the firm will remain Richard Schram and Co. as heretofore.

COMMERCIAL NOTES.

Metals.

The Metal Market has been fairly active during the current week. Bank rate remains 3 per cent. Bar silver has declined to 46⅝d.

Copper has been easier owing to the expectation of larger supplies from America. GMB Warrants declined on Monday to 51*l.* 15s. cash and 52*l.* 2s. 6d. three months, but improved next day to 52*l.* 2s. 5d. cash and 51*l.* 12s. 6d. three months, and has since been quiet at about 52*l.* cash and 52*l.* 10s. three months closing at 52*l.* 2s. 6d. cash and 52*l.* 10s. three months. The statistics published on the 1st inst. were favourable, and give the visible supply as 60,596 tons, compared with 65,366 tons on 1st January. Supplies to England and France during January 7,494 tons. Deliveries 12,264 tons. We quote English tough, 56*l.* to 58*l.*; best selected, 58*l.* 10s. to 60*l.*; strong sheets, 64*l.* 10s. to 65*l.*; India sheets, 60*l.* 10s. to 61*l.* 10s. Yellow metal, 6d.; ore, &c., 9s. 6d. to 11s. per unit.

Tin has been active at rather easier prices; Straits declined from 90*l.* 10s. to 89*l.* 7s. 6d. cash, and 89*l.* 15s. three months, but has improved again to 90*l.* cash, and 90*l.* 10s. three months, closing at 90*l.* 2s. 6d. cash, and 90*l.* 12s. 6d. three months. Australian rules 2s. 6d. to 5s. premium. The statistics on the 1st instant show an increase in supply. Quantity spot and afloat to London and Holland, 8,697 tons; against 8,200 tons on 1st January. Straits shipments for January, 3,675 tons. Arrivals of tin in January, 1,590 tons; deliveries, 1,969 tons, including 395 tons to America. Stock, 3,025 tons. Straits and Australian afloat, 2,850 tons. The Dutch market has been steady, and we quote 54½fl. for Banca and Billiton. English Ingots, 93*l.* 10s.

Tinplates have been firm, and we quote ordinary coke, 18s. to 18s. 3d., Liverpool.

Spelter has been steady, closing firmer. We quote ordinary brands, 23*l.* 10s. to 23*l.* 15s. ex ship here.

Sheet Zinc.—In public sale, yesterday, 95 tons sold at 20*l.* nett at the works.

Lead.—Dull, and easier. We quote, soft Spanish, 12*l.* 7s. 6d. to 12*l.* 10s.; soft English, 12*l.* 12s. 6d. to 12*l.* 15s.; L.B. China pigs, 13*l.*; sheets, 13*l.* 10s. to 14*l.*

Quicksilver.—Rothschild's price is still 8*l.* 12s. 6d.; seconds, 8*l.* 11s. 6d.

Antimony quiet, 68*l.* to 70*l.*

Stamford, Spalding, and Boston Banking ...	9 per cent.
Tramways Union	5s. per share.
Trust Investment	7 per cent.
United States Debenture	3½ per cent.
West India and Pacific Steamship	15s. per share.
Woodhouse and Rawson, Ordinary	15 per cent.
Woodhouse and Rawson, Preference	8 per cent.
York Gas, Old	10 per cent.
York Gas, New	5 per cent.
York Waterworks	9 per cent.

The Salt Union directors have recommended a dividend at the rate of 8 per cent. per annum for the last half-year on the ordinary shares, making 7 per cent. for the year 1890, adding 50,000*l.* to reserve. The general meeting will be held on the 20th inst.

MINING PLANT AND MACHINERY FOR SALE.

WEST CARZISE MINE, Crowan, near Marazion, Cornwall.

TO BE SOLD by TENDER, in one lot, by order of the Secretary, in the winding-up of the above Mine, the whole of the PLANT, MACHINERY, and MATERIALS upon the West Carzise Mine, including a 17½-in. Horizontal Engine with One Boiler, 25 fms. 1¾ round iron rods and stands for ditto, two ballast bobs, capstan and shears, horse whim rope, carpenters' shop, dry and tube, smiths' tools, and a quantity of sundries.

Separate Tenders will also be received for the underground pitwork, &c., to be drawn at purchaser's expense.

Particulars and conditions can be obtained from Mr. E. Ashmead, 2, Drapers' Gardens, London, the Secretary, or from Capt. Curtis on the Mine, and all Tenders shall be subject thereto and bound thereby.

All Tenders must be in writing, and sent to the Secretary at the above address on or before 21st February, 1891.

Dated this 6th day of February, 1891.

E. Ashmead,
Secretary.

Note.—The Secretary will be prepared to negotiate for the sale of the License and Plant as a going concern with any party desirous of re-opening and working the Mine.

ESTABLISHED 1871.] SATURDAY, FEBRUARY 7, 1891. [ESTABLISHED 1871.

REPORTS OF MEETINGS.

THE MEXICAN EXPLORATIONS, LIMITED.

THE COMPANY PAYS 10 PER CENT. ON ITS FIRST YEAR'S WORK—IT FINANCES PALMAREJO, AND HAS CONTRACTED OBLIGATIONS WITH MINING AND OTHER CONCERNS THAT PROMISE PROFITS.

THE ordinary general meeting was held at the Cannon Street Hotel, on Monday, to transact the usual business.

Seward Brice, Esq., Q.C. (chairman of the company), presided.

Mr. G. E. MARTIN (secretary) read the notice of meeting, and the report of the board was taken as read.

HOW THE COMPANY STARTED.

The CHAIRMAN, after one or two prefatory observations, said: There has been an enormous amount of business done during the year, some of it partly entered upon, partly consisting of negotiations which have ended finally in nothing, and which it would be almost impossible to touch upon without going into a mass of detail, which would really be of little service to you. I may say this at the commencement, that with regard to the number of our shareholders, we have already 850 ordinary and 76 deferred—in other words, between 920 and 930 shareholders; and with regard to the capital, the total amount subscribed and called up has been paid up, so that there is no default whatever, with the exception of a trifle of 25s. due by a gentleman, whose address we cannot trace. The first point to which I will call attention is as to the position of the company when we started. We started free from engagements and liabilities of every description. None of the capital went in the purchase money of any undertaking. Nothiug was spent by thc company itself for promotion. Of course that, to a great extent, is an advantage, but, on the other hand, it has this disadvantage, that the business of the company has had to be built up from the beginning, and consequently you may take it thus, that whatever is the position at the present moment, and whatever has been done during the last 12 months, has been built up from thc beginning by the agents, the officers and the directors of the company. It started free from promotion arrangements of every description, but it did not start free from some intention of doing business, and one of the things in view at the time was an investigation in Sonora, and this, after being carried out to a certain extent, was deemed inadvisable to proceed with further. We paid no purchase-money for that directly, but considerable expense was incurred. After the experience the directors have now gained I think that business of a similar kind, if offered, would be dealt with differently, and the expense saved. The next point to which I will direct your attention is

THE WOOD BUSINESS,

in connection with Yucatan and British Honduras. That business consisted in the acquisition of certain concessions giving the going over the national land of Yucatan. Mr. Charles Hunter was our agent in that business, and was engaged upon it all last year. It was hoped by the directors tbat the returns would have been made much more quickly than have resulted in fact, but it is difficult to foresee the future. There are two matters which no one could have anticipated. One was the prevalence of yellow fever, from which for 25 years Belize had been free, but during the last 12 months there have been 40 deaths of Europeans, one of them, I regret very much to say, being a young man whom we sent out as assistant to Mr. Hunter. Mr. Hunter felt bound to say he would not have another assistant from England, and when we sent out an engineer to take charge of the completion of a small steamer we had for coasting, special precautions were taken for his safety, but the completion of the steamer was delayed until November, three or four months after the time expected. The wood business of British Honduras is undoubtedly valuable. The logwood runs to 22,000 tons every year. The amount of mahogany is very large, and in addition there are other varieties of wood. The business is in comparatively few hands, and from two or three firms we received persistent opposition, which was even malignant. The returns from that cause were greatly reduced. There is no doubt we have got over the difficulties, and that we are on better terms with our competitors, and there is no doubt also that during the coming year we shall obtain the returns which Mr. Hunter indicated at the commencement.

RESULTS FROM WOOD.

The expenditure to 31st December has been rather over 11,000*l.*, and we calculate the assets at 13,000*l.* At the time the report and balance-sheet were sent out we had not received Mr. Hunter's estimate and valuation, bringing the business to the 31st December, and, therefore, what we had to do was to make the valuation as well as we could from his monthly accounts. We have now received his report, and his valuation of the same assets is between 16,000*l.* and 17,000*l.*, instead of 13,000*l.* (Cheers.) I do not think that is an over valuation, but the directors deem it advisable to keep under the mark rather than go over it. It is difficult at the commencement of an enterprise to value assets, but Mr. Hunter's valuation of assets does not contain, any more than does our own, one single farthing for goodwill, which undoubtedly is worth a large sum. In this 13,000*l.* we have put down the value of a cargo of wood, which was on the way, at 3,000*l.*, but Mr. Hunter's estimate is 4,000*l.* (Cheers.) I think his valuation at 16,000*l.* or 17,000*l.* is not at all excessive.

A SHAREHOLDER: Did he put it down at cost price?

The CHAIRMAN: It would be impossible for us to exactly know what was the cost price, because the sum is made up of various details, but the cost price is given as nearly as possible. Another matter we dealt with was some

BUILDING LAND IN THE CITY OF MEXICO.

We purchased it in connection with the Mexican Association, which is at present intimately connected with us. Its existence might have been deprecated by us, but we have to recognise facts. One of the directors is on one of our intermediary companies, and the two companies are on very good terms. We sold this land at a profit of 6,000*l.* The price was considerably under the actual value, but we have retained, with the Mexican Association, an interest in the increased value. The latter is rather more responsible for the management than ourselves, and their notion of the value is that it is very much above what has been given for it. Another matter we took up was the formation of the Western and General Development Syndicate. That was a business that came to us. It was rather a larger business than we could deal with ourselves. We therefore saw some friends, and amongst them the Mexican Association, and were able to arrange terms for the purchase of certain mines pending a report. We sent out a surveyor, who reported favourably upon the purchase, and thereupon we agreed to form a syndicate and find the greater part of the capital so as to take over those mines upon certain terms, which did not include purchase at all. Our arrangement is simply that we have the power over a certain period to work.

THEY ARE SILVER MINES.

If we do not like to exercise it we need not, but there is no doubt from the nature of the report that we shall keep to the property, and within a reasonable time we hope that that company may be brought out at a profit to the united companies who own it.

A SHAREHOLDER: Are they silver mines?

The CHAIRMAN: Yes. The report also mentions the financial crisis which has affected us indirectly. We are not a bank, or concerned in speculative matters, but the crisis affected us in this way — that it prevented the chance of successfully bringing out certain undertakings in which our friends would have been interested, and with which we might have dealt had the money market been in a favourable position. With regard to the accounts, we have set them out much more fully than should be done in a company like this, but we thought at the conclusion of the first year shareholders should have as full details as possible. With regard to expenses, those in connection with office rent seem large, but we have very good offices in Lombard Street, and are underletting by degrees, and I hope by next year the rent will be reduced considerably. We are at the end of not merely 12 but 14 months' expenditure, although the real business did not commence much earlier than the beginning of last year. I will now call attention to the bank mentioned last year. We had gone a long way with that, when we found it advisable to consider as to certain concessions in Central America, with the view of establishing the bank on a wider basis than originally contemplated. We are still in treaty about that. From May it was simply impossible to have done anything with an institution of that kind, but I hope this year we shall be able to arrange matters, and if so, the bank is an institution which is wanted badly in Central America. It will attract practically the greater part of the business of many of the local banks, because people will come to it as an English institution, with its head offices on English soil, and it will take there the position that the Hong Kong and Shanghai Bank takes in China. When this is ready we shall appeal to the shareholders for their co-operation. Another matter is the French Company.

THE FRENCH COMPANY.

We had communications made with a view of securing the support in France, with the result that arrangements were made by which that company was brought out, having its head office in London, but three of the board being French. It has wider and more extended powers than the parent company, and when floated had its capital considerably over-subscribed. The French directors are, if possible, more careful than we are; but then the French have had a bitter experience with regard to companies brought out—more bitter even than we have had here. They are going along safely, and I fully anticipate for that company a very large amount of business. It is concerned with us in two or three matters—in one, at least, of great promise, and is likely to be extremely profitable. Then there is

AN ARRANGEMENT WITH THE PALMAREJO COMPANY.

The shareholders know that we have a very large uncalled capital. That uncalled capital is the real basis of the stability and position the company has attained in Central America and Mexico. There is no doubt that with the small capital called up, if that were the only capital the company's position would be nothing like what it is at present, but with its reserve, throughout those countries the reputation of the

company must be considerably established. For instance, I will read you an extract from Mr. Hunter's letter, dated 12th December :—

"I have got for nearly every bill of exchange 2 or 3 per cent., and by this mail 3½, more than other houses. When I have got 23 per cent. as compared with 19 per cent. of other persons, you can see the position, and what is of greater importance, the compauy's bills sell like bank-notes."

(Cheers.) I believe there is no question whatever that that is the positiou of the company in those countries, and it depends almost entirely not simply upon the capital called up, but on what is uncalled. The Palmarejo Company approached us with a view to financing an issue of debentures for them. We did not see our way to do it directly, but ultimately arranged, for a consideration, to guarantee the payment of the principal and interest of the issue. Before doing that we took care to see that what we got as a return for our guarantee was good payment to this company. I am sure that what we got as security for the guarantee was that which will render our liability in our opinion *nil*.

GOOD OPINION OF PALMAREJO.

Two of us investigated very carefully the report and accounts of the Palmarejo Company, and came to this conclusion, that the shareholders have a property which is undoubtedly of enormous value, present and prospective. They have expended not as much capital as I should have anticipated upon the works. They are as far as, humanly speaking, you can estimate the reports put before you (and I see no reason to doubt their accuracy) within measurable distance of the completion of their mill, their railway, their water ditch, and the works generally, whilst their mine seems to be properly developed. The amouut of money asked on these debentures would enable the matter to be completed.

WHAT PALMAREJO HAS AT SURFACE.

That alone would not give a security which, in my opinion, we should have, because in the event of anything going wrong we should require to work the property ourselves ; but, in addition, there is on the dump a large mass of ore, which, from the report furnished to us, would show a profit of between 200,000*l.* and 250,000*l.* Apart from any question of working, there is thus an amount of ore at surface three times the value of our advance. (Cheers.) We came to the conclusion that the terms suggested were favourable to the company, and closed with them. We thought Palmarejo shareholders were ill-advised themselves not to find the money instead of paying us to guarantee it, but that is a matter for their consideration and not for ours. We arranged also, in connection with the Mexican Association, to send out a surveyor and mining experts to survey and report upon one of the States. Persons interested with us are the present and late Governor of the State, and I must request you not to ask for further particulars. (Hear, hear.) The terms are very good, the expense cauuot be much, and we feel as soon as the survey is completed we shall find concessions of considerable value. Within the last two or three weeks we have had submitted to us by a prominent company in London a proposal to join with them in taking over, on somewhat similar terms to those made with the Western Development Syndicate, certain mines in a well-known mining district. I believe the negotiations are practically completed, and, if so, that is another property we shall have in our hands, with the assistance of the other company. We have arranged for the issue of

10 PER CENT. DEBENTURES, CHARGED ON A SILVER-COPPER MINE IN MEXICO.

It is a going company, and the amount of debentures will probably be between 15,000*l.* and 20,000*l.*—the whole being subject to the report of our own surveyor. The property is ample security, and the rate of interest is not out of the way. There is another matter in Central America which belongs to the French compauy rather than ourselves. That also is so far complete that I should think within a short time we may be able to put it before the shareholders ; and now I have mentioned all the material subjects that have engaged the consideration of the board during the last year. From this you will see that a large amount of work has been done. There has been an enormous amount of negotiations, and the results are in several instances very satisfactory. (Cheers.) The company has to make itself known in Mexico and in England, and that object has been attained, so that it stands out as a prominent institution.

COMPANY'S POSITION DESCRIBED.

It may be looked upon as a trading or investing concern. Undoubtedly the returns must be put at a moderate figure. If, as a trading and investing company, it returns a steady 10 per cent., I think that is about all one can expect, and I think we ought, in anythiug like luck, to be pretty certain of getting 10 per cent. But besides that, this is a financial company, and as such, its capital is not sufficiently large to directly do a great amount of business. There is a certain amount of negotiation and intermediary work it can do, and also earn a good deal by way of commission, though, in this department, as in others, it will depend largely upon its friends, and upon the shareholders aud their frieuds. Thirdly, it is an exploring company, and, as such, hopes in the future to have concessions of value brought before it which can be dealt with ; only it will be necessary that when these are brought prominently forward the shareholders should assist by every means in their power. The directors and officers can do their best, as they have done, to secure that matters are properly investigated, but the assistance of the shareholders is essential. Oue of our directors at the time the report on the Sonora coalfields came to hand——

Mr. WEIR : What was his name?

The CHAIRMAN : Mr. Farias, but his connection with the company has ceased. As regards assistance, advice, and support which he gave to the company in the past, we shall have in the future the same aid as heretofore. In his place we have elected Mr. George Bush, who is a director of various nitrate companies, and has a large financial connection. He is a civil and mining eugineer of good position, and intimately acquainted with Spauish, and I am sure his acquisition as a director will be most useful to the company. (Hear, hear.) Up to the end of December last

WE HAVE HAD 90 BOARD MEETINGS.

This includes the time Mr. Ashby was away at Sonora (four months), and we have had an average of 75 attendances. (Cheers.) I think our secretary Mr. Martin, has been absent twice, and on those two occasions he was in Paris on the affairs of the company. (Cheers.) Mr. Hart, our consulting engineer, has attended every board meeting, with the exception of 10, to give advice and assistance, though not bound to attend one of them. The clerks also in the office have given their best time and attention to the company's affairs. (Cheers.)

THE DIVIDEND.

The report proposes 10 per cent. dividend, and that practically amounts to 1½ per cent. to the vendors, and, therefore, means in all 11½ per cent. We have considered the matter very carefully, cut down the estimates considerably, and I believe that the assets are placed considerably under than over the mark. I think the proposed dividend is perfectly fair to all concerned, and that you will agree with me that in carrying over the securities to a reserve fund we have done what is right and proper. I think that as soon as possible we should make that reserve fund at least two ycars' dividend, which would be 15,000*l.* to 20,000*l.* We have, therefore, carried securities over, and propose to keep them in that form. The latter is a general contingency fund to meet various emergencies and equalise dividends. I uow move, "That this meeting receive and adopt the directors' report and audited balance-sheet to the 31st Decemher."

SHAREHOLDERS ASK QUESTIONS.

Mr. M. I. BROWN : You have written off the 5,899*l.* as lost on the Sonora option, but do you expect to recover any portion of that money? With regard to the Ibarra Wood Concession account, you state that it was already returning a profit, but the only amount I can see is an estimated increase in the value of the assets. Do you estimate that amount as the fair proportion of the profits due on the past year's working, which would otherwise have come into this year, and may we look forward to the same proportion of profit during the current year? Can you give another extension of time to allow shareholders to pay up in full who wish to do so, similar to the six weeks allowed some time ago? There is a strong feeling that the directors should not make any call without consulting the shareholders in general meeting.

AN ANONYMOUS REPORT.

Mr. WEIR : I think the directors should in future put their names upou the face of the report. (Hear, hear.) This is a most extraordinary document, aud I do not know that I ever before saw a report without the names of the directors, and without the name even of the chairman. I should like to ask if the directors of this company are directors also of the Mexican Association, and will you hold the meetings half-yearly? (Cheers.) In the fifth paragraph you state that you have found "the greater part of the capital for the Western and General Developmeut Syndicate," but I see nothing in the accounts referring to that. What amount of capital has been expended, and why is it not separately stated? You say that you went into Sonora "on the faith of clear and explicit statements as to the proved existence of workable coal in immense quantities." You go on to say that "after careful investigatiou" further outlay was stopped, and the money expended written off and defrayed out of profits. Was the money expended on simple verbal statemeuts? From this paragraph I assume it was, and can only consider it wrong. The last paragraph states that the directors propose to carry to a reserve fund securities estimated at 2,500*l.* I should like to know in what these securities are invested, and the amounts in each case, aud also the amount of dividend to the ordinary shareholder. How much is required to be paid to the ordinary, and how much to the deferred shares? The office rent—409*l.*—appears heavy. I did not know we had debentures, but see interest 529*l.* Then there is a sale of property, 5,900*l.*, but what property has been sold? Then you have shares 9,332*l.*, valued at 6,500*l.*, but at what price have you calculated them, siuce they have fallen very materially in market value since. There is also an item respecting which, despite application, I have been unable to get satisfactory information, 35,775*l.* This is a trading and investmeut company, and surely we ought to know the securities in which our money is placed. I hope the chairman will be plaiu and candid in this matter.

CHAIRMAN *v.* SHAREHOLDER.

The CHAIRMAN : How many shares do you hold?

Mr. WEIR : That is not the point. (Hear, hear, and laughter.) Whether I hold 50, 500 or 5,000 shares I have a right to come here and ask these questions. (Cheers.) I appeal to the meeting whether it is not an impertineut question on the part of any chairman to put to a shareholder asking for the information to which he is entitled. I hold 50 shares, for which I paid a premium of 12s.

Mr. HAMILTON : I hope that as we are a trading company the chairman will not divulge the uature of our investments or the actual business we are doing. The board consists of gentlemen of business integrity, and we should either trust them or remove them. To ask such questions amounts to a want of confidence in them.

A SLIP.

I think we ought to trust directors like those now *standing on the table* before us. (Loud laughter.)

A VOICE : What about Baring Brothers?

Mr. HAMILTON : As a considerable shareholder, I hope my interest will be protected from such questions. (Cheers.)

The CHAIRMAN : The expression of opiuiou from the meeting is in itself an answer to Mr. Weir. I should no more think of telling him what is the position of affairs between us and any of our customers, than a banker would think of disclosing to one creditor the position of another. I think it would be morally, as I am sure it would be legally, wrong. If we give the whole details of our business in public meeting wei might, so far as its financial part is concerned, shut up shop at once. We are

WILLING TO GIVE INFORMATION TO VERY LARGE SHAREHOLDERS

on points where they may think their iuterests not properly protected. I think 10,000 shares should be the proportion held by any gentleman who wishes for this special information, but he will afterwards be required to give his undertaking iu writing that he will not disclose what he has learnt. As to the 5,899*l.*, I think a portion of that will come back. There is machinery in Sonora leased by us from an American company, which will form a considerable asset that will be useful for exploratory purposes. A certain sum has also been paid to Col. Garcia for him to pay on our account, and if not paid it must

come back, but if paid then he must give us an account, and the balance of what he has will be returned. Mr. Hunter is paid by a share of the profits. As to the question of the call, it has not been suggested in the board room during the whole of the year, and I do not believe it will be during the whole of this year, so that the reports which went about to that effect were untrue. Possibly they were put about by interested persons for their own objects. I do not believe we shall make a call this year. It is much easier to pay dividends on a small than on a large capital, but if you authorise us for a short period to allow those so disposed to pay up in full, we will not object to them doing so.

Mr. PIGOU seconded the chairman's motion, which was carried unanimously.

The CHAIRMAN proposed the dividend of 10 per cent. on the ordinary and 9*l.* 15s. 4d. on the deferred shares, of which there are 100. A simple sum in addition would give the information to Mr. Weir he wanted. He never heard the shares were more than 6s. premium, so that Mr. Weir was rather unfortunate in his purchase. In future the names of the directors would be put on the report.

The motion was agreed to.

Mr. BROWN proposed the re-election of Mr. Bouverie, the retiring director.

Mr. SYKES seconded the motion, which was carried unanimously.

The auditors, Messrs. Martin and Farlow, were re-elected at a remuneration of 30 guineas.

OFFICIALS THANKED ALL ROUND.

The CHAIRMAN again drew attention to the services of the officials, and suggested that a vote of thanks should be given to the consulting engineer, Mr. Hart, to Mr. Hunter, on the spot, and to Mr. Martin, the secretary, who was practically ubiquitous. He hardly knew what the company would do without the services of the latter gentleman.

Mr. WEIR proposed this motion, which was carried by acclamation.

A motion for half-yearly meetings was defeated by an amendment to leave the meetings as at present.

A SHAREHOLDER proposed a vote of thanks to the chairman and directors, which was seconded and carried, and the meeting ended.

THE NEW SONORA MINING CO., LIMITED.

INVESTMENTS IN VARIOUS COMPANIES ON "PROMOTERS'" TERMS — TANGIBLE PROSPECTS PUT BEFORE THE MEETING BY A SANGUINE CHAIRMAN.

THE second annual general meeting was held at Room 47, Winchester House, Old Broad Street, on Wednesday, "for the purpose of receiving the report of the directors and statement of accounts, and of transacting the ordinary busiuess of the company."

Mr. James Doyle (chairman of the company) presided.

Mr. CHARLES GOODYEAR (secretary) read the notice of meeting, and the report of the directors was taken as read.

BALANCE-SHEET EXPLAINED.

The CHAIRMAN: We are very pleased to meet you here on the occasion of our second annual meeting, but as the report is very full my remarks will be exceedingly brief. I may as well, first of all, go through the items of account in the balance-sheet, and anything I may omit to explain can be elicited afterwards by questions. The authorised capital is 300,000 shares of 1s. 6d. each, 254,214 have been subscribed 15,233 of which have been forfeited, leaving 238,981, upon which 1s. 3d. has been called up. Unfortunatcly, the calls as arranged to be made on the shares could come in but slowly, as, in fact, we were limited to make a call of one-fifth of the capital, and this proved to be not good for the company. 111,594 shares were forfeited and re-allotted, and the amount paid to date is 11,372*l.* 15s. There is one item, "less calls in arrear," 3,767*l.*, which seems rather large, but on the date of the account (30th September) one call fell due, and, of course, a considerable amount of that has since been paid. The other items are "forfeited shares account" being the amount received on 15,233 shares forfeited, and not re-issued at date, 242*l.* Then there is Martin and Co.'s loan and interest, 1,030*l.*, and sundry creditors 112*l.* The latter is chiefly for rent, which fell due at that time and has since been paid. On the other side, there are investments at cost price, 9,300*l.*; less liabilities on calls, 1,350*l.*, or leaving 7,950*l.*, as to which I shall make further reference later on. The next item is loan and expenditure *re* Spanish Honduras Corporation 2,471*l.*, to which also I shall refer later on. Expenditure in connection with the Sonora Silver Mining Company (in liquidation) and general expenditure, per last balance-sheet, 1,445*l.*, was incurred before this concern was really started as an independent company, with the sanction of the shareholders at that time. The office furniture and lease are put at 157*l.*, and sundry debtors 182*l.*, the latter being chiefly due for rents by sub-companies, and most of that has since been paid, if not all. The cash at bank and iu hand is 264*l.*, and the profit and loss balance, as per account, 286*l.* 12s. 2d. Then we come to the profit and loss account for the year; the bank charges are 3s. 7d.; priuting and stationery, 89*l.*; rent, rates and taxes, 323*l.*; but in connection with this there is a correspondingly large item from sub-tenants, which almost equalises the amount of our rent. Legal charges and incidental expenses amount to 132*l.*;

THE DIRECTORS RECEIVE NOTHING;

the salaries are 242*l.*, and the auditors' fee 10 guineas. On the other side, the sub-tenants have paid us 258*l.*: the trausfer fees have brought 13*l.*; and the amount received on forfeited shares re-allotted is 240*l.*, whilst that carried to the balance-sheet is 286*l.* With reference to the investmcnts at cost, and the loan and expcnditure *re* Spanish Honduras Corporation—these investments were made in companies at a time when the compauies first started. They were made on very favourable terms, but though the companies have becn cngaged all through the year working at these concessions, we have not calculated anything for their increased value. They are taken at absolutely cost price, and therc has been also charged against them the expensc necessary to get them at that price, so that, though tbere is a debit balance against the company in the accounts, if we had valued the investments at what they seemed to be worth, and even at the price the shares stood at recently, we should show a considerable profit. Amongst these shares are included those received as a bonus for doing certain things, which were absolute profit as far as the shares went, but these have been valued at nothing. Next year, when sold, we shall get the advantage of not having valued them or taken them into account now. It is not advisable for the company to state in detail the amount of each investment, because investments in shares that are got on promoters' terms, if they were set out in full would hinder their sale at a proper valuation.

ARGUS EYES ON THE COMPANY.

People would say (we have 50 or 60 stockbrokers amongst us) if they saw what these shares cost, "Oh, they only cost so much," and our market would be damaged. We think it much better to lump them, but any shareholder who wishes to see the investments can do so in each case if he wishes the information in a *bona fide* way for his own use. The investments are described in the reports as Minas do Salto (Gold and Antimony Mines), the Gwalla Copper Mines, the Mammoth Gold Mines, and the Spanish Honduras Corporation. About the Minas do Salto Gold and Antimony Mines—that is an old Roman mine, which has been taken up by influential people in the City. One of our largest shareholders is connected with it, and he asked us to assist him in working it. Unfortunately we found that the developments of the Romans went deeper than was thought possible, but having now got below them, the mine seems promising. There is antimony mixed with gold and silver, and in his last report, dated 26th January, the manager writes:—

"Have driven up the 24, 5 metres 20 ceutimetres on the vein in drainage levcl. If ore be cleaned up the end is making about 8*l.* per week profit, and the driving price is 33s. 4d. per metre. In Martin's level the lode is large, but hard; it begins to show good stones of antimony mixed with some blende."

At present we have no machinery, but there is an English company in the neighbourhood, which will buy our ores and treat them. The next company is the

GWALLA COPPER MINES.

Were worked by Mr. Shenton in Australia, who sent over 44 lots of copper as taken from different parts of the mine, which averaged over 25 per cent. for copper and realised 16*l.* 10s. per ton. At the present time the total expense of shipping ore from the mine to London, including the London dock dues, is under 14s., and at 25 per cent. the ore at present is worth 12*l.* 10s. per ton. In that mine, worked on a small scale, there are only a few directors. Amongst them is a member of the firm of Richardson and Co., of Swansea, who have received all the ore that ever came from the mine. Another is Mr. Keane, who is the engineer of the Midland Railway of Australia, whose large capital was obtained recently. He has reported on the property, and backed up his report by coming on the board. From his report and those of Mr. Mitchell, it seems that if we could only get 2 tons a day from each shaft there would be made a profit equal to 60 per cent. on the whole of the capital.

THE MAMMOTH GOLD MINES.

That is now a public company, and you see the reports in the mining papers from time to time. I believe very shortly you will see the annual report, and the first public meeting will be held which will give a great spurt to the shares in the market. Referring to the shares, I must say that this company never goes in for speculation in the shares of a mine, but goes into that mine upon its merits. It invests at a proper price, believing the value will be made known, and the reward will come. We invested in the Mammoth considerably below the market price, and the mine is now earning 30,000*l.* a year, with the prospect of a large increase. Three adjoining properties have been offered them at cost price by one of our largest shareholders. As for the Spanish Honduras Corporation, that is not an investment, but a loau At our last meeting I mentioned that company as being about to come out, and stated that this company had become interested in it ou the most favourable terms—the advantage being that if it weut to allotment a large profit would be made, and if it did uot no loss would be incurred. For this loan the company has market security worth more than its full amount, if not repaid. I believed the last time I saw you the company was going through to allotment, but that has not beeu so. One of the vendors who had a contract was not able to carry through his engagements, and now he is out of the affair; but now this company, with a small capital of only 100,000*l.*, has concessions which, in stronger hands, might have been valued at half a million. The company has been taken up by a strong corporation who have entered into a contract which, I have no doubt, will be fully carried out At the same time New Sonora shareholders will be invited to assist in the floating of this corporation. Through the arrangements the directors have made they will be offered extra terms for doing so. When appealed to formerly in this way I must say they subscribed largely, and I hope now that the company is in such strong hands, and is sure to be made a great success, they will come in still more largely than before. Not only is the company in strong hands here, but though the delay has been great in bringing it out, the time has not been wasted in Honduras, and affairs have not been allowed to drift. A report has been prepared by Mr. Phillips, on the Gold Placers. He spent six months prospecting this part of the river. Mr. Phillips, has since undertaken to go out to work part of the Placers himself, and to take for his remuneration only 10 per cent. of the net profits obtained. He obtains only by way of salary enough to cover his expenses. When he wrote the report he was engaged in other business, but since then we have obtained his services. According to his report he expects to obtain 25,000*l.* worth of gold out of one small stretch of the river alone. If he only does half of that then these shares will rise to a large premium.

A SHAREHOLDER: Do the terms remain the same for the loan?

The CHAIRMAN: The security remains the same whether the company goes on or not. The terms are sufficient to pay a considerable dividend to the New Sonora shareholders—a dividend that would put the shares at 100 per cent. above par. I now move the adoption of the report.

Mr. FISH (director) seconded the motion.

QUESTIONS,

A SHAREHOLDER: How many shafts are there on the Gwalla property?

The CHAIRMAN : 16 ; and 2 tons per day from each would pay a very large dividend. The Gwalla shaft is sinking in a way that has proved continuity of the vein more than ¼ mile from the old workings. The Government of Western Australia built a special line of railway from the port to the mine, which it made its terminus, and that is why we can ship the ore so cheaply.

A SHAREHOLDER : What is the Sonora interest in the Gwalla property?

The CHAIRMAN : That is what I have just said it is not advisable to say. It may prevent selling shares afterwards.

A SHAREHOLDER : Is there any likelihood of a dividend on Gwalla?

The CHAIRMAN : At present the mine is being tested to see if it continues good. If it does we can get the capital to work it on a large scale.

The SHAREHOLDER : Has the Mammoth paid its dividend yet?

The CHAIRMAN : It has only just started. The mill re-commenced in September, and was earning a net profit at the rate of 2,500*l*. a month. It will depend on Mammoth shareholders whether they pay a dividend or not. They must either do that or spend the surplus on new machinery.

The report was unanimously adopted.

On the motion of the CHAIRMAN, seconded by Mr. SEARLE, Mr. Fish was re-elected a director.

On the motion of Mr. CROZIER, the auditors were re-elected, and a vote of thanks to the chairman closed the meeting.

LONDON AND SOUTH-WESTERN BANK.

THE BANK CONTINUES TO PROGRESS IN ALL DEPARTMENTS.

THE fifty-fifth ordinary general meeting of this company was held on Thursday at the City Terminus Hotel, Cannon Street.

Mr. George N. Marten (the chairman) presided.

Mr. WILLIAM HERBAGE, joint general manager, read the notice convening the meeting.

THE RECENT CRISIS.

The CHAIRMAN, in moving the adoption of the report and balance-sheet, said that it was not necessary to specially dwell upon the grave events that had taken place in the mercantile world during the last three months, events that caused considerable anxiety, and which but for the thoughtful, prompt, and judicious action of the Bank of England might have developed into a financial crisis, the consequences of which it was almost impossible to estimate. As far as this bank was concerned they were scarcely interested in Barings, for they only held a very small amount of their paper discounted for responsible customers, all of which had since been paid, and had no interest whatever in Argentine transactions or liabilities, and in no other way was this bank either directly or indirectly interested. (Applause.) With these few preliminary observations he would now go through the balance-sheet and consider the principal items of the same. It was a subject that he approached with pleasure, for the amounts all showed good,

SOLID AND SUBSTANTIAL PROGRESS.

The first item, and to his mind one of the most important, was the amount held by the bank on account of its customers on current and deposit accounts. In the corresponding period last year these amounted to 4,450,000*l*., but this year, notwithstanding the commercial mistrust and depreciation, they now stood at 4,812,000*l*., giving in 12 months a substantial increase of 362,009*l*. The next item—outstanding advices, letters of credit, circular notes, &c.—stood at 79,372*l*., or about the same figure as last year, showing a small increase of 949*l*. Acceptances stood at 342*l*. only, and for both these items there were corresponding entries on the other side. The item of capital had been increased by the payment of the second and third instalments on the new shares by 75,000*l*., and it now stood at 475,000*l*. Reserve fund had in like manner been proportionately very largely increased, in fact, he might say it had been doubled. In the three important items of current and deposit accounts, capital and reserve fund, there had been a growth that must be taken as strong and satisfactory for the bank. The item of rebate on bills discounted amounted to 5,296*l*. Cash in hand and at the Bank of England amounted to no less than 721,823*l*., an increase of 111,700*l*., and the money at call and short notice was 389,870*l*., an increase of 96,170*l*., making together, in these two items of cash alone, over 1,000,000*l*. The

INVESTMENTS AMOUNTED TO 1,362,654*l*.

of which amount upwards of 1,000,000*l*. consisted of securities of, or guaranteed by, the British Government. The remaining securities were —City of London bonds 38,900*l*. British Colonial Government stocks 196,250*l*., and British Railway stocks and other securities 101,601*l*. Taking, then, these first three items of "Cash in hand and at the Bank of England," "Money at call and short notice" and "Investments," they amounted to 2,474,317*l*., and, as the total amount due on current and deposit accounts, outstanding advices and acceptances was 4,892,287*l*., it showed that they had in hand assets readily available of over 50 per cent. of the total liabilities to customers. (Applause.) That was

A POSITION OF GREAT STRENGTH

and sufficient to meet any strain arising through panic, or otherwise, that this institution was ever likely to bear, and there were only two out of all the joint-stock banks in London that dealt with figures equal or larger than these that exceeded this percentage. The Chancellor of the Exchequer in his recent speech at Leeds to the Incorporated Chamber of Commerce called special attention to this peint—the cash reserves held by bankers—and expressed his opinion that generally they were not sufficiently large and were inadequate to the requirements of the country, and too small in oomparison with the liabilities incurred. He gave figures to show that during the last ten years the proportion of cash to liabilities had fallen from 12.9 per cent. to 10.3 per cent. The latter figures were based upon the Joint Stock Banks' balance-sheet ending June, 1890. The average of cash was then 10.3, but what was the position of that bank? They would be pleased to hear that it was nearly 2 per cent. higher than the average, namely, 12 per cent., and that when they made up their present accounts they had, on the 31st December last, no less than the percentage before stated, namely, 14.7. This position of strength and security must be appreciated alike by customers and shareholders. (Applause.) The next items were bills discounted, amounting to 531,349*l*., and loans amounting to 2,119,012*l*., showing an increase on the year of 56,726*l*., and that they had accommodated their customers to a greater extent this year than they did last year, by upwards of 50,000*l*. These discounts and loans were spread over among numerous customers, and, although generally small individually, were among the soundest and best that a banker could take. In reference to the subject of discounts and loans, not one of their customers, who, through the crisis that the commercial word had recently gone through, but could and did obtain every legitimate accommodation on good security. Bank premises stood at 277,931*l*., an increase of 68,349*l*. In the profit and loss account they would observe that they had paid to customers for interest 23,623*l*., being 8,547*l*. more than in the corresponding period last year. This increase arose from two causes—the first, a very satisfactory one, that they had held from the public and customers a larger amount of deposits ; and the second, that the average deposit rate for the last half-year had been 3*l*. 4s. 4d., against 2*l*. 12s. 1d. for the corresponding period in 1889. The current expenses were 50,469*l*., being an increase of 7,066*l*., caused by the increase of business. The chairman concluded by moving "That the report, balance-sheet and statement of accounts, now taken as read, be received and adopted, and that a dividend for the half-year at the rate of 8 per cent. per annum, free of income-tax (including dividend calculated on the new capital from the dates of payment of the instalments), be declared and paid upon the shares of the company." (Applause.)

Col. ELLIOT seconded the resolution, which, after a few congratulatory remarks, was agreed to.

The retiring directors, Col. Elliot, Mr. W. Franklin and Mr. Henry Wethered, were re-elected.

The auditors, Messrs. Edmeston and Worley, were also re-appointed.

A cordial vote of thanks to the directors, managers, and officers closed the proceedings.

THE MONTANA CO., LIMITED.

MONTHLY RETURN.

THE secretary of the Montana Company, Limited, begs to state that the following information has been received by cablegram from the resident director at the mine : "Total weight of ore crushed during January, 7,204 tons ; yield from the three mills, $81,500 ; working expenses for the month, $58,800." The estimated number of ounces contained in returns by assay being, gold, 2,985 ozs. ; silver, 15,348 ozs.

HOLLOWAY'S PILLS.—Weak Stomach.—The wisest cannot enumerate one quarter of the distressing symptoms arising from imperfect or disordered digestion, all of which can be relieved by these admirable Pills. They remove cankery taste from the mouth, flatulency and constipation. Holloway's Pills rouse the stomach, liver, and every other organ, thereby bringing digestion to that healthy tone which fully enables it to convert all we eat and drink to the nourishment of our bodies. Hence these Pills are the surest strengtheners and the safest restoratives in nervousness, wasting, and chronic debility. Holloway's Pills are infallible remedies for impaired appetite, eructations, and a multitude of other disagreeable symptoms which render the lives of thousands miserable indeed. These Pills are approved by all classes.

STOCK AND SHARE DEALERS,
AVENUE HOUSE, COPTHALL AVENUE, E.C.
Are prepared to deal in Mining and Miscellaneous Shares for two, three, or four months' forward delivery on receipt of the usual deposit of 20 per cent.
Send at once for copy of their Mining Circular containing advice to intending investors.
Telegraphic Address:
"EQUALIZATION, LONDON."
Bankers: CITY BANK, LIMITED.

MR. W. TREGELLAS,
40, BISHOPSGATE STREET WITHIN, E.C.,
DEALS in all descriptions of STOCKS and SHARES at close market prices.
SPECIAL BUSINESS in New Gold Hill, partly paid and fully paid. Strongly advise immediate purchase of shares.

RELIABLE INFORMATION AS TO MINING SHARES.

THE LONDON MINING EXCHANGE, LIMITED,
70 AND 71, BISHOPSGATE STREET, LONDON, E.C.,
Deals there and then in Mining Securities.
No connection with any promoter, vendor, or chairman of any company.
Lists published bi-weekly; subscription, 6s. 6d. per annum.
See our advertisement in *Financial News* from day to day.
The London Mining Exchange, Limited.

GEORGE GREGORY & COMPANY,
STOCK AND SHARE DEALERS,
1, CHURCH COURT, LOTHBURY, BANK OF ENGLAND,
OPEN SPECULATIVE ACCOUNTS with 1 per cent. cover. All telegrams free.
Special Business in Mining, Miscellaneous and Unquoted Shares. Hundreds of testimonials from clients.
No Commission charged on buying, selling, or carrying over.
Lend money to any amount on approved Stocks and Shares.
Weekly, Fortnightly, and Monthly Circular, showing
WHAT TO BUY, WHAT TO SELL, WHAT TO AVOID, Free on Application.
Write for our work, entitled
"HINTS TO SPECULATORS" (136 pages), giving a mass of information, and containing highest and lowest prices of all stocks, together with dividends paid for the past ten years. All post free. See Press opinions.
Bankers: Capital and Counties Bank, London and South Western Bank, London Provident, Moorgate Street, E.C.

Secretary and Offices (*pro tem.*)

R. WARNER, Esq., 105, GRESHAM HOUSE, OLD BROAD STREET, E.C.

This Company has been formed to acquire and work the valuable and extensive mineral properties known as the Grand Clos, Allemont, and Chalanches Mines, which, as proved by the reports, are rich in gold, silver and lead; in addition to which, other minerals are known to exist.

The mines are situated in France, about 36 hours' journey from London, and every facility will be given to intending investors to inspect and satisfy themselves as to the value of the properties.

The mines may be described as follows :—

GRAND CLOS.—This mine is in the Hautes-Alpes, about 50 miles from the town of Grenoble, being on the main road between that town and Briangon, and 39 miles from the railway at Vizille and about 575 English acres in extent.

The ALLEMONT.—This mine is about 2,000 acres in extent, and situated 500 ft. above the village of that name, which is at a distance of about 17 miles from the station at Vizille.

CHALANCHES.—This mine, adjoining the Allemont, is contained in a property about 3 miles long, by about 1 mile wide. There are the remains of extensive workings of early date, and which are shown in plan accompanying prospectus.

The titles to the properties are as follows :—

The Grand Clos and the Chalanches are concessions in perpetuity held direct from the French Government upon a royalty of 5 per cent. on the nett profits.

The Allemont is at present held under a *permis de recherche*, in exchange for which the Company will be entitled to a Government concession similar to that above-named.

GRAND CLOS MINES.—These consist of eight well-defined lodes, upon five of which considerable workings have been carried out, viz. :—The Javenel, Pisse Noir, Escarelle, Colombier—which are on the right or north bank of the River Romanches—and the Feche-Rond on the south bank.

Extensive adit workings have been carried out on these lodes, but in so unminerlike a manner that large bodies of rich ore have been left unstoped in the workings. This, no doubt, is due to the fact that the old miners were unable to provide the necessary capital for properly laying the mines open.

Mr. Thomas Denny says :—

"I have no hesitation in saying that, from my investigations on the spot, and the result of my assays of the ore taken from the mine, that with sufficient capital provided, sound management, and rapid development, not only would good dividends be earned upon the capital employed, but large returns made for a great number of years."

It is now proposed to drive a main tunnel at a point adjacent to, and convenient for, the mill, in order to make the mines self-draining, and work them in an economical manner. At various points in this tunnel, or main adit, it is proposed to drive cross-cuts, which will intersect the various lodes, giving enormous backs and reserves of mineral, which can be stoped out and brought up by the main tunnel direct into the smelting works. Assays made by Messrs. Shedlock and Denny of the ore taken from this mine give an average of nearly 50 per cent. of lead and 6¾ ozs. of silver per ton.

CHALANCHES.—These mines, which are situated to the north-west of, and about 3,000 to 4,000 ft. above the village of Allemont, have in former days been sufficiently worked to indicate the enormous deposits of mineral contained therein.

Mr. Thomas Denny says :—

"The evidence of the extent and richness of the ores raised in these mines which I have been able to collect, and the enormous power obtainable from the splendid supply of water, fully justifies me in recommending you to secure these properties. By the judicious employment of sufficient capital in their development, I can safely predict large and continuous returns."

The samples taken by Mr. Thos. Denny have assayed on an average 98 ozs. silver, and 10 per cent. of lead per ton of ore.

It is now proposed to attack these mines by adit levels at considerable distances below the old workings, *vide* plans, by which means they will be not only self-draining, but offer facilities for winning the ore and bringing it to surface.

ALLEMONT.—Mr. Robson in his report of 30th September, 1890, after he had seen the result of the assays of the samples taken by him, writes as follows :—

"If care was taken to collect all the earths from these different points, I will not undertake to say how much would be obtained for the ton of rock taken away, but this I will say that looking at the analysis of the various samples, this is the most wonderful property I ever came across. The samples I took with my own hands, parcelled them up in the mine, fastened them in the box at the hotel, and never left it until I handed it over to you. Had it been in the Chalanches part of the property, I would not have been so surprised, but I confess I did not expect such riches in Allemont. I need not say that if you are satisfied with the conditions under which you are asked to contribute to this affair, you need not any longer hesitate as to the value of the mine."

Mr. Thomas Denny says :—

"Going west from this old shaft in old level, and about 39 ft. distant, I examined a lode ranging from 2 to 3 ft. in width, from which I also took samples. Continuing west for another 39 ft., I took samples from a winze on the north side ; I also obtained samples from rise opposite. Still further, 26 ft. westward, I took more samples. Coming back to mouth of adit, I explored an old level running east from cross-cut, in which a considerable amount of work has been done, and from which a limited quantity of ore could now easily be obtained. The samples I took at this point, with these above mentioned, I have assayed, the results being highly payable, the average being 1 oz. 0 dwts. 7 grs. gold, and 29 ozs. 3 dwts. 10 grs. silver, and about 10 per cent. lead per ton of ore. As it is intended to crush and treat the whole of the lode stuff, I have given a bulk average of the various samples taken from this mine (for details see certificates). In consequence of the discovery of gold in this mine, it will pay to take out the whole of the lode stuff for treatment. The absence of any reference to gold in the old records, and the system under which this mine has been worked by the old miners, I am satisfied that they had no idea of the presence of gold, for, if they had, they would have taken large bodies of ore (now left standing) which are payable for the gold now proved to be contained in the ore."

There appears to be no knowledge in the district as regards the Allemont and Chalanches Mines, of the ores containing gold, in evidence of which Mr. Thomas Denny, in his report, says :—

"I obtained 29 buttons of metal from the resident agent, being the result of assays which he had made for silver only. I have had these buttons parted, with the following average results :—

	ozs.	dwts.	grs.		
"Gold... ...	3	15	14	average of 7 buttons	per ton of ore."
"Silver ...	62	13	22	,, 29 ,,	

It is also proposed in this case to drive an adit level at some depth below the old workings, thereby draining the mine, and providing a large extent of stoping ground.

These mines already have mills and buildings partially adapted for the proposed works ; and all the power necessary for treating vast quantities of ore is provided by the magnificent and never-failing streams of water, whose power would be sufficient to treat many times the amount of ore it is estimated can be raised from the mines. By the addition of modern machinery and appliances to these mills, the ore, as raised, can be most economically treated.

It will be observed in perusal of the assays accompanying the prospectus that those of Messrs. Shedlock and Denny are much lower than the others ; this is explained by the fact that this firm have made bulk assays, representing as nearly as possible the results that would be obtained commercially.

According to the assays, the lead in the Allemont and Chalanches ores will more than pay all the expenses of mining and milling, thus leaving all the gold and silver as profit,

The directors reply on the accuracy of the reports made by Mr. Thomas Denny and Mr. George Robson for the various statements made in the prospectus.

There being such a large number of assays they are enclosed with prospectus separately.

The following contracts have been entered into :—An agreement, dated 4th February, 1891, between the Grand Clos Mining Syndicate, Limited, of the one part ; and Harry Parminter of the other part. An agreement, dated 4th February, 1891, between the Allemont Mining Syndicate Company, Limited, of the one part ; and Harry Parminter of the other part. An agreement, dated 5th February, 1891, between Harry Parminter, of the one part, and the Company of the other part, and which may be seen at the offices of the solicitors.

The vendors pay all expenses of and incidental to the formation of the Company, up to allotment ; and they have entered into contracts with various parties relating to the acquisition of the property, the payment of preliminary expenses, and the subscription of the capital, to none of which is the Company a party, and under which it incurs no liability. Applicants for shares must, therefore, be deemed to have had notice of any such contracts, and to have waived all rights (if any) to particulars thereof whether under Section 38 of the Companies Act, 1867, or otherwise.

Prospectuses and application forms can be obtained of the bankers and solicitors, or at the offices of the Company, where maps, plans, photographs, assays, samples of ore, and original reports may be seen.

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

A BUSY WEEK—BIG ADVANCE IN FRONTINO SHARES—ALMADA, GOLD HILL, GOLDEN GATE AND FEATHER SHARES RISE APPRECIABLY—INDIANS ALL UP—THE MARKETS GENERALLY FIRM — GOOD OUTLOOK FOR NEXT WEEK.

THE Mining market has justified the prognostications in which we indulged last week. We said the week would be characterised by a large amount of business and so it has. The general Foreign and Indian sections have received most attention, and curiously enough, the very shares upon which we fastened as most likely to respond to even a small amount of healthy buying have advanced appreciably, if not considerably. For example, Gravel Golds are better—a share we described as "coming to the front." In a special leader we pointed out the ridiculously low price of Eberhardt, and foretold the satisfactory discourse the chairman would preach from the text of his visit to the mines. The shares have advanced, and there is a spirit of inquiry abroad respecting them which bids well for better prices shortly. There has also been a big rise in Golden Gate and Golden Feather shares, and as summer approaches we expect to see them much higher. Almadas have also justified our forecast by rising at one time to 4s., but the prompt appearance of sellers threw quotations back. There has been a big market for Gold Hills, which mark a rise. Don Pedros have not maintained prices according to expectation. The reports just issued by the management had been discounted by the news we published last week. They are down in company with Yankee Girl, Orita, Tolima, Pahang Corporation, and one or two others.

The sensation of the week has, however, been the Frontino and Bolivia Company, which has done nothing but prosper since Mr. Donagan took the helm some few years ago. He had difficulty in persuading the shareholders to re-construct the company, but quotations have this week been considerably over par, the total rise on the week being measured by 12s. 6d. Our leader columns tell the whole story, which, so far as this article is concerned, may be left where it is.

Turning to the Indian market—where changes have taken place they have all been for the better. Champion Reefs have led the way, followed by a substantial rise in Nine Reefs, Nundydroog, and Goldfields of Mysore. Mysore West and Wynaad have also been in good demand, and New Devala Moyar shares, to which special attention was directed in the MINING WORLD last week, have advanced from about 6d. to, at one time during to-day, 2s. Of all the Wynaad mines there is seemingly not one that has better prospects than New Devala, and the recent re-construction has provided it with ample working capital.

In regard to Indian shares there is not a single fall to be recorded upon the week. Meanwhile the Mysore Goldfields' directors, and those of the other companies that are now postulating before them for portions of their property, are elaborating their plans, which are likely to be mainly, if not wholly, for the benefit of the Goldfields shareholders, and there are not wanting those on the market who predict a far bigger rise for these shares than they have yet seen. The outlook for Indian shares is decidedly good, and still firmer prices may be expected. It is thought that Mysore Reefs are too much neglected.

In the South African market the announcement that the Witwatersrandt gold crop for January was 53,205 ozs. "firmed" these descriptions. Although the total is greater, the individual crushings of several of the companies have fallen off. Most of the gold shares are up ⅛ each, whilst City and Suburban, Stanhope, Pioneer and Langlaagte mark an even greater advance. The circular issued by the Simmer and Jack company, giving a list of the shares in which errors have been discovered, has upset this market. Not only have the transfer books been closed, but also the London office at 1, Drapers' Gardens, where Mr. E. J. Burgess acted as secretary. The inference is that there are in existence duplicates of the shares of which the numbers have been published. The Diamond market has moved unevenly, the principal feature being the rise in New Jagersfontein. Land shares have advanced, notably Oceanas, but Explorings fell on adverse rumours. The meeting of the South African Trust and Finance Company to-day passed off satisfactorily, though not without some criticism as to the general administration expenses and directors' fees.

In the Australian Market, Bonnie Dundees have been firm and so have Kangarillas, whilst Gympie Great Eastern lost a point of the recent rise.

The Copper Market has been featureless.

The Home Market has recovered somewhat from the recent fall, notably Dolcoath, East Pool, Wheal Agar, and Killifrith, but other shares are down. The speculation in these descriptions has rather to do with the state of the Tin market than the condition of the mines. Stocks have decreased by 25 per cent., and, as the market has not yet responded to this diminution, the firmness noticeable in Cornish shares this week is easily accounted for.

The settlement passed off satisfactorily. The transactions were on a larger scale than the market has known for some time past. The carrying-over rates were light, and, in many of the shares heavily dealt in, stock is known to be scarce. Public confidence in the profitable nature of mining investment and speculation appears to be reviving, and it is seldom that it is long wanting.

To-morrow (Saturday) the Mining Exchange will be closed ; but next week we venture to think that the volume of business will be even greater than has characterised the one with which we have now dealt.

KAFFIRS.

In this market it has been a week of ups and downs just to suit the jobbers, but on the deal the public have had the best of it seeing that prices are still improving. Pigg's Peak Preference, Central Langlaagte, City and Suburban, Durban Roodepoort, Henry Nourse, Johannesburg Pioneer, Langlaagte, Stanhope, and Wemmer have all been freely dealt in, and close at higher prices, but Royal and Simmer and Jack are down a shade.

There has been some good buying in Geldenhuis on the crushing of 5,100 ozs. from 3,400 tons, the mining profit being 13,500*l*.

Business.—Those closing higher on the week are as follows :—Pigg's Peak Preference ⅛, Sheba 6d., Aurora ⅛, Bothas Reef 6d. Central Langlaate ⅛, City and Suburban ⅜, Crœsus 6d., Durban, Roodepoort ⅛, Forbes Reef 6d., Henry Nourse ⅛, Johannesburg Pioneer ¾, Langlaagte $\frac{5}{16}$, May Consolidated 1s., Modderfontein 6d., Nabob $\frac{1}{16}$, Stanhope ⅜, Wemmer ⅛, and Witwatersrandt (Knight's) 3s. Those lower are Kleinfontein ⅛, Main Reef 1s., Royal ⅛, and Simmer and Jack $\frac{1}{16}$.

Diamonds.

An enquiry has been made for Griqualand West and Jagersfonteins, which have advanced. The market in other respects has been somewhat dull. De Beers have been up and down, but as we foreshadowed last week they have receded in value, and will, in our opinion, go yet lower. The dividend declared last December will be paid at the offices in London on and after Thursday next.

Business :—Those shares showing a decline are De Beers, 1/4; Griqualand West, 1/4; and North-Eastern Bultfontein, 1/8; whilst the only upward move to note is in Gordon, 6d.; aud New Jagersfontein, 3/4.

Making-up Prices. Feb. 10th, 1891.	Diamond Shares.	To-night's Prices.

—	United Jagersfontein ...	3/8 — 1/2
1/2	Bnrma Ruby Mines	7/16 — 9/16

South African Lands.

A good deal of life has been apparent in this market, and although no important rise can be chronicled, quotations on the whole have been firm, and it has been difficult to deal in any fairly good line of shares at quoted prices. Chartered South Africas have been steady, and changed hands at 2 1/2, while Oceana at one time rose to 22s. 6d. Silatis also had a rise. South African Explorations have been freely dealt in at advanced prices, but Explorings have been again offered for sale, and close lower.

Bnsiness.—An advance has taken place in the following :—Bechuanaland, 1/16; Exploration, 1/8; Goldfields of South Africa, 1/16; Horo Concessions. 2s.; Johannesburg Estates, 1/16; Klerksdorp, 6d.; London and South African, 1/4; New Grahamstown, 1/8; Oceana, 3/4; Ophir, 3d.; Silati River, 1/8; Transvaal Gold, 6d.; and Zoutpansberg, 1/16.

The falls are as under :—Exploring, 3/4; Moodies, 1/16; South African Gold Trust, 1/8; and Transvaal Lands, 1/16.

Indians.

We have again to record a very large volume of business transacted in this class of shares. Goldfields of Mysore have again taken the lead, and kept very firm. They have been as low as 1 9/16, and up to 1 13/16, but close 1 5/8, 1 3/4, against 1 1/2, 1 9/16 last week.

Large transactions have also taken place in Nine Reefs. After closing last week at 3s. 9d., 4s. 3d., they suddenly leapt to 8s., but close at 6s., 6s. 6d.

Doubtless Indian Consolidated and Colar Central will share in the general rise ere long. Holders of Balaghats will note with interest the steady improvement in the workings on their property. Mysore West and Wynaad have slightly improved in price. The outlook generally for this field is very hopeful. Harnhalli shares have been rigged up, not on their merits but on better news from the Colar field, which is 180 miles distant from the Mysore Harnhalli Mine. There has also been considerable business in Champion Reefs and Devala-Moyar, both of which have advanced in price.

Business.—The upward move in this class is shown in Champion Reefs, 3s.; Goldfields of Mysore, 1/8; Mysore West and Mysore Wynaad 6d. each; New Devala-Moyar, 1s.; Nine Reefs, 2s. 3d.; and Nundydroog, 1/16. Others remain firm at last week's quotations.

Australians.

There has not been very much doing in these shares if we except Etheridge, which are being quietly picked up for higher prices.

Business.—A rise has taken place in Bonnie Dundee, 1s. 6d.; Day Dawn Block, 6d.; Etheridge, 3d.; Kangarilla, 5/16; and Mount Shamrock, 3d. The only fall is in Gympie Great Eastern of 6d.

Copper.

There has been very little business doing in this discription, and prices in several cases have been nominal.

Business.—An improvement is to be noted in Bratsberg, 6d.; Namaqua, 1/8; whilst a fall has taken place in Mason and Barry, 1/8, and Rio Tinto, 1/4.

General Foreign Shares.

Several of the shares in this market have been heavily dealt in during the week, and foremost have been Almadas. These

shares at one time were eagerly sought after at 4s., but do not close quite so good, although a firm market. Golden Feather and Golden Gate have also been well to the fore and have had a considerable advance. California, Gold Hill, Loma, and Rnssell have also been enquired for at a slight advance, and Frontino and Bolivia have risen from 23s., 25s. to 1¾, 1⅞. Don Pedro, Potosi, and Yuruari are not quite so good.

Business.—The rises are in the following :—Almada, 1/16 ; Colon, 3d. ; Emma, 3d. ; Flagstaff, 6d. ; Frontino and Bolivia, ⅝ ; Golden Feather, 4s. 6d. ; Golden Gate, ¾ ; Gravel Gold, 6d. ; Kohinoor, 3d. ; Loma, 3d. ; New Eberhardt, 3d. ; and New Gold Hill, 1s. 3d.

The falls are :—American Belle, 1s. ; Balkis, 1s. ; Don Pedro, ⅛ ; New Viola, 6d. ; Orita, ⅛ ; Pahang, 1/16 ; Potosi, 6d. ; Tolima, ¼ ; and Yankee Girl, 3s.

The following list shows the principal changes which have taken place :—

	Last Week.		This Week.

LATEST FROM THE MINES.

INDIAN MINES.

BALAGHAT.—The directors have sold, through Messrs. Johnson, Matthey and Co. the gold obtained in the month of December, which realised 1,896*l.* 15s. 10d.

INDIAN GOLD.—The following information was received by cable 9th February :—"January : Total amount crushed is 590 tons ; Koorumber ore yielding 54 ozs. Outcrop stopes have been abandoned. Ore from No. 11 tunnel : Total amount crushed is 150 tons, yielding 5 ozs. ; concentrates, 3½ per cent. ; assays, 16 ozs. per ton."

MYSORE.—The directors have sold, through Messrs. Johnson, Matthey and Co. the gold obtained in the month of December, which realised 20,987*l.* 16s. 3d.

MYSORE REEFS.—The gold produced in December was 346*l.* 4s. 1d.

NUNDYDROOG.—The directors have sold, through Messrs. Johnson, Matthey and Co., the gold obtained in the month of December, which realised 5,337*l.* 5s. 11d.

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—The following telegram has been received from the managing director, resident at Broken Hill, dated 6th February :—"Raised since last report (dated 23rd ultimo), 6 tons of ore, containing 13,500 ozs. silver."

BRILLIANT.—Cablegram from Charters Towers reports the fortnightly crushing 841 tons ; yielded 1,775 ozs. smelted gold ; value, 6,250*l.* Henceforth, dividends will be 4s., declared monthly.

OOREGUM.—The superintendent under date of February 11th telegraphs as follows : "Cholera ended ; Moplahs returning." The company sold the gold produced in December for 10,910*l.* 18s.

BROKEN HILL PROPRIETARY.—For the week ending 12th inst. there were 5,006 tons of ore treated, yielding 1,001 tons of lead, containing 195,234 ozs. silver. The leaching plant realised 2,200 ozs. ; making a total production of 197,434 ozs. of silver.

CUMBERLAND.—A cablegram from Mr. Piper, dated 6th February, states :—"Mill returns show profit 300*l.* ; have stopped. Have sold machinery 800*l.* on satisfactory terms. Have commenced driving. Main shaft is down." The secretary advises that in the recent cablegram from the mine, which appears to have been misunderstood in some quarters, the words "have stopped" referred to the treatment of the tailings, not to the working of the mine. The machinery that has been sold is old machinery, which has long since been replaced.

DURHAM AND LORD BYRON.—The extraordinary general meeting was adjourned to Thursday, 19th inst., but on this occasion the directors do not propose to transact any business. A new scheme will shortly be in the possession of the shareholders, for the consideration of which an extraordinary general meeting will be called.

HARRIETVILLE.—Telegram from Mr. T. G. Davey, dated 7th February, states :—"Cleaned up 5th February, 23 days. Mons Meg Mine, 580 (?) tons, 270 ozs. New Lease, 402 tons, 110 ozs. Amalgamating pans, 6 ozs. ; also 8 tons pyrites, 4 ozs. per ton."

MIDAS.—Cable from the mine : "Yield for week, 60 ozs."

NEW VICTORIA.—The company crushed 165 tons stone for 1,240 ozs. smelted gold, and paid a dividend of 2s. per share. The manager reports that the mine continnes to look well.

QUEEN CROSS REEF.—The company crushed 350 tons for 813 ozs. gold, and paid two dividends in January equal to 1s. 6d. per share.

FOREIGN MINES.

ALMADA AND TIRITO.—Telegram from the superintendent :—"Month's profit for January, $9,000."

CORTEZ.—Cablegram show the results for the month of January, "Production, 32,391 ozs. ; expenses, $15,143 ; tons crushed, 612 ; development expenditure, $2,948."

DON PEDRO.—Messrs. Lacy, Hartland and Co. notify that they are prepared to pay the coupons now due on the debentures of this company.

ELKHORN.—Cables from Capt. Plummer :—"Bullion shipped for week ending the 7th February, 10,000 dols." "Mill worked 30 days during month of January, and crushed 980 tons of ore, producing bullion amounting to 36,325 dols., smelting ore produced 281 tons of the value of 16,830 dols. Total produce, 53,155 dols. Total expenses, 21,810 dols. New hoisting machinery has been received, and is in course of erection." Also, that a new ore body has been discovered in the 1,050-ft. level north of the shaft, which is now 5 ft. wide, and assays 75 dols. per ton.

GOLDFIELDS OF URUGUAY.—The directors have sold, through Messrs. Pixley and Abell, the gold bar produced during December, which realised, net 1,491*l.* 5s. 1d.

KETCHAU (PAHANG) CORPORATION.—Advices from Singapore, dated 14th ult., state that the bullion recently sold by them was purchased by the Hong Kong and Shanghai Bank at $22.50 (equal to 4*l.* 0s. 3d. per oz.

NEW CALIFORNIA.—Cable from the manager :—"New ore body in shaft. Sinking progressing well.—RICKARD."

OURO PRETO.—A telegram dated 11th February gives last month's return of gold as follows :—3,430 tons of quartz produced 10,522 oitavas of gold (1,213 ozs.)

PINOS ALTOS.—The out-turn for the week ended 31st ult. was $8,850.

QUEBRADA RAILWAY LAND AND COPPER.—The company notify that coupons due 1st March on the 50,000*l.* prior mortgage (bearer) bonds, will be paid at the Commercial Bank of Scotland, No. 62, Lombard Street. The transfer books of the oompany's 400,000*l.* 6 per cent. debenture stock will be closed from the 14th to the 28th inst., both days inclusive, for the preparation of interest warrants due March 1st.

UNITED MEXICAN.—Telegram :—"San Cayetano : Gross returns for week ending January 31st, $2,580 ; expenditure, $1,400 ; loss, $1,820. El Cubo : Gross returns, $5,850 ; expenditure, $4,970 ; profit, $880."

HOME MINES.

CALDERBANK STEEL AND COAL.—The directors have declared a dividend on the preference shares at the rate of 6 per cent. per annum, payable on 12th inst.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

ROODEPOORT.—January crushing, 1,560 ozs.

PRINCESS ESTATE.—The crushing for January was 870 ozs.

HERIOT.—Tenders are being advertised for re-construction or purchase.

GLENCAIRN MAIN REEF.—January crushing for 23 days, 402 ozs.

KLEINFONTEIN ESTATE.—1,800 tons crushed ; 525 ozs. ; 25 stamps ; 28 days.

UNITED LANGLAAGTE.—January crushing, 1,130 ozs. ; the mine was flooded owing to heavy rains.

WEMMER.—Result of working for January : 560 tons crushed, yielding, 1,050 ozs. for 27 days' working.

TEUTONIA.—Have cut lode in cross-cut 6 ins. wide. Assays of the vein give 14 ozs. per ton.

Worcester Exploration.—Result of last month's crushing yielded 706 ozs. of gold. Have declared a dividend of 5 per cent.

Geldenhuis Estate.—The crushing of 3,400 tons last month yielded 5,100 ozs., the profit for the month being 13,500*l.*

New Primrose.—2,500 tons crushed, realised 1,110 ozs. of gold, result of 25 days' crushing with 30 stamps.

Central Montrose Estate.—The crushing for January with a 10-stamp battery was 375 tons, yielding 416 ozs. of gold. Expenses on revenue account were 600*l.*

Piggs Peak.—Cablegram: "Mill returns show 930 ozs., 290 tons; crushing only 210 hours owing to weather; quality of ore is improving; you may expect improvements February."

Stanhope.—Cable from the head office: "Have declared a dividend of 10 per cent. payable to all shareholders registered on the 7th day of February. Will be paid on the 11th day of March."

Barrett.—Confirming the last published advices to the effect that "the run of alluvial gold had been again picked up, and that washing had been resumed with an ample water supply," a cablegram is to hand from the manager, dated 7th inst.:—"Have found a 50-oz. nugget."

Crown Reef.—The crushing for the month of January during 27 days of 24 hours was 5,305 tons, yielding 3,115 ozs. of smelted gold. The revenue for the month was 11,136*l.* 2s. 6d., and the working expenditure was 6,472*l.*, leaving a profit for the month of 4,664*l.* 2s. 6d. The expenditure on capital account for the month was 1,309*l.*, making a total expenditure for the month of 7,781*l.*

COMMERCIAL NOTES.

Metals.

Copper has been quiet. G.M.B. Warrants for cash improved from 52*l.* 2s. 6d. to 53*l.* cash, and three months from 52*l.* 10s. to 53*l.* 5s., but eased to 52*l.* 10s. cash, and 52*l.* 15s. three months; closing at 52*l.* 7s. 6d. cash, and 52*l.* 12s. 6d. three months. We quote English tough 56*l.* 10s. to 58*l.*; best selected, 58*l.* 10s. to 60*l.*; strong sheets, 65*l.* to 66*l.*; India sheets, 60*l.* 10s. to 61*l.* 10s.; yellow metal, 6d.; ore, &c., 9s. 6d. to 11s. per unit.

Tin has been rather irregular. Straits advanced from 90*l.* to 90*l.* 15s. cash; three months from 90*l.* 12s. 6d. to 91*l.* 5s.; easing to 90*l.* 5s. cash, and 90*l.* 12s. 6d. three months; closing at 90*l.* 2s. 6d. cash, and 90*l.* 10s. three months; Australian is about 2s. 6d. premium over Straits. The Dutch market has been firm; Banca, 55fl.; Billiton, 54¾fl. English Ingots, 93*l.* 10s. to 94*l.*

Tinplates are firm, and in good demand. We qnote ordinary coke, 18s. to 18s. 3d., Liverpool.

Spelter firm. 23*l.* 12s. 6d. to 23*l.* 15s. for ordinary brands, ex ship here.

Lead quiet. We quote soft Spanish, 12*l.* 7s. 6d. to 12*l.* 10s.; soft English, 12*l.* 10s. to 12*l.* 12s. 6d.; L.B. China pigs, 13*l.* 5s.; sheets, 13*l.* 10s. to 13*l.* 15s.

Quicksilver.—Rothschild's price is still 8*l.* 12s. 6d.; seconds, 8*l.* 11s. 6d.

Antimony dull, 68*l.* to 69*l.*

Dividends Declared and Announced for Week Ending February 14th.

FRONTINO AND BOLIVIA (SOUTH AMERICAN) GOLD MINING CO., LIMITED.

A brilliant return—7,300*l.* profit for January.

11th February.—The directors have received a telegram from the superintendent at the mines as follows, viz:—"January remittance, eleven thousand seven hundred sterling. Expenses, four thousand. Eustice." This points to a profit of about 7,000*l.* for January, after adding London expenses, insurance premium, and the charges on realisation of the gold to the above statement of cost. The written explanation of the sources from which the above very large return was obtained may possibly reach this country at the end of the present month, or such information may not arrive uutil the following mail, which will be due on the 16th of March. The directors take this opportunity of mentioning that, from a paragraph in the last letter received from Mr. Eustice, dated 23rd December, 1890, it appears to be probable that the returns and cost for December will prove to be about the same as November—in which caae a profit of upwards of 3,000*l.* for December will be announced by the next circular. The mail which may give the estimated figures for December is due on the 16th inst.—J. Jameson Truran, Secretary.

BRITISH MINING INTELLIGENCE.

D'Eresby and Gwydyr (11th Feb.)—No. 10 levels: In south cross-cut we have more compact, harder ground this week. The cross-joint we are driving on keeps open, and produces very good lumps of lead embedded in blende, and friable spar very promising. The end of main level driving north of shaft is still in a loose sparry lode, showing a mixture of blende with occasional spots of lead. I shall start a cross-cut through the lode at this end next week. No. 9 level: The driving south from No. 1 winze, south of shaft, produces good strings of lead, all of which are dipping across the lode towards the footwall. These and other indications tend to show that the most productive part of the lode is making into the footwall. The stope over level north of shaft is worth 1 ton of lead to a fm. No. 8 level: The end driving north from shaft produces stones of lead, but not enough to value. This end is now about 2 fms. in advance of stope coming up from No. 9. The south stope at this level is worth 15 cwt. of lead to a fm. Surface: Winding and dressing is proceeding satisfactorily. Our reservoir is now getting rather low, and in order to retain enough water for keeping the crusher-wheel going, we are now pumping with the engine at night and closing the reservoir. I shall sample 14 tons of lead to-morrow.—H. Nottingham.

DEVON GREAT CONSOLS (12th Feb.)—Wheal Maria, Capel Tor lode, eastern shaft: In the 112-fm. level west the lode is 2 ft. wide, composed of capel and quartz, with peach and a little copper and mundic ores. The 74-fm. level east is without alteration. Watson's engine shaft: In the 172-fm. level west the lode is 3½ ft. wide, and continues to yield saving work of copper and mundic ores. In the 160-fm. level east the lode is 4 ft. wide, and yields a little copper and mundic ores.—I. Richards.

DEVON UNITED (12th Feb.)—Willesford's shaft: In the 144-fm. level west the lode is 2½ ft. wide, composed of capel, quartz, and peach, with small quantities of good quality copper and mundic ores. In the 132-fm. level west the lode is 2½ ft. wide, very promising, and is yielding 1 ton of copper and mundic ores per fm. The lode in the stope in the back of the 132-fm. level west is worth 2 tons of copper

ore per fm. Watson's shaft: In the 60-fm. west the lode is 1½ ft. wide, yielding saving work of copper and mundic ores.—I. RICHARDS.

EAST BLUE HILLS (12th Feb.)—In the 30 east on the new lode a small cross-course has intersected the lode, so that we are unable to value it this week, but have no doubt it will be found equally good the other side of the cross-course. The 35 east continues worth 15*l*. per fm., and the stopes and pitches about the same. We are progressing fairly well with the dressing.—W. NANCE.

ENGLISH ANTIMONY (11th Feb.)—The manaper reports :—The lode in the 8-fm. level driving south of shaft is daily improving and increasing in size. We have to-day discovered a branch of antimony in the level driving north of trial shaft. I am pushing on the driving north and south as fast as I possibly can.

LEADHILLS (9th Feb.)—The 145-fm. level north of Jeffrey's shaft keeps in a vein above 4 ft. wide, charged with quartz, improving every cut in, and so we look for ore soon. The stope above the 145 south of Jeffrey's shaft is worth 30 cwt. of ore per fm. The stope above the 145 south of Wilson's shaft is worth 20 cwt. of ore per fm. The stope above the 145 north of Wilson's shaft is worth 30 cwt. of ore per fm. No. 4 winze below the 130 north of Jeffrey's shaft shows a promising vein 7½ ft. wide, worth 15 cwt. of ore per fm. The three stopes above the 130 north of Jeffrey's shaft are each worth 20 cwt. of ore per fm. The rise above the 130 north of Jeffrey's shaft is in promising quartz, but without ore. The stope above the 130 north of Wilson's shaft is worth 20 cwt. of ore per fm. The sizing of the 115 north of Jeffrey's shaft is being done with fair speed. The stope below the 115 north of Jeffrey's shaft is worth 30 cwt. of ore per fm. The stope above the 115 south of Wilson's shaft is worth 25 cwt. of ore per fm. The 85-fm. level north of Jeffrey's shaft keeps in an unkindly vein, above 4 ft. wide, and without ore. The 70-fm. level south of Wilson's shaft is in a twitched veiu, and showing stone, yet too dark in colour for producing ore. The 35-fm. level south of Flat Rod shaft is in a vein 5 ft. wide, composed of kindly stone and quartz, with one worth 35 cwt. per fm.; there is also a nice dampness. The stope above the 35 south of Flat Rod shaft is worth 30 cwt. of ore per fm. Sarrowcole Vein: The stope above Gripp's adit north of George's Roust vein is worth 10 cwt. of ore per fm.—T. NEWBIGGING.

MID DEVON.—Report for week ending 7th February :—Surface: The machinery has worked continuously this week; it takes 3¾ revolutions per minute to cope with influx of water to shaft. A shaft: Water in fork to bottom of the 80. C Shaft: The cross-cut south from under winze at the 60-fm. level driven by six men 1 fm.; total distance from level, 1 fm. 3 ft.; the strata is conducive to the yield, ore being mineralized throughout and at present yields 10 cwt. of 6½ per cent. ore per fathom.—J. NEILL.

ROMAN GRAVELS (12th Feb.)—The 155 cross-cut has now we consider passed through the whole of the Roman lode, which is made up of three divisions together 7 ft. wide, composed of carbonate of lime of a more congenial character than that immediately above at the 140-fms. level, and enclosed by country rock of typical nature. Although the vein at present exposed does not contain a sufficient quantity of lead ore to enable us to place a value upon it, there are two nice looking strings of galena to be seen, and blotches here and there throughout the matrix, which together with the surrounding favourable indications referred to above are, we believe, certain signs of a near approach to productive and paying ground. In other words if we do not at an early date discover a good deposit of ore in this level we shall not only be disappointed, but also deceived. We commenced to drive south on the vein last uight, and calculate that the caunter lode will be intersected at say 8 or 9 fms. from the cross-cut, aud if we may now also judge of this by surrounding circumstances, and by what has been seen above, we may likewise expect to find a profitable run of ore at the 155 south-east. The 140 north is driven 78 fm. 4 ft., and we are very pleased to be able to report to you the great improvement which has taken place here this week. We believe that the forebreast is now up to the junction of the Roman and East lodes, which as at present exposed are together 7 ft. wide, and worth quite 3 tons of lead ore to the fm. We do not hesitate to state that this is the best looking vein seen in any forebreast in the mine during the past five or six years. The winze being sunk from the 125 at a point say 10 fms. in front of above-named forebreast is 9 fms. deep, the vein in present bottom being 3 ft. wide, producing 1¼ tons of lead ore to the fm. We have only one of the lodes in this winze, but which of the two we canuot tell, and it may be that the bunch of ore at the 140 level dips north with the lids, in which case the winze is not deep enough to catch it. The 140 south is driven 78 fms. 1½ ft., but there is no change in the vein worthy of notice since last week. We hope, however, to experience a favourable change here very shortly, since the forebreast is now not far away from a corresponding point where a deposit of ore was found in the levels above; the levels here dip south. There is no change to notice in the vein at the 125 south. The drivage south from Jones' winze in the 80 south is worth quite 2 tons of lead ore, and the stopes in back of the drivage are as last reported. In driving out from the stope in back of the 80 south of Glover's winze, south of old engine shaft on the east lode, we have cut into a vein, which is to-day worth 2 tons of lead ore per fm.; if this maintains its value a lengthy run of ore ground will be opened up here. The stopes throughout the mine are just as when last reported. We have sold 20 tons of blende to-day for 12*4l*., and sent ont samples of 50 tons of lead ore for sale on Thursday next.—A. WATERS.

SOUTH DARREN (12th Feb.)—The stope under the 142 west is worth 1 ton of silver-lead ore per fm., with good copper. No. 1 stope over this level is worth 15 cwt. No. 2 is worth 10 cwt. of silver-lead ore per fm. All work is going on satisfactorily. We are drawing two cores a day, aud pushing on the dressing.—J. MITCHELL.

WHEAL CREBOR (10th Feb.)—Good progress is still being made in driving the 156-fm. level cast and sinking the winze below the 144 west of cross-cut. The character and value of the lode in each place is the same as reported last week. These two points we hope to bring together within six weeks. The lode in the end driving west of cross-cut is worth 1 ton of mundic and copper ore per fm. The lode in the stope in the back of the 144 west of cross-cut is worth 6 tons of copper ore and 5 tons of mundic per fm. No change in the tribute part of the mine to report.—P. D. HOLMAN.

WHEAL GRENVILLE (10th Feb.)—I herewith hand you the monthly report :—In the 220-fm. level driving east of Goold's engine shaft: There is no change to report as to the value of the lode; it is well defined, aud producing low quality tin stuff; but as we are only carrying the south part of the lode we do not know its real value, considering the ground in this end is hard and wet, I think 7 fms. per month is good speed. The machine in this end is working well. The 205-fm. level east of Goold's shaft: The lode in this end is without change to note since last reported, but I think this end will soon improve, as it is getting under some good tin ground seen in the levels above. We drove over 9 fms. with the boring machine in this level last month, which I consider good speed. The 190-fm. level east of Goold's shaft is being driven by hand labour. The grouud is uot so difficult in this as in the two bottom levels, for driving it is worth for tin 14*l*. per fm. The 178-fm. level east of Goold's shaft is about same value as last reported, worth 20*l*. per fm. The 165-fm. level east of Goold's shaft is worth for tin 16*l*. per fm. The other ends are without change to note. We are producing the usual quantity of tin from our stopes, as for some time past I think, ou the whole, our tribute pitches have a little improved. We are making good speed in cutting down and securing the eastern shaft. We have about finished the foundation for the new stamps at eastern part. The masons will at once level up for the line of the base of the house, and I hope next week we shall commence to build the engine house and loadings.—C. F. BISHOP.

WHEAL METAL AND FLOW (11th Feb.)—The 27 end driving east on course of metal lode is more mineralised, and shows a little tin when washed on the vanning shovel.—S. P. CURTIS.

WHEAL UNY (11th Feb.)—The lode in Hind's shaft still looks promising. No change in it since last reported. The men are making good speed in sinking. No change in any other point through the mine.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO (20th Jan.)—Mine: The uorth end 24 level on 100 lodc was driven last week only 7 1-10th ft. in two days, the air compressor having been undergoing repairs the rest of the week. The breast is looking now rather poor, containing very little ore, but of high grade. General samples from thc mine smalls (*i.e.*, the rock crushed by the blastings) were assayed on the 17th and 19th inst., giving 28.3 and 19.1 ozs. per ton respectivcly which shows that whatever little ore is being carried is of very good grade, as the above samples did not probably contain more than one part of mineral to nine or 10 of waste. The two cross-cuts at the tunuel and the 24-fm. levels to intersect the 100 lode are being pushed by hand labour, and the breasts are still on country rock. The stopes are looking much the same as last reported. Reduction: I am glad to say that the favourable grade in our milling ores is being maintained, and as a consequence we are beginning to obtain more substantial bullion returns. The clean ups of precipitate from the leaching works for the two weeks ending 3rd and 10th inst. were worth in silver $6,174.05 and $4,931.55 (gross assay values) respectively, or $11,105.60 for the fortnight. From the smelter we have obtained from the 1st to the 17th inst. 2,177 bars pig lead, worth in silver about $10,000, or an average daily product of 128 bars, worth about $588.00. In the last two days we obtained 243 bars more, worth $1,270 approximate. The cupellation furnace produced last Saturday eight bars silver, worth a little over $8,000. During the present week I expect to obtain six or seven bars more. It is not necessary to say that with such good returns as the above we shall very soon get into a sound financial position. If we can keep up an average grade in the mill such as it has been in the last few weeks we can make satisfactory profits.

ANGLO-MEXICAN (13th Dec.)—The superintendent reports :—East drift: 814-ft. level has been advanced during the past week by the machine-drill 6 ft., making the total distance 238 ft. The drift is reported as looking pretty favourable, there being a large body of ore in sight. The face shows about 6 ft. of ore, which is, however, I am sorry to say, of a low grade, assaying from 20 to 40 ozs. per ton in silver. West drift: 814-ft. level has been advanced during the past week by the machine-drill 7 ft., making the total distance 190 ft. Surface drift, above Santa Herlinda tunnel, advanced during the past week 31 ft., making the total distance 120 ft. The face shows 1 ft. to 1½ ft. of high-grade ore. East drift on the main vein, above Santa Herlinda tunnel, was advanced during the past week 8 ft., making the total distance 62 ft. Scarcity of labour has greatly interfered with our work in this drift. The stopes above 814-ft. level are looking well, very well indeed, but little work can be done by hand-drilling owing to the hardness of the rock.

ARGENTELLA (5th Feb.)—No. 2 sea tunnel or marine: We have cross-cut 1½ metres, and have cut through the footwall. On the footwall there is a little flookan and carbonate of lime; it looks kindly for lead. The south side of the wall is a bastard of quartz aud killas, with a deal of scattered pyrites. I have now put thc men to drive east on the lode. The tramway is completed, and by Saturday the wall of the smithy will be finished. The uew mule road from the highway to the level will be completed in a few days. No. 3 Rowe's workings: The tramway has been relaid, and level properly drained. We have commenced driving, but have nothing to report different to what I have written. The repairing and cleaning is going on satisfactorily. I have commenced the new survey.—J. B. ROBERTS.

ASIA MINOR (31st Jan.)—Ara Dere Mine: The crosscut from level shows sigus of approachiug the lode. The winze and lodc are worth about 12 cwt. silver lead. Chief Mine: We have made a fine discovery of silver lead ore in a northerly direction from Petri air shaft worth four tons of rich silver lead per fathom. We are not in a position to state what it may lead to till we have advanced further upon it, but anyhow we shall get some fine ore from it. Savalan special drivage and Petri maiu level are both looking very favourable, and may come into good ore any day. The stopes maintain their value. Kaya Bashi: We are producing some good silver lead and blende ores here. Dolu Dere: We arc sinking a wiuze herc on the ore, as we think it probablc that the level has skimmed over the top of an ore body. Mining operations are proceeding vigorously, and the dressing machinery is being overhaulcd and put in a condition to start and run continuously as soon as weather permits.

BALAGHAT MYSORE (21st Jan.)—North engine shaft: This

shaft has been sunk 8 ft. 6 ins.. or 91 ft. below the level. The quartz is improving a little in size and quality, being now from 4 to 6 ins. wide, and assays 16 dwts. 8 grs. of gold per ton. The 500-ft. level north has been driven 22 ft., or 422 ft. from the shaft. The quartz has varied from 2 ft. to 4 ft. wide, but is now much smaller, being only about 6 ins. wide, and assays only 12 dwts. 21 grs. of gold per ton. I hope it will soon again improve. The No. 1 winze in the bottom of this level has been sunk 5 ft. 2 ins., or 32 ft. 8 ins. below the level. The quartz continues about 2 ft. wide, and assays 1 oz. 2 dwts. 20 grs. of gold per ton. The stopes in the back of this level produce quartz of about 1 ft. wide, and assay 3 ozs. 16 dwts. 10 grs. of gold per ton. The 410-ft. level north has been driven 2 ft. 6 ins., or 819 ft. from the shaft. The ground is of a kindly appearance, and continues to let out water freely. The No. 2 winze in the bottom of this level has been sunk 4 ft., or 85 ft. below the level; the lode continues to yield a little quartz, but as yet not of much value. The No. 3 winze in the bottom of this level has been sunk 2 ft., or 51 ft. below the level. The quartz is about 3 ins. wide, and worth about 5 dwts. per ton. The stopes in the back of this level yield quartz of about 1 ft. wide, and assay, on an average, 3 ozs. 12 dwts. 2 grs. of gold per ton. The plat stopes in the back of this level produce quartz of about 8 ins. wide, and assay 2 ozs. 12 dwts. 6 grs. of gold per ton. The plat stopes in the back of the 330-ft. level yield quartz of about 9 ins. wide, and assay, on an average, 3 ozs. 10 dwts. 2 grs. per ton. At about 510 ft. from the shaft, at the 330-ft. level north, we have commenced sinking a winze (or rather a shaft, this being the position of Haines' shaft); it is now down about 12 ft. The quartz is about 6 ins. wide, and assays 1 oz. 10 dwts. 1 gr. of gold per ton. The stopes in the back of the 330-ft. level north produce quartz of about 1 ft. wide, and assay, on an average, 2 ozs. 1 dwt. 19 grs. of gold per ton. The 270-ft. level south has been extended 2 ft., or 638 ft. 6 ins. from the shaft; the ground is still unproductive. The stopes in the back of this level yield quartz of about 9 ins. wide, and assay 1 oz. 10 dwts. 1 gr. of gold per ton. The stopes in the back of the 270-ft. level north produce quartz of about 9 ins. wide, and assay 1 oz. of gold per ton. Haines' shaft: We are making fairly satisfactory progress with the enlarging of the machine rise, and hope to complete the shaft to the 270-ft. level next week, when we shall at once commence sinking below that level. Surface: The general work at surface is progressing satisfactorily. The engineers are busily engaged with the erection of the new winding engines at Haines' shaft, and the carpenters are also busy preparing the pit-head gear, poppet heads, &c., so that we may be in a position to use the shaft at an early date.—J. Pryor.

BRATSBERG.—Report for week ending 31st January.—Hoffnung Mine: The lode at No. 2 adit level has become rather small, but still yields ½ ton per fm. This level having been sufficiently advanced from the last Government mark, we applied for, and now hold, the necessary document from the mining authorities legalising our right to continue driving in this westerly direction. No. 1 rise in the back of this level is worth fully 1 ton per fm., and No. 2 rise is of a similar value. No. 3 adit level is now worth ½ ton per fm., and the rise in the back here is yielding about ¾ ton per fm. At No. 4 level we have a very powerful lode, not so rich in ore at present, but still yielding ½ ton per fm. There is yet some work remaining to be done about Ball's shaft before we can begin sinking below No. 4 level. At this mine we have had employed during January 60 miners. Johannes Mine: The cross-cut towards Johannes lode is started, and 3 metres advance made. The level driving east on Howard's lode is still producing about ½ ton per fm. In all, eight miners engaged here during the month. Moberg Mine: The adit has been driven 5 metres during January, which is slow progress, but is partly accounted for by one of the three miners employed having been sick. We have recently struck a matrix which is identically the same as that making close to the lode at surface, hence we expect to strike it almost at any time now. Surface work and remarks: The builders have made good progress with the roof for the new dressing-house, and expect to start laying the galvanised iron sheets to-day. Owing, I presume, to some unexpected repairs, the Elizabeth Morton was hindered from loading last week, but understand she begins loading for certain to-day. The estimated quantity 20 per cent. ore mined for January is 120 tons.—J. D. Holman.

BRITISH BROKEN HILL (31st Dec.)—No. 1 shaft, 2nd level: During the past week the pressure on the front of the new section has increased considerably, thus enhancing the difficulties we have to contend with. The increased pressure has been caused by falls of rock from the roof of the vugh in advance of our timbers, where we cannot yet put up supports. However, the work of advancing the timbers has been continued steadily, and on both the eastern and western sides of the section one set has been put in on the 12th floor. The bulk of the ore broken has been of a better grade than usual. No. 7 shaft, 50-ft. level: Work has been continued all the week here, aud we are still getting good lead ore. No. 5 shaft: The south drive has been lengthened 9 ft., making its total 218 ft., the ore broken being very similar to that reported last week. Stoping has been continued above this drive, and a fair grade of carbonate ore obainted. Surface: All works progressing satisfactorily. Holidays: This report covers only three days' work, as no work was done either on the suface or underground from Christmas Day till Monday.

CAPE COPPER.—December report:—Ookiep: Good progress has been made in driving the 117-fm. level east of 64 winze. The rock is still yielding stones of copper ore. The 105-fm. level (No. 6) north of main east level has, since the last report, produced a few stones of copper ore. The stope in the back of 105-fm. level east of 68 winze is worth 6 tons of copper ore per fm. The stope in back of 92-fm. level east of 41 winze is yielding 13 tons of copper ore per fm. The ground in the 92-fm. level (No. 8) north-east of 45 winze is producing a little copper ore, but not to value. The stopes throughout the mine continue to yield remarkably well. Trial mines — Springbok: There is no material change to notice in the rock in the 59-fm. level north-west of south-west cross-cut (No. 2) since last report, occasionally the forebreast produces stones of copper ore. The ground in the 59-fm. cross-cut north of south-east level continues favourable for progress, but nothing of great value has yet been met with. Nababeep, south: The 59 fm. cross-cut south-east of north-east level is yielding fully 1 ton of copper ore per fm. The rock in the 59-fm. cross-cut north-west of north-east level is producing stones of copper ore. Ookiep, east: The stopes in the 66-fm. level and 58-fm. level continue to yield large quantities of mineral for the smelting works, worth for copper ore about 2 tons per fm. Spectakel: The ground in the 86-fm. cross-cut south-west of No. 1 winze at the present is only yielding occasional stones of copper ore. The stope in the 36-fm. level south-east of Kelly's shaft is producing 2½ tons of copper ore per fm.—Capt. Henwood.

— Returns for December: Ookiep, 1,760 tons of 26 per cent. Arrival at Swansea: The Cubana. Arrivals at Port Nolloth: The Swansea Castle, and Gateside. Bills of lading received: 1,380 tons of ore per Andaman, and 660 tons per Foxhound.

CHAMPION REEF.—Superintendent's report for the fortnight ending 19th January:—Mysore section: Carmichael's shaft has been sunk 4 ft.; total depth, 223 ft. 3 ins. The progress made is not as much as desired, but taking into consideration the very hard rock and the bad place it is to work in, in consequence of the large amount of water, there is very little cause for complaint against the coolies. There is very little change in the appearance of the rock, except that the ground has a little more underlie to the west. Ribblesdale's shaft: We have sunk 5 ft.; total depth, 210 ft. 6 ins. There are several stringers of quartz dipping west with the underlie of the ground. Garland's shaft: The men have been employed sinking a sump, and blasting down on the west side of shaft for the turn on the underlie. This work is well advanced, and the sinking on the course of the lode will be resumed in a few days. Dalyell's shaft has been sunk 5 ft.; total depth, 203 ft. The lode in the south end of shaft is 1 ft. 6 ins. wide of quartz, but the value of the ore has not improved. The 160 end north has been extended 12 ft.; total length, 53 ft. 6 ins.; and during the last 2 ft. of drivage the lode has opened out to a width of 3 ft. of quartz, assaying 9 dwts. 14 grs. per ton. This is a decided improvement siuce last report, and from the present appearance of the lode it has a tendency of making wider. Should this improvement continue it will open up good payable quartz from this point to Garland's shaft. Coromandel section: The 320 ft. cross-cut has been driven 5 ft. 6 ins.; total distance west of shaft, 23 ft. 3 ins. With the exception of one or two small stringers of quartz, nothing of importance has been met with in the whole drivage; work suspended. Prospect shaft: The cross-cut east at the 320-ft. level has been driven 6 ft. 6 ins.; total length, 18 ft. 3 ins. We have cut into 1 ft. of quartz, which is apparently the hanging part of the lode. The 290 end south has been advanced 5 ft. 6 ins.; total length, 113 ft.; the lode is very small and poor. The winze below this level has been sunk 6 ft. 3 ins. in country rock, mixed with small patches of quartz; depth below the 290 level, 26 ft. 9 ins. The winze below the 260-ft. level has been sunk 7 ft. 3 ins.; total depth, 56 ft. 3 ins.; the lode 1 ft. 6 ins. wide, but the quality of the ore has fallen off considerably. Surface work: We are now putting on the roof to the compressor and boiler-houses, and hope to start the air-drills next week. The excavation for the bob pit, &c., at Garland's shaft will take some time to complete, as they are down on hard rock, which probably will have to be blasted out.

COLAR CENTRAL (21st Jan.)—North division: New shaft has been sunk 11 ft.; total depth, 186 ft. The bottom is still in country and hard; we have no water at this point. We shall sink to the 200-ft. level before driving north, and afterwards cross-cutting west. South division, Main shaft: We have commenced to drift north and south from the cross-cut at the 260-ft. level. The 260 north has been driven 17 ft. There is at present a very small streak of soft ground letting out a little water, but no quartz of any size or value. The 260 ft. south has been driven 11 ft. This end is, at present, also in barren ground, but we anticipate getting into quartz before very long. The 180 ft. north has been driven 13 ft.; total 25 ft. from cross-cut; the quartz in end is only 1 ft. wide. The 180 ft. south has been driven 14 ft.; distance from cross-cut 26 ft.; the quartz is about 3 ft. wide at this point, but shows very little gold in the pan. Marden's shaft: The 240 ft. north has been driven 16 ft.; total, 99 ft.; the lode is now only 6 ins. wide. Machinery continues to give satisfaction and is working very well.—A. S. B. Oakley.

CORTEZ.—Report under date of January 24th:—North-east raise stoped 92 tons of ore; north-west raise stoped 120 tons of ore; No. 2 west stoped 8 tons of ore; ore run into ore house, 210 tons; ore trammed to mill, 213 tons; ore worked at mill, 190 tons; average assay for the week 46 20-100 ozs. silver.

EMERALD.—The manager at the mine, writing on the 27th December, says as follows:—Since I wrote to you last we have continued working and lowering the same part as the weeks before from the point "Fricto-Fivar" up to the bridge. In our work of lowering we have now passed the bridge and arrived at the best vein there. With widening the canal we also have made a good progress, and soon shall have reached the other veins, containing crystals as well, up to where I shall go on lowering. Depth worked in rock at the bridge is 7 metres. Miners at work, 124.

ETHERIDGE UNITED (17th Dec.)—Fortnightly report.—My last report was dated 3rd inst. During the past fortnight we have cleaned up from 90 tons of ore from the No. 2 shaft on Caledonian reef for a yield of 90 ozs. 9 dwts. gold. Money value, after deducting bank charges, &c., is 217*l*. I may state that the reef still keeps large, and we have again at grass 30 tons of the same quality of ore to all appearance. In No. 1 shaft we have sunk a further depth of 6 ft., and have cut the reef, and are into it about 3 ft. The water is so heavy that I had to leave the bottom of the shaft and have come up 10 ft., where we will cross-cut for the reef; this will leave room for water lodgment. I anticipate cutting the reef in about 12 ft. from the shaft. I believe the reef is a very large one as there are no signs of our getting through it in the shaft. By February I hope to have a crushing from this shaft. North Star Mine: We are now having a trial crushing which will be through in a few days, and the result will be cabled to you as soon as possible. The eastern level has been advanced 24 ft., and the western level 5 ft. Stoping has been done 15 ft. by 6 ft. over the eastern level. The reef is very irregular at present; sometimes it is 20 ins., and sometimes hardly 2 ins. in thickness, and this causes a very large quantity of ground to be taken out for very little ore. Should this crushing turn out satisfactory I shall have to sink the shaft at least 20 ft. and then open out new levels. A pump will also have to be put in as the water is very heavy. This work will delay us rising much ore for a month or so. I shall prospect the mines with as few hands as possible until I see they will pay.—M. Ferguson.

FLAGSTAFF (24th Jan.)—I have been doing some timbering during the past week, so I cannot report any ore mined. Some of the ground overhead has become dangerous to work under, and as my force of men is so small I thought that I might as well put them all

at timbering and fixing up the skip-road. We are not through with it yet ; it may take us all of next week. I have kept two men at work in the south-east drift. I think that we are going to find a good body of rich ore here. We are now in 63 ft. Last night we came upon some very fine ore, carrying silver-lead with yellow crystallised carbonate ; it looks more like the ore that was on 2 and 3 (on 2nd and 3rd levels). We went through 20 ft. of broken up ground mixed all through with low-grade ore, but now it seems to be more confined to its natural course, south-east and north-west, with the dip to the north-east. I think that we are getting close to the hanging-wall, as the rock is more of a white lime, which goes to show th2t we are somewhere in that neighbourhood. As soon as I get through with the timbering will again push work at all points.—A. L. SWOPE.

GOLDFIELDS OF MYSORE.—Superintendent's report for the fortnight ending 19th January :—The mining operations for the fortnight have consisted of sinking the winze below the 206-ft. level, South shaft. The sinking is 6 ft.; total depth below the level, 28 ft. 3 ins. ; 12 coolies employed. The lode still continues wider than the winze ; the quartz at present is very hard and glassy, and carries but very little gold, the last week's assays only giving from 1 to 3 dwts. per ton. The better class of ore passed through near the 206 level has probably dipped south, and, assuming this to be the case, we shall cut it again by extending a level in that direction after a few feet more sinking.

INDIAN CONSOLIDATED (20th Jan.)—Phœnix section : Underground work is proceeding regularly with no particular change anywhere. The quartz from the different stopes continues of about the same value, and a slight improvement in size of lode has taken place in stopes E and F. At the south end of the latter workings a make of quartz has been cut about 2 ft. in width ; it has a good appearance and without doubt is of milling value, but it cannot be of great extent in this direction. Our tramway stopes still show their usual disordered appearance, irregular masses of quartz mixed with blue rock being the rule. A larger bunch than usual has enabled us to keep the mill going full time (Sundays excepted) this month, and I expect to get a better return than we have had for some time past. (During the month of January 680 tons of quartz were crushed, which yielded 97 ozs. of gold.) No. 1 level advanced 12 ft. for the fortnight ; the hanging-wall continues clean and regular with a small seam of blue greasy clay alongside, the rest of the end is hard blue rock. Tramway level advanced 12 ft. 6 ins. ; the end shows a vein of brown slate and quartz 3 ft. wide, this is not at present worth saving, but it gives the face a much improved look. Winding engine, tramroads, and things generally in fair order, aud mill working regularly and well.—J. FRY.

— (21st Jan.)—Colar section : No. 1 new shaft : We have been unable to do any sinking for measurement for this report, having had to secure some very heavy ground in the shaft, and until this work is finished it is too dangerous to admit of men working in the bottom. The water has increased considerably, and we are making arrangements to work a donkey pump in this shaft. No. 2 new shaft : The 210 ft. north has been driven 20 ft. ; total length, 66 ft. 9 ins. from shaft. The present end is still letting out a good deal of water. The 210 south has been driven 10 ft. 3 ins. ; total, 67 ft. 6 ins. There are stringers of quartz in the end showing a little gold in washing, but nothing of any particular value. At 50 ft. from shaft we have started a cross-cut east to see if we may possibly have left any part of the lode standing in that direction. This cross-cut has been driven 5 ft. from the level. Air shaft : All the timber has been taken out of this shaft, so that it can be utilised elsewhere. Main shaft : The 240 ft. north drive has been driven 9 ft. 6 ins. ; total from shaft, 66 ft. 6 ins. ; the end looks more promising—there are patches and stringers of quartz with a better underlie than we have hitherto had. No. 5 shaft : The 156 ft. north, east cross-cut No. 1, has been driven 6 ft. 6 ins. by hand labour ; total, 77 ft. There is nothing in present end, but we are starting to drive north on a stringer of quartz about 18 ft. behind the forebreast. East cross-cut No. 2 driven by rock-drill 12 ft.; total length, 45 ft.; there is no change to notice. We are hardly out far enough to strike the same branch as met with in the other cross-cut. The 156 ft. north has been driven 3 ft.; total, 177 ft. The ground still continues very hard. The 425 winze north drift driven 3 ft. ; total, 16 ft. 3 ins. South drift driven 5 ft.; total, 25 ft. 3 ins. The whole of the end is in quartz which only assays a trace. The 450 ft. winze has been sunk 6 ft.; total, 11 ft.; lode, 2 ft. wide, assaying 1 dwt. 7 grs. The 450 ft. back stope : Lode very small, assays 3 dwts. 21 grs. New air compressor machinery : The two boilers and air-receiver have been brought on the mine, and I hope in a few days we shall have some of the parts of the new engine to hand.—A. S. B. OAKLEY.

MONTE DEL ORO.—Mine agent's report for the fortnight ending 3rd February : Taylor's engine shaft : With the sinking of this shaft below the 244-ft. level very good speed is made, as during the past fortnight 13 ft. were sunk ; the total depth reached being 42½ ft. No change has occurred either in the size or character of the lode, its width being from 3 ft. to 4 ft., and composition principally slate. Two samples have been assayed, one giving a trace of gold, and the other *nil*. Shaft No. 6 : The total length of the 244-ft. level north of the shaft is 380½ ft., the advance for the two weeks being 14½ ft. ; the lode during this period has varied considerably, at one time carrying from 18 ins. to 2 ft. of quartz, while at present it is about 3 ft. wide, and composed of a hard slate with a stringer of quartz. Both samples taken gave a result of a trace of gold on assay. The west cross-cut has been extended 14½ ft. since the last report, and is now 149½ ft. long ; the end is in fairly hard country rock, and is quite dry. Good progress was made in driving the intermediate level north of winze No. 8, 20 ft. being driven, making its length 58 ft. Here also the lode has been variable ; since early in the fortnight it contained 2 ft. of quartz, a sample from it yielding 13 dwts. 1 gr. of gold per ton, and at present its width is about 3 ft., of which 12 ins. to 18 ins. are slate and quartz intermixed, a sample from this assaying 1 dwt. 23 grs. of gold per ton. An advance of 11 ft. was made in the 186-ft. level north, and its total length is now 519½ ft. Considering the length of the level and the hardness of the quartz the speed in driving is fairly satisfactory. The quartz maintains an average of 3 ft. in width, and the samples obtained assayed respectively 9 dwts. 21 grs., and 6 dwts. 12 grs. of gold per ton. New engine shaft : At a distance of 580 ft. from shaft No. 6, and in the direction north 33 degs. east, a new engine shaft to communicate with the 186-ft. level has been commenced. Its dimensions are 10 ft. by 5 ft. within timber, and it will be called Low's engine shaft.

MOUNT ZEEHAN (29th Dec.)—The manager writes as follows : —Our progress for the week has been :—Montana section : 7 ft. driven on the west cross-cut ; total, 243 ft. In the south drive we have sunk the winze 5 ft. As we continue sinking the vein remains at about 12 ins. galena across the winze running south. I am preparing for stocktaking, when the quantity and value of the ore belonging to your company will be fully stated, both first and second-class.

MYSORE (21st Jan.)—Mining operations for the fortnight ending 15th January :—The progress made in the different bargains with the rock-drills has been highly satisfactory. The 780 north of Rowse's shaft has been driven 21 ft.; this level is still in the barren rock, but we are expecting to meet with the lode very soon. The lode in the 770 north of incline shaft is 1 ft. 6 ins. wide, and assaying 3 ozs. 17 dwts. 6 grs. The 770 north of Rowse's shaft has been driven 28 ft. 4 ins. ; total distance, 215 ft. ; the lode has very much improved in the last few days ; it is now 4 ft. wide, and assaying 3 ozs. 5 dwts. 8 grs. The 620 north of Rowse's shaft has been driven 3 ft. 6 ins. ; this level has beeu suspended for the time, as it has just intersected the north band of unproductive rock. The 550 has been driven south of incline shaft on the west lode 3 ft. ; the lode is 2 ft. wide, and estimated to be worth 10 dwts., but is still in the influence of the fold of the wide lode. The 466 cross-cut north-west of Rowse's shaft has been driven 22 ft. ; total distance, 331 ft. ; there is no change in the character of the rock, except it is a little better for driving through. The 236 north of Rowse's shaft has been driven 2 ft. 2 ins. ; the lode is 4 ft. wide, and assaying 2 dwts. 14 grs. Schaw's shaft : The 450 cross-cut north of shaft has been driven east 25 ft. 9 ins. ; the total distance 51 ft., but we have met with nothing worthy of notice. The 450 south of shaft has been driven 3 ft. 9 ins. ; the lode is 1 ft. wide, and assaying 3 dwts. 22 grs. The 320 north of shaft has been driven 4 ft. 9 ins. ; the lode is 8 ins. wide, and yielding some quartz of low quality. The 320 south of shaft has been driven 4 ft. ; total distance, 170 ft. 6 ins. ; the lode is 6 ins. wide, and assaying 6 dwts. 12 grs. Tennant's shaft : The 360 north of shaft has been driven 34 ft. 9 ins. ; total distance, 220 ft. ; the lode is about 1 ft. 6 ins. wide, but divided in small branches of quartz. This level is not yet far enough north to intersect the rich run of quartz that we are now driving through in the 290. The 290 south of shaft has been driven 33 ft. 6 ins. ; total distance, 172 ft. ; the lode is 1 ft. wide, yielding a little quartz, but not sufficient to value. The 290 north of shaft has been driven 35 ft. 6 ins. ; total distance, 498 ft. ; the lode is 3 ft. 6 ins. wide, and assaying 1 oz. 10 dwts., and presenting a very promising appearance. The 180 north of shaft has been driven 33 ft. ; total distance, 657 ft. ; the lode is 1 ft. wide, composed of schist and quartz, aud letting some water in, which we consider to be a good indication. I am expecting the lode will improve as this level gets further uorth. Stopes : The lode in stope in back of the 700 south of incline shaft (on the wide lode) is 5 ft. wide, and assaying 2 ozs. 7 grs. The lode in back of the 700 south of Rowse's shaft is 1 ft. 6 ins. wide, and assaying 13 dwts. 1 gr. The lode in back of the 620 north of cross-cut from incline shaft is 3 ft. wide, and assaying 2 ozs. The lode in No. 1 stope in back of the 620 north of Rowse's shaft is 1 ft. 6 ins. wide, and assaying 1 oz. 7 dwts. 6 grs. The lode in No. 2 stope in back of this level is 9 ins. wide, and assaying 13 dwts. 1 gr. The lode in stope in back of the 600 south of Rowse's shaft is 5 ft. wide, and assaying 13 dwts. 1 gr. The lode in No. 1 stope in back of the 550 north of Rowse's shaft is 5 ft. wide, and assaying 3 ozs. 7 dwts. 6 grs. The lode in No. 2 stope in back of this level is 6 ins. wide, and assaying 7 dwts. 19 grs. The lode in stope in back of the 550 south of Rowse's shaft is 3 ft. wide, and assayiug 17 dwts. 1 gr. The lode in back of the 550 south of incline shaft is 2 ft. wide, and assaying 2 ozs. 18 dwts. 19 grs. The lode in back of the 550 south of winze south of Rowse's shaft is 3 ft. wide, and assaying 6 dwts. 19 grs. The lode in stope north of winze is 3 ft. wide, and assaying 17 dwts. The lode in back of the 466 north of Rowse's shaft is 3 ft. 6 ins. wide, and assaying 2 ozs. 5 dwts. 18 grs. The lode in stope in back of the 400 north of Rowse's shaft is 3 ft. wide, aud assaying 1 oz. 19 dwts. 4 grs. The lode in back of the 400 south of Plummer's shaft is 3 ft. wide, and assaying 8 dwts. The lode in back of the 400 south of Taylor's is 5 ft. wide, assaying 6 dwts. 12 grs. The lode in back of the 360 south of Plummer's is 1 ft. wide, and assaying 3 dwts. 6 grs. The lode in back of the 296 north of Plummer's is 1 ft. 6 ins. wide, and assaying 1 oz. 17 dwts. 6 grs. The lode in back of the 296 north of Rowse's is 3 ft. wide, and assayiug 5 dwts. 5 grs. Rising : The rise in back of the 700 north of Rowse's shaft has been put up 23 ft. ; total distance 62 ft.. at which point it communicated with the 620 ; the lode is very rich for the whole distance, the last assay from a lode 3 ft. wide was 3 ozs. 5 dwts. 8 grs. The rise in back of the 290 north of Tennant's shaft has been put up 15 ft. 6 ins.; the lode is 4 ft. wide, and assaying 15 grs. The rise in back of the 180 south of Tennant's has been put up 3 ft. 8 ins. ; the lode is 1 ft. wide, mixed with quartz and country rock. The lode in No. 1 rise north of Tennant's shaft is 3 ft. wide, and assaying 1 oz. 12 dwts. The lode in No. 2 rise north of shaft is 3 ft. 6 ins. wide, and assaying 3 ozs. 5 dwts. 8 grs. Sinking : Glen's shaft has been sunk 5 ft. 7 ius. ; total distauce, 255 ft. 8 ins., at which point we have intersected the lode recently cut in the 150 cross-cut east ; it is about 4 ft. wide, and composed of schist, mixed with carbonate of lime and a little quartz and pyrites. We have opened on it north about 6 ft., and, judging from the dip of quartz where the lode was seen in the 150, we expect it will improve very soou. The winze in bottom of the 320 south of Schaw's shaft has been sunk 3 ft. ; total distance, 100 ft. 6 ins. ; the lode is 6 ins. wide, and yielding occasional stones of quartz. All the surface operations are going on in the usual satisfactory manner, and the engineers are making good progress with the erection of the new tailings machinery, and Glen's new Cornish pumping engine. Mill samples : New mill, 2 ozs. 12 dwts. 6 grs.; old mill (Taylor's), 2 ozs. 5 dwts. 17 grs. ; old mill (Plummer's), 7 dwts.—J. GILBERT.

MYSORE-HARNHALLI (21st Jan.)—No. 2 shaft : Since my last report the shaft has been suuk 7 ft., making a total of 30 ft. below the 80-ft. level. We would have suuk more, but the ground being very jointy we have to timber close to the bottom, for it was not safe to go far below the timbering. We are still in the same sort of country schist, and at times we meet with small veins of quartz giving out a lot of water. The water is very heavy, and drains very slowly. South drive : This drive towards the No. 3 old workings has been extended 20 ft., making a total of 97 ft. from shaft. We had a slight change in the country ; it is not so hard, and not giving out much water as yet, but we may at any time tap the water in No. 3 old workings, when we will be able to get iuto them. South-west cross-cut : This point has been extended 15 ft., making a total of

94 ft. from shaft. The veins we had in the drive are cut out by what appears to be a cross-course. We will, as soon as the shaft is deep enough to drain this drive, sink a winze on these leaders, as I believe they will make as they go down, but at present we have too much water in this cross-cut to do anything. I think it is easing off in the drive, and is more concentrated in the shaft; our main point is to get the shaft deep enough to drain this ground thoroughly. I have made several assays from the leaders met with in this drive, and they turned out well. I will make others before my next report, and advise you of the result. Machinery: All the machinery is working well, and we are not using much fuel with our pumping engine. General: His Highness the Maharajah of Mysore and his Dewan visited the mines on the 29th December last, and appeared to be well satisfied.

NEW DEVALA-MOYAR (20th Jan.)—The 116-ft. level, drive east: We have extended this drive 8 ft.; total distance from No. 1 winze, 80 ft. As this end is in unproductive reef, we have stopped this drive, and removed the drills. Drive west: Here we have driven 5 ft.; total length, 108 ft. We have an improved quality of stone in this end, white quartz carrying a little pyrites. Should this improve as we extend the drive we shall soon have milling quartz at this point. We have again found specks of visible gold in the stone, which apparently came from the stope in the 116-ft. level. We found visible gold formerly in the 78 level, and I take it that this is the same shoot of gold going down. We have made some alterations at the mill, which has increased our supply of water for the battery and condensing purposes. Everything is working well.—R. B. Johnston.

NEW GOLD HILL (15th Jan.)—I received your telegram on the 9th inst., asking for assay of ore from 160 west of Barnhardt, which I answered that day, and Messrs. Craige and Clement forwarded the certificates from the United States Assay Office at Charlotte to you. I have sent a box of samples of ore to Messrs. Craige and Clement to be shipped to you, marked and numbered as follows:—From level 160 ft. west of Barnhardt, No. 1, selected sample; from level 160 ft. west of Barnhardt, No. 2, medium sample; from level 160 ft. west of Barnhardt, No. 3, average sample; from Martin shaft, No. 1, selected sample; from Martin shaft, No. 2, average sample; from Miller shaft, No. 1, average sample; the box weighs 63 lbs. The work at the mine is going along very well. In the 435-ft. level south-west of Barnhardt the vein is forming solid again, and is now about 2 ft. wide, but it is not showing any free gold in the pan. In the 435-ft. level east we are getting into a lot of vein matter that is looking very favourable. In the 160-ft. level south-west we have gone through the shoot, and the vein has narrowed down to 6 ins., but the indications are that it will open out again in a few feet further driving. I have commenced to back stope on the shoot. In the Miller shaft the vein is smaller, and looks as if it will be cut off by the iron dyke that is following it. In the Martin shaft the vein in the stope is small, about 4 ins. average, but it is making larger as we go down on it and improving in quality. We will have to sink the shaft as the stopes are within a few feet of being down to the bottom of shaft. I have not run the mill this month on account of the frost, and therefore could not do any proper milling, but I hope to be able to start the mill next week if we have more favourable weather.—F. H. Mauney.

— (22nd Jan.)—The work on the mine is going on very well, with good prospects, but it will require a little time yet to get the new works opened out. In the 435-ft. level at Barnhardt there is not much improvement in the vein, it is split up with slate, still there is a lot of vein matter and heavy sulphurets. In the 160-ft. level west the vein is looking fine, and continuing in size and quality as we go upwards on it. I am making preparations to drive in the 300-ft. level to cut the shoot of ore that we have in the 160-ft., and I think it will take about 70 ft. to cut it provided it does not dip off to the south-west faster than it does in the 160-ft. above. I have commenced sinking the Martin shaft, and will sink and stope as we go. The shoot is getting longer, and showing well for gold. I am not running the mill at present as the weather has been cold, the water gets frozen, so that we cannot do much good milling.—F. H. Mauney.

— (22nd Jan.)—We shipped you to-day by express 60 lbs. of gold ore, and Mr. Mauney has worked it so that it will be understood. The mill will be started as soon as the weather will permit, and we will let you know the result as soon as ascertained. The ore in both veins still pans beautifully, and everybody at the mine is quite jubilant.—Craige and Clement.

NINE REEFS (21st Jan.)—Report for fortnight ending 19th January.—Vyvyan shaft: This shaft has been sunk during the past fortnight 7 ft. 6 ins. by hand labour, making a total of 92 ft. 3 ins. below the 145 level; the total depth of the shaft from surface is now 237 ft. 3 ins. The quartz on the hanging-wall side has opened out again during the last few blasts, and especially at the south end, from which direction the shoots of ore may be expected; visible gold is still to be seen in the stones; the assay this week was 15 dwts. Another branch of quartz about 5 ins. wide has also come in on the footwall side, which is a very encouraging indication; the walls of the lode are 4 ft. apart, and there is now quartz on both sides, the space between the quartz being filled in with lode matter. Should these two branches widen out and come together they will make a fine lode. Prospect pit: The cross-cut east has been extended 8 ft., making a total of 31 ft. 3 ins. from the shaft; no lode has yet been met with. Costeaning: In one of the trenches a lode has been discovered with about 9 ins. of nice-looking quartz, giving a few colours of gold in the pan. From its position it is probable that this lode is a continuation of the one on which they are sinking at the Balaghat Mine.—H. P. Hodgson.

NUNDYDROOG (21st Jan.)—Below I have the pleasure to hand you report of work done for the fortnight ending 16th January: The 450 north, winze in bottom: Distance sunk 16 ft., by two Englishmen with a rock-drill; the lode is a fine one, 3 ft. 6 ins. in width, and worth 1¾ ozs. per ton. The 450 north, rise in back: Risen 8 ft. 6 ins., by two natives with a rock-drill; present height of rise 46 ft. 6 ins.; the quartz has improved in appearance and quality, assaying now 1 oz. 13 dwts. 12 grs. per ton. The lode is a massive one, 6 ft. in width. The 450 south, winze and stope in bottom: Stoped 13 fms. 4 ft., by one Englishman with a rock-drill; the lode looks as well as ever, being 3 ft. 6 ins. wide, and worth 3 ozs. 17 dwts. The 370 south, stope in bottom: Stoped 6 fms. 4 ft. by one Italian with a rock-drill; the lode is 4 ft. wide, and worth 2 ozs. 16 dwts. 15 grs. The 370 north: Distance driven 20 ft. 6 ins., by two Italians with a rock-drill; present length of level 388 ft. 6 ins. We commenced to cross-cut west here last week. There is no change for the present. The 370 north, stope in back: Working by contract by 12 coolies at Rs 16 per ft.; the lode is 1 ft. 6 ins. wide, and worth 2 ozs. 7 dwts. 12 grs. The 300 north, stope in back: Ground stoped 3 fms. 5 ft., by two natives with a rock-drill; the lode is 2 ft. in width, and the quartz of very good quality, being worth over 4 ozs. per ton. Taylor's shaft: Fair progress has been made here for the fortnight, 13 ft. having been sunk by three Italians with a rock-drill; there is no change in the rock, present depth 504 ft. 6 ins. North shaft, north drive, winze in bottom: Good work has been done here, one Italian with a rock-drill having sunk 13 ft. in the fortnight; present depth, 74 ft. below the level; the lode is improving in size, and is now 1 ft. 3 ins. wide, and worth 1¼ ozs. per ton. Mill samples: Rough quartz (through stonebreaker), 2 ozs. 12 dwts.; smalls, 1 oz. 17 dwts. 18 grs.—F. W. Grey.

OOREGUM (21st Jan.)—Fortnightly report of superintendent:—I beg to hand you the mine report for fortnight ending yesterday. In consequence of an outbreak of cholera amongst our Moplah coolies and a considerable number of deaths, work has been greatly retarded. We had over 400 of them employed, and with a view to stamping out the epidemic as soon as possible, we have allowed most of the various gangs to go to their country, and, as may be imagined, this has, to a great extent, disorganised our work, and to keep the mill going as far as possible we have had to stop in many places development work and put the rock-drills to stope, and even now I fear our return for the current month will show a decrease, for we have difficulty in clearing the stuff underground, and also to get it carted to the mill at surface. There are still a few cases of cholera amongst our local coolies, but in a few days at most we hope the camp will be entirely free from epidemic. Many of the workings have not been measured nor samples taken, in consequence of water being in; this accounts for the short report to-day. We have arranged with the contractors to return with their men as soon as the medical officers will permit. Wallroth's shaft has been sunk 8 ft. 9 ins.; total depth below 280-ft. level, 43 ft. 5 ins.; lode 1 ft. 6 ins. wide, value 6 ozs. 8 dwts. 21 grs. per ton. The 280-ft. level north advanced 3 ft.; total from shaft, 620 ft.; lode 3 ft. wide but still disordered. An assay gave 6 dwts. 12 grs. per ton. The 215-ft. level north advanced 2 ft. 9 ins.; total, 65 ft. 9 ins.; lode 1 ft. 9 ins. wide, value 6 ozs. 1 dwt. 7 grs. per ton. The 215-ft. level south advanced 1 ft.; total 255 ft. 2 ins.; lode 1 ft. wide, assaying 10 dwts. 21 grs. per ton. Low's shaft sunk 2 ft. 6 ins.; total below 350-ft. level 7 ft. 4 ins. Cross-cut west from 350-ft. level south advanced 9 ft.; total, 52 ft. We reported in our last that the lode had been intersected that morning. We have since cut through it, where it was 3 ft. 6 ins. wide; a level was then commenced north, and has been driven 22 ft. 8 ins.; lode in present end, 2 ft. 6 ins. wide, value 4 ozs. 10 dwts. 8 grs. per ton. We have now put a rock-drill to drive south on the lode. The 270-ft. level south advanced 2 ft.; total, 241 ft. 8 ins.; no lode. The winze in bottom of the 270-ft. level north-west of shaft has been communicated with the 350-ft. level north. Winze in bottom 270-ft. level north sunk 3 ft.; total, 42 ft. 6 ins.; lode 1 ft. wide, value 1 oz. 12 dwts. 16 grs. per ton. The 200-ft. level south advanced 5 ft. 6 ins.; total from cross-cut, 22 ft. 6 ins. A branch of quartz in present end 6 ins. wide, assaying 8 dwts. 17 grs. per ton. Probyn's shaft: Sunk 5 ft. 6 ins.; total below 450-ft. level, 16 ft. 6 ins.; lode 2 ft. wide, value 2 ozs. 12 dwts. 16 grs. per ton. The 450-ft. level south advanced 14 ft. 6 ins.; total, 67 ft.; lode 2 ft. 6 ins. wide, value 3 ozs. 5 dwts. 8 grs. per ton. The 366-ft. level south advanced 19 ft.; total, 391 ft. 6 ins. End now in dyke. No. 1 winze in bottom 366-ft. level south sunk 3 ft. 10 ins.; total, 21 ft. 6 ins.; bottom still in band of country rock. No. 2 winze commenced in bottom same level, and sunk 3 ft.; lode 2 ft. wide, value 3 ozs. 16 dwts. 5 grs. per ton. Rise in back, 4 ft. 6 ins. risen; total, 17 ft. 6 ins.; lode 1 ft. 6 ins., value 3 ozs. 7 dwts. 12 grs. per ton. The 300-ft. level south advanced 11 ft.; total, 371 ft. 10 ins.; lode 9 ins. wide, value 1 oz. 1 dwt. 19 grs. per ton. The 230-ft. level south advanced 2 ft. 10 ins.; total 325 ft. 8 ins.; no lode. We have received the plans of the tailing, machinery and excavations, and loadings for engines will be commenced immediately the coolies return who left during the cholera scare. Stamps: Up to Friday last, the day of the outbreak of the cholera, the amalgam collected was in excess of the previous month for same period, showing that the average value of the quartz is maintained throughout the mine.

PESTARENA (3rd Feb.)—No. 1 lode: The 160 end north is yielding 7 tons of ore per fm. at 10 dwts. per ton; the lode is 7 centimetres wide, and looking promising. The winze under the 130 is poor at present; lode 40 centimetres wide. The 120 north is holed to Fontana's winze, and stoping will be commenced shortly; the lode is worth 5 tons per fm. at 8 dwts. The 80 south is yielding 6 tons per fm. at 1 oz. 10 dwts. Cauuter lode: The 120 east is yielding 3 tons per fm. at 9 dwts.; the winze under the 110 east 6 tons at 12 dwts.; the 90 west from old cross-cut, 3 tons at 12 dwts.; and the intermediate level over the 90 driving west 5 tons at 15 dwts. The latter will be continued 3 metres further, when a stope will be started over it. The 70 end east and west, and the 46 east are yielding no ore at present. The 150 cross-cut has passed through two branches which were seen in the 130 cross-cut. The caunter is soon expected to be met with. The 70 cross-cut towards No. 1 lode has passed through a branch that went off in the hanging-wall of caunter; it carries a little pyrites; no change in the 55 cross-cut. There are eight stopes at work, averaging about 7 tons per fm., at 17 dwts. per ton. The Morghen adit is without change. The transport of millstone and timber to the mine has been completed. The cold is very severe, and we have much difficulty in keeping the machinery going; only 16 mills are now at work, and going slowly. Val Toppa: There is no feature calling for particular remark at this mine.—W. Roberts, W. H. Trelease.

RUBY.—Report for week ending January 24th.—Dunderberg: We have seven men on day's pay and 10 tributers at work here; no particular change. The ore in the 700-ft. upraise still continues about the same. We have sunk 10 ft. in the 700-ft. incline; total, 86 ft.; the ground is very hard. Lord Byron: We have two men on day's pay, 13 tributers, and four contractors at work here. I cannot add anything to my last report, as the men have been sorting ore, the weather being fine. I have let a contract of 40 ft. drift on the 165-ft. level. This 40-ft. drift will take us under the present bottom of the winze. We shall keep on extracting ore with two men until connection is made with the bottom drift. Bullwhacker: We have six men at work here. No particular change.

SAMBAS EXPLORATION.—The manager writes December 30th as follows:—Boedock: We have discovered what appears to be a

similar lode to that at Poh-san-poie. Eight men are opening it up. I will report further next mail. Capt. Bennett is of opinion that it is a very strong lode. Belaban: We also discovered what Capt. Bennett thinks is a strong lode of quartz panning free gold, and carrying a large percentage of pyrites. Three men are opening it up. I will report further next mail. In regard to the cleaning of the Pah-Koh-ching river, the assistant resident has given me an order for the 25 prisoners to clean the river out, providing we supervise it.

SOUTH-EAST MYSORE (21st Jan.)—Fortnightly report of superintendent:—I beg to hand you the progress report of this mine for the fortnight ending the 17th January. The 500 level north of main shaft: This drift has been advanced 30 ft. 6 ins.; total from the cross-cut east, 118 ft. 6 ins. The lode in the end is 4 ft. wide, of which 2 ft. are quartz, the assay being 3 dwts. 21 grs. There is no change in the general appearance of the lode. The 500 level south of main shaft: An advance of 8 ft. 2 ins. has been made; total length of drift, 49 ft.; the ground is unchanged. The end of the drift is being turned a little east in the hope of finding easier ground. The 295 south cross-cut east: This cross-cut was driven 9 ft. in the week, and as nothing of any value was discovered has been stopped. The machinery is working well, and the health of the camp is good.

CORRESPONDENCE.

OOREGUM ORDINARY AND PREFERENCE SHARES.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—Your Weymouth correspondent, under this head, is not half so obtuse as he professes, for he clearly understands, and agrees with me, that in the event of one of the alternative decisions I suggested "everything would be perfectly plain," and that in the other the "solution would be hard on the original allottees."

But he makes an assumption, that I cannot accept, when he says it is "most likely the preference shareholders will come in on the 5s. basis, and that, therefore, the ordinary shareholder will be benefited."

Before discussing the matter any further, I wish to assure "Ordinary Shareholder" that I am not an original allottee of preferences, nor do I intend in any way to attack the company or its directors by anything I have written in the past or may write hereafter.

Now, I believe I am right in saying that more than 20,000 of the preferences were originally allotted to the present directors, and without imputing any improper motives, I think this fact will not be without some weight whenever the position and rights of the preference shareholders come to be considered.

Again, I do not know of a single instance of shareholders who, having taken up shares at a discount, have been called on to pay up the balance. In fact, the companies, which on the strength of the earliest decision in favour of its legality made such issues, hastened to re-construct when the Courts subsequently ruled them illegal, in order to protect the allottees. There may be some cases where no action at all has been taken pending the Ooregum appeal, but I have no knowledge of them, nor do they, if such there be, affect my argument.

Assuming, then, that the case is decided by finding the issue illegal, I persist in my belief that an equitable settlement will be arrived at by the company, for without the money raised by the issue of the preferences, the ordinary shareholders would have been wiped out by the liquidation of the company in 1885, when the creditors for 8,000*l.* would have obtained possession of the mine.

Any arrangement that may be arrived at will, of course, benefit the ordinary shares to the extent of rendering the accrued profits available for dividends, but if a fair and proper settlement be come to, the preferences will be worth at least twice as much as the ordinary shares.

If, on the other hand, regardless of the equities, the company were to take advantage of the assumed decision, and attempted to make the preferences come in on the 5s. basis, which "Ordinary Shareholder" says is "most likely," then I expect litigation would ensue, and the profits of the company thus be locked up for an indefinite period—a state of things which most decidedly would not benefit the ordinary shares.

"Ordinary Shareholder" and I must agree to differ. That there are very many who are of his way of thinking is evident by the price his class of shares is quoted at.

Events alone can show who is right. He says we "really must put ethics aside," and as this is now nothing more than an ethical question, it is useless to discuss it further in a mining paper.—I am, &c.,

THE COMPILER OF THE CHARTS.

London, February 9th, 1891.

SOUTH DARREN.

Sir,—As an old shareholder I feel we have a grievance against our recent chairman, Mr. Schofield, in his efforts to hinder the re-construction resolved upon at the meeting of 10th November and fully reported in your journal. Prior to that meeting Mr. Schofield took the unnecessary trouble of inviting proxies to assist his views, but at the same time, with a show of fairness, said, "if the necessary majority of the shareholders resolve on re-construction, I shall be ready to support it." They did so resolve, but he is not supporting it. He seems neither to take up the shares himself nor allow unfettered judgment to his co-shareholders.

Looking over your files, and reading his own speeches of 26th August and 15th September, he expresses unbounded confidence in the mine if the necessary capital be found to work it, but his ideas lately seem rather to have run in the direction of getting some of the larger shareholders to form a syndicate. Everyone knows what the object of a syndicate is—the property would be bought at a nominal figure—all our past expenditure would go for nothing, small holders would lose their stake in the concern entirely, and in a short time, when the present promises become realities they would have to pay a fancy price to regain their interests.

From a circular just issued by the liquidator I find he has mustered about 20,000 applications for new shares, instead of 30,000 asked for, and can only come to the conclusion that Mr. Schofield's latest circular has caused some shareholders to withdraw the support promised when the meeting was held. By following Mr. Schofield's advice—or whim—or whatever he chooses to have it called by, it appears to me that as a company we shall be effaced and can get nothing; whereas, by going into the new company we have good prospects of retrieving our position. My old shares cost me 7s. 6d. each and, like me, I hope wavering shareholders will see the policy, in their own interests, of supporting the reconstruction scheme and not allow a syndicate to reap the benefit of past expenditure. The mine is reported as looking better than for years past, and, as it is worked very inexpensively, a very small increase in the present returns would permit of a dividend. I hope a little more energy will be infused into the working of the mine, as it has not had a chance during the past year or two for want of rock-drills and deeper sinking.—I am, &c.,

AN OLD SHAREHOLDER.

P.S.—Why cannot Mr. Schofield "bury the hatchet," shake hands, and give us all another chance?

13th February, 1891.

BRILLIANT COMPANY—A CAUTION.

SIR,—The Brilliant Company is a purely Queensland affair, and as an attempt may be made to plant the shares on the London market, I think it necessary to caution your readers against it. It is said 1775 ozs. were produced from 841 tons, which I suppose gave 6,500*l.* The managers or wire pullers announce rather grandiloquently and prophetically that "*Henceforth* dividends will be 4s., declared monthly," that is I suppose until the shares have been absorbed here, when, if true to all former Queensland mining tradition, they will cease and the prices drop to zero. If I am wrong, then your Australian price lists are wrong too, but I am not wrong and neither are your lists. Is not this a rather rash statement for a company to make? I should like to know what reserves they have. The whole thing smacks something like a market rig in the shares. I strongly advise your readers to be very careful about buying these shares, in fact to give them a wide berth.—I am, &c.,

ONCE BITTEN BY THE QUEENSLANDER, TWICE SHY.

REPORT OF MEETING.

THE GREAT EUKABY SILVER FIELD (S.A.), LIMITED.

FAILURE OF ORIGINAL PROJECTS OF THE COMPANY, AND RE-ARRANGEMENT ARRIVED AT WITH THE VENDORS—GREAT EUKABY PROPERTY DISAPPOINTING, AND WHEAL ELLEN PURCHASE ABANDONED—MORE MONEY WANTED.

THE first annual general meeting was held recently at Winchester House, Old Broad Street, to transact the ordinary business.

Lord Richard Brown presided.

Mr. H. E. RODWELL (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN stated that the past year had been an anxious time to the board. Reviewing the history of the company, he stated that the success that had been expected from the new mode of treatment of the ore had not been realised. The board were not thoroughly satisfied as to the process, and the whole of the scheme for the purchase of the Wheal Ellen Mine had fallen through. The report of Capt. Craze on the Eukaby Silver Field, as the shareholders knew, was not a favourable one, and the directors were then face to face with the question of whether they should wind-up the company or pursue some other course. However, they decided to lay the report of Capt. Craze before the vendors and ask for some compensation, which they did, and after some considerable negotiation the following compensatory offer was made by the vendors.

OFFER OF THE VENDORS.

"The Eukaby concession shall remain the property of the company, and the vendors agree to acquire, at their own cost, and transfer to the company, free of all liabilities, the properties known as the 'Bird-in-Hand' Group, consisting of the Bird-in-Hand, the Bird-in-Hand Extended, and the Ridge Mines, situate about 20 miles from Adelaide, the company, on its side, agreeing to purchase, for the sum of 6,000*l.* in cash, the machinery on the ground (which is valued by Mr. Rosewarne, late Government Inspector of Mines, at over 20,000*l.*")

The directors had accepted the offer, and the property had been transferred to the company. The board believed that the Bird-in-Hand property was valuable, and the evidence that they had from the spot confirmed that opinion. They had an estimated amount of from 15,000 to 20,000 tons of tailings on the property. They did not, for the present at any rate, intend to do any further work on the Eukaby property, but they still possessed it, and it was by no means proved that it was absolutely valueless. The estimated cost to work the new property properly was from 1,000*l.* to 1,200*l.* per month. It would be necessary, therefore, to raise further capital for the purpose. It was the intention of the directors to at once make a further call of 2s. per share as the funds of the company were now very low. He concluded by moving the adoption of the report.

The motion was seconded, and, after some discussion, carried, and the other formal business having been transacted the proceedings terminated.

MINING EXCHANGE.—This Exchange will be closed to-morrow (Saturday.)

MR. STRAUSS A LARGE PURCHASER OF TIN ORES.—Mr. Strauss has, it is said, purchased 300,000*l.* worth of Cornish tin ores during the past three years, chiefly at the Cornish ticketings.

ONE instalment coupon, No. 22, of 10s. upon each instalment certificate of the Alabama Coal, Iron, Land and Colonisation Company, Limited, issued in exchange for Alabama 8 per Cent. Gold State Bonds of 1870, will be payable at the company's offices, 19, King's Arms Yard, Moorgate Street, on and after the 21st instant.

REPORT OF MEETING.

WENTWORTH GOLDFIELDS PROPRIETARY CO., LIMITED.

IMPORTANT STATEMENT BY MR. COOPER, WHO SUCCESSFULLY EMERGES FROM A CROSS-EXAMINATION BY SHAREHOLDERS—AN APPARENTLY REMARKABLE MINE.

The first, or statutory, meeting was held on Wednesday, at Winchester House, Old Broad Street.

Admiral F. A. Maxse presided.

Mr. Alexander Hislop (secretary) read the notice calling the meeting.

THE MANAGER PRESENT.

The Chairman: Geutlemen, the meeting is called to-day with the chief object of conforming to the Companies Act, which requires a statutory meeting to be held within a certain date of the period of registration. That date has not elapsed yet, but the directors thought it desirable to have the meeting as soon as possible, to inform you as to the situation and prospects, and also to see Mr. Cooper, who has come back from Australia lately. I am sorry that the chairman, Lord Kilmorey, is not here to-day. He is away for a cruise for the benefit of his wife's health, and I occupy the position of chairman with the sanction of my colleagues. The company was registered on November 27th, and after the usual advertisement, and having obtained a suitable amount of capital, a general allotment of shares was made on December 11th, and communication was then held with Sydney, with the view to a transfer of the property. Mr. Cooper is here to-day, and he will be able to give you any information that you may desire. I may say that we have had a long conference with him ourselves, and we are quite satisfied with his statements and explanations. We think altogether they are very encouraging. I may mention one point, perhaps: what is known as the

GOLDEN GATE VEIN,

which he had not seen at the time of his report, but which he referred to in a telegram of September 29th, seems to be of great richness, and we are likely to get a considerable return from it alone. It is more than probable that several other veins will be developed as the workings go on. We propose to retain Mr. Cooper as consulting engineer in Londou, at the same time sending him out when necessary in order to superintend the management of the mine. Duriug his absence the control of the mine will be in the hands of a competent manager, whom Mr. Cooper is now looking out for, and whom we hope to find in London. Of course all mines, as you know, are of a speculative nature. I do not attempt for a moment to give you too sanguine a view; all I can say is that as far as I have been able to study the evidence, I cannot conceive much more promising circumstances than are presented by that evidence, and my faith in the matter has been shown by my having taken up personally the largest number of priority shares. (Cheers.) Therefore if anyone suffers, I shall suffer chiefly. Accompanying the notice of this meetiug you will have observed a circular letter informing you that the New South Wales Government claims for the first time a small royalty of 2s. per oz. The directors may or may not be able to resist that claim; but they do not regard it as a very serious matter. Even if the claim be valid, it happens that the

QUALITY OF THE GOLD

of our mine is of such value, realising about 4*l*. or 4*l*. 4s. per oz., as compared with 3*l*. 10s. or 3*l*. 12s. 6d. in the case of the gold of other mines; therefore, eveu if the claim be maintained, it will involve a loss of a very small percentage. The directors think, however, instead of acting on their general powers in dealing with the matter, that it would be better to submit it to your consideration, in order that you may authorise them to negotiate, and do the best that they can. This claim of royalty was never made before, and is really a new feature. Our last information is that it possibly may not be pressed; but, as I have said, it appears to us to be an extremely small matter, and we shall ask you to give us authority to do what we may think best in regard to meeting it. Perhaps there is one rather encouraging point I may refer to before sitting down—the subject of royalty reminds me of it—and that is, that a mine that we leased, called

THE JACKASS MINE,

has been developing considerable richness lately. We have a royalty on that of 10 per cent., and, therefore, that will be to our benefit. It is to be hoped, considering that we have over 1,000 acres of area, that we shall be able to sublet or dispose of other sections of the property upon advantageous terms. We, as the directors, will be very much obliged to any gentleman who will ask any questions that he may think proper of Mr. Cooper in regard to the state of affairs, and the condition of the mine, and its prospects, and I think that you will find him, as we have found him, most anxious to make a thoroughly sincere and straightforward statement about everything. I am bound to admit myself that what seemed to be a little discouraging in this concern has been the fact that it seems so very encouraging that really the reports which have been given seem almost to be too good to be true; but, nevertheless, I myself am in exactly the same position I was in two or three months ago. Having learned more, and having joined the board, while admitting at the same time it is a pure speculation, I still think that everything is of the most encouraging description, and I have not found any flaw at all in the evidence, which I have most carefully sifted, and which has been placed before us. (Applause.)

DISCUSSION.

Sir Arthur Hodgson: Before Mr. Cooper makes the explanation, may I ask the board of directors one question? At what date did the New South Wales Government make this claim for royalty?

The Chairman: On January 27th of this year.

Sir Arthur Hodgson: And does the claim for royalty go back to any definite or indefinite period?

The Chairman: I do not think so.

Sir Arthur Hodgson: Of course, that is a very important matter as to whether it is retrospective or not.

The Chairman: That is the very point I was discussing before I came in here; and anyhow, as far as the company is concerned, we shall not be responsible in any way for the liability; the vendors will be responsible. (Applause.)

Sir Arthur Hodgson: That information is very satisfactory.

Mr. R. S. Evans: I take it that it is not necessary for you gentlemen on that side of the table to take any legal action in this matter.

The Chairman: I think not.

Mr. R. S. Evans: I suppose you will watch events, and see what the Government resolves to do, letting other large mining properties there buy your experience for you. I assume that you do not intend to thrust us into any legal engagements on this point. I take it you have done this to let us know what has taken place?

The Chairman: To put ourselves technically right.

Mr. Evans: And you do not propose to take any legal action in the matter?

The Chairman: We shall make the best terms we can.

Mr. William Clarence Watson asked whom Mr. Cooper represented in inspecting the mines—the board or Mr. Cawston?

The Chairman: He went out, in the first instance, representing Mr. Cawston, who had some thought of purchasing the mine himself. That is the report he made to him, and that is the report we have benefitted by.

Mr. Watson: It was for the purchaser?

The Chairman: For the purchaser.

Mr. Evans: Mr. Chairman, are we to understand that Mr. Cooper will make us a statement? I have intentionally put down two or three questions I should like to ask him. I think it would be preferable for us on this side of the table to ask him questions direct, if you will allow us.

STATEMENT BY MR. COOPER.

Mr. Cooper: I have very little to say, except what is in my report. You have all seen and read my report. By that report I stand. Since I wrote that report certain developments have been made. I remained in Sydney for some months, and they drove this 300-ft. level from the Reform and the 300-ft. level from the Phœnix Mine to intersect this intermediate vein, and during my stay in Sydney they telegraphed to say they had struck a vein in the Phœnix, and a few weeks afterwards they said they had struck a very rich vein, called the Golden Gate, so that they asked me if I would cable that home. I said I could not cable anything I had not seen, so I went out on my own responsibility and saw it for myself, and I found a very nice strike—the Golden Gate. It was 150 ft. deeper than the old people's workings. This vein has not been worked for 25 years, so that it proves to us these veins are extending down. I was very much pleased with it, and I put a shot in, and this shot broke away 300*l*. worth of ore. I told the vendors they must not work that vein at all, because the company should have the benefit of it; but Lord Carrington (the Governor of New South Wales) went on a visit to these mines, and as they asked if they could put a shot in for him, I said they could do that, but that they must not work and take out the ore. So they put in a shot, and got 500*l*. sterling worth of ore out by that shot. Now, that vein is intact up to within 350 ft. of the surface, and at the 300-ft. level there was 350 ft. of backs. We have not driven on the vein, but it is very satisfactory. Some people said the old people have worked it out, but it is proved they have not done so.

A POINTED QUESTION.

Mr. Evans: And you have sufficient confidence in this property to absolutely take the management of it?

Mr. Cooper: I am not taking the management out there. As the consulting engineer, my business would be in London. I will act as consulting engineer in London, and a manager will be sent out; but if things should not be going on rightly, and I am required to pay a visit to the property, I shall be satisfied to go out.

Mr. Cooper, in reply to Mr. Evans, said he stood by his report, and believed that the results would be as he had foreshadowed.

Mr. Evans asked if the existing plant would suffice for the present working, or whether a large amount would have to be spent upon machinery.

Mr. Cooper said that what they would have to spend would be upon the new shaft, which was to be sunk 1,000 ft. The cost of any additional machinery would not be anything like the amount he had put in his estimate, namely, 15,000*l*.

Mr. Evans: Did you take many samples while in the mines, and did you try them yourself?

Mr. Cooper: I took several samples from all over the mines, and tested them myself. The results were very much higher than I expected to get; in fact, some were so high that I have not reported them.

Mr. Evans: I see you mention in one of your telegrams that you "struck it rich in Phœnix Mine and Golden Gate." Was this a new vein?

Mr. Cooper: These are the finds I have just referred to. I finished my report on July 31st, and I think it was towards the end of September they struck these. They were driving a cross-cut, and struck them within a week or two of each other. The one was going south-east and the other driving north-west, about half a mile apart.

Mr. Evans: Have you ever seen a mine of this particular and peculiar character before?

Mr. Cooper: I have been in California, Colorado, and the Transvaal—in fact, all over the world—and I have never come across any mine where the ore is so rich as it is in this.

Mr. W. C. Watson: From your examination of the mine, do you believe there are other portions of it than those worked which are equally rich?

Mr. Cooper: I have no reason to suppose otherwise. He added that the

PROPERTY CONSISTED OF ABOUT 1,000 ACRES,

and 25 subsidiary companies might be formed, for 1 mile of good ground was sufficient for any company to work. These subsidiary companies would form a valuable part of the company's assets. The parent company could prove the deep leads of alluvial at very little cost, and as they had enough to do, he would allow the subsidiary companies to work these. They would not require large capitals.

Mr. WATSON: These veins, which you look upon as feeders, lead to the main lode. Have you any idea what depth the main lode is?

Mr. COOPER: Taking the dip of these veins, I estimate that we would have to go down about 1,000 ft. from the surface to get to the junction. On the other side there is a large quartz vein, which I estimate will junction with these veins at about 1,000 ft.

Mr. EVANS: How long will it take to reach that?

Mr. COOPER: The work should be done in about 18 months; it all depends on the ground.

Mr. WATSON: Do you think the results, as you get deeper on these veins, will be better?

Mr. COOPER: I do not say they will be better, but I can show you a piece of ore that came out of one of the veins, and I will guarantee it will give 8,000 ozs. to the ton.

Mr. COOPER, replying to Mr. Walter Bird, said he could not find anything in the mine under 50 ozs. or 60 ozs. to the ton. He would certainly prefer to ship the ore home for treatment, as had been done in the past. Before he left Sydney he heard that 2,000,000*l*. of money had been taken out of the mine, and he visited all the banks and Government offices for the purpose of getting statistics on the subject. He succeeded in finding statistics for over 1,000,000*l*.

Mr. BIRD: In your report you mention about 15,000 ozs. to the ton. Do you mean that that is only an occasional find, or that we can look for an average of, say, 50 to 60 ozs. to the ton?

Mr. COOPER: I might say that you could

LOOK FOR AN AVERAGE OF 50 TO 60 OZS. TO THE TON,

but, of course, you would not find an average of 15,000. I took one assay which came to 15,000 ozs., and also got 5 ozs. of gold out of 8 ozs. of stone, which, I think, is equal to 11,000 ozs. per ton.

Mr. EVANS: This company has a working capital of 50,000*l*. How long will that last, supposing you do not form any subsidiary companies?

Mr. COOPER: I do not think you will ever require it. As soon as we re-start work we shall drive on five veins, which will produce ore at once.

Mr. BIRD then proposed: "That the directors be, and they are hereby, authorised to complete the purchase of the property, notwithstanding and subject to the Government claim, for a royalty of uot exceeding 2s. per oz. of gold; and the directors are requested to make the best terms possible with the Government for a settlement of the royalty claim.

Genl. HARRIS seconded the resolution, which was carried unanimously.

The CHAIRMAN announced that a circular would be sent to the shareholders when the actual transfer of the property was carried out.

A vote of thanks to the chairman and Mr. Cooper was carried with acclamation.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

THE feature in the Money Market this week has been the return of two out of the three millions of gold borrowed of the Bank of France three months since at the period of the crisis here. The prompt return is a satisfactory sign that all so far is going on well in reference to the great liquidation, although in regard to Argentine affairs difficulties and delay have arisen. The return, moreover, has been arranged without weakening the Bank, for the reserve is still 1,280,000*l*. better than at this time last year, at 16,060,000*l*. A reflux of coin and notes has helped the Bank, but the liabilities under the deposits owing to the Revenue collections has reduced the proportion 2½ per cent. to 41¼ per cent. The private securities show a moderate increase, and the Government Securities an increase corresponding with the amount of gold returned to France representing, no doubt, the Treasury Bills exchanged for it. Discount has been firmer and three months' Bank Bills have improved to 2⅛ to 2¼ per cent., partly due to the smaller supply of capital afloat, and money has, consequently, with the settlement, improved to 2¼ to 2½ per cent. The Bank is reported to have taken up about a million of money upon Consols, but there is no proof of it. The export demand for gold has ceased and there is some prospect of a supply coming from Brazil and the United States.

Stock Exchange affairs in the past week have been in a state of abeyance, partly owing to the recurrence of the settlement and partly to the apparent general disinclination of the public to transact business. Prices, despite the paucity of business, have nevertheless been well maintained. The Bourses have also been supported, and New York has been more inclined to sustain values, but at the same time the support has not been continuous. The "passing" of the Allsopp dividend having been already discounted caused an improvement, which has since been maintained. The Bell's Asbestos Company announced a distribution equivalent to 15 per cent., but prices receded as more had been anticipated, and disappointed holders sold in consequence. In Parliament the Deceased Wife's Sister's Bill has again appeared and departed, while the Irish negotiations have apparently collapsed, and Mr. Parnell remains practically master of the field. The rates for carrying over speculative bargains until the next account ranged from 1 to 3 per cent. on Foreign Government bonds, and from 3 to 4 per cent. on American Railroad securities. In Home Railways a "back" was exacted during the earlier hours. The changes on the week are of a trifling character apart from a few special descriptions in each market. The Funds show a slight reduction, but Indian Government and Colonial Inscribed were firmer. An almost general advance was shown in Foreign Government bonds, with exceptional movements in Peruvian Corporation issues of 3 to 4, and of 1 in Spanish. The rise in South Eastern "A" was the feature in the Home Railway market. In American Railways the changes were slight and about equally divided, apart from the exceptional flatness in Atchison and Union Pacific issues, and the firmness of Erie shares. Grand Trunk stocks were easier, but Mexican Preferences rallied 1 to 2 per cent. Allsopp's fell 4 to 5, and Guinness Ordinary rose 8 per cent. Hansard's Union were heavily sold, while the Financial Trust and Land shares were stronger.

Money was in less demand this afternoon at 1½ and 2 per cent., but discount quotations remained comparatively firm for the choicest three months' bills at 2⅛. The Bank of Germany has reduced its rate of discount from 3½ to 3 per cent. per annum.

Sovereigns amounting to 14,000 left the Bank to-day for South America. Bar silver has relapsed to 46d. per oz., and with the Indian exchanges, Rupee Paper has also declined, though considered cheap at the present moment.

In view of the holiday to-morrow, business at the Stock Exchange to-day has been very idle, a disposition to realise being the prevailing feature, but the latest prices exhibited a hardening tendency. The Funds were somewhat dull, and India Government issues lower, Rupee Paper being flat. Very few dealiugs were reported in the Foreign Government market, and prices exhibit an almost general shrinkage of ¼ per cent., South American loans being rather more seriously affected. Home Railways have shown an irregular tendency, the Scotch and heavy lines failing to retain yesterday's advance, while the passenger lines were higher, still excluding South Eastern Deferred, which was 1 down. American shares were nearly all lower, the resignation of the president of the Louisville line having a disturbing effect upon a limited market. Atchison, Milwaukee and Louisville dropped from $1 to $1½, and the rest ¼ to ⅜. Grand Trunk stocks were steady, but Mexican heavy, and 1 to 2 lower. Beyond the decline in Hansard's Union the variations in the Miscellaueous market were insignificant.

Annexed are the final quotations to-day:—Consols Account, 97¼, 97⅜; Egyptian Preference Three-and-a-Half per Cent., 94½, 95; Egyptian Unified, 98¼, 98½; French Four-and-Half per Cents., 105¼, 105¾; Hungarian, 92¼, 92½; Italian, 93¼, 93½; Mexican, 92, 92½; Peru Corporation, 12, 12½; Peru Preference, 31, 32; Russiau, 1873, 99¼, 99¾; Portuguese, 55, 55¼; Spanish, 76⅝, 77; Turkish, 1871, 99, 99½; Turkish Defence, 102⅛, 102⅜; Caledonian Railway, 118¾, 119; Great Eastern, 92¼, 92½; Great Western, 164¼, 164½; Brighton "A," 152⅞, 153⅛; North Western, 179⅜, 179⅝; Metropolitan, 77¾, 78¼; Metropolitan District, 30¼, 30¾; Midland, 152⅛, 152⅜; North British 49⅜, 49⅝; North Eastern, 163⅛, 163⅜ xd; South Eastern "A," 93¾, 94; Mexican Railway Ordinary, 43½, 43¾; Grand Trunk 9½, 9⅝; Grand Trunk First Preference, 62⅜, 62⅝; Grand Trunk Second, 41⅞, 42⅛; Grand Trunk Third, 22⅛, 22¾; Canadian Pacific, 76⅛, 76⅜; Denver Preference, 61¾, 62; Erie, 20⅛, 20⅜; Milwaukee, 56, 56¼; Lake Shore, 114½, 115; Louisville, 76½, 77; Atlantic First, 32¾, 33¼; Ontario, 17⅛, 17⅜; Ohio, 18½, 19; Norfolk and Western, 56½, 56; Reading, 16½, 17; Reading 5 per Cent. Bonds, 56, 56½; Union Pacific, 45½, 45¾; Wabash Preference, 19, 19½; Ottoman Bank, 14⅝, 14¾; Anglo-Telegraph, 48¼, 48¾ xd.; National Telephone, 4½, 5; Hudson's Bay, 18½, 19; Suez Canal, 96¼, 96¾; Guinness Ordinary,', 320, 323; Allsopp's, 35, 38; Bryant and May, 13¾, 14 xd.; Eastmans, 12⅜, 13; Hansard's Union Ordinary, 2¼, 2¾.

REVIEWS.

MINERALOGICAL REPORT.—CALIFORNIA STATE MINING BUREAU. Sacramento: State Office.

This is the tenth annual report of the State Mineralogist, for the year ending December 1st, 1890. It is replete with information which should be of much interest to our readers, seeing that much British capital is locked up in the territory with which it deals.

MINERAL RESOURCES OF THE UNITED STATES. Washington: Government Printing Office.

This work has been prepared with great care and research by Mr. David T. Day, Chief of Division of Mining Statistics and Technology, and is issued by the Department of the Interior, United States Geological Survey (J. W. Powell, Director). It is positively exhaustive on the subject of the vast interests of which it treats.

THE HANDY BOOK OF THE LAW OF JOINT STOCK COMPANIES. James Walter Smith, Esq. London: Effingham Wilson and Co., Royal Exchange.

The re-appearance of the new and revised edition of this useful work will be hailed with pleasure by the legal fraternity, and by those who have to do with public companies.

BIBLIOTHECA POLYTECHNICA. Edited by Fritz von Szczepanski. London: Sampson Low, Marston, Searle et Rivington, Limited, Fetter Lane, Fleet Strcet, E.C.

This is a classified catalogue of all books, annuals, and journals published in England, America, France, and Germany, including their relation to legislation, hygiene, and daily life. We greet with pleasure this new international index to the progress of technical science. It has been compiled with much industry, and is a complete book of reference for all publications of a technical nature. The catch-words are given in three languages—English, French, and German—so that readers of every nationality can at once turn to the branch he seeks in the literature of the latest investigations. An exhaustive enumeration of the technical journals in the three great languages of the world is also given. The work is carefully printed and elegantly got up, and can be recommended.

PUBLIC APPEALS FOR CAPITAL IN 1890. London: Fredc. C. Mathieson and Sons, 10, Old Broad Street, and Bartholomew House, E.C.

Chronologically arranged, with an index. A very useful work of reference.

HOLLOWAY'S OINTMENT AND PILLS.—Travellers and Emigrants.—Those who cross the seas chauge the climate, but they do not change the constitution. The altered conditions of life, the exigencies of travel and other causes render the traveller and emigrant peculiarly liable to diseases and accidents when far from efficient medical aid. With these associated remedies at hand they may be said to have a physician always at their call, and they may be certain that situations will be constantly arising in which they will require a ready resource in time of need. The directions for use which accompany each box and pot of Holloway's Pills and Ointment are written in plain and simple language, and are applicable in all cases.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

Investors in all classes of Stocks and Shares should read Mr. Thos. Thompson's Mining and Investment Circular, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

Lester and Hook are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

Lester and Hook advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

Telegraphic Address: — "LONGEVOUS, LONDON."

MEMBERS OF THE MINING EXCHANGE.

BURRELL, BRADDOCK & CO.,

Stock and Share Brokers, Mining and Financial Agents,

STOCK EXCHANGE BUILDINGS,

90, QUEEN STREET, MELBOURNE,

Undertake Agencies for Investments in AUSTRALIA, and negociate the purchase of Mining Properties.

Personal inspection by a member of the firm of all properties under negociation, thus ensuring the safest guarantee of the *bonâ fides* of mines, &c.

REFERENCES.—MESSRS. BURRELL & COMPANY, 117 and 118, Leadenhall Street, London, E.C.

Bankers: THE COMMERCIAL BANK OF AUSTRALIA.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

Board.

Sir CHARLES METCALFE, Bart., Chairman.
B. B. TRENCH, Esq., Deputy-Chairman.
L. Balfour Burns, Esq. | Major J. W. M. Cotton.
Sir Stuart S. Hogg. | Richard Smith, Esq.
Edward Dicey, Esq., C.B.

Head Office.—19, ST. SWITHIN'S LANE, LONDON, E.C.

South African Office.
NATAL CHAMBERS, JOHANNESBURG.

General Managers in South Africa.
W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

Bankers.—THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.
THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South Africau Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

RECOMMENDATIONS FOR CURRENT ACCOUNT:—

INDIAN CONSOLIDATED,
MYSORE REEFS,
NINE REEFS,
MYSORE WEST,
MYSORE WYNAAD.
DEVALA MOYAR.

All recommendations this month have, up to the present, been correct, and large profits to our followers the result.

We make Mines a special study, and invite correspondence, whether business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly, irrespective of account day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. Clients may rely on fair treatment at our hands. We are members of the Mining Exchange, and subject to the rules and regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Melbourne.—We advise you to pay no attention to the prices as telegraphed from Melbourne. Ask yourself who pays for them?

Marcisbeguiled.—To the liquidator, when the company is put into liquidation. The value of his shares will be their value at the time the company went into liquidation. As a rule that is *nil*.

G. H. A.—Do not dispose of them. The company is well managed.

Uncertain.—As an investment. No.

Citizen (M. J.).—The mine is shut down; that is the reason. Purely nominal quotation.

Reader.—At the first favourable opportunity, we advise you to sell.

Dividends (B. N.).—The preferences are certainly the best.

Silver (Cirencester).—Have nothing to do with the concern named.

Enquirer.—Certainly. Both those, and also Nine Reefs.

Glen Abar.—In liquidation, and shares unsaleable.
R. S. (Newton Abbott).—We have a fair opinion of them as a speculation.
Country Reader.—Our advice is join the reconstruction.
S. Staton.—Think a better price may be obtainable, but you should take a fair profit when shown.
J. W. H. (Birmingham).—Early next week.
Victory.—Will write by post as soon as information is complete.
Castle.—No. 1. They were formerly directors. Cannot advise you to support them. No. 2. At present price are cheap, and rather advise you to average. No. 3. Hold for the present, but take advantage of any market spurt. No. 4. We are making inquiries, and will write to you.

Owing to the pressure on our space we are compelled to hold over our Table Pages.

The Mining World.

LONDON: SATURDAY, FEBRUARY 14TH, 1891.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

THE RANDT GOLD OUTPUT.

THE Randt district has commenced the new year well, the total output of gold last mouth having amounted to 53,205 ozs., contrasting with 50,352 ozs. in December, 46,795 ozs. in November, and 45,250 ozs. in October. This shows that good progress is being made, because such heavy floods have recently taken place in the Transvaal that it would not have been surprising if last month's production had been upon a smaller scale than that of the closing month of 1890. As a matter of fact, it would have been less but for the fact that the Ferreira and Geldenhuis Companies re-entered the productive list with crushings of 4,033 ozs. and 5,100 ozs. respectively. As these companies are expected to increase their crushings henceforward, and as two or three of the other mines are getting additional stamping power ready, it seems reasonable to assume that the augmentation shown in the aggregate returns for some months past will be continued. In the following list we show the principal yields during the past four months, apart from Ferreira and Geldenhuis, which, as we have said, have only just re-entered the productive list :—

	Oct. Ozs.	Nov. Ozs.	Dec. Ozs.	Jan. Ozs.
City and Suburban	811	738	960	881
Crown Reef	4,030	3,760	3,293	3,115
Durban-Roodepoort	1,540	1,540	1,406	877
Geldenhuis Main Reef	450	453	430	425
Heriot	320	472	300	248
Jubilee	1,015	1,040	1,056	1,020
Langlaagte	4,550	4,600	4,750	4,600
Langlaagte Central	650	525	675	612
Langlaagte United	1,450	1,550	1,563	1,130
May Consolidated	1,110	933	2,025	2,078
Nigel	1,110	1,103	1,108	1,103
Robinson	5,510	6,034	6,530	5,935
Roodepoort (Kimberley)	1,108	918	1,215	1,560
Salisbury	750	870	530	400
Simmer and Jack	3,013	3,016	2,563	2,445
Stanhope	618	780	369	667

It will be observed that in the majority of cases there has been a falling off in the yield; but that is mainly accounted for by the fact that at many of the mines the mills could not be kept running anything like full time, owing to the damage and delay caused by the floods. Bearing this fact in mind the returns are not unsatisfactory. The extent to which they justify the current prices of the shares, where they do so at all, is not so clear; and though we have no doubt whatever about the capabilities of the Randt district, we still think that in some cases quotations are even now too high, much as they are below the figures ruling a couple of years ago. The Heriot Company, whose shares have been as high as about 10, has got to the end of its resources, and will have either to be re-constructed or wound up, and there are companies not much better off. We would, therefore, again urge caution in dealing with Randt shares, for, to a large extent, the advance in their market value is due to the manipulations of local holders, who will be only pleased to unload when they can do so at a profit.

FRONTINO AND BOLIVIA.

IN our issue of December 13th last we heartily congratulated the shareholders of this company upon the great improvement in their property, and in the course of our remarks we said: "The prospects are exceedingly encouraging, and the shares at the present price are undoubtedly cheap." At that time the shares were quoted at 16s., on Thursday 2*l.* was bid for them without bringing many into the market; so that the accuracy of our estimate of the value of the shares has been very quickly verified. The existing proprietors show no disposition to realise their holdings, and we think they would be unwise if they exhibited such a disposition, for the company's outlook is everything that could be desired. It possesses a whole series of mines, some of which it will be able to dispose of if it thinks necessary, retaining and working those which are now in course of development. It has plenty of money, and the management, both on the spot and at home, is worthy of the highest commendation. The directors have this week received a telegram from the superintendant at the mines, Mr. Eustice, stating that the January remittance of bullion was 11,700*l.*, and that the expenses in Colombia were 4,000*l.* This points to a profit of about 7,000*l.* for January, after adding London expenses, insurance premium, and the charges on realization of the gold to the above statement of costs. The November profit, it will be remembered, amounted to 3,394*l.*, and though the result of the December working has not yet been received, the directors estimate, basing their calculations upon a letter from Mr. Eustice, dated the 23rd December last, that it will be about the same as for November. In this case the profits for the three months would be very nearly 16,000*l.*, or at the rate of 64,000*l.* per annum. The January return is, however, at the rate of 84,000*l.* per annum, or about sufficient to pay the shareholders 75 per cent. in dividends. If this rate of profit is maintained, the Frontino and Bolivia shareholders will be splendidly rewarded for their patience, and, so far as we can ascertain, there is every prospect that it will be maintained. In any case, the shares appear to be very cheap, even now, and we shall not be surprised if they advance steadily. With the view of showing what the progress of the company has been since the end of 1888, we append a table of the returns, month by month.

	1890. Produce	1890. Expenditure.	1890. Profit.	1889. Produce	1889. Expenditure.	1889. Profit or Loss.
	£	£	£	£	£	£
January	4,059	3,021	+1,038	1,830	2,290	— 460
February	4,415	2,756	+1,658	1,705	2,280	— 574
March	4,276	2,839	+1,437	1,615	2,331	— 715
April	4,227	2,670	+1,557	2,457	2,257	+ 200
May	4,640	2,932	+1,708	2,099	2,639	— 539
June	4,506	3,201	+1,304	2,184	2,475	+ 9
July	4,292	3,850	+ 441	3,328	3,052	+ 276
August	5,030	3,782	+1,248	3,919	3,066	+ 853
September	5,498	4,511	+ 986	4,358	3,245	+1,113
October	5,356	3,853	+1,503	4,244	3,197	+1,046
November	7,699	4,305	+3,394	3,870	2,891	+ 979
December	—	—	—	4,706	3,319	+1,386

This table must prove interesting to the shareholders, though scarcely so acceptable as the dividend which they will receive when the next distribution is made. For the year ended June last, about 9 per cent. was paid; for the current year it promises to be at least five times that.

HARNHALLI, BUT NO "RIG."

WHEN the Mysore Harnhalli rig commenced about a year ago, our readers were kept fully informed as to the various little manœuvres which attended it. They were advised to watch the game, but by no means to take part in it. Nothing in the mine justified the extravagantly absurd prices to which the shares then rose, and nothing in the mine justified the flash in the pan which took place this week. It is quite true that the last report speaks of the visit of the Maharajah of Mysore and his Dewan, when they "appeared to be well satisfied," but as much cannot be said of those who bought at the high prices to which the group of speculators sometime since forced the shares. In fact, they appear to be anything, but well satisfied. Shares for which they gave pounds are now to be had in basketfuls at but a few shillings, and, in fact, look at the market from whatever way one will it is obvious that the bloom is off the Harnhalli rye. Mining usually, even when devoid of dividends, is not altogether left without hope, but it is difficult to find the basis of any such sentiment in Harnhalli. Shareholders cannot find an atom of consolation even from a perusal of the latest report. It speaks of country schist and small veins of quartz giving out large quantities of water, and not of gold, as might more reasonably have been anticipated. In fact, every line of the report shows Harnhalli to be a watery mine, and if the shareholders do not know this, we beg to assure them it is a fact that a watery mine is the terror of Cornwall, and, in fact, of everybody who knows the full significance of the term. It means immense expense in pumps and a variety of other directions. This is so far as No. 2 shaft is concerned, but is the south drive any better? No, it is not. Water is everywhere and gold nowhere. The reader may turn to the south-west cross-cut with the faint hope of expecting better things, but here the veins that were in the drive have simply cut out, and when they will cut in again it would need the combined wisdom of a patriarch and a prophet to tell. What, therefore, the Maharajah thought of the whole affair is merely imagined by the superintendent, for the oracle of Mysore appears to have opened not his mouth. Perhaps he was like the Yankee boy, who, after a sound thrashing, said, "I says nothing, but I thinks a lot." Probably his Highness was reflecting that the English could scarcely be the great commercial nation his Dewan had told.

him they were if they could be so feather-brained as to take up a property of this kind. There is some sign that Harnhalli operators, encouraged by their last deal, are about to try another, but once more we advise our readers to look over the chess board, but not to touch any of the pieces.

TRADE IN JANUARY.

The returns of trade, compiled by the Customs, and issued by the Board of Trade, for the past month, compared with the corresponding month of last year, show a considerable falling off, no doubt due to contraction of trade from various causes, but partly also to the severity of the winter, which checked navigation, the returns of which, as regards entrances and clearances, confirm to a marked degree the figures of imports and exports, the tonnage having decreased very materially. The imports were valued at 33,740,000*l*., equivalent to a reduction of 11¼ per cent., while the exports were 19,834,000*l*., or over 8 per cent. less. The reshipments reached only 4,389,000*l*., or fully 8 per cent. under the total for January, 1890. The summaries show, as regards imports, an increase only in cattle, &c., chemicals and oils, and as regards exports in chemicals alone, the falling off having been general. The arrivals of metals were valued at 1,715,000*l*., or a decrease of 369,000*l*., while the exports, including metal manufactures, were 3,148,000*l*., or a reduction of 428,000*l*. The imports of copper ore have been larger, but the value less, while those of regulus and precipitate were greater, with an augmented value representing an increase in price. Tin and lead have both declined. On the export side the shipments of all copper and lead have diminished, but tin improved, especially in value. Coal fell off, and iron and steel, with machinery, show a heavy reduction—less in price than quantity—to all quarters.

The following table gives the results for January in our usual form:—

Article.	Quantity Tons.	Value £	Increase or decrease per Cent. Quantity.	Value.
Imports.				
Copper ore	6,139 ...	39,483 ...	+12.6 ...	—10.4
,, reg. and precip. ...	9,964 ...	313,040 ...	+22.3 ...	+42.3
,, un. & pt. wrought...	3,120 ...	172,599 ...	—35.5 ...	—31.6
Lead	13,257 ...	173,747 ...	—19.5 ...	—22.3
Tin	1,667 ...	153,718 ...	—38.7 ...	—40.3
Exports.				
Copper, unwrought ...	2,402 ...	144,227 ...	—22.2 ...	—15.0
,, wrought ...	1,029 ...	72,603 ...	—44.0 ...	—34.3
,, mixed	549 ...	33,551 ...	—75.5 ...	—66.4
Lead	2,545 ...	38,797 ...	— 2.4 ...	—29.4
Tin	358 ...	34,460 ...	+ 2.2 ...	+16.7
Iron and steel	219,419 ...	2,112,622 ...	—34.1 ...	—16.5
Coal	1,912,423 ...	1,267,965 ...	—15.3 ...	— 6.5

WORKING THE OLD EBERHARDT.

The vagaries of the Mining Market are past finding out. We invite our readers to consider the report which Mr. Clipperton gave on Wednesday of his visit to the New Eberhardt Company's properties, and to turn from its perusal to our Mining market, which records the price of the shares. If the whole of the appliances of the Eberhardt property at surface were broken up and sold at a valuation, the mines being thrown in for absolutely nothing, we believe the proceeds would realise more than the selling value of the shares at the present moment. People are always asking about cheap mining speculations. Well, Eberhardt is one of them, and our readers will think so when they possess a knowledge of the facts. Mr. Clipperton went to see the mines about three months ago, and was received with great joy by Capt. Reed, to whom the sight of a director came as a sort of revelation from the skies. He had not seen one since 1874. First of all the chairman visited the Monitor property, which has been opened up with a fair, though not a conspicuous, measure of success. It has made profits, and, to put it briefly, has prevented the shareholders from being mulcted in calls, but it has not provided them with food with which to appease their hunger for dividends. Exploration works are to be continued on this mine, and should anything of a special character turn up work on a more extended scale can be resumed. From the Monitor Mr. Clipperton, in a day and a-half's journey, reached the old Eberhardt, and thoroughly examined the tunnel as well as the appurtenances at surface, including the White Pine Waterworks, which originally cost half a million sterling, but which were bought by this company for 30,000*l*. He became truly astonished from the indications which presented themselves in the tunnel that his predecessors in the directorship could have been led away from old Eberhardt to the Monitor mine, or to any other. This stupendous tunnel, which cost the shareholders in the days gone by almost a mint of money, goes right under Treasure Hill, from which has been extracted immense quantities of silver ore. He was not long in coming to the conclusion that the hope of Eberhardt lies in the tunnel and in the developments that may be made therefrom. In this he was supported by Capt. Read, who, although 20 years in the service of the company, is still in the prime of life. Capt. Read is confident that with a free hand he can make old Eberhardt pay, but only *via* the tunnel. No one can read the chairman's description of Treasure Hill in the past, and his reasonable conclusions of what that hill may yield in the future, without feeling satisfied that the right course had been adopted in re-working the old Eberhardt, and that Mr. Clipperton's visit may be fraught with consequences of an extremely important character. We do not propose to follow that gentleman into his exhaustive statement of what he saw during the fortnight he spent in examining the property underground and at surface, but invite our readers to peruse the interesting narrative for themselves as reported *verbatim* in our present issue. The proposal with which he concluded his speech was the necessary supplement to the conclusions at which he arrived, viz., a resolution authorising the necessary expenditure, so that the company may at once proceed with the re-working of old Eberhardt. The shareholders with a modification in respect to the suggested means of raising the money authorised a call of 6d. on the shares, payable in two equal instalments, and dealers must be told that shares cannot be transferred without the full 6d. being paid. We have reason to believe that on the day of the meeting, or the day following, instructions were sent to Capt. Read to commence work in the tunnel at once. The cordial thanks of the meeting were awarded to the chairman for his visit to the mines in the depth of winter on their behalf, and we have said enough to indicate that the issue may be far more wide-reaching and important than is just now dreamed of in the shareholders' philosophy. We have three morsels of advice to present to the shareholders for their digestion. First of all let them read the full text of Mr. Clipperton's speech; next, let them watch with interest, both keen and intelligent, the reports from the mine, which we promise to reproduce in these columns as received, and, finally, let them not be induced to part with their shares at prices anything like those we quote to-day.

THE URANIUM MINES, LIMITED.

Sir Wm. Armstrong, the worthy chairman of this company, and his colleagues are to be congratulated upon the satisfactory meeting they held this week. Seeing that the company has only been in existence a little over 12 months, and that the management is dealing with a practically new metal, the shareholders could scarcely look for a dividend at present; but from what was stated at the meeting, and what we learn from another authoritative source, there is every likelihood of this happy result being achieved at an early date. It is satisfactory to learn that the management has placed beyond doubt the existence of a regular and true uranium lode upon the property; and, besides bringing to grass a large quantity of the mineral, they have assured themselves of the richness and continuity of the reserves. The company has not escaped those difficulties and delays which attend all new mining undertakings, but the chief difficulties have now been surmounted, and a successful and economical process of treating the ore has been found. It may be considered advisable in a short time to increase the chemical manufacturing plant, in which case the necessary funds will be raised upon debentures.

RED MOUNTAIN SILVER MINES, LIMITED.

We heralded the birth of this company some three months ago with a special article, in which we pointed out that it promised successful results. Reading over what we then said by the light thrown upon the company's affairs by Mr. Findlay Wallace at the meeting last Thursday, we see no reason to vary or to modify our remarks at that time. The chairman, who from the opening of his speech we should judge is not deficient in poetic fancy or in vividness of imagination, delivered an able speech, in which he set forth at length the position and prospects of the company. He pointed out the rich nature of the Red Mountain District, and referred to the developments on the Pickwick claim, which will be far more extensive when the weather improves. He had at his side Mr. Philip Argall, whose statement was extremely satisfactory, seeing that the company has acquired its valuable claims on gospel terms—that is, without money and without price. All it has to do is to enter in and possess them, develop them, realise their bullion produce, and after dividing their own proportion hand over that which belongs to the vendors whose interest was entirely acquired in shares. No money was paid in promotion, and there were no greedy vendors to run away with all the capital. Mr. Argall is confident that the mines will be creditable to him as their manager and profitable to the shareholders.

Incidentally, Mr. Argall gave a good deal of information respecting La Plata, whose affairs are decidedly more encouraging than the shareholders may be led to suppose by looking at the market price of their stock. The debentures have been paid off, profits are being steadily made, particularly from the slag dump, which has been worked steadily, so that the total amount received from the commencement has not been less than $12,438. There is a disposition to work the ground on tribute, which, of course, means a royalty to the company, and there is some desire manifested to lease the smelting works, which in the old times, it will be remembered, proved so disastrous to the shareholders. Whilst the affairs of La Plata may be described as fairly encouraging, those of Red Mountain appear to be of an exceptionally hopeful kind.

MAMMOTH MINES.

A REMARKABLE RECORD OF PROGRESS

WHEN Mr. James Hastings, the esteemed chairman of this company, rose to address the shareholders at the annual meeting assembled last Thursday, they could scarcely have expected from him so gratifying an account of his stewardship as that which he was able to render. Judging from the price of the shares, this is a company that ought to be hovering between the two alternatives of reconstruction or absolute winding up; but instead of that it is a going concern, making at the present time a gross return of 60,000*l*. a year, of which about one half is clear profit. What the market can be about to let Mammoth shares stand at their present price, uuder 4s., is a conundrum that at this time of the year we must give up. Last year the directors added 20 stamps, making 50 in all, and the present profit is about 5,000*l*. a month. The chairman believes that this will be the smallest return the company is likely to realise for a long time to come. Of this ore there was crushed up to the end of last year 17,342 tons, and in November last the produce reached slightly over 2,000 ozs. Fortunately the directors have been able to find suitable appliances with which to treat their ore, and one of their number when on the spot was able to view the 50,000 tons that were then ready for cheap extraction, and in addition extensive bodies of lower grade ore, which are held in reserve, whilst richer ore bodies are expected. It would be impossible without making a larger drain upon our space than we can this week afford to follow Mr. Hastings through the interesting details of his speech, but enough has been said to show that in the Mommoth Mines the shareholders have a property of no ordinary value, and we can only conclude, as we commenced, by expressing our extreme surprise at the price at which the company's stock stands in the market. From what Mr. Hastings said, we gather that during the present year about 20,000*l*. will be available for dividend, the rest of the profit being devoted to the permanent improvement of the mine and its appurtenances.

SOUTH AFRICAN TRUST AND FINANCE CO., LIMITED.

WE incline to the opinion of those shareholders who have written to the directors describing the result of the first year's operations of this enterprise as satisfactory. The revenue, as Mr. Trench in his extremely able speech pointed out, was actually for six months, whereas the expenditure was for 11. The year in South Africa was described by the chairman (Sir C. Metcalfe), who has been out there, as disastrous, and there are few individuals or companies trading in that part of the world who could say at its close that their securities had done other than diminish in value. Mr. Trench was, however, in a position to declare that those of this company showed an augmentation, which indicates clearly the cautious policy the board have adopted and pursued, and also the highly profitable nature of the business the Trust can conduct in even fairly prosperous times. The appointment of managers in SouthAfrica is a wise step, and we should be glad to see companies out there applying more freely to the Trust for assistance than they have hitherto done. Van Ryn shareholders did so a short time since, and have no reason to regret the action they took. A good deal of the criticism was devoted to the expenditure of the year, which, on the side of the directors' fees, was somewhat heavy, though the office expenses cannot be called immoderate considering the large amount of work that has had to be done. In justice to the directors it should be mentioned that they have met nearly three times a week to attend to the company's affairs, and have had to sift and measure the height and depth of no fewer than 317 business proposals. It is evident to shareholders, who understand the value of time to City men, that if the work of such a company as this is to be done well, and is to be left in the hands of really respectable and responsible men, it must be paid for. Probably the directors would have acted wisely had they made some concession to the generally expressed wish of the meeting, but no one can truly charge them with neglect of duty in any sense, whilst they may claim to have laid the foundations of what promises to be a sound and highly remunerative business.

"OUGHT I TO JOIN THE KANTOOR BANKET SYNDICATE?"

No. This is the reply we must give to a correspondent who has addressed to us this question. As the prospectus is being scattered over the face of the country by post, and as it does not seem generally to have come under the cognizance of the Press, our conclusions with regard to it may not be without some general interest to our readers. The syndicate is remarkable for this, that it is the child of a former company, and that in due time it proposes itself to bring forth what is called "a larger company." The first concern is styled "The London and Pretoria Financial Company, Limited," which was born just about a year ago. It seeks to make a profit out of its sale to the Kantoor Syndicate, which syndicate in due time will mulct in damages the "larger company" which, when the times are less out of joint, will be forthcoming. The question we should like to ask the London and Pretoria Financial Company is why they do not work the 24 claims proposed to be acquired themselves, particularly seeing that "no dead work" has to be done. This phrase actually occurs in the report of a sage named Barter. The London and Pretoria Financial Company, wise in its generation, prefers 15,000*l*. in cash and shares to the fanciful profit which imaginative experts have conjured up. The 24 claims, we are told, are near the town of Kaapsche Hoop, which we suppose is a village with a few shanties. Even if the claims were all that the experts describe we should caution our readers against having anything to do with this syndicate for the reason that the prospectus states:—"Applicants for shares shall be deemed to have assented to the omission of the dates and names of the parties to and contents of any such arrangements or contracts, and to have accepted the above statement as a sufficient compliance with that section, and shall be deemed to have waived all rights and remedies under the said Act against the directors, promoters, and all other persons in respect of such omission, and applications for shares will only be accepted subject to this provision." Another of our objections to the syndicate lies in the fact that half the members of the board are already directors of the vendor company. There have been assays of small samples of the ore to the results of which we attach as little importance as we do to the fanciful estimate of the prospectus of a return of 80 per cent. to the subscribers of the capital. The sellers of the 24 claims in our judgment will be far more fortunate than the buyers.

WOODHOUSE AND RAWSON UNITED, LIMITED.

IN the present condition of the Money Market, any undertaking that will yield investors over 5 per cent. per annum should be welcome to those who are blessed with spare capital which they desire to employ profitably. The new issue of shares and debentures by Woodhouse and Rawson United, Limited, affords an opportunity to the public not to be met with every day. The dividends already declared by this company during the last 18 months have been at the rate of 8 per cent. and 15 per cent. per annum upon the preference and ordinary shares respectively, besides which 7,421*l*. has been written off patents account, 26,000*l*. placed to reserve fund, and 16,335*l*. carried forward undivided. With such a record there is little doubt that the new issue will be eagerly subscribed. The additional capital is required to meet the constantly increasing business of the company, and to carry out various additional proposals, including a contract for the lighting of a portion of the City of Paris; and further, to enable the directors to pay off a balance of 75,000*l*. deposited with the company, which they can now do on advantageous terms. The enterprising character of the management is shown by the fact that almost every kind of article counected with electricity is manufactured at the works of the company, and some important financial operations in relation to electrical industries have already been completed. The present issue consists of 20,000 ordinary shares of 5*l*. each (there is no present intention of calling up more than 2*l*. 10s. per share); 10,000 7 per cent (cumulative) preference shares of 5*l*. each, which will be entitled to preference as to capital as well as interest, and a further 1 per cent. in every year in which the ordinary shares have received 10 per cent. or upwards; and 100,000*l*., 5½ per cent debenture stock, redeemable in 10 years at 105*l*. The prices of issue will be for the ordinary shares 5s. per share premium, and for the preference shares and debentures par. The issue merits the careful attention of investors.

ANOTHER CHANCE FOR THE ELMORE GOLD CO.

THE keynote of the Elmore meeting, which we report verbatim, was struck by Mr. Armitage almost in his opening sentence: "We do not acknowledge failure, because our work is as yet incomplete." If incomplete, the fault is not to be laid at the chairman's door. Like a good man stuggling with difficulties, he has presented a spectacle for the gods. Obstacles wholly unforeseen, and of the most formidable character, have beset almost every movement that has been made, and hence it is not surprising that the original estimates have been so far exceeded that the funds have run short, and that at the meeting the real question presented was—re-construction with a small liability on the shares or the absolute suspension of operations. The latter course was not to be thought of for a moment; and, as for the former, it resolved itself into a question of what the liability should be — 1s. or 1s. 6d. The shareholders, with the concurrence of the board, decided upon the former sum, and on that basis we have no doubt they will respond to the appeal that will forthwith be made to them. Regarding them as reasonable beings, they can scarcely do otherwise. What are the the facts? A shaft has been sunk 550 ft. It is thoroughly equipped in every possible respect, and the underground workings are getting close to the Alturas and the Confederate Star lodes. The workings formerly had to be suspended for want of pumping appliances, but these are now fully provided, and less than half the amount of the proposed liability will, in the chairman's opinion, finish the work that he described as being incomplete. In fact, if it does not do so, he will not be a party to calling up another penny without the consent of the shareholders in general meeting. The frank and outspoken statement of the chairman carried the

meeting with him, and it may be safely asserted that he never, in a greater degree, possessed the confidence of the shareholders than he does now. Elmore is evidently approaching an interesting, not to say critical, period in its history. No one can think of what the mine produced in days gone by without being alive to the possibilities that may yet lie before it. The shareholders may, at least, rely upon this, that it will be honestly managed, that the news will be properly disseminated, and that, so far as the board from this side can control them, the telegrams will be conveyed to all alike, and be couched in the language of moderation, and shadow forth the nearest possible approximation to truth. Whether the telegrams of old Alturas times came up to this dual standard is a question in managerial ethics, into which more important business prevents us from entering.

KNYSNA CONCESSION AFFAIRS.

AT the meeting to take place next Wednesday it will be proposed to wind up the Knysna Concession Gold Mining Company, and to re-construct it under the name of "The Peterson Reef (South Africa) Gold Mining Company, Limited," with a capital of 60,000*l*., in 240,000 shares of 5s. each. It is arranged that the new company shall allot and issue to the liquidators 124,618 shares of 5s. each, upon which there shall be credited as paid up the sum of 5s. per share, making them fully paid up, and shall pay them 1,373*l*. in cash. The expenditure for 17 months, that is, from July 31st, 1889, to December 31st, 1890, was 20,983*l*., principally on machinery supplied by Fraser and Chalmers, nearly the whole of which has now been erected. Mining operations have been continued persistently and systematically, and, according to the report of Messrs. John Taylor and Son, operations have been chiefly confined to the Peterson reef, which appears to be "a true fissure vein." The 130-ft. level east, 325 ft. from the shaft, is the most important point in the mine. "A sample taken over a distance of 120 ft. (the length of the ore shoot) in the back of the level gave, by panning, from 8 to 10 dwts. of free gold, and about 5 per cent. of pyrites per ton of ore, and samples of the ore which have been assayed have given from 6 dwts. 12 grs. to 2 ozs. 9 dwts. of gold per ton." The rapid sinking of No. 1 shaft is recommended. Trial crushings have taken place, which have yielded 5 dwts. in the mill, but it is the opinion of the directors that the bulk of the gold remains in the tailings. The directors are encouraged by the report of the Messrs. Taylor, and particularly by their statement: "The mine can be cheaply worked, and if the ore in depth proves to be of the value of from 8 to 10 dwts. per ton, as present appearances seem to indicate that it will, there should be a good margin for profit." The plea for re-construction is effectually made out by the report of the Messrs. Taylor, not to say by that of the directors themselves. The shareholders are well advised to adopt it in its entirety and to carry out its recommendations with spirit and energy.

FRENCH MINES, LIMITED.

THIS company has certainly this advantage over many others that are floated in London, that some of the directors, with their friends, have returned from a visit to the properties, "and are satisfied that the statements contained in the prospectus and reports are correct." The company is formed with a capital of 200,000*l*. in 1*l*. shares, of which 125,000 shares, fully paid, will be issued to the vendors as part of the purchase consideration, and subscription is now invited for 50,000 shares, leaving 25,000 for future issue if required. The properties to be acquired are known as Grand Clos, Allemont and Chalanches Mines, which the reports speak of as rich in gold, silver and lead. The mines are 36 hours from London, and the public will note that every facility will be given to persons who wish to inspect them. The first of the mines, named Grand Clos, is in the Hautes-Alpes, 50 miles from the town of Greuoble, and comprises 575 English acres, whilst the Allemont comprises 2,000 acres, and is 17 miles from Vizille. Chalanches adjoins the former, and is in a property three miles long by about 1 mile wide, and appears to have been worked from a very early date. All the mines are held on favourable terms, and we gather from the reports that adit workings have been carried out on the lodes, but in a manner to leave rich bodies of ore at the disposal of those who will go to work on the moderu system of development. The report of Mr. Thomas Denny is very emphatic, as to the results to be derived from "sound management and rapid development," and the bases upon which he founds his opinion seem both correct and reasonable. There are mills and buildings partially adapted for the proposed works on the ground, and we attach considerable importance to the statement that there is water power sufficient to treat many times the amount of ore it is estimated can be raised from the mines. Indeed we gather from the documents submitted to us that the ore can be most economically raised and treated. Great importance will also be attached to the fact that bulk assays have been made "representing as nearly as possible the results that would be obtained commercially." In two of the mines it is said that the lead will pay all expenses of mining and milling, thus leaving the gold and silver as profit. It is by no means a novel enterprise that the directors of the French Mines, Limited, submit to the public. The operations on the Pierre-fitte Mine in the Pyrenees are at the present moment paying enormous dividends, and there seems to be no reason why their success should not be repeated in the case of the French Mines, Limited.

DRAKEWALLS.—Under date of 12th February the manager reports that the mine is again drained, and the men are now working at the bottom levels. The lode in the 160, both east and west, has improved, yielding in the former 7 tons, and in the latter 11 tons of mundic per fm. mixed with a little tin. The work of cleaning out the arsenic flues will be finished in the course of a few days, and samples will be taken on Saturday. A parcel of tin is being dressed for sale next week.

THE YURUARI CO., LIMITED.

THE FINAL CALL IS MADE—THE MINE FALLS OFF IN VALUE, BUT THE POLICY OF MR. PRYOR WILL BE CARRIED OUT VIGOROUSLY.

THE directors have delayed making the last call of 6d. per share, as they desired to keep the call in reserve, but in view of the pressure put upon them by Mr. Pryor, they have now no alternative. The directors have been able to postpone the present call for over a year, and beyond the 1s. 6d. per share necessary to pay off the debentures and debts of the previous company, have till now only trespassed upon the finances of shareholders to the extent of 6d. per share. They have been able to do this by means of loans; but in view of the unanimous expression of opinion, at the general meeting, that the directors were hardly justified in paying interest on loans when capital remained uncalled, they are now compelled to make this call. They regret that the favourable prospects up to June last have not been continued, partly owing to great floods, and the impossibility of obtaining firewood during the early months of the current year, also the great delays in transit up country of machinery and stores. Subsequently the lodes in levels Nos. 4 and 5 water shaft, from yielding about 1½ ozs. per ton gross, have pinched away, and the produce being reduced both in quantity and quality. The production since 1st July last to the end of the year has, therefore, only amounted to about one-third of what appearances in June seemed to justify, the total produce received to the end of December last being about 3,500 ozs. Mr. Pryor has accordingly repeated his strong representations to the directors, that the only mode of procedure calculated to produce satisfactory results would be by suspending milling operations for the time being, by sinking the water shaft (which can now be done quickly and most economically with the rock-drills), and opening up nine or 10 levels and stopes, he then, as a miner, expresses the confident opinion that, with the greatly reduced expenses now possible, results will amply repay the further expenditure necessary for this purpose. The directors have accordingly telegraphed Mr. Pryor to continue sinking the water shaft, and, owing to the small returns for November and December, have found it necessary, including drafts drawn upon the company in London, to remit him a total sum to date of about 6,500*l*. For the information of new shareholders, who seem to consider expenses at the mines are still high, it may be mentioned that although the price of firewood has been greatly reduced, this still costs the company about 32s. per cord, or equal to about 3*l*. 5s. per ton of coal. Wages of miners now vary from 8*l*. to 12*l*. per month, the average number employed by the company being 300 to 400 men, while the staff of British officials, besides being paid high wages, have to be maintained at the expense of the company. The directors have also been compelled, besides the usual indents for stores and wearing parts of the mill and other machinery, to send out a considerable amount of machinery and stores, including the Ingersoll drills, the cost of transit &c., up country, alone amounted to 2,000*l*. It is only fair to Mr. Pryor to state that, when he took the management, everything was in a backward condition, and the previous manager left him a legacy of about 12,000*l*. of debt, which had to be paid upon Mr. Pryor taking possession. Notwithstanding what is above stated, the mines have yielded greater results, at less expense, than any British company in the district, the produce having exceeded that of all the other British companies. The policy of cash payments having been adopted at the mines, Mr. Pryor feels satisfied that, with a comparatively small further expenditure, the property owned by the company will prove in the early future, to use his own words, "to be of the highest value." The directors had hoped to have obtained from the upper levels of the water shaft sufficient to pay for sinking the same, and in any case preferred that the 10,000 ozs. subsequently remitted should be obtained before a further expenditure was incurred, but they cannot longer hold out against his justifiable argument that to confine milling operations to two levels and stopes is not giving the mines a fair chance, and that the new shaft being to the dip of the old one, and consequently a comparatively shallow mine, necessitating much less expense than heretofore, he will be able in the future to justify his assurances by the results obtained from the property.—F. REGINALD ROBIN, Secretary.

THE EAGLEHAWK CONSOLIDATED GOLD MINING CO., LIMITED.

THE secretary of this company sends us the following abstract of reports received from the mine, dated 27th December, 1890, and 5th January, 1891:—During the fortnight we have extended the 650-ft. level 25 ft. for the nine days' work, making the drive 791 ft., leaving 81 ft. more to drive before we get abreast of the Limited shaft. The reef is 7 ft. wide, with two good walls. I find the colour of gold, but nothing payable. In the 750-ft. level we have put the rise up 14 ft., making it 23 ft. from the back of the drive. We have taken the rise 16 ft. long, thinking we might have a better chance of getting something payable. We have found a golden stone almost every day since we started the rise, but we cannot get any prospect in the dish, so it is not payable. There is any amount of stone, and the gold found is about 6 ft. from the west wall on the east side of the rise. The Melbourne directors have ordered a small trial crushing to be made of the quartz now being taken from the 750 ft. rise.

MR. THOMAS THOMPSON AND HIS STAFF.—The annual dinuer of the staff of Mr. Thomas Thompson took place last evening at the Baytree Restaurant, St. Swithin's Lane. We regret to say that, owing to ill-health, Mr. Thompson was unable to be present, but in his absence, Mr. South, the manager, proved himself to be a genial and courteous chairman.

NEWPORT ABERCARN COLLIERY COMPANY.—This company, of which the Rt. Hon. H. Cecil Raikes, M.P., is chairman, is taking active steps to develope the new seam in No. 2 shaft, and in the course of a comparatively short period of time the output will be increased from the present get of 8,000 tons per week to from 11,000 to 12,000 tons per week. The Newport Abercarn has been one of the most progressive colliery concerns in South Wales, and with a continuance of present prices, its success in the future is likely to far exceed the past. The company was brought out in 1873 by Mr. H. Russell Evans, of Newport, and 31, Lombard Street, London.

REPORTS OF MEETINGS.

THE NEW EBERHARDT CO., LIMITED.

THE CHAIRMAN GIVES IN DETAIL THE STORY OF HIS VISIT TO THE MINES, AND THE REASONS WHICH LED HIM TO ADVISE THE RE-WORKING OF THE OLD EBERHARDT—SHAREHOLDERS UNANIMOUSLY ENDORSE HIS OPINION, AND ARRANGE TO SUPPLY THE REQUISITE FUNDS BY THEIR VOTE.

AN extraordinary general meeting was held at the City Terminus Hotel, on Wednesday, to receive a statement from the chairman of his recent visit to the mines, together with a report on the company's properties by Messrs. Bewick, Moreing and Hooper, and to consider the advisability of re-commencing operations upon the Eberhardt Mine and sanctioning the additional expenditure.

J. Russell Clipperton, Esq. (chairman of the company), presided.

ALFRED H. OXENFORD, Esq. (secretary), read the notice of meeting.

CHAIRMAN'S VISIT.

The CHAIRMAN, who was received with much applause, said: Gentlemen, you have heard the notice convening this meeting read by our secretary, is it your pleasure that he should now read the engineer's report accompanying it, or will you take it as read, as I presume you have all studied it individually? You will remember that at every meeting of shareholders since the re-construction of the company, the directors have promised that they would not re-open the works at the old Eberhardt and Aurora Mines without the consent of the shareholders specially summoned for the purpose. We, now, in accordance with the notice just read by the secretary, think the time has arrived when that pledge should be redeemed. From the repeated references made to the subject by our manager, Capt. Read, urging us to go back to Eberhardt, and backed by the advice of some of our largest shareholders, your directors thought the time had arrived for taking action in the matter, and after consideration deemed it very desirable that one of them should pay a visit to the mines—as your chairman, I thought it my duty to be that one. I will first read you one or two extracts from Capt. Read's letters during the past year which led up to that determination. He says in a letter dated 29th April :—

CAPT. READ'S LETTERS.

"I would beg to call your attention at this time to the favourable prospects in the Eberhardt and Aurora Tunnel property. I sincerely hope the company will not lose sight of the fact that there are yet good and favourable prospects remaining in the Eberhardt and Treasure Hill properties, and there is not a shadow of a doubt in my mind that ore will be found in larger quantities in the tunnel than were ever taken out from the mines above it."

Again, August 31st.: "This company has good and excellent prospects in the Eberhardt and Aurora Tunnel, which I doubt not in the near future will be worked."

And again, September 14th: "Some time during the latter part of the present month it is my intention to go to Eberhardt and Treasure Hill to examine the company's mines. I think strongly that our company ought to resume work at least on their Tunnel property the coming season, considering the prospects there are of finding something of value. I feel confident had the money spent on this Monitor property been spent at Eberhardt, the company would now be on a dividend-paying basis."

As the season was rapidly advancing, I lost no time in making the necessary arrangements for my departure, and arrived at Taylor, Nevada, at the end of the first week in November, accompanied by Mr. Edward Hooper (the resident partner at San Francisco), of Messrs. Bewick, Moreing and Hooper, mining engineers of London, and Capt. Read, our manager, who had requested to meet me at Eureka—the furthest point of the journey to be reached by railway; from thence 120 miles had to be travelled by coach. The company's property at Taylor consists of two mines—the Monitor, 1,500 ft. by 600 ft., and the Gore, very nearly of a similar size, running parallel to the Monitor on the east side, both of them secured to the company by United States patent, and are worked through several shafts.

WORK AT THE MONITOR.

The one being worked at the time of my visit was the south shaft where small and irregular seams of ore were being found and followed up in various directions with fair success. A winze was also being sunk from the Gore level. Generally the ore found in these mines lies quite flat, and near the surface, from 40 to 60 ft. deep, though I am informed that once it was found in paying quantities at a depth of 100 ft. The buildings belonging to the company at these mines consist of a whim (or hoist) house, containing a very good horse-power whim, blacksmith's shop, assay office and scale room, two ore houses, a boarding house for miners, two lodging houses, and a dwelling house for the foreman—all in a very fair state of repair. The mill is situated about 9 miles from the mines, at a spot called Steptoe Creek. The property, secured by United States pateut is 80 acres in extent, upon which is erected a 10-stamp mill worked by water power, with a Knight's improved wheel, together with rock-breaker, dry kiln, four pans, two settlers, clean-up pan and boiler for heating same, a house in which is the office and assay room, a retort building aud melting room, blacksmith's and carpenter's shops and store-room, manager's house, with stable and waggon sheds—all in a very good state of repair. Having completed a thorough inspection of the Monitor and Gore properties, we started very early on the following morning for Eberhardt, distant from Taylor about 75 miles, almost due west, the journey taking a day and a-half. As with your other property, I shall limit myself to a description of the mines and buildings, Mr. Hooper having dealt most exhaustively with the geological formation of both properties.

PROPOSED WORK AT EBERHARDT.

The Eberhardt Mines, as you will see by the plan accompanying Messrs. Bewick and Co.'s report, consist of seven claims, viz., John Wild, south, John Wild, north, Tom Jefferson, Eberhardt, North Aurora, Ward Beecher, and Iceberg, a full description of which is given in the engineer's report. The Eberhardt and Aurora tunnel has been driven from a point in Mahogany Canyon, due north for a distance of 6,015 ft. At the 6,000 ft. station the tunnel is connected with the incline, which comes down from Treasure Hill, the total length of which is 2,200 ft. At this station also a drift branches off at an angle of 60 degs. in a westerly direction, and is extended 1,260 ft.; this drift is known as the west drift. At the 1,100 ft. station in this drift a wall was discovered crossing the west drift almost at right angles. Upon this wall in many places, both in the north and south drifts, prospects of ore have been found, but the best and most favourable prospects I believe to be in the south drift, where in several places the ground is highly mineralised, and seams of ore are plainly visible, varying from 1 in. up to 8 ins. and 10 ins. in thickness or even more; the average value being about $70 per ton of 2,000 lbs.; these seams of ore are not considered large enough to keep the mill supplied, but when we consider that this ore is at a depth perpendicular below the surface 1,600 ft., and 1,200 ft. below the lowest ore bodies, and immediately under them, it is, I think, a reasonable conclusion to arrive at, that there are yet large ore bodies in the tunnel level. Judging from the good and promising showings of ore now to be seen, I can arrive at no other conclusion than that by resuming work upon the tunnel property we shall, at no very distant date, meet with good results. (Cheers.)

PAST RESULTS.

The North Aurora and Ward Beecher Mines are situated on the summit of Treasure Hill, from which a very large amount in money has already been won, and I cannot but think there yet remains to be found as good ore in the mines as has ever been taken out of them if we only have the good fortune to come upon it. Since the mines were ordered to be closed down seven years ago not a pick has been put into them, and I am sanguine that by following up the favourable indications, mentioned by Mr. Hooper in his carefully written report, we shall open out large and profitable bodies of ore. The buildings on Treasure Hill are hoisting works, comprising engine room with engine and boiler, blacksmith shop, ore house, bin, and loading station, water tank, and company's office, in fair state of repair. The buildings at Eberhardt are of the usual description necessary for the efficient working of the mines, and consist of 30-stamp mill, rock breaker, dry kiln, together with pans, settlers, &c., also a good engine and six boilers; the mill, though somewhat out of repair from lying idle so long, can be easily put into working order by sections as circumstances render necessary. The offices, comprising business office and scale room, store room, machine, blacksmith's and carpenter's shops, salt-house, tramway station, a very commodious and well-arranged manager's residence, with stabling for 20 horses, and five other dwelling-houses, are all in a good state of repair. At the tunnel are numerous buildings, consisting of machine shop, engine and boiler room, fitted with two engines and boiler, air compressor and receivers, four Cranston air drills, with all equipments in good working order, a boarding-house and lodging-house, and small cabin stable for tunnel mules. The White Pine Waterworks, situate at Hamilton, about 5 miles distant from Eberhardt, which originally cost, I am informed, 500,000*l*., and were purchased by the Eberhardt and Aurora Company for 30,000*l*., are in very good order, and ready to be started again, if necessary, at a day's notice; some slight repairs only would be necessary in the line of piping. There is a good house and office belonging to this company at Hamilton City.

A FORTNIGHT'S HARD WORK.

I have endeavoured to give you to the best of my ability a full account of your property, but I fear have but poorly represented the extent and value of it. It took me 14 days to go over it, "from early morn to dewy eve." (Cheers.) I was received with the utmost kindness and cordiality by everyone. No one representing the London directors had visited the property since the year 1874, and I was very much pleased to find that the Eberhardt Company still retained its old prestige. Your present manager, Mr. William Read, is a strong, active man in the prime of life (not yet turned forty, I believe), and has been at the mines nearly twenty years, having, with a partner, taken the contract for constructing the first 1,000 ft. of the tunnel, and knows every inch of it. He was appointed manager when Capt. Frank Drake left us unexpectedly for another company in Mexico, and has not hitherto had a chance, as manager, of giving proof of his knowledge of the Eberhardt Mines. (Cheers.)

CAPT. READ.

Although Capt. Read has had more than one offer of appointment as manager to other mines, at increased remuneration, he has declined to desert the old company, and he assured me that so long as old Eberhardt required his services he would remain with us. He is a man of the strictest integrity, a practical miner in every sense, having worked in the mines through every stage, and is, in my opinion, the *beau idéal* of a mining superintendent. (Cheers.) I would rather be guided by his opinion than that of the best expert in existence that I know of. The miners, one and all, respect and trust him; they have most of them worked with and under him from the early days of the company. This, I think, speaks volumes, not only for Capt. Read, but for the great confidence they have in the company. You will see by the favourable reports lately received from Capt. Read, which have been published in the mining and financial papers, that the Monitor Mine is not by any means played out, nor do we propose giving up prospecting there, but we have been somewhat disappointed in our original hopes that it would provide not only a good dividend for the shareholders, but a surplus for re-opening the old Eberhardt works. You have heard the opinion expressed by Capt. Read in the letters I have read to you, and we hope and trust you will approve the course your directors now desire to adopt. Mr. Hooper advises that the sum of $8,000 (1,600*l*.) be expended on development work at certain points indicated in his report, but, gentlemen, we must have funds to fall back upon so as to meet all contingencies.

WHAT IS PROPOSED.

We, therefore, propose to call up another 1s. per share of the capital (which will make the shares 3s. paid), but to make the payment as easy as possible for the shareholders, by dividing it into two instalments of 6d. each, at, say, six months intervals; we may not even want the second moiety, and you may rest assured the directors will not ask for it unless they do want it. Remember the extent and

value of the property you now possess at very small cost, somewhere about (in round terms) 12,500*l.* only, so that if we only have ordinary luck, it will not take very large profits to pay very substantial dividends on the full capital of the company, 75,000*l.*, if the 5s. shares were fully paid up. Capt. Read expressed his opinion that within a very few months of recommencing work at Eberhardt the shares, instead of being worth the par value, 5s., would be selling at 5*l.* or more, and stated his intention of considerably increasing his holding. I am very much inclined to agree with him. Mining is a lottery at best—few prizes and many blanks. No one can tell with any certainty what is within the bowels of the earth. I never advise anyone to go into mining speculations unless they can afford to lose all the money they put into them, but having invested their money it is well to follow it up when there is a chance, as I think there is in this company, of more than doubling the stake. You may think me too sanguine—perhaps I am. What is a chairman worth (especially a mining chairman) who is not sanguine. (Cheers and laughter.)

"Hope springs eternal in the human breast,
Man never is, but always to be, blest."

Let us hope that our expectations may be realised, and that our "long-suffering shareholders" (to use the expression of our good friend, the MINING WORLD, last week) may at last meet with their just reward. The chairman concluded by moving "That this meeting having heard the chairman's statement as to his recent visit to the mine, together with the report on the company's property by Messrs. Bewick, Moreing and Hooper, it is resolved that operations on the Eberhardt Mine be re-commenced, and the general operations of the company be continued, for which the necessary expenditure is hereby sanctioned." (Loud cheers.)

Mr. HAMMOND (director): I second that motion with great pleasure. I have faith that in the old Eberhardt riches will yet be found, and I say so as a very considerable shareholder in the company.

FULL DISCUSSION AND INQUIRY INVITED.

The CHAIRMAN here invited the fullest discussion, and promised to answer all the questions addressed to him.

Mr. BAKEWELL: I understood you to say that 1,600*l.* was what we required to develop these mines and make these explorations, but I do not know whether I was right in understanding you to say that 12,500*l.* would be the result of the call.

The CHAIRMAN: 1s. a share would return that, but we only propose to call it up by two instalments.

Mr. BAKEWELL: Then it comes to this, that you are asking eight times as much as you require, and, therefore, I think it would be

MORE PRUDENT IF YOU WERE ONLY TO ASK FOR 6D.

In that case you will have four times what you require (6,250*l.*), and, therefore, instead of committing ourselves to the 1s. at once, I think it far better to only do so to the extent of 6d., seeing that even then, according to your own showing, we shall have four times as much as we want. Knowing how extremely risky mining operations are it is just as well not to allow too much money to be in the hands of directors. Many of us know that directors are sanguine, rather than the reverse, and always think that the more money they have to expend the more can they return in dividends, whereas, the experience usually is that nothing is returned under such circumstances. There is just a chance that something more may be found at this mine, and I think that 6d. will be ample to fiud it. The unfortunate shareholders are in a different position from the fortunate directors. We subscribe our money, and the directors continue on the board, taking their fees, paying their officials, aud all the necessary expenses. We, however, remain out in the cold, unless by some fortuitous circumstance an ore body is found, in which case we may be able to turn out of our shares a large profit. The result of my remarks I would like to be understood as this—that, I think, it is quite unnecessary to call for more than 6d., and that the 6d. is more thau sufficient, according to the chairman's own showing.

Mr. CRANE: I should like to know what is the financial position at present, because I have noticed in the mining papers for some mouths past that profits have been made steadily until quite recently. One month we made $7,000 profit, and I want to know how much we have in hand. I do not see the necessity for this 1s. call at all, and I should have thought we had enough money in hand for these development works without it.

Mr. BURGE: Is the amount you state to be required at all connected with the observation in the report of the mining engineers, that the stamp mill would have to be rebuilt? because if you do any business in Eberhardt it seems to me from this report you will require almost a new mill.

Mr. J. H. A. SMITH: Doiyou propose answering these questions now or dealing with them in a general reply afterwards?

CHAIRMAN'S FIRST REPLY.

The CHAIRMAN: My original intention was to reply upon the whole discussion, but I will now deal with that part of it that has already taken place, and will allow further discussion and questions should they be needed. Mr. Bakewell says he thinks that as the engineers only estimate the cost of what they propose to do at 1,600*l.* we shall not require money for anything else. My reply to this will answer another shareholder at the same time. My ideas are that if we do find valuable ore we shall require to crush it, and we ought not to delay doing so, and, therefore, shall have to put the mill into some sort of repair to do its work. I do not propose to rebuild the mill, as the engineers seem to intimate, but if we can get five or 10 stamps to work at a time we must be prepared to spend a little money. (Mr. BAKEWELL: How much?) I cannot tell you. It is impossible to say, but we must have funds in hand to meet those contingencies. (Hear, hear.) Mr. Crane wanted to know

THE FINANCIAL POSITION OF THE COMPANY.

The balance at the present time is 2,428*l.* 8s. 6d. We have not had to send Mr. Read any money now since June 5th, 1889, and that was for his May expenses. (Hear, hear and cheers.) He, however, may at any time cable or write requesting us to send him money. We should have no time to make a call on the shares, and unless we had the money in hand we could not send it. The consequence would be that the mill would have to be shut down for a time, and as men of business you know what that would mean. (Hear, hear.)

Mr. CRANE: You have not dealt with the profits mentioned in the mining papers.

The CHAIRMAN: We have been making small profits over the expenses, but those profits are at present in bullion, and have not been received here, though they will be when the accounts come over. There are heavy expenses going on at Monitor, and if we go to Eberhardt there will be heavier expenses still. It is not only what it will cost to open up the points Mr. Hooper suggests, but other expenses must be incurred as well.

DIRECTORS' SERVICES.

As regards Mr. Bakewell's remark that the directors take all the money, and the shareholders get nothing—all I can say is this, that if Mr. Bakewell will take my position I shall be only too happy to surrender it. He will not find it such pleasant work as he imagines. (Cheers.) The directors are not highly paid for their services—in fact, they are paid much less than in the general run of companies. (Cheers.) I did not seek this position. It devolved upon me to take it in order to keep the company going. I have done my best, and I do not think any shareholder has much to complain of. (Loud cheers.) I went to the mine in the depth of winter in your service—a journey from which many another chairman would have shrunk. (Cheers.) We do not propose to call the 1s. all at once, but 6d. now, and 6d. in six months. The first 6d. will last for a considerable time, but we must be ready to call up the other 6d. if required. If not required, certainly we shall not call it up.

Mr. BAKEWELL: According to your statement you have 2,400*l.* in hand, and the call of 6d. will give you 6,500*l.*—that is 8,900*l.*

The CHAIRMAN: Yes; and not any too much.

A COUNTER PROPOSAL.

Mr. BAKEWELL: It seems to me that that is amply sufficient, and when you have exhausted it you can call a meeting, and leave the shareholders to decide as to whether they will submit to a further call. You have held it out as a reason for making the call that the probability is before long you will strike an ore body, and, therefore, to ask for all this money at once is unreasonable. A 6d. call should be made at once, divisible into two moieties of 3d. each, and I move that as a distinct amendment.

Mr. CRANE: I second the amendment. We ought not to ignore, however, what the chairman says about the necessity of having the stamps ready if we find ore, but a very little knowledge of mining tells us that there is plenty of time when you do find it to put up stamps, because it takes a long time to drive a level, and you have to open stopes. Everybody knows you cannot get enough ore to crush for some time after you have found it; so I repeat, there will be plenty of time to get the money and put up the stamps.

The CHAIRMAN: You seem to forget that the two mines are very far apart. We cannot send our ore to be crushed at the Monitor. The distance is 75 miles, and the cost of shipment would exceed the value. It is a mountainous country also. Unless the stamp mill is put in order, so that we can work it at least partially, there is no place to send the ore to. We have now in the tunnels 50 tons of $60 ore on assay, and it is at that spot where this ore was taken from we intend to go on working, and, therefore, there is every reasonable probability that almost immediately we re-commence to work we shall be filled up with ore of one sort and another. It will be necessary, therefore, to put some of the stamps in proper working order within a very few weeks. That is Capt. Read's opinion, and I quite agree with him.

Mr. CRANE; For that purpose a call of 6d. will surely be sufficient with the money you have in hand.

Mr. BURGE: Has any estimate been made, in any shape or form, as to the amount required to put the mill in repair?

The CHAIRMAN: No; but we are aware of what mills cost generally—at any rate new mills.

Mr. J. H. A. SMITH: There is one point you might explain in regard to section B on page 2 of Mr. Hooper's report. He does not appear to support the scheme that is now before us.

The CHAIRMAN: Mr. Hooper is a mining expert, and mining experts, as a rule, never will commit themselves if they can avoid it. I was surprised to find those remarks in Mr. Hooper's report at all. It is very different from what our manager says, and after all I would be rather guided by the mine manager, who knows all about the matter, than I would by Mr. Hooper, who is brought face to face with it for the first time, although at the same time I know and esteem that gentleman, having travelled with him, and having been in his company for a fortnight on the mine.

ACCOUNTS WELL KEPT.

Mr. HAYDON: Are the accounts kept up close on the other side, and are there any serious outstanding debts?

The CHAIRMAN: I can assure you that the accounts are closely charged, for whilst I was there I took the opportunity of going into them minutely with the accountant, and was perfectly satisfied with the manner in which they were kept.

Mr. BULLOCK: What was the fee paid to Mr. Hooper?

The CHAIRMAN: 300 guineas.

Mr. EDWARDS: What is the value of the bullion on the other side?

The CHAIRMAN: There are seven bars not yet sold, and the approximate net value is $750 each.

Mr. PEARLESS: Does the North Ward Beecher belong to the company now?

The CHAIRMAN: All the property that belongs to the company is marked in red on the plan.

Mr. PEARLESS: This (holding it up) is a working plan which would deceive any shareholder, because the hill slopes from the north to the west, and not from the west to the north. On the other side of the Ward Beecher, on the turn of the ridge, was the old Hidden Treasure Mine, from which a large quantity of ore was taken out. It is clear to me that the Ward Beecher, or North Ward Beecher, is the place to strike into the ore channel, because it slopes towards Hamilton. It is not the slope of the North Aurora, the Eberhardt, or Aurora, we are on at all; therefore,

THE ORE CHANNEL SEEMS TO BE ON THE RIDGE OF THE HILL.

There was some very good ore taken out of the Ward Beecher, and the idea of the running only 250 ft. into it is absurd—1,000 or 1,500 ft. would be nearer the mark. Therefore, it is necessary to have funds enough to run the ore yet further into the hill. As to the mill, that

can be put in order at any time when you have, say, 1,000 tons, on the dump. First get your ore, and then put your mill in order. Mining companies usually proceed by the reverse method. (Laughter.) I advise you to lay out money in prospecting that hill.

READ IS A COMPETENT MAN,

and I know him perfectly well. He is a thorough miner and a man you can trust in every possible way. His idea of running in there is a very good one indeed, and I hope it will meet with success. (Cheers.)

Mr. J. H. A. SMITH: I think we must come back to the practical point, and that is the question of the call, which is the most interesting for the moment for the whole of us. We are in a little difficulty owing to the reply you made as to Mr. Hooper's recommendation, to which I called attention. We are at this meeting called to sanction certain works which are based upon the recommendations of Mr. Hooper. We cannot pick and choose between those recommendations. I am prepared to admit the force of a great deal of what you said, that in many cases the agent of the mine who is going through it constantly is really a better guide than a stranger, however high his reputation, but at the same time we have to reflect that the stranger called in is a gentleman of your own selection, whose reputation is well known as being that of a first class expert, and that he comes to this mine perfectly unprejudiced, whilst without in the slightest degree imputing to Capt. Read any desire to mislead you, we have, however, to look at the fact that that gentleman is prejudiced in favour of his own mine, and naturally so.

SHAREHOLDERS URGED TO ABIDE BY MR. HOOPER.

Mr. Hooper is, however, disinterested and has a reputation to sustain, and he says he sees nothing whatever in the Eberhardt property to justify him in recommending its further development. The Monitor he condemns, and the principal point in his report lies in the fourth recommendation, under the head of "proposed development." There we get upon something definite where ore has been found, and are led to suppose that this is not an isolated body, but that, on the contrary, there are others to be found by exploration. Coming from a gentleman of Mr. Hooper's well known caution, that is an exceedingly favourable recommendation, and one to encourage us to hope for better days than we have at present, but I think we should confine ourselves to the poiuts he mentioned, and not go on a wild goose chase elsewhere. If the prospects are anything like what are stated in his fourth recommendation, we shall have much to occupy our attention for some little time. The whole of these recommendations would cost 1,600*l*. to carry out, and we have 2,428*l*. on this side, with, as you said, seven bars of bullion, valued at 1,400*l*., and the American Bank balance besides.

The CHAIRMAN: There have been expenses at Monitor, and I have no doubt that Capt. Read has drawn against the value of those bars. They are sent to San Francisco for sale, and he draws upon them there.

Mr. SMITH: The balance would meet the ordinary expenses.

The CHAIRMAN: We must keep a respectable balance if the company is to maintain its reputation and prestige with its bankers, and I assure you it is very important it should do so. (Hear, hear.)

IT IS SO.

Mr. SMITH: That is the difficulty shareholders find who are continually paying calls. (Laughter.) You have, in round figures, 4,000*l*. Your total loss for 1889, as per the last published balance-sheet, was 2,445*l*., and in that report was an estimate for 1890, where we were told the mine had considerably improved, and, judging from the reports, that was a mild expression to use. On the face of matters, therefore, I can see no possible reason for this enormous call. Whilst we are all prepared to thoroughly explore and give the mine the development it requires, it is scarcely necessary to go to such an extent as you propose. We shall have auother meeting in May, and I should propose that you make a call now of 3d. a share, which will bring you in 3,000*l*. or 4,000*l*., and, with the cash in hand, seeing that you have been making profits up to last December, at all events, will give you a total of 7,000*l*. I do not gather from what you say that you propose an expenditure which will exceed that in three months, and if it does you can borrow upon the uncalled capital.

The CHAIRMAN: I doubt if any banker would advance money upon that security.

Mr. SMITH: We, at all events, have funds for six months before us without any call, and what is the use of calling up money to provide funds now to carry you on for 18 months. I shall move an amendment, "That the matter be re-considered at the general meeting due in May."

A SHAREHOLDER: What is the average monthly expenditure at present?

VIEWS OF SHAREHOLDERS MET.

The CHAIRMAN: About 600*l*. The amendment is, "That these words be added to the resolution—'Resolved, that operations upon the Eberhardt Mine be re-commenced, and the general operations of the company be continued, for which the necessary expenditure is hereby sanctioned not exceeding a call of 6d. per share, payable 3d. down and 3d. in six months.'" That is apparently the wish of the meeting, and, therefore, in order to meet the shareholders, I will withdraw my proposition in favour of a shilling call and will propose this as the substantive resolution. It has already been seconded.

Mr. J. H. A. SMITH: And I move as au amendment, "That a call of 3d. per share be now made, and that should it be desirable that the shareholders be called together, to sanction a further call of 3d.

The motion was seconded by a SHAREHOLDER.

JUSTICE TO THE BOARD.

Mr. WHYTT: The shareholders might show a little more confidence in the board than they have done after the economy they have practised so loug, and the good management they have shown. If these directors had been a squandering board, like the directors of some other companies I could easily name, it would be indeed desirable to fetter them in every possible way, but they have shown such diligence aud economy here, and the manager has so ably seconded them abroad, that I think we ought to pass the resolution, as amended and as accepted by them, unanimously. (Cheers.) I must say, in regard to the reports, that I attach much more value to the opinion of Capt. Read than to the report of Mr. Hooper. A man like Capt. Read, who takes so much interest in the concern, should have more store set by his opinion than should be set to that of experts, many of whose views have of late proved very fallacious.

The amendment was lost, and the original resolution, as adopted by them, carried unanimously.

The CHAIRMAN: That concludes the business, and I can only hope that the history I have given you of my visit to the mines has proved satisfactory.

THANKS TO THE CHAIRMAN, THE DIRECTORS, AND CAPT. READ.

Mr. BAKEWELL: I propose a vote of thanks to the directors and the chairman, who all appear to be most desirous of doing what they can for the company, and I only hope they will continue to exercise strict supervision over the funds.

Mr. EDWARDS seconded the motion, which was carried unanimously.

Mr. PEARLESS: And I hope this meeting will not break up without expressing a hearty vote of thanks to the chairman for going out to the mine at the time he did, respecting which nothing has been said. The chairman has never been thanked specially for that, and I think he ought to be. (Cheers.) I also think the motion should include the manager at the mines.

Mr. EDWARDS seconded the motion, which was carried by acclamation.

The CHAIRMAN briefly replied, and the meeting ended.

LATEST REPORT.

The mine manager reports under date January 25th:—Mine: Our mine prospects are without material change. The ore continues along in about the same direction; the rock, however, around the ore is getting somewhat harder than it has been, but I trust in a few days we shall pass through this ground. The total weight of ore extracted for the week, 30 tons; assay value of same, as per mine samples, $42 per ton. Ore teams: The ore team has been steadily hauling, and there is now on our mill dump 75 tons of ore.

RED MOUNTAIN SILVER MINES, LIMITED.

THE COMPANY STARTS UNDER THE HAPPIEST AUSPICES AND BIDS FAIR TO ACHIEVE SUBSTANTIAL SUCCESS—MR. ARGALL GIVES HIS VIEWS OF THE CLAIMS AND IMPORTANT INFORMATION FOR LA PLATA SHAREHOLDERS.

THE first ordinary general meeting of the shareholders was held at Winchester House on Thursday. Notice was also given that an extraordinary general meetiug would be held at Winchester House half an hour later, at 12.30 p.m., to consider, and, if approved, to pass the following resolution, viz.:—

"That the capital of the company be increased from 50,000*l*. to 60,000*l*. by the creation of 10,000 new ordinary shares of 1*l*. each."

Mr. Findlay Wallace presided.

Mr. HENRY RICHARDS (secretary) read the notice of meeting.

A FIRST MEETING.

The CHAIRMAN: Fellow shareholders, you will observe from the notice that has now been read that this is called the *first* meeting of the Red Mountain Company. I may say before I come to the more practical points before us that there is always something iuteresting in the idea of that which is first. May we not this morning, with the hopes we have before us, look with anticipation not very far into the future when our Red Mountain, with its many claims, will enrich us with its wealth and make us glad, and also help to recoup some of our losses in ventures of a less promising kind? (Cheers.) When I speak of the hopeful prospects of this enterprise, I do not do it as a mere matter of sentiment. I have, personally, as well as conjointly with the other directors, gone into this matter as fully as careful men could reasonably do, and the conclusions we have come to are that the Red Mountain promises exceptional opportunities in regard to the not very distant future. However, you may say, why is it then that you speak thus hopefully? Well, one reason is that our experienced and honest mining engineer, who is now present, has given us his judgment in the matter, and leaning on that, in the first instance, we have reason to expect that what is before us merely now as an anticipation will hereafter become an actual reality. (Cheers.) Perhaps at this point I ought to say that we are somewhat indebted to a gentleman on my left, Mr. J. T. Hopwood, who has been asked from year to year to join our La Plata board, but who never saw his way to do so till recently. He is quite of the view that in connection with La Plata, we might add thereto some of those claims that now belong to the Red Mountain. The next reason why, I say, we have these anticipations is that the company itself has been successfully launched. I do not know that I ought to indulge in anything like personal laudation, and I have no desire to do so. The laudation will be won when the actual results come, but I think I ought not to omit saying that the unwearied labours of

OUR VERY DILIGENT AND ABLE SECRETARY

no doubt has had very much to do with the successful floating of the Red Mountain Company. Mr. Jones, who is present, has worked well with him, and the word I now speak I have no doubt is thoroughly well deserved. Then I may say that not only has the compauy been successfully launched, but it is launched with 250 or more shareholders, who have subscribed working capital sufficient for its purposes—that is to say, to prove one or more claims of the Red Mountain group, for we have several of them. There is sufficient money subscribed for that purpose. Now, work can be pursued with this money, whilst the property is so large that some of it might be taken up by another company, to whom a portion of it might be disposed of on good terms. I like the last part of the idea best. We are not going to lose sight of developing the Pickwick claim, but why should we not dispose of another claim with a fair profit attached to it, make that profit for ourselves, and let

somebody else have a portion of the riches that are to be found as the result of the expenditure of money on development? I would not grudge them such larger return, if we got a fair profit on the sale. Your directors will have an eye not merely to the development of these claims, but to sales of some of them, if it be deemed advisable. I have also to say that the meeting is called at this early date so as to give the shareholders the opportunity of

SEEING AND HEARING MR. ARGALL.

As shareholders we will be glad, personally, to hear from his lips about the property, and those of us who have known him for years can recommend him to you as a man who will speak the truth and tell you honestly what he believes about the property. I know that some have said he is occasionally too frank, especially when there is something evil to be said, but in a concern that is so promising as the Red Mountain, I think there will be no danger of this. The shareholders are aware also that Mr. Argall was employed to examine these mining claims, and to furnish the directors with an independent report. That was anticipated in what I said before as one of the great features of our confidence in the future of Red Mountain. Now, I am pleased to say that the prospects of carrying out the development to advantage are all that we could wish, and that some six weeks ago work was commenced on the Pickwick claim, so that we are really at work there now; but there is no use my talking when a gentleman is present who has just come from the property who will do it so much better. I have only further to say that in connection with the desire we have to increase the capital of the company, I will reserve any remark I would like to make about that till the extraordinary meeting that will follow this. The reasons for it will be obvious to you all when they are named. I do not know that it would be wise for me to go on, but I will simply add the expression of our hope that the anticipations of success that we all have who have gone into this matter will be fully realised. I will now conclude by calling on Mr. Argall to give us his opinion concerning our property. (Cheers.)

PROPERTIES OBTAINED WITHOUT CASH PAYMENT OR PROMOTERS' PROFIT.

Mr. PHILIP ARGALL (who was received with cheers) said: Mr. Chairman and Gentlemen, I have really but little to say as to the Red Mountain Mines, Limited. The position has been placed before you so clearly and fully in the prospectus and the circulars of the Red Mountain Mines, Limited, and in the speech of the chairman, that the subject is almost exhausted. It may, however, be permissible for me to say that you have acquired these valuable mining claims in an extremely rich district without paying one cent in promotion money or by way of purchase price. (Cheers.) The owners of these properties in Colorado have sufficient confidence in them to wait for the actual developments to get their results from the claims themselves, knowing full well that when developed the stock will be much more valuable than the purchase price would be, judged by the present rates paid for undeveloped Red Mountain properties. (Hear, hear.) You are, no doubt, aware that a company has recently been floated in London to work some mines in that very district—I refer to the American Belle Mines, Limited, whose Silver Bell property adjoins your company's Pickwick claim. The cash transactions appearing in the prospectus shows that they actually paid in cash for each claim 27,000*l.* sterling, forming the American Belle, or cash and stock at the rate of 43,000*l.* for each claim, whereas you get the controlling interest of six claims for developiug and proving the ground, and nothing more. As to the Red Mountain, work has been commenced.

WORK IN PROGRESS.

A prospect tunnel was started in the Pickwick claim, and is being pushed on vigorously. That will be all the work attempted until the snow clears away in April and May, when we can examine the ground thoroughly, locate a permanent working shaft, and go down. It is a peculiarity of the district that no rich "finds" of ore have been made until a depth of 200 to 300 ft. has been reached from surface. I have no doubt that in less than a year's time we shall be able to report satisfactory developing and successful results. (Cheers.)

Mr. V. W. JONES: With your permission, Mr. Chairmau, I should like to make a digression. Many of the shareholders in this company are also shareholders in La Plata, and as Mr. Argall is our manager, and has recently left the mine, they would, no doubt, like to hear what is the present position and what are the prospects of La Plata. I would ask the shareholders to say whether they would like to hear any remarks from Mr. Argall on that subject. (Cheers.)

IMPORTANT TO LA PLATA SHAREHOLDERS.

Mr. ARGALL: No doubt you are aware that the formation in Leadville is a comparatively flat vein, like a coal seam, and that the ores are found at the junction of the limestone and porphyry. Consequently, we have not the same prospect in depth as if we had a fissure vein to deal with. In La Plata claim proper the contact has been pretty well exhausted, and the richer ores have been taken out. The mine has been leased for the last year or two for the purpose of taking out the lower grade ores. As the smelting ores are reduced, and the prices of silver go up as last month, they can be taken out profitably. Some time ago the company sanctioned a development scheme to prove the limestone about 150 ft. below the contact, and also at the sixth level. That work has been practically completed, and the amount spent has been less than the estimate. Although no large bodies of ore have been found to extend into the limestone, many small seams have appeared, some of them with rich ore going up to 300 ozs. or 400 ozs. of silver, but our development work has proved and opened up a great deal of the mine that was hitherto inaccessible. The lessees can follow the ore deeper into the limestone, and we find that the ground opened up can be worked to better results for the company by leasing than by the company working it themselves, because they have not discovered any very large ore bodies. The output of La Plata last year was between $8,000 and $9,000 in excess of the previous year, and the work in December was much better than for any previous part of the year. We have now opened up large reserves, which we intend to work under lease. We do not look for anything startling, but to go on steadily. In the Gnesen we have a new claim into which only one drift has been put, and that on the horizon of the contact. A large quantity of water was met with, and we were driven out. Another company—

THE NISI PRIUS—

has a much larger interest in the district than we have, and is pumping the water and running a drift at a lower level that will be of great benefit to us. With this company we have already made an agreement that we are to use this drift in developing our claim. The work of the Nisi Prius Company has already opeued up very well, and the results are satisfactory from a shaft less than 300 ft. from our side line. We cannot dictate to the Nisi Prius Company, and so must wait for them to put in their drift and then allow us to develop the claim without paying any expense for pumping or drifting. I look upon this as a most valuable claim, and a principal hope of the future in regard to La Plata. (Cheers.)

A GRATIFIED SHAREHOLDER.

Mr. TUCKER: Being an old shareholder in La Plata, and this being the first opportunity I have had of attending your meeting, I must say it is a great pleasure to me to see our able manager, Mr. Argall, and to hear the account of our prospects that he has given. Although La Plata may not turn out anything very startling, yet I look upon it as being one of those steady going concerns, respecting which satisfactory developments may be expected as time goes on. As far as I can gather we have been making regular monthly profits, a portion of which has been used in the development of virgin ground, which we hear from him is likely to turn out very profitable. With the moderate expense we have I look upon the prospects of La Plata as being brilliant—considering it as a small concern. I must congratulate my fellow shareholders on that, and also on the

EXTREMELY MODERATE COSTS AT THIS END.

They will bear very favourable comparison with most mines. (Cheers.) In fact, I have been connected with some mines where the prospects were not nearly so good as those of La Plata, aud where the expenses were four or five times greater. (Hear, hear.) I happen to be connected with several other companies in that position, but whilst I am speaking I would impress upon Mr. Argall the absolute necessity of combining economy with efficiency at his end. I am perfectly sure there are a good many companies wrecked simply and solely through extravagance. (Hear, hear.) I have every confidence in

MR. ARGALL'S ABLE AND ECONOMICAL MANAGEMENT,

and also that before long he will show successful results for La Plata shareholders. (Cheers.)

Mr. C. W. BARROW: I should like Mr. Argall to give us some report of the prospects of the slag dump.

SLAG DUMP AND SMELTING WORKS.

Mr. ARGALL: I must admit that I neglected to say anything about La Plata Smelting Works. The site they occupy is one of the best in Leadville. The works are a little old, as you no doubt are aware, but I have had an application for a lease of those works in order that they may be used for the purpose of smelting. Two or three months ago, when silver was up, the output of Colorado exceeded the smelting capacity of the State, whereas it is usually the other way. Consequently the price went up, and the smelters started to work at a profit, even in Leadville. There is another Silver Bill before the Congress at present, and the mining population in the Western States think it will pass, aud that we are going to have a very flourishing year in Colorado. With the increased output from the mines the profits of the smelters would be augmented, and so also would the value of the company's works which might be leased to those who would carry on either lead or copper smelting. The

SLAG DUMP HAS BEEN WORKED STEADILY

month by month, and the returns from it are pretty regular. The total amount received from the time the dump has been worked until the last return I have has been $12,438.60.

A SHAREHOLDER: What amount do you estimate is left in the slag dump?

CONTENTS OF THE SLAG DUMP.

Capt. ARGALL: About 600,000 tons. Possibly a quarter of it has been turned over, but simply the matte and bullion in large pieces have been picked out by hand. The slag will run 3 ozs. or 4 ozs. in silver. Some of it is worthless, but the rest is good enough to ship and get a few cents profit per ton. There is a proposition before the leaseholder from one which will take 40 tons or 50 tons a day, which would leave him 10 cents a ton of profit on the transaction, but he is holding out for more. We are trying to negotiate a sale of the slag in bulk. I should also mention the

MONTGOMERY CLAIM

of which the company owns 5-9ths. There is a great deal of low grade ore on the surface. I have had several applications for a lease latterly, but wanted to have a shaft put down so as to get deep into the claim, and I offered a contract for the shaft for 250 ft. There are no workings below the 100 ft., but without accepting my offer the lessees made au offer to put half of the money they got out of the mine as they worked iuto the sinking. The lessees will pay about 20 per cent. to the company in royalty. I expect to be able to arrauge for the sinking of the shaft.

Mr. TUCKER: Are the lessees satisfied?

Mr. ARGALL: Some of them are aud some of them are not. There are about 40 men working at La Plata, and we can always lease the ground, because it is bunchy.

NO DEBENTURES NOW.

Mr. TUCKER: Have all the debentures been paid off?

The SECRETARY: Yes; the whole of the 8,000*l.*, with the exception of four bonds of 50*l.* each, the owners of which we cannot find. We have advertised the numbers, but the owners are not forthcoming.

EXTRAORDINARY GENERAL MEETING.

Mr. RICHARDS having read the notice as above,

The CHAIRMAN said: There is no real need for an increase of

capital, and no likelihood that we shall want the money. You may ask then, why increase the capital? The reason is this: At the commencement of the negotiations for obtaining the property the nominal capital suggested was 60,000*l*. It was afterwards considered on this side that 50,000*l*. would be sufficient, but after the company was registered it was found that the various owners in America had agreed amongst themselves on the first proposition providing for 10,000*l*. capital in reserve, and having done so we wish to add that 10,000*l*. to our existing capital. These various owners are scattered over the United States, and it would be a matter of great difficulty to get them to sign fresh documents. Hence, as it will do the company no harm to have the proposed amount of capital in reserve, we have decided to solve the difficulty in this way. We do not need it, but it meets a condition of things created on the other side of "the Big River." I move the resolution.

Mr. JONES: I second it, and think it will be very useful to have that 10,000*l*. in reserve.

In reply to a question,

Mr. JONES stated that in due course, and when considered desirable, a Stock Exchange quotation would be applied for.

Mr. BARROW: Are the new shares on the same footing as the old?

The SECRETARY: Precisely; but they will be kept in reserve.

The motion was carried unanimously.

THE CHAIRMAN, HIS COLLEAGUES, AND MR. ARGALL THANKED.

Mr. W. C. BARROW: I think we should not part without expressing our obligations to the chairman and his colleagues, and also to Mr. Argall. We have to thank the latter especially for his attention to the interests of the company and his report to-day.

The motion was carried by acclamation.

The CHAIRMAN, in returning thanks, said: It is a pleasure to be here to-day at this first meeting of the Red Mountain Company. I have perfect confidence in it, and thank you heartily for the kind way in which you have received my remarks to-day. (Cheers.)

LATEST REPORT.

Regarding the new development tunnel on the Pickwick claim, the mine foreman reports: "From present appearances I do not think it will be very long before I can send you good news, as in going through the gravel and slide the miners have struck some fine pieces of ore (galena and iron), and it has the appearance of not coming from very far. I apprehend that we may strike it before we are in 100 ft."

THE SOUTH AFRICAN TRUST AND FINANCE CO., LIMITED.

THE POSITION OF THE COMPANY ESTABLISHED—SERVICES IT HAS RENDERED TO VAN RYN SHAREHOLDERS — SECURITIES AUGMENTED IN VALUE, DESPITE A BAD YEAR FOR SOUTH AFRICA—EXPENSES OF MANAGEMENT CRITICISED.

THE second ordinary general meeting was held yesterday, at Winchester House, to receive and consider the statement of accounts and balance-sheet to the 31st of December, 1890, with the reports of the directors and auditors, and to elect directors and auditors in place of those retiring.

Sir Charles Metcalfe, Bart. (chairman of the company), presided.

Mr. A. J. MACPHAIL (secretary) read the notice of meeting.

THE CHAIRMAN'S VISIT.

The CHAIRMAN: Gentlemen, we are meeting you to-day for the second ordinary meeting, and as I have been unfortunately detained in South Africa very much longer than I expected—a detention which I trust will be of some service to the company through the experience which I was able to gather by going about the country, which is now progressing and developing at a very fast rate indeed—I will ask the deputy chairman, Mr. Trench, who has so ably fulfilled my office—much better than I could have filled it myself—while I have been away, to propose the adoption of the report.

A PROSPECTUS THAT CAN BE REFERRED TO.

Mr. B. B. TRENCH (deputy-chairman): Gentlemen, I think I will first refer to an item which is always referred to practically at the first meeting of a company, and that is the prospectus on the faith of which your subscriptions were made. I do so to show you how these statements have been fulfilled. It is not always an agreeable duty to a speaker at this side of the table to refer to what has been said in a prospectus, but in this case we feel no hesitation whatever in doing so. In the first paragraph it is stated that the trust was established to deal mainly with South African Land, Mining, and other securities. I shall be glad to show you in the accounts that that paragraph has been carried into effect. The second paragraph alludes to the principle of investments of trust companies as being too well known to need comment. I take it that that means the averaging of investment, and I shall be able to satisfy you on that point also. The third paragraph states that it is believed by competent persons that the development of the mineral and mercantile resources of South Africa have only just commenced. The board are still of the same opinion. It is somewhat of a prophecy that so far as the board are concerned they still believed in it. It may be said, perhaps, in the expressive phraseology of the American, that the statement is "a little too previous" but we all believe in it. The fourth paragraph states that two of the directors, the chairman and Mr. Jones, would visit South Africa and represent the company's interest there, and those two gentlemen have been there, and since returned. Then the remainder of the prospectus deals simply with the facts about the formation of the company, and the method by which the preliminary expenses were provided. The accounts will show that those statements are now realised facts. I will now refer to

WHAT I SAID AT THE STATUTORY MEETING

over which, in the absence of the chairman, I had the honour of presiding. I said, notwithstanding the depreciation which had taken place in many of our securities, that after payment of all working expenses they show an appreciable profit. That statement the accounts verified. I further stated that the market value of those securities was a known quantity, with one or two trifling exceptions, inasmuch as they were nearly all dealt with on the Stock Exchange, and most of them officially quoted. I further stated that the policy of the board has been a cautious not a heroic one. The necessity of it was much sooner realised than I had reason to anticipate at the time. Since then we have passed through a very acute financial crisis, and had the board been speculative instead of cautious in their policy serious loss might have resulted. The fourth point was that we should

ESTABLISH BEYOND DOUBT THE FINANCIAL STABILITY OF THE COMPANY.

Although you are disappointed in not receiving a dividend now, I believe it to be of far greater importance that the financial position should be established than that early dividends should be declared. (Cheers.) It has been well said it is easy enough to show a profit and loss account for one or two years, but the thing is to show a balance-sheet, and I claim for ours that we have shown you one, which will (although you cannot build mountains in a day) eventually establish the financial stability of the company and prove to the world that its success is assured. The fifth point I made was the statement with reference to a scheme for the registration of shares which this company had inaugurated. I am sorry to tell you that scheme has not been adopted to the extent we had reason to expect, and which we still believe, in the interest of shareholders, it should have been. We had very soon an illustration of its necessity.

THE VAN RYN SHAREHOLDERS,

a company in which we have no interest whatever, came to us and requested us to call a meeting of the shareholders to consider the best method of protecting their interests. They did not come to us until, like the patient in the dying condition, things were *in extremis*. A meeting had been held at Cape Town to re-construct or liquidate the company. There was no time to communicate with the directorate, even by letter. We communicated at once, by cable, that we should do the best we could for those shareholders, but had they adopted the scheme we recommended on May 24th their interest would have been in the safe custody of this company, and they would be in a different position from that in which they now find themselves. At the same time I believe that we shall be able to do something to protect their interest at this meeting through the medium of our managers there. I am satisfied if we fail in that attempt it will not be for want of exertions on our part, or ability on that of our managers. I proceed now to the report and accounts, and will take

THE BALANCE-SHEET.

In that you will see that the subscribed capital of the company amounts to 255,000*l*., and upon the shares there has been called up 63,970*l*. 10s. There are calls in arrear to the paltry amount of 4*l*. 10s., to which I need not refer. That shows you that the company has at command ample means. Creditors represent 3,554*l*. odd. They consist mainly of our bankers, to whom we owe 2,000*l*. That is a liability which we incurred simply because we can borrow the money from them at a lower rate than we can employ it—the profit going, of course, to the shareholders. There are a few other items I need not specify, but they are mainly money deposited with us for specific purposes, or by shareholders in anticipation of calls which may possibly be made. We will now take the assets of the company as shown in the balance-sheet. In the first place, there is unemployed cash at bank, 398*l*. odd; loans at short dates against securities, 6,889*l*. amply secured. The debtors are 2,426*l*., principally for business entered into but not completed at the date of the balance-sheet. With trifling exceptions, that has now been realised, and the balance is quite safe. I now come to

INVESTMENTS WHICH ARE SHOWN AT COST PRICE,

in accordance with the custom adopted by many other companies. That is a vital point in our affairs, and it is not desirable in the common interest that they should be set forth in detail, but it is desirable that you should have some idea of their nature. The information I will give you will show you that the two statements in the prospectus to which I referred have been carried out, first that the trust was established to deal mainly with South African securities, and secondly, that it was established on the principal on which other trusts had been founded to average investments. We have

INVESTED IN VARIOUS MINES 21,718*l*. 18s. 11D.

Those are principally in South African mines, but a large proportion of the money is invested in the debentures of De Beers, or bonds guaranteed by that company. (Cheers.) Those we consider absolutely safe, and their amount is 8,760*l*. 14s. 1d., which represents an important deduction from the 21,718*l*. This shows that you have not any large proportion of your capital involved in highly speculative securities, though there is some of it that is speculative. We have invested in various land companies 3,650*l*. In a certain coal farm in Natal we have invested 1,000*l*., that is to say, we have secured an option for a property which we believe to be very valuable. It is being reported upon by an expert to whose opinion we attach the greatest value. A considerable sum has already been expended on the property, and for the money which has been so expended we have paid nothing. We have simply taken a lease of it for 21 years, with the option of abandonment at one year, and I believe other periods, but certainly at an expiration of one year, and for that we have paid a year's rent in advance. We have power to acquire the freehold on favourable terms. There is a station of the Natal Government Railway on that property, and altogether the circumstances point to this as likely to be a successful venture. In any event, no great loss will be incurred, and the property is now being proved by our men on the spot. We have invested in Canadian and American railways 9,945*l*. 8s. 6d., of which amount 1,011*l*. is invested in ordinary shares, and the balance either in debentures or preference, which we consider to be absolutely secured. We have invested in certain brewery debentures 7,978*l*. 8s. 6d., which we also deem to be quite secure. I am, of course, speaking of our investments on 31st December, some of which have been

changed since, but not materially. We have also in various commercial and industrial undertakings, 1,488*l*. 18s. Those investments stand at a very considerable profit on the price at which they are put down here. In certain tramway debentures we have 1,830*l*. 19s. 9d., and in certain undertakings, termed "financial," 1,000*l*. That stock has since been sold, and the profit varies between 5 and 6 per cent. on the price at which it was bought. In foreign government bonds we have 9,446*l*. 18s. 6d., colonial corporation bonds 1,660*l*. 10s., and sundry undertakings of a minor character, which may possibly be very profitable, 325*l*. If you add those items, the amount will come to 60,045*l*. 2s. 2d., the amount put down in the balance-sheet at cost price. I take it that these are sound investments which quite fulfil the conditions of paragraphs 1 and 2 of the prospectus. We have had a vast amount of business submitted to us—

NO FEWER THAN 317 VARIOUS SCHEMES—

all of them to be sifted and analysed. There were 19 for the floatation of mining properties, 22 land schemes, 11 colliery schemes, two for house property, 20 for the re-construction of mining companies, 27 for subscriptions to debenture issues, 4 for water-works, 16 for the purchase of mining properties, 3 for the purchase of industrial undertakings, 63 (not surprising after the acute financial crisis) for loans, 49 for underwriting, 6 for the purchase of various concessious thought to be of great value by the owners—(laughter)—6 for the purchase of various silver, tin, copper and diamond properties, and 4 for exploring, and 65 others not classified, makiug a total of 317. Some of these schemes were of grcat importance, aud all of them, or nearly all, required to be looked into in order that we might not find ourselves throwing away some gem of value. I am sorry to say we have not found that gem amongst them, but amongst those proposals there were three for various chartered companies somewhat resembling the British South Africa and Imperial East Africa Companies, giving rights even wider than those given to the chartered compauies. Two of them were from foreign governments, and one fromia colonial provincial government. Two of them are still under consideration, and one has been abandoned. I will now pass to

THE PROFIT AND LOSS ACCOUNT,

which has been the subject of criticism, but which criticism wlll I think be much modified after my explanations. On the credit side the dividends, interest, commision and profit on sales amounts to 6,916*l*. 16s. 2d. That appears to be a small item, but your directors have felt themselves bound to exercise great caution, and among the criticisms we find those that say we can never hope to exceed such a profit as that, which is very satisfactory, whilst others call it altogether insignificant. I take it that it is not unreasonable to suppose that the policy of the board in steering the middle course is not far from the right course.

PROFIT REPRESENTS SIX MONTHS' WORK.

That profit, however, really represents I suppose on an average probably not more than six months' work. (Cheers.) This company was started without any commitments of any kind. There was nothing prepared—everything had to be done from the beginning. There was money to invest, and care had to be taken not to put too many eggs into one basket, and therefore I think that the profit on six months is very satisfactory. Against that we have expenses which, I admit, are heavy in proportion to the amount earned, but they represent the full outlay for 11 months' work, whereas the profits as I have said are for ouly six months. Advertising, bank charges, postages, cablegrams, &c., 355*l*. might possibly be reduced, but we expect that amount will bring us in remunerative business. (Hear. hear.) Then there are the directors' fees, upon which certain critics fasten, 1,832*l*. 17s. 2d. That represents the fees as provided by the articles of association. Let me tell you that the board have held during the period under review 141 meetings. Among other complaiuants was a well-known gentleman iu the City, on whom I called and discussed the question fully. We went into each detail, and found ourselves perfectly agreed that it is desirable to run this machine on the most economical basis. I said, "here is the work we have done, and I want to know if you can fiud a body of capable meu who will do it for less. If you can I shall be glad of their assistance, and be prepared to work myself at whatever rate they will take. (Cheers.) We have held 141 meetings and considered 317 proposals, besides doing a great deal of routine work that does not appear. You have told me (I said to him) that you were a director of a company which for three years paid no dividends, and that you received no fees. That was very generous on your part, and I am sure it was very much appreciated by your shareholders, but will you come on our board and work on the same terms, and I will work with you on those terms also." The gentleman declined, for he said "I have done it once, but I am not goiug to do it again." I then asked him if he knew of any men in the City to whom we could safely entrust the interests of a company like this, and who would work on these generous terms, but he was unable to name them. We went through the accouuts item by item, and he said the working expenses were high. I then said, "What were the expenses in the company you served?" and found they were 1,240*l*., whereas ours come to 1,066*l*. (Cheers.) Yes, but our capital is very much bigger, and you understand that in a company of this sort

THERE IS AN IRREDUCIBLE MINIMUM

beyond which you cannot go without impairing the efficiency of the machine. I contend that in the matter of office rent. including the services of the secretary and staff, I do not see where auy reduction can be made. (Hear, hear.) Our staff has been very fully employed, and the arrangemeut was made by contract. That was to the advantage of the shareholders, and the best proof of it is that the contractor is perfectly ready to abandon his contract at any time, which does not look as if he thought it a good thing. (Hear, hear.) We have the advantage in that contract of having a limitless and efficient staff at hand whenever the emergency arises. When, for instance, the Van Ryn shareholders called us to help them, we were able to

COMMAND THE NECESSARY STAFF WITHOUT ADDITIONAL EXPENDITURE,

and there was an immense amount of detail to be attended to over that business. (Cheers.) Then this gentleman looked at his minute book to see how many board meetings he had held when he was acting on these generous lines, and he found he had attended 40, but I ask you how does that compare with the 141 which my colleagues and myself have attended in conuection with this business? (Cheers.) So we arrived at the couclusion that it was really very difficult to reduce the expenses, and, iu fact, they must increase in the future by the appointment of our managers in South Africa. We have no managers here so that the whole responsibility of the work falls upon the board, and, therefore, our anxiety is very heavy. We believe that the profit on the other side of the account will be greatly increased, and that is where we look for the benefit of the shareholders. It is curious to notice that among our critics we find such a wide divergence of opinion, both as to the profits being small and being large. We steer the middle course. One gentleman suggests the increase of the directors to the maximum number of 12, but I confess I do not share his view. I think a small body of capable men much more likely to act for your benefit than a large body, amongst whom there must be great variance of opinion.

THE REPORT.

I now come to the report. The first point is the appointment of managers in South Africa. During the past year we have worked at great disadvantage through having no responsible managers in South Africa. We have taken 12 months, or nearly so, to select the gentlemen, but our choice has fallen upon Messrs. Campbell and Evans, whose names are well-known in South Africa and fairly known here. The board have had many interviews with Mr. Campbell, and are satisfied that he is a man capable of safeguarding your interests. The instructions to Messrs. Campbell and Evans have been, before all things, tosecure the financial stability of the company. We are anxious to make large profits, but do not wish to jeopardise the capital, and I hope they will bear that in mind, and not run great risks. Although the expense will be increased by their appointment, we think the profits earned will far more than compensate for that increase. Our business has been crippled through having no managers on the other side. The next paragraph refers to depreciation in some of the company's securities, and that paragraph must be extremely satisfactory to all of you, for that depreciation has been more than counterbalanced by the appreciation in others. I saw the other day at the meeting of a trust company the chairman alluded to the depreciations that had taken place in their securities, which had averaged about 5 per cent.—not at all large in my opinion. Some of the shareholders cavilled at it, but he promptly said, "You are all business men, and who is there can tell me that during the past year his securities have not depreciated 5 per cent.?" We are in a satisfactory position, for ours have appreciated 1,650*l*. We are very thankful for all criticisms, and I fully realise the desirability of the shareholders keeping the directors alive to their responsibility and duty. I know, and am couvinced, that such criticisms are made in a friendly spirit. and solely in our mutual interests. One gentleman says, "Money has been very dear for the last part of the year, and I am sure you ought to have made large profits," and he was disappointed; but now that he has looked at the balance-sheet and heard it explained he will see that the money, or the greater portion of it, was invested in various securities, and it would uot have paid us to transfer it out of them into others, and lent it at a higher rate. There would be an absolute certainty of expense in selling those securities, and a risk of not being able to buy them back at the price at which we sold them, and the profit would have been small. The uext paragraph refers to the resignation of two directors. I do not see them here, but they still continue to hold the interest they have in this company. Not a share has been sold by either of them, and when you think the directors are deriving great benefit from fees, and when you see that two of them have retired because they cannot find time to give that attention to the company's affairs which they deserve, you will thiuk the position perhaps not so remunerative as is suppos[illegible]. They have no want of confidence in the board or in the company. In making your criticisms, which I have no doubt you will do in a friendly and wise spirit, I hope you will confine yourselves as much as possible to the methods by which the profits of the company may be increased and the working expenses diminished. If you will do that without allowing your feelings to take possession of you, I have no doubt the gentlemen on this side of the table will greatly benefit by your observations. I am not going to make auy prophecy as to the future of the company. But

I AM THE LARGEST SHAREHOLDER

in it. (Cheers.) My interests are identical with yours. A large portion of my shares have been bought iu the open market. I have never sold a single share, and I should not hold them unless I believed in the success of the company. I thank you for the patience with which you have listened to my address, and have now to propose the following resolution: "That the report of the directors and statement of accounts from 24th January to 31st December, 1890, now submitted, be hereby approved aud adopted." (Cheers.)

Sir Stuart S. Hogg (director): I second the motion.

VIEWS OF SHAREHOLDERS.

Mr. Doré: After the very satisfactory speech the vice-chairman has made I do not feel inclined to make the remarks I should otherwise have done. I think the fees high, and that the shareholders should have received 5 per cent. before the full amount was drawn—(hear, hear, and no, no)—more especially as the board has been reduced from its original number. How many board meetings has the chairman attended? I am disappointed at the manner in which the directors have treated the whole subject of the fees aud expenses. In Mr. Campbell I believe they have made a good selection as their African representative. I have the pleasure of knowiug him, and how well he is acquainted with South Africa.

Mr. William Nash: I shall eudeavour to address my remarks to the points indicated by the chairman. It is a good sign that there has been no depreciation in our securities. When we come to the profit and loss account we have less cause for satisfaction. The expenses are 7 per cent. on a capital of 60,000*l*., and with that it is almost hopeless to expect a dividend. The directors' fees are 3 per cent., and the other expenses 4 per cent., whilst the shareholders get nothing. They ought at least to have 3 per cent. out of the 2,234*l*. 2s. carried forward. I thiuk the directors should have waived 800*l*., given it to the shareholders, and so made up a dividend of 5 per cent. I approve the policy of the board iu not having lost money during

the year in South Africa, but when I see them putting money into breweries and De Beers Mine we might as well have invested like that ourselves, and saved the 7 per cent. commission which they charged us.

Mr. HIBBERT: What is the amount of dividend received on investments, and the profit on sales? It looks like 11 per cent., but I do not know any investment at present that would be likely to yield that.

Mr. WRENCH: We have here a statement that the board intend to adopt a course of policy which must mean not more than 7½ per cent. on the securities invested in. That is

THE LIMIT OF A CAUTIOUS POLICY,

and it will just produce our expenses. I have no objection to paying my calls, so that the capital may be fully called up, but let us not struggle with the 7 per cent. charged for expenses, because we shall never be able to pay a dividend.

Mr. SIMMONDS: I hope that it will not be thought necessary to call up any further money, for, as the vice-chairman pointed out, it is important for our stability that a great portion of the shares should not be called up. I think we have great reason to hope in the future for better results than are put forward to-day, and certainly

OUR VICE-CHAIRMAN HAS GI VEN US A MOST ABLE SPEECH,

which I am sure has inspired a great deal of confidence not only in him but in the company. I do not think we should look altogether at our affairs as presenting a black and unpromising light, but at the same time I feel an alteration should be made in directors' fees, as these gentlemen seem to receive 200*l*. a year each. Have all the directors rendered the same service as Mr. Trench, or anything like it by attending the board meetings? I have no doubt some of the directors have not shown the same vigilance as others. I feel it is an unfortunate report, and that the expenses are too heavy. Still, if the vice-chairman is a fair representative of tho other directors I would not grudge the money they draw if I thought the company would be a success in the future. I hope the board will take notice of my remarks, and endeavour to meet the wishes of the shareholders.

Mr. TURNER: While, to some extent, sympathising with the observations of previous speakers, which have been given utterance to in a friendly spirit, there are one or two features in connection with them with which I venture to disagree. Of course, the great fault of this report is that it presents no dividend. Had there been a dividend, speeches in the nature of those we just heard would not have been delivered. We are in a business in which great risks are incurred. Everything in South Africa must be attended with risk, and we have joined this company on that basis, and when one gentleman suggested that the capital should be called up I ventured to think that the shareholders would not agree with him or be content with 7½ per cent. No person would think of investing his money in such risky securities as those of South Africa unless he had a much larger percentage than that. We have

PLACED OURSELVES IN THE HANDS OF MEN OF EXPERIENCE

in whom we cannot but have the greatest confidence. (Cheers.) The last speaker has said that each of the directors get 200*l*. a year, but what is that spread over 141 attendances. That is three meetings a week.

A SHAREHOLDER: Not all have been present. The chairman has not

Mr. TURNER: But the chairman has been in South Africa on your business, and only returned a few weeks ago. (Cheers.) I venture to think that if you had paid him only 200*l*., you have had his services at an uncommonly cheap rate. It is wonderful to me that during the last year the investments have not shown a great depreciation instead of appreciation, and I think we are under obligations to the directors for the cautious policy they have pursued. Let us give them another year, and I feel confident they will be able to show us not only a good but a splendid result. (Cheers.)

Mr. GEORGE DIBLEY: What was the method of distribution of founders' shares? I do not agree with the last speaker, but consider myself to blame for not having looked at the articles to see what the fees really are. I belong to a compauy, a colonial company, which has not paid a dividend for some years, and the directors have had no fees. I do not name that as a precedent in this case, but the directors would have acted with becoming modesty if they had only accepted 100*l*. a year. By not doing so they have left themselves opon to criticism, although the articles may have justified their action.

Mr. GENT: Do you take money on deposits. The Trust and Loan Company of China made 75 per cent. profit on its paid up capital in its first year.

The CHAIRMAN: One gentleman kindly said that my services were worth 200*l*. a year to the company, but I may state that I have not had so much as that. Being detained in South Africa longer than I expected I wrote asking my colleagues not to apportion me my share of the fees as chairman. At the same time, I was in constant communication with the board, and was and am able to give them a certain amount of assistance from the experience I acquired when there. I notice that the least generous of the speakers towards the directors are those who hold 105 shares between them. (Laughter.)

Mr. SIMMONDS: You do not apply your remarks to me. (Laughter.)

Mr. DIBLEY: Or to me. (Laughter.)

The CHAIRMAN: No, I do not wish to single out any gentleman. As to fixed deposits, we receive them at certain rates as part of our business, and if we can make 75 per cent. shall be only too pleased. (Laughter.) we are always happy to receive the suggestions or to hear the criticisms of shareholders. I have a letter showing that there is a feeling that the board under the circumstances have done exceedingly well. The writer says:—"Considering the unsatisfactory state of the South African market, I am inclined to think we shall come out well if we have incurred no loss." That was before the report was published. I have a large acquaintance with Johannesberg and Kimberley and various centres, and can assure you that I know very few companies or individuals who have not suffered loss this year. It has been

A DISASTROUS YEAR IN SOUTH AFRICA.

When I went out those who knew best did not expect a boom, but did not expect things would go to so low an ebb. It was only day after day when I saw the securities declining that I wrote to the board and said, "We must not purchase any shares." That is the policy we adopted, and a bank came to grief that advanced 25 per cent. on the value of securities, so much were they depreciated. The country is developed very materially, and the industries are becoming slowly established. The railways have been run forward with great rapidity. We have made 126 miles this year towards the north, and have successfully progressed towards Mashonaland. The Chartered Company has sent 700 men up there, a distance of over 1,000 miles, without the loss of a life—a remarkable achievement when you consider that the country was inhabited by wild beasts only a year ago. I trust to be able to go out this year to Mashonaland, and to find promising channels for capital. (Cheers.)

FOUNDERS' SHARES.

Mr. TRENCH: The founders' shares are widely distributed amongst those who hold ordinary shares. I hold largely myself, and have purchased a considerable number of founders' shares in the open market since the formation of the company. (Cheers.) 250,000 shares were guaranteed in the prospectus, and the founders' shares were distributed amongst those who guaranteed that capital in the proportion of one share to 1,000. They are more widely scattered than in other companies of this description.

The retiring directors were re-elected on the motion of Mr. TRENCH, seconded by Mr. DORE.

On the motion of Mr. BUCKINGHAM, seconded by Mr. GOUFFÉ, the auditors, Messrs. Deloitte, Dever, Griffiths and Co., were re-elected.

On the motion of Mr. DONALD, a cordial vote of thanks was passed to the chairman, the deputy chairman, and the directors.

AMERICAN BELLE MINES, LIMITED.

GOOD WORK BEING DONE AT THE MINE.

A CABLE has been received from Mr. Crawford as follows:—"Shipped 250 tons from Silver Bell. Estimated value, about 7,000*l*. Impossible to get cars during last month. Very little shipped from National Belle and Hudson. The mines look splendid."

Mr. Harvey wrote, under date 20th January, 1891, as follows:—Silver Bell.—Rich ore is being taken out at present, and the prospects are exceedingly good, seeing the class of ore being met with in the deeper levels, some of which is as rich as anything I have seen.—BEDFORD MCNEILL, Secretary.

YANKEE GIRL SILVER MINES, LIMITED.

OUTPUT FOR JANUARY MONTH.

THE mine superintendent cables to the following effect:—"Ore shipped, 500 tons; value, 14,460*l*.; mine expenses, 4,030*l*.; estimated profit for the month, 10,430*l*."

Mr. Harvey, in his monthly report of the Yankee Girl, Orphan Boy, and Robinson, states:—Yankee Girl and Orphan Boy—No. 4 level: Drifting is being continued in the north-east drift, nothing of importance has been met with. In the Orphan Boy ore-body: Fine ore is being met with in the stope, some of which is of high grade. Two cars of ore shipped from here during January gave 155 ozs. and 148 ozs. of silver per ton. The stope is about 20 ft. long and 10 ft. wide. No. 5 level: The stope on the Yankee Girl ore body continues to produce fair ore. The Orphan Boy ore body in this level looks promising, and is producing ore similar to that extracted at No. 4 level. The stope is 18 ft. long by 8 ft. wide. The general indications and prospects of the Orphan Boy ore body are certainly encouraging. No. 6 level—Yankee Girl ore body: The stope from end of winze (sunk from 5½ to 6 level) had been extended for a length of 60 ft. by 15 ft. wide. The ore for this length is from 10 to 15 ft. wide, some of which is of high grade. No. 7 level: Prospecting is being continued with the diamond drill and a drift is being driven from south level, east, through hard mineralised quartz. Robinson Mine—shaft: The engine shaft is now 90 ft. below No. 4 level. No. 2 level: There is fair ore in the face of new south drift. The stope continues to look well. No. 3 level: There is an improvement in the face of the drift, and the stope at this level looks fairly well. The winze in the north drift, close to boundary, has been sunk 22 ft., and there is a streak of ore in the winze from 6 to 18 ins. wide. No. 4 level: In the south drift scattered ore encountered, assaying from 20 ozs. to 90 ozs. silver per ton. The drift has been driven 22 ft. Cable: In a cable received from Mr. Harvey on 9th February, he states:—"Snow falling heavily."—B. MCNEILL, Secretary.

THE NEW GUSTON CO., LIMITED.

OUTPUT FOR JANUARY MONTH.

THE mine superintendent cables to the following effect:—"Ore shipped, 600 tons; value, 12,400*l*.; expenses, 2,890*l*.; estimated profit for the month, 9,510*l*."

Mr. Harvey, in his report, states:—No. 4 level: No. 4 level has been driven to the Robinson boundary. The new stope at this level does not look quite so well. No. 5 level: This stope is within 10 ft. of No. 4 level. At the north end there is a streak of ore 2 ft. thick. The winze in the bottom of the level yields good shipping ore. There is a streak of ore from 1 to 3 ft. thick going down in the bottom of south part of winze. We are carrying down a winze close to the Robinson boundary, about 8 ft. long, on a streak of fair shipping ore; the thickness of the ore varies from 1 ft. to 18 ins. The stope in the back of the drift near to the Robinson boundary continues to be satisfactory. The streak varies from 6 ins. to 18 ins. in thickness for the length of the stope, of nice shipping ore. From the north end of this stope we have drifted about 40 ft. and discovered a streak of fair ore 18 ins. thick. I am sanguine the ground will prove to be productive for stoping. At present it is certainly very encouraging. No work has been done in the north-east drift since the date of my last report. No. 6 level: In the face of No. 6 level we have good shipping ore for the width of drift. It is about 5 ft. wide. This place looks well. The stope at this level continues to look about the same. Shaft: In a report dated 10th January, Mr. Harvey states: The contractors completed their contract for sinking 100 ft. on 19th December. We have since put in 100 ft. of skip road, and are making good progress in cutting station for No. 7 level. Cable: In a cable received from Mr. Harvey on 9th February, he states:—"No. 6 level: Fine body of ore 10 ft. wide in face of level. Ore is improving as we advance. Mine looking well. Snow falling heavily.—B. MCNEILL, Secretary.

REPORTS OF MEETINGS.

THE ELMORE GOLD CO., LIMITED.

BOARD REPORT THEIR WORK INCOMPLETE, AND REQUIRING A SMALL FURTHER OUTLAY TO DETERMINE THE VALUE OF THE MINE—THEY MEET THE VIEWS OF SHAREHOLDERS, AND LOWER THE RE-CONSTRUCTION LIABILITY FROM 1s. 6D. TO 1s. PER SHARE —A HEARTY FEELING MANIFESTED OF CONFIDENCE IN THE MINE AND ITS MANAGEMENT.

AN extraordinary general meeting was held at Winchester House, on Tuesday, for the purpose of considering the present position and prospects of the company, and, if thought expedient, of passing re-construction resolutions.

THE SCHEME.

1. "That it is desirable to re-construct the company, and that with a view thereto the company be wound up voluntarily." 2. "That the liquidator be, and he is hereby, authorised and directed to transfer to a new company to be incorporated with limited liability under the Companies Acts, 1862 to 1890, all and singular the lands, hereditaments, mines, mining, water, and other rights, leases, buildings, plant, machinery, stores, and all other the property and effects of this company, of every description whatsoever, upon the following terms and conditions :—(*a*) 'The nominal capital of the new company shall be 75,000*l*. in 300,000 shares of 5s. each, with the usual power to increase and reduce the same. The form of the memorandum and articles of association of the new company shall be subject to the approval of the general meeting, which shall confirm this resolution as a special resolution.' (*b*) 'The consideration for the said transfer shall be the allotment to the liquidator or to his nominees of 300,000 shares of 5s. each in the capital of the new company, credited with 3s. 6d. paid thereon, and leaving a liability of 1s. 6d. per share and no more, and the payment and satisfaction by the new company of such of the debts and liabilities of the company and of the costs of winding it up as the assets of that company available for the purpose may be insufficient to satisfy, and of any sums which may become payable under section 161 of the Companies Acts, 1862.'" 3. "That the liquidator be, and he is hereby, authorised and directed to procure to be allotted to every member of this company requiring the same, as his nominee under the contract hereinafter mentioned, one share in the new company, with 3s. 6d. credited as paid thereon, for or in respect of every share held by him in this company. Provided always that to entitle the members of this company to an allotment of such new shares, application must be made for the same in writing in the form and manner prescribed by the liquidator, accompanied by a payment of 3d. per share on the number of shares applied for, within 14 days next after notice requiring him to apply for the same shall have been given in manner in which notices are required to be given to members under the articles of association of this company." (4.) "That the liquidator be, and he is hereby, directed to dispose of so many of the said 300,000 shares as shall be in excess of the number to which the members of this company would be entitled if they all applied for the same, and also of the shares for which applications are not made within the time, and on the terms aforesaid, and in making such disposition of the said shares, the liquidator shall not be treated as a trustee for or in any fiduciary relation to the said members or to the new company, but shall have full discretionary power of selling and transferring the same to any person or persons at such price or prices (if any), and on such terms and conditions as such liquidator may think fit, and it shall not be necessary to first offer such surplus shares to the shareholders of this company, and the new company shall, subject to the terms of the said draft contract, be entitled to retain all shares not applied for and taken by the liquidator or his nominees within six calendar months after the incorporation of the new company. If the liquidator shall obtain any premium for the shares to which members of this company other than dissentients would have been entitled had they applied for the same as aforesaid, such premium (less the costs and expenses of realisation) shall belong to and be paid to such members by the liquidator." 5. "That the cash in hand and monies due to this company and the net proceeds of sale of so many of the said 300,000 shares as shall be in excess of the number to which members of this company would be entitled if they all applied for the same, shall be applied by the liquidator in or towards paying off the debts and liabilities of the company and the cost of winding it up and of carrying the arrangement embodied in these resolutions into effect, and the surplus, if any, shall be handed over to the new company." 6. "That for carrying into effect the arrangement embodied in the foregoing resolutions the liquidator be authorised to enter into a contract with the new company, in the form to be submitted to the confirmatory meeting aforesaid, but with power to concur with the new company in any modification of the same which he may consider necessary or expedient." 7. "That the liquidator be authorised to enter into a contract with any person or persons for the purpose of obtaining subscriptions, or guarantees of subscription, for any such shares aforesaid, on such terms and conditions as the meeting may direct, and in default of such direction upon such terms as he may think expedient, and also to pay, advance, or guarantee the cost of and incidental to the formation and registration of the new company, and to charge the assets of this company with the payment of any such monies as aforesaid."

J. R. Armitage, Esq., J.P. (chairman of the company), presided.

Mr. C. HARRISON SMITH (secretary) read the notice of meeting.

WORKS NOT A FAILURE, BUT INCOMPLETE.

The CHAIRMAN: Ladies and gentlemen, I must, on behalf of the board, in the first instance express my regret that we have found it necessary to call you together at this particular juncture in the affairs of the Elmore Company, but whilst doing that I, at the same time, must explicitly declare that we do not come before you feeling we have failed in the undertaking we put in hand less than two years ago. We are in an incomplete condition. The delays are consequent on bad weather, and other matters to be touched upon presently, that caused an increase of expense, partly in consequence of those delays, and partly in consequence of the extra work that has been thrown upon us, so that the money with which you entrusted us has been practically expended before the work has been completed. We do not admit that it has failed. I repeat, it is incomplete, but it is so near completion that we cannot help feeling great regret that it should be necessary to call upon you at all. With regard to the company's financial position, you have had in the circular that has been put before you a statement approximately of the position up to the present time. I may say that during the past year, out of about 15,000*l*. dealt with, between 13,000*l*. and 14,000*l*. has been remitted to the mines. We are in a position to go on for another month. We have stores that are an asset of value, equal to about 5,000*l*. We have a debt owing to us by a neighbouring company of 1,500*l*., which will come back into our coffers in reduction of expenses, but would have been necessarily incurred independently of the neighbouring company contributing or not. We should have had the work to do, but for their own convenience and economy they preferred to pay us a share of the expense so as to be entitled to the partial use of our new shaft, and that money is so much to the credit of the company that might not otherwise have accrued.

THE REAL QUESTION.

We ask you to decide to-day whether you will go into liquidation or proceed with the proposed scheme, and I think I can show you very good reasons why you should adopt the latter course. (Cheers.) I will not enter into much detail of what has been done, but the mines stand now very much in this position: We have a very good shaft sunk to a depth of 550 ft., where it has been stopped. The works are of the best and most complete character; the hoisting, pumping, and everything connected with the shaft and the cross-cuts has been done as well as our manager knows how to do it; we have driven altogether in cross-cuts something like 1,200 ft. in different directions, and we are to-day within, I may say, about 60 to 80 ft., in the two directions that we are working, of reaching the goal we have been aiming at for two years. We are getting very close indeed upon the Alturas lode, and our late manager declared that when he left it was worth $10 or $12 a ton, with a big vein also. According to all human probability we are within anything from 40 to 80 ft., at the present time, of reaching it by a cross-cut. We are also within something less than 100 ft. of reaching the old Confederate Star lode, which, I may tell you, has the reputation amongst old miners of the district of having been exceedingly rich and valuable, and one that paid well as long as the water did not prevent them from working it. But this was the element that ultimately beat them. We are going in at a considerable depth with powerful pumps, and if we reach the lode shall be able to give a good account of it. That, I think, is a very good reason why we should spend a little more to reach the goal and know what we really possess. (Cheers.) We have asked you to agree to a scheme of re-construction, making the shares 5s. each, with 3s. 6d. credited as paid, and leaving a liability of 1s. 6d. You may think that that 1s. 6d. is a great deal, and I perfectly agree with you, and for my own part I have no idea of spending it. I believe that

6D. PER SHARE, OR A GREAT DEAL LESS,

will enable us to do all that we have before us. (Hear, hear.) You may then ask, why make it 1s. 6d.? Well, contingencies may arise, and it is possible that more capital may be required, so we have thought it far better to arrange for it while we are about it than to come

to you with another slow and expensive process of re-construction. (Hear, hear.)

A PLEDGE.

I am so far convinced that 6d. is the maximum of what will be wanted that I shall not continue to occupy this chair and call up any more than 6d. (presuming the scheme is carried) without first calling the shareholders together and taking them into the fullest confidence of the board, and acting upon their decision. (Cheers.) My personal opinion is that we are so near the ultimate object of our efforts that before this scheme can be carried through we shall know whether we have a success or failure. I regret to find that some shareholders, in the papers, have been depreciating their own property to an extent even that it does not deserve, for, as I pointed out, we have certainly some 6,000*l.* or 7,000*l.* of available assets, leaving out of consideration the value of the plant and machinery, which is of very great value to our neighbours, at all events, who would be very glad to buy it at a moderate price if they had the chance. I am quite sure that if enforced to do so we could make a good bargain in the disposal of the plant as distinguished from the mining claims. The property is certainly worth more in my opinion than the market value of the shares puts it at. It rests with you to decide what you will do. We have done our work within the narrow limit I have told you, and I think we must go forward. The board have consulted some of the large shareholders, and their advice and opinion are that it would be simple madness to think about going into liquidation without re-construction at this time. The

LATEST NEWS FROM THE MINE

is conveyed in an extract from a letter from the manager, Mr. George McCornick, dated the 7th January, 1891, who says:—"We want to connect the Confederate Star workings, in order to ventilate the mine, and also it is very necessary that we should have some other way of getting out of the mine other than through the shaft in case of accident. Another reason is, that, from what we can learn from miners who worked in the old Star tunnel, they all say we will find ore in paying quantities when we get under the old workings. There is a little quartz coming in both on the hanging and footwalls, which are indications that there must be ore higher up in paying quantities. The old Star winze was sunk 30 ft., below the tunnel in good ore when the water drove them out. The object is to get under the old winze. The distance we have to rise now to get from the old workings would be, from surveys made, about 100 ft., with the chance of finding ore before we make the connection." On 31st January we had a telegram from him on the general prospects, some of which it is unnecessary to read, but he concludes by saying "prospects are encouraging." He was written to a fortnight or three weeks ago, advising him of this meeting, and asking him to telegraph to the latest date what he had to say. His reply by cable, received this morning, states that he hoped to cut the vein in the cross-cut within 100 ft. "Have driven in 20 from the shaft." That is to say he has 80 ft. at the utmost to drive. "West rise: Ore improving as developed." That is the position of affairs, and the decision is now with you. I think there is a strong case for re-construction, and you have the assurance that the money is not going to be squanderod, so that I confidently ask for your support in the matter. I now move the first resolution. (Cheers.)

Mr. Leak (director): I second the motion.

DISCUSSION.

Mr. White: What will be the expense of winding-up and re-construction?

The Chairman: Not more than 500*l.*, and I think it will be done for less.

Mr. Painter: I think that usually re-constructions of this kind are carried out for less than 500*l.*, or should be, when it is proposed to extract 1s. 6d. from our pockets. I listened to the chairman with some interest, as this is the first meeting I have attended. I have been under one re-construction and paid money for it, but am now informed that the shares are worth 3d., though I suppose we have some good ground upon which to pay another 1s. 6d. When, however, we are told that re-construction cannot be carried out under 500*l.* it seems to be a waste of money. I thought I should have heard that the secretary would have acted for 50*l.* or 25*l.*, and that the solicitors would have been content with an equal amount. (Laughter.)

A Shareholder: You must bear in mind that the principal expense is caused by Government duties. (Hear, hear.)

Mr. Painter: We are reducing the face value of our shares from 1*l.* to 5s., and I am certain that the statement of the chairman does not warrant us in consenting to the re-organisation as proposed. I am acquainted with mining companies and their proceedings, and am astonished that no balance-sheet has been presented. Of course, we may be told to call at the office and inquire, but the present value of the stock does not induce one to take much trouble. It is not fair to ask us to proceed with this re-organisation without a balance-sheet, for a few figures would have been most instructive. I should like to have heard the chairman wind up his speech by saying that in consequence of the lamentable state of the company the London directors have reduced their fees and the office expenses have been cut down. I should like him to have said that the directors' fees have been cut down to half, or quarter, or to something even less. At the same time I believe that directors ought to be paid, for I should not like to work a dead horse myself for nothing.

BOARD COMPLIMENTED.

Mr. Wood: I must say I think the board have worked with great spirit and energy. (Hear, hear.) They do not deserve the strictures of the last speaker. I have a friend on the spot who has watched the working of this mine, and who says that great credit is due to the management at home and abroad. He also says that with a small income from the re-construction we shall be able to carry the works through, when the mine will be one of the finest and largest in Idaho. (Cheers.)

HE HAS.

A Voice: Has he got any shares?

Mr. Wood: Most certainly he has. (Cheers.)

Mr. Brotherton: I do not know who the gentleman is who spoke first, but there was considerable force in his remarks. The chairman said that there is due to this company 1,500*l.* by another company. The name of the company is the

VISHNU,

and I should like to know what is the value of that debt; also, who constitutes the Vishnu Company, and how many of the directors here are associated with its board. I should also like to know what connection Mr. McCornick has with it, and whether he is manager of that company and of this also. I also want to know where the directors got their endorsement of Mr. McCornick's mining qualification. Mr. Woodrow is here, and may afford information, for I believe both are more or less associated with Vishnu. I should like to know whether our secretary has anything to do with Vishnu. (Laughter). These remarks are not made to depreciate this (Elmore) property, in which I am one of the largest shareholders. The chairman said a good many of the largest shareholders were consulted, but I never had a word from them except this report and the meagre statement in the circular. We had a balance-sheet in June, 1890, but I have received no report respecting the doings of the company from September 24th, 1890, until this circular in January, 1891, when we are called together for the purpose of writing off 15s. a share from the face value of our shares, and supplying another 1s. 6d. on a re-construction scheme. The chairman has stated that 13,000*l.* out of 15,000*l.* has been sent to the mine. It is two years since the first re-construction was carried under which 45,000*l.* was provided. 15,000*l.* went to pay the debt of the old company, and 30,000*l.* was left for this company. This has been spent within a period of two years, or at the rate of 1,260*l.* a month. When this mine was in full working and producing ore the expenses ranged from $7,000 to $10,000 a month. Mr. Watson, who was the predecessor of Mr. McCornick, is a fine mining engineer, respecting whose abilities I have had the highest endorsement, though he has the reputation of being an extravagant manager. Whether that be so or not I do not know, but this is certain, that 30,000*l.* has been spent, so that if you take the original working capital there has been spent 95,000*l.*, and now we are asked to contribute 22,500*l.* for the purpose of reaching the old Alturas—Elmore vein, which, it is admitted, when Mr. Watson left it was worth only $8 a ton. That you cannot work ore like that to pay you I can give you as a definite statement. It will not pay at any such value, unless you bring water power to the mill and run it by that. The Elmore lode is the mother lode of that district, and this group is only one of the famous mines in that camp. It is also known that this group does not pay at any severe depth. From the Confederate Star a million dollars has been taken down to the depth where the old winze was sunk.

A SERIOUS THEORY—IF CORRECT.

Where the shaft has gone below that, if you strike the vein, the chances are very great that you will not find paying ore. The ore taken out of the Alturas was from the 2nd level, between that and the 3rd. The ore in the 4th level is nothing but barren quartz—$4 a ton—which you cannot raise and mill at less than $7. To subscribe 6d. a share will not land us in the haven of rest to which Mr. Armitage wishes to lead us. In justice to our chairman, he honestly believes that it will. Therefore I do not say that the board are making a wilful mistake, but they are making a mistake nevertheless. When we are asked to provide 6d. we are just as much committed to the full 1s. 6d. as we are to the 6d., and, therefore, it is fallacious to suppose that our liability will end with the smaller figure. When the 6d. is spent we shall meet again, and probably be told by another telegram that instead of being 80 ft. from the lode we are only 8 ft., and we shall probably go on with another 6d. All these things are perfectly known, and must be looked at. Then we are asked to write 15s. a share off our shares. My 7,000 at present cost me over 7,000*l.*, and the last scheme of re-construction debited me with more than 1,000*l.* If I felt sure that the chairman's statements would be realised, I should not hesitate to re-construct leaving the shares at 1*l.*, and paying up 1s. 6d.; but so confident am I of the reverse, that upon my word I do not see what is the reason of taking the fresh risk of 1s. 6d., for you may as well ask for that at once as for 6d. Why not take a liability of 6d. only? I am surprised to hear that this company is going to cost 500*l.* to re-construct, for as far as I know anything about registrations, a capital of 75,000*l.* should not cost more for stamps and fees than 112*l.* 10s., and in addition there will be the printing, law and liquidation expenses, so that I do not see where the balance up to 500*l.* is going to be spent. I should like the chairman to give me information as to the Vishnu. It adjoins our mine, and was in its time worked by Capt. Sutton and two or three more. I own something like 20 mines in the neighbourhood, so that

I AM NOT TALKING IN THE DARK.

The Vishnu may be very good for the owners afterwards to sell to Elmore when Elmore gets 22,500*l.* subscribed. Whether they will do us the turn of selling it I do not know, but perhaps Mr. Woodrow will tell us. He has a high opinion of its value, which I have not. The Elmore shaft, sunk where it is, is a very good thing for the Vishnu, and it seems that in September, 1891, we are to get 1,500*l.* for our shaft. Why do they not show their *bona fides* by paying something on account? If they had done that we might not have needed re-construction. Upon the facts, as submitted to us to-day, I do not think we, as a body of shareholders, ought to plunge into this scheme head foremost. If it is all right, then let it be proved by better statements than we have already heard, and, if proved, I will be one of the first to say—support the directors in their scheme of re-construction. (Cheers.)

Mr. Payne thought the re-construction could be carried out with little expense by the present staff.

VIEWS OF THE LIQUIDATOR OF ALTURAS.

Mr. J. H. A. Smith: I should like to say a few words to the meeting. I did not propose to make any claim upon its time, but the speech of Mr. Brotherton has been such a very charming surprise to me that he must pardon me if I address to him through the chairman a few of the thoughts it has conjured up. Mr. Brotherton has told us that when you have expended your 6d. there will be ready a telegram to say that you are 8 ft. instead of 80 ft. from the lode.

Mr. Brotherton: I said no such thing. What I said was, there would be the "probability" of such a telegram. (Laughter.)

Mr. SMITH: Then the probability is that we may get such a telegram, and on that probability I contend, with great deference to Mr. Brotherton, that he ought to support the re-construction scheme proposed, for there are few persons who should be better acquainted with the "probabilities" of Alturas (or Elmore) telegrams than Mr. Brotherton himself. (Cheers and laughter.) I do not know if any of you were shareholders of the old Alturas Company. (Cries of "Yes.") Then you know the facts, and so do I, to my cost. I bought shares at from 17s. to 35s., and at a meeting of shareholders I was asked to join a committee, subsequently became liquidator of the old concern, and assisted in raising the money that put into funds the company whose affairs we are considering now, and hence, like Mr. Brotherton, though in a different way, I too have some knowledge of this matter. (Hear, hear).

MR. BROTHERTON TWO YEARS AGO AND NOW.

At that time I distinctly recollect (I am speaking of the meeting which immediately preceded the liquidation) there was not from Mr. Brotherton one word of warning that if we got below the second level we would find barren ground, although at that time we were driving the third level. Why were we not warned then by Mr. Brotherton as he warns us to-day? (Cheers.)

Mr. BROTHERTON: I did not say below the second level, but I said that the fourth level would not pay to drive.

Mr. SMITH: The levels mentioned (and I am in the recollection of the meeting) were the second and the third as those between which we found all the good ore. Now Mr. Brotherton speaks of the second.

Mr. BROTHERTON: Between the second and third level good ore was found, and the fourth will not pay, I said.

Mr. SMITH: We were at the former re-construction driving at the third and fourth levels, and were driving east. There was not one word at that meeting from Mr. Brotherton or Mr. Kemp Vanee. The shares were allowed to rise freely on the market, and those telegrams which Mr. Brotherton thinks it probable we shall receive again were received then. (Laughter, and cheers.) Probably if we get the same old associates round the mine we shall have better cables yet than ever we had before. (Cheers and laughter.) At that meeting, however, we determined as far as possible to put a stop to these cables, and know what was our real condition. When the company was re-constructed, at the earnest solicitation of some of the largest shareholders, Mr. Armitage consented to become chairman, supported by a body of gentlemen, whose reputation guaranteed that nothing like what had occurred in the past should take place in the future, and we have to-day to congratulate ourselves that throughout the whole of their administration everything has been

DONE WITH A SINGLE EYE TO THE BENEFIT OF THE SHAREHOLDERS,

and in order that all should be placed upon an equal basis of information. (Loud cheers.) It is true we have had no sensational telegrams, but in their place we have had truthful reports. (Cheers.) What we had in the past was revealed only too plainly to the committee. Amongst other things which I had to investigate, as chairman of that committee, was a most remarkable letter, some extracts of which were given in the committee's report, as to the manner in which these telegrams were sent from the mine, and in one case the express statement was made that a group or combination of persons were at that moment engaged in booming the shares, and there might be expected good telegrams to be shortly sent. That was apparently common knowledge at Rocky Bar and the surrounding district. You remember the enormous returns made in January, just before the final collapse, which influenced some of you to buy shares, as it did me. All that sort of thing is at an end. We are now dealing with

THE SIMPLE HONEST WORKING OF THE MINE,

and as Mr. Armitage has told you, the result so far is indefinite. It is neither a success nor a failure, but more money is wanted to prove it the one thing or the other. The question now is will you throw away the money you have already subscribed? You will do so if you do not support this scheme. (Hear, hear.) There are, no doubt, purchasers round about Rocky Bar ready to take the mine off your hands at the cheapest price they can buy it at, and then when the opportune moment comes, we shall see Elmore re-christened and brought out with prospects which will no doubt be described in language more glowing (if less truthful) than has ever been indulged in with regard to either Elmore or Alturas. (Hear, hear.) From the moment my duties as liquidator ceased I have neither directly or indirectly had anything to do with the management of this company. I know all the directors, and my brother is the secretary, but still I appear here as a perfectly impartial witness, and simply as connected with the company as a shareholder. When the company was put upon its legs

MR. ARMITAGE WAS REQUESTED TO GO OUT

and visit the property, and decide upon the course about to be adopted. On his return he gave you a full account of the Vishnu, which is on record, and I do not think it fair of Mr. Brotherton to put that subject to you in the manner he has done. Every shareholder was told fully about the Vishnu, and if I mistake not that is the very property which Mr. Brotherton offered to the Alturas Company.

A VOICE: Tiptop.

Mr. BROTHERTON: I never offered it.

Mr. WOOD: My memory is that you said you had a bond of it.

Mr. SMITH: When Mr. Brotherton took proceedings in the Court to prevent Alturas from being re-constructed (which petition he ultimately withdrew) he came before the shareholders and, I think, said he had an interest in the Vishnu, and promised to give us his aid in acquiring any additional property in the vicinity of our mine in which he might be interested, which we might desire to take. My recollection may be faulty on the point of ownership, but at any rate I am certain he said it was necessary to Elmore to obtain that property on the ground of the new shaft, and I recollect at that time the Vishnu was being pressed upon us by Mr. Kemp Vanee.

Mr. BROTHERTON: You are wrong; we had nothing to do with it. I repeat now what Mr. Smith says I then stated, that Vishnu was important for Elmore to acquire, as being useful to finish the boundary of their property. I repeat that now, and do not take it back at all.

Mr. SMITH: We have, at all events, arrived at this point: We have cleared away one misconception and know that Vishnu is an aid to Elmore, and therefore, if Elmore has been able to obtain all that is necessary it has saved the cost of purchasing Vishnu. It has a place for its shaft and its dump, so that I think our directors have done a very fair stroke of business in securing these advantages without calling upon us to pay for them, and to buy the Vishnu as was proposed to Alturas. As to Mr. McCornick, he receives pay from both mines, reduced proportionately, and all these advantages, I repeat, have been secured without your being called upon for one penny of capital. May I ask Mr. Brotherton what are the figures at which it was proposed we should take over Vishnu?

The SECRETARY: $60,000.

Mr. BROTHERTON: The secretary is right—$60,000—but that took in a loss at Salt Lake which you had an explanation about.

VISHNU ADVANTAGES SECURED WITHOUT PAYMENT.

Mr. SMITH: I am not interested in Vishnu matters, except so far as they touched me as an Elmore shareholder. The only point I am addressing myself to is, whether we are placed in a false position by the engagement entered into with the Vishnu, or whether it is to our advantage. I think I have shown from the actual statements of Mr. Brotherton that it was desirable to get these advantages, and also that instead of paying $60,000 for them we have practically got them without any payment whatever. (Cheers.) If Mr. Brotherton is of opinion that there is no further use in going on with Elmore, the advantage of this re-construction scheme is that it compels no one to do what he is disinclined to do. (Hear, hear.) One gentleman has said the market value is 3d. per share. Well, that value can be realised, and the account closed. But for those who wish to go on the other course is open. They may be right or wrong, because mining is speculative, and the wisdom of the process (or the folly) can only be judged by the result. Why should those who are desirous of going on be stopped and blocked because Mr. Brotherton now comes out with a theory as to which he was absolutely silent two years ago. (Laughter.) We can gain no possible advantage from refusing to go on. Mr. Armitage pledges himself that he will only spend 6d., and that should further money be necessary he will call the shareholders together, and let them decide whether they will spend it or not. We are only pledging ourselves to a question of 6d.

Mr. PAINTER: Nonsense. (Order.)

THE ISSUE PLAIN.

Mr. SMITH: The gentleman says uonsense, but I fail to see where the nonsense comes in, unless it be in his own exclamation. (Laughter.) If the shareholders are not to be called upon to pay more money without their express sanction, it is "nonsense" on the part of the gentleman who utters that word to affirm the reverse. I will not pursue the subject further. It seems to me the issue is so plain that I need only conclude by cordially supporting the resolution. (Loud cheers.)

Mr. HAUGHTON: We have heard the chairman, Mr. Brotherton and Mr. Smith, and I suggest, that as the chairman has positively stated no more than 6d. per share will be called up without our consent, let us liquidate right away on a basis of 6d., and abandon the other shilling.

A SHAREHOLDER: I thiuk it would be extremely foolish to hold ourselves down to such a narrow margin. The full proposition should be put and carried—more particularly as we have the chairman's assurance that if anything beyond the first 6d. is required our consent will be obtained for its expenditure. Why did the last estimate fail? It was thought the money would be sufficient to sink the shaft, drive the levels, and intersect the veins. I regret we have not the plans here.

The SECRETARY: They are on the table.

A SHAREHOLDER: In the case of winding up finally, what would be the use of the stores?

The CHAIRMAN: They are movable stores, such as firewood, and the like.

A SHAREHOLDER: Would it not be possible to raise this small amount by debentures?

Mr. HAUGHTON said the latter observation was an argument for his proposal, as if with the first sixpence they found gold they could very easily raise money on debentures afterwards.

MR. ARMITAGE SUMS UP, AND REPLIES.

The CHAIRMAN: At the present moment there is simply the resolution before the meeting. The amendment will come properly upon the second resolution. I will now answer one or two points, and will then take the vote. I had overlooked in my speech the causes of delay. In the first place, thr winter of 12 months ago was exceedingly severe in Idaho, and the roads were so utterly impassable that from January to June it was impossible for heavy freight waggons to get to the mine. Six months were absolutely lost in sinking the shaft on that account, because our late manager—who is believed to be very much what Mr. Brotherton spoke of, a very able, and, possibly, somewhat extravagant man—had not sufficient foresight to get all the pipes necessary for the pumping machinery before the hard weather came. He was in a fix, with the pumps incomplete, and the pipes lying 60 miles off at Mountain Home railway station. It was September last before the work of sinking the shaft could be resumed. Then you had information of the serious landslip which occurred in the neighbourhood of the pumping and hoisting shaft, which necessitated the removal of about 10,000 tons of loose material that threatened to come down like an avalanche and wreck the building, but fortunately that was prevented, and the ground has now been secured. Then the ground towards the lower end of the shaft became loose and shifty, and when they tried to continue their working it kept moving and bursting in the timbers, which had to be renewed from time to time at considerable expense and delay. I should say that

SOME THOUSANDS OF POUNDS HAVE BEEN SPENT ON THE WORKS

that would not have been necessary, but for the facts I have laid before you. I have taken off the expense in London, and find the

amount, less the balance in the bank last year, sent out to the mine was 13,647*l.*, leaving 1,209*l.* for all other expenses, including directors' fees, travelling expenses, &c.—(hear, hear)—

CANNOT BE REDUCED BELOW NOTHING.

With regard to directors' fees, I defy you to reduce mine, because I have had none for the last two years. (Cheers.) I have not even had my travelling expenses. My railway fares and hotel bills have amounted to much more than you have paid me. Some of us know Mr. Brotherton very well, and I can only thank him for the courteous way in which he has spoken of me; but Mr. Smith has answered very fully the points he raised. I will ask the secretary to read from the full report which appeared in the MINING WORLD what I said about the Vishnu last year. I am a shareholder in that company, as also are my colleagues, and every Elmore shareholder was invited to join with us. Our secretary is secretary of that company too, and though I am not a director, I think it is really part and parcel of the Elmore Company. It is a great pity that Alturas did not take it instead of

"TIP TOP," WHICH THE COMPANY BOUGHT FROM MR. BROTHERTON.

(Laughter). "Tip Top" was never worth the cents that it cost us dollars. The Alturas gave 10,000*l.* for the property that I myself would not give 10s. for to-day. If that money had been spent on Elmore and Vishnu our position to-day would have been vastly different. (Cheers). Mr. M'Cornick, I believe, is a very able man, and I personally selected him as my adviser to go with me from Salt Lake City to Rocky Bar to inquire into the position of affairs. I found him cautious, phlegmatic, and disinclined to give anything in the nature of a speculative opinion. He said all he could honestly in favour of the property, but would not commit himself to any opinion not absolutely founded on fact. I inquired a good deal about him. His brother is a leading banker of Salt Lake, a man of high position, whom they used to call

"THE LEADING GENTILE."

I also enquired about him from mining men to whom I had introductions. I saw a man with whom I was brought into connection when six or seven years ago I went out to the Montana Mine on a similar mission, and who then rendered me great service, and he gave me a high opinion of Mr. McCornick. He is there at the present time as manager of both Vishnu and Elmore companies. If he is not a good man then I have unwittingly misled my colleagues, and if he is a good man then I take the credit for having introduced him.

A SHAREHOLDER: It is unnecessary to read the report of what you said about the Vishnu as most of us recollect it.

RESOLUTION CARRIED UNANIMOUSLY.

The CHAIRMAN: It is here, if required. Those in favour of the resolution—those against—carried unanimously. I shall propose the remainder of the resolutions *en bloc*, No. 2 to No. 7, with this alteration in clause 4 where it says "on such terms and conditions as such liquidator may think fit, and it shall not be necessary to first offer such surplus shares to the shareholders of this company." I propose to alter it thus: "But such surplus shares *shall be first offered* to the shareholders of this company." (Cheers). The liability has received the consideration of the board, who thought it was best to make it Is. 6d., and to give the pledge I have already made.

Mr. VAUGHAN WILLIAMS (director) seconded the motion.

Mr. PAINTER proposed an amendment reducing the liability to 6d. only, and in reply to a question he put was informed that the liquidator, and his remuneration would, as was customary, be appointed at the confirmatory meeting, the CHAIRMAN further stating that if his advice were followed the liquidation would be placed in the hands of the secretary, who understood the company's affairs, and who would do the work more efficiently and economically than anyone else. (Hear, hear).

Mr. HAUGHTON seconded the amendment.

Mr. VERDEN (Kerly, Son and Verden), the solicitor, in reply to a question said that any premium that might be obtained for the shares would be divided amongst those who felt disinclined to put further money into the company.

A SHAREHOLDER said he thought that nearly all in the meeting would be agreed if the liability could be reduced to 1s.

BOARD MEET THE WISHES OF SHAREHOLDERS, AND RESOLUTIONS ARE CARRIED.

The CHAIRMAN, on behalf of the board, stated that he was perfectly prepared to accept that amendment, for he quite thought that 6d. or less would enable them to find out whether it was worth going on with the mine or not. Reference to the back papers of the company would show that the late manager pledged his reputation as a mining engineer that, with the new shaft and new appliances, he would make the mine pay with ore of the value of $4 a ton, a statement that did not coincide with the views of Mr. Brotherton. The expenses were put at not more than $3, but he (the chairman) reported to the meeting that they would probably be $3½. The late manager spoke with a good deal of experience, for he had worked as second in command at the Homestake Mine, where $3 ore had been profitably treated.

Mr. GOODALL moved formally, as an amendment, that the liability should be reduced to Is., and that the shares should be credited with 4s. paid.

A SHAREHOLDER seconded this motion, which was carried all but unanimously.

The CHAIRMAN put the amendment of Mr. Painter, and it was lost by a big majority.

The CHAIRMAN then put the resolutions No. 2 to 7, with the amendment reducing the liability to 1s. embodied therein, instead of the proposal of the board that the liability should be 1s. 6d., and it was carried almost unanimously.

The meeting did not break up until Mr. Armitage had been cordially thanked for presiding, and generally for his services to the company.

THE URANIUM MINES, LIMITED.

URANIUM PROVED TO EXIST IN LARGE QUANTITIES UPON THE PROPERTY—A GROWING MARKET FOR IT—CRITICS ANSWERED.

THE annual general meeting of the shareholders of this company was held at Cannon Street Hotel, on Tuesday.

The chair was occupied by Sir Alexander Armstrong, K.C.B., F.R.S.

The notice convening the meeting was read by the SECRETARY.

A CONCISE STATEMENT.

The CHAIRMAN: Gentlemen, this report and balance-sheet has been in your hands for some days, and I presume you will take it as read. I have, therefore, first of all to inform you of the cause of the delay in holding our meeting, for since last we had the pleasure of meeting you a period of nearly 15 months has elapsed. I may say that the directors are entirely responsible for that delay, as we were desirous of closing the accounts at the end of the year for the sake of uniformity in the future, and we were expecting to be able to realise more of our available assets than we have done. The report and balance-sheet, the adoption of which I now have to move, I think you will consider, is on the whole very satisfactory, bearing in mind that the company has only been in existence a short time. There has, however, been a good deal of work done on the mine.

A VALUABLE URANIUM LODE.

We have accomplished one of our principal objects, namely, to establish the proof of the existence of a valuable uranium lode. The hopes I entertained at the former meeting have been more than confirmed by everything that has subsequently happened upon the property. (Hear, hear.) We have developed this valuable lode, and we have also found tin and ochre, but as our entire efforts have been directed to the development of the uranium ore and endeavouring to make a market for it, we did not work the tin and ochre, and, consequently, we have that as a monetary resource. I will now draw your attention to the third paragraph in the report, where you will find a reference to the amount of work that has been done. The construction of the shaft, the opening up of underground levels, the erection of the necessary machinery, &c., have caused considerable expenditure of time and money; but having regard to the result achieved, I think it is very satisfactory. Of course, there have been

UNAVOIDABLE DELAYS,

as you may readily imagine. We were working with a new metal; and not only that, but a delicate chemical manipulation was necessary in treating the ore. I am pleased to say, however, that we have now overcome every difficulty with regard to the treatment of the ore, and have opened up what I hope will prove a very profitable market for it. It may interest you to know that we have at the present time orders in hand for the purchase of ore sufficient to convert into cash the whole of the 3,429*l.*, represented by the produce of uranium oxide, uranium, and other ores. Of course, when the stock is converted into cash, a very considerable portion of it will find its way into your pockets, and I hope it will do so at an early date. (Hear, hear.) The progress of the mine in all respects is very satisfactory. We have a great deal of valuable plant there, and also an excellent manager; and I do not think that a single hitch of any kind has occurred since the formation of the company. We have now placed beyond the shadow of a doubt the existence of this valuable lode, and the further we go with shaft and levels the more valuable does the ore become. Not only so, but we have, in addition to the ordinary uranium ore, a considerable quantity of pitchblende ore which contains a

LARGE PERCENTAGE OF OXIDE,

and hence will become more valuable. Now, if we had been disposed to sell the ore, instead of reducing it to the oxide, we would have had a much larger cash balance to show, but then it would have been against our interests entirely. It is more profitable to the company to reduce the ore to the oxide than to sell it in its native state. As regards the chemical treatment of our ores, we are fortunate in having the services of a very distinguished chemist (Mr. Kitto), who has bestowed a great deal of time and attention upon the subject, and who has now succeeded in arriving at a very satisfactory process. As soon, therefore, as we have put up the new machinery I hope we will be able to meet all the demands which are now coming rapidly upon us. Only this morning a letter arrived from a well known quarter asking for no less than 3 cwt. of oxide. That, with the orders we have already had, will absorb the whole of the stock balance and convert it into cash. (Applause.)

FIRST 14 MONTHS' PRODUCTION.

The total production of the mine from the time we commenced working it until the 31st December last, about 14 months, is 7,263*l.* 11s.6d., which I think you will agree with me in saying is very satisfactory.

A SHAREHOLDER: Does that include the stock, 6,171*l.*?

The CHAIRMAN: Yes. There are certain items in the balance-sheet, which, I think, may perhaps call for some explanation. For instance, you will observe that we have placed 210*l.* to a suspense account. I may tell you that we have it under consideration to erect some additional plant at the mines. We have not yet finally decided to do so, but we believe it would enable us to treat the ore in a more extensive way, and also more effectively so as to meet the demands upon us. If those demands continue to increase it will be absolutely necessary to erect some additional plant at the mine, and for that purpose we would have to raise money upon debentures. Upon that point, however, we are not decided, but I may say that in the event of any debenture issue the first offer would be made to the shareholders. (Hear, hear.)

THE ORIGINAL PROSPECTUS.

There are some of our shareholders who have taken exception to the original prospectus, and the matter is now forming the subject of litigation; but I may assure you that we, as a board, entertain no doubt whatever as to the validity of everything that we have said. As, however, the subject is *sub judice*, I shall make no further comment upon it except to say that we look forward to the result with

the utmost confidence. (Applause.) I am sorry that I am not in a position to ask you to declare a dividend out of your assets. There they are, however, to the amount of 6,171*l.*—good, valuable assets, which, when time permits, will be realised, and you will, I hope, be able to share the profit. There is nothing else for me to refer to, but I shall be happy to answer any questions, and meanwhile I beg to move the adoption of the report and accounts. (Applause.)

A DIRECTOR LARGELY INCREASES HIS HOLDING.

The HON. W. F. B. MASSEY-MAINWARING, LL.B. (director): I beg to second the motion, and after such a very lucid statement from our chairman, I do not think I need say anything more. Perhaps the best way of showing confidence in a mine is to increase your holding. Well, I have done that. I have increased my holding from about 500 shares to nearly 4,000, and I think that is the very best proof that any director can give of confidence in an undertaking, the control of which is entrusted to him. (Applause.) All we want now is peace. This company has been attacked in a most ridiculous and unfounded way—I do not know for what purpose, and that I am not going into, but if the shareholders will only hold together, and keep the enemy at bay, I am sure that this company will go ahead. I only hope that in future we shall move shoulder to shoulder, and I have not the least doubt that the Uranium Mines will be as great a success as we have always prophesied they would be. (Applause.)

QUESTIONS.

Mr. J. H. JAMES: Would you kindly inform us what quantity of uranium you have sold, and the amount realised? We have here "Produce of uranium and other ores, 7,263*l.* 11s. 6d."; but we want something more definite. Against that amount of produce, we have on the other side, salaries and wages at mines, 993*l.* 2s. 9d. Then, in the capital account we find, timber, shaft sinking, and exploring, 2,887*l.* 4s. 5d. I wish to ask what "exploring" means.

The CHAIRMAN: Sinking and driving to find the ore.

Mr. JAMES: Well, gentlemen, the shaft has been sunk 27 fms. from the surface, and supposing it to cost 20*l.* per fm., which would be a very good price—in fact, I should like to have the contract at that figure—it would absorb 540*l.* That leaves 2,300*l.* to account for, and that is said to have gone in exploring and driving levels. In driving levels, however, you are

CUTTING OUT THE LODES,

and if the lode is as productive as the directors say there ought to be a very large quantity of uranium to come out of that exploration. We find no mention of that, but 2,000*l.* is debited to capital account. It seems to me that that should have gone to the debit of profit and loss account, which would reduce the estimated amount of profit (3,000*l.*) by that sum. Not only so, but we find the estimated value of uranium and other ores in stock set down as 6,171*l.* 14s. I take it that that is part of the total production of 7,263*l.* 11s. 6d.; therefore, after deducting the one from the other you will find that they have actually sold during the 12 months 1,091*l.* 17s. 6d. The expenses, too, in my opinion, are excessive. In sinking the shaft only 7 fms. from the surface to the adit they could not communicate without missing 5 ft.

Mr. T. H. NORTH: You have no proof of that.

Mr. JAMES: Again, the directors tell us that the engine shaft is permanent. It may be so, for it will never be used if the mine is worked to any extent, because it has gone down behind the lode. At the 10-fm. level a cross-cut has been driven 9 ft. Every fathom you go down you have to make new cross-cuts, and if the shaft is a permanent one it will be very expensive to cross-cut or drive to it.

NO TIME FOR A MINING LECTURE.

A SHAREHOLDER: Gentlemen, we have not come here to listen to a lecture on mining. (Hear, hear.)

A VOICE: And by a discharged manager. (Cheers.)

The CHAIRMAN: I cannot but think, Mr. James, that you are not entertaining this meeting. (Hear, hear.) We have come here to explain to the shareholders the character and nature of the property which they possess; it is your object to depreciate that property. (Applause.) It has been your object throughout to depreciate the property, but if you had been employed on the mine your tone at this meeting would assume a very different character. (Hear, hear.) I feel quite sure that the meeting will estimate at their proper value the observations you have made in depreciation of the shareholders' property, which observations, I beg to say, are

UNTRUE.

Mr. JAMES: I wish to lay before the shareholders the actual circumstances connected with this property. I believe the water is in the mine. How many men are employed in the mine at the present time?

The CHAIRMAN: The questions are being taken down, and will be answered *seriatim*.

Mr. JAMES: Why was expensive boring machinery erected when there is no hard rock to go through? What has become of the stock taken over by the company at its inception? My name has been mentioned in connection with this property; but although I have known the mine for many years I had nothing to do with the promotion of this company. Before the report is adopted, I wish to move that a committee of investigation be appointed to examine into the whole circumstances connected with the company in London, as well as at the mine.

A SHAREHOLDER: Will you pay the expenses of that investigation? (Laughter.)

A REASON FOR THE LOW PRICE OF THE SHARES.

A SHAREHOLDER: It is difficult to criticise the balance-sheet without knowing the quantity of uranium actually realised; still, the fact remains that the company has been working for nearly 15 months and we have no dividend, which is a great disappointment. Soon after allotment the price of the shares fell away to next to nothing, and I think the vendor is to blame for that. The vendor gave certain commissions in the form of shares to people who were impecunious, and consequently those shares were thrown upon the market soon after allotment. That that is so there can be no doubt, because no *bonâ fide* shareholder who gave 20s. each for his shares would sell at 3s. or 4s. The prospectus stated that the vendor would join the board after allotment, but I observe that he has not done so. Perhaps this has something to do with it. Coming to the balance-sheet, I find that whilst the cost of producing the uranium has been something like 993*l.*, the expenses at the head office have amounted to nearly double that. I shall be glad if the chairman will tell us how that item is made up—the amount paid as directors' fees, and office salaries?

DIRECTORS AND NOMINAL FEES.

Until a company is in a dividend-paying condition directors ought to be satisfied with a nominal fee for their services; and when a dividend is declared, it should be left to the shareholders to say what they will pay for their directors' services.

Mr. WILLIAMSON thought there was some wisdom in the suggestion to appoint a committee of investigation, and wished to know how many directors there were.

Mr. WATKINS: What are the difficulties that you appear to have overcome in the treatment of your ores? Have you found some new process for the extraction of the oxide; and are you paying a royalty for this process? If not, what consideration are you giving for it?

THE CHAIRMAN REPLIES.

The CHAIRMAN: In answer to Mr. James, I may say that every step we took in connection with this mine was upon the advice, and by the counsel of our very eminent engineer, and we do not admit that there has been any mistake made. As regards the quantity of uranium sold, Mr. James is correct; it is about 1,091*l.*, and had it not been for the causes I have named, your asset balance would have been a cash balance. The other matters Mr. James referred to are matters of detail, and I will presently call upon a gentleman, who is thoroughly conversant with the working of the mine, to reply to them.

WHY THE VENDOR HAS NOT JOINED THE BOARD.

The vendor is a somewhat elderly gentleman, and resides at Dundee. Owing to indifferent health it was extremely inconvenient for him to attend the board meetings, and he ceased, according to the articles of association, to hold the office of director from non-attendance. With regard to the matter of directors' fees, office salaries and travelling expenses to which exception has been taken, and I am not surprised at it, for it does look a large item—at a very early period of the company's existence the directors hoped that they would have been able to declare a dividend by this time.

DIRECTORS FOREGO THEIR FEES.

The directors took their fees up to the 1st July last; but since that date they have not taken one sixpence. (Applause.) They have remitted the amount due from July up to this date, and placed it to the credit of the company. They propose, in future, that any fees they take will be very considerably reduced until a dividend is paid. (Hear, hear.) As to the office salaries, rent, travelling and other expenses, we thought it would be a matter of convenience to give them all together, and we had ample precedent for doing so, but such matters of detail will be readily furnished upon application at the office. With regard to Mr. Watkin's questions as to the treatment of the ores, that is a matter I would rather not go into. We paid no royalties, and received none.

A SHAREHOLDER: What amount of fees did the directors take up to June?

The CHAIRMAN: About 900*l.*

Mr. JAMES: You have not told us the number of men employed on the mine.

The CHAIRMAN: I will ask Mr. North to reply to your details.

A GOOD DEFENCE.

Mr. NORTH: Sir Alexander and gentlemen, as you have done me the honour to ask me to reply on behalf of the board, I will endeavour to do so as concisely as I can, and although, I confess, it is somewhat difficult to do so, I will try to keep my temper. The difficulty in keeping my temper is due to the fact that from the outset of this company, the very persons who ought to have helped have very considerably hindered. (Hear, hear.) The gentleman who has addressed this meeting—Mr. James Harris James—was for several years manager for the vendor, Mr. Moir. Mr. Moir is a gentleman whom I very highly esteem. I know that he has not had more than three personal interviews with Mr. James, and I do not think that at the present moment his feeling is exactly the same with regard to Mr. James that it was at the outset of this company. Mr. James, from the time that he found that he was not going to occupy in this company the position he had been occupying, began raising difficulties, and I could, if it were necessary, go through a bundle of letters, which I have here, showing the determination of Mr. James to come to this meeting to endeavour to destroy the harmony of the shareholders generally. These letters show nothing if they do not show that Shakespeare was right when he spoke of

"HOT FRIENDS COOLING."

There are letters which state that Mr. James was to participate in several thousand shares of this company, coming from the vendor as his agent. There are letters showing the progress of Mr. James's cooling as he found that he could not have all his own way, because, having entered into this company, I determined that so far as in me lay I would work it to a success, and if the company is not hounded to death by people like Mr. James, it will be a very great success. (Applause.) I want to say a word or two to show what the criticism of that gentleman is worth. There is in Cornwall, immediately opposite this Uranium Mine, a property called the New Terras Mine, of which Mr. J. H. James was a very large holder and manager. That mine is in liquidation, I believe; or if not, it is next door to it. Mr. James upon that mine exercised his ideas of sinking a shaft in the way he would have proposed to do upon our mine.

Mr. JAMES: That is false. ("Order.")

Mr. NORTH (continuing): I frequently go to Cornwall and spend a great deal of time

LOOKING AFTER THE COMPANY'S AFFAIRS

there; and I want it to be here understood—whatever you may say about directors, although I never in my life worked with a body of gentlemen who gave closer attention to the affairs of a company than they do—(cheers)—I have never had one pennypiece, nor do I intend to have, from this company until it is a great success. I know every inch of the mine, underground and above ground. Mr. James has

remarked about the folly of erecting boring machinery. Mr. James has told people in Cornwall that the ground was exceedingly soft, and boring machinery was not necessary. All I say is, that Mr. James knows nothing of the constitution of the lode as I do; because the country rock is so hard that it was absolutely essential, unless we were going to drive a foot or two a week and no more, to have boring machinery. As to sinking the shaft behind the lode I may say that from surface down to 10 fms. below adit, a distance of nearly 20 fms., we were entirely on the lode, and if that is not

GOOD MINING,

I do not know what is. (Hear, hear.) It is true we went down 10 fms. further, and at the present moment, 29 fms. or 30 fms. below the surface, we are about 3 fms. from the lode. We are not intending to drive on the lode at the 20-fm. below adit level at present, for the reason that, in addition to taking out from that mine during the year 7,263*l.* worth of ore, we have

OPENED UP RESERVES

on the 10-fm., which are now merely a matter of hauling, and we can bring to the surface at least 14,000*l.* or 15,000*l.* worth of ore for very little expense indeed. (Applause.) There are 12 men now underground. There have been as many as 60 employed on the mine, but if you are going to blame directors because, having brought to surface 7,000*l.* worth of ore, and having brought within immediate reach double that quantity, they then discharge workmen in order that costs may be reduced, seeing that it is not their intention to sell their produce as ore, but as oxide, and, therefore, 7,000*l.* of ore means to them nearly double that value in oxide price—then, I say, appoint your committee of investigation, destroy your property, make Mr. James, or some equally good man, your chief, and, perhaps, you will get a dividend at some future time. (Laughter.)

A SIGNIFICANT REMARK.

A gentleman, named Mr. Watkins, has asked whether royalty is paid for the process of converting the ore into oxide. No, sir; no royalty has been paid, nor is it intended to pay royalty. Mr. Watkins has, however, a brother who wanted to charge a royalty for a process. (Oh! and laughter.)

MISTS LIFTED.

Mr. SMYTH: Being a very large shareholder in this mine, I rise to point out that the mists have been completely dissolved from my eyes by the answers of our worthy friend, the chairman, and our honest little friend, Mr. North. (Applause.) I would ask you to be careful, gentlemen, how you take yourselves out of the hands of respectable men such as our directors are, and get into the hands of other people in Cornwall or in this room. Uranium is a new metal, but a demand is springing up for the oxide, and the directors very properly said, "We will raise so many tons of ore, and convert it from its crude state into oxide, which will make it worth four or five times the money." We are told to-day that we have about 15,000*l.* worth of reserves besides the 7,000*l.* worth of ore which is available. I think the directors are pursuing a very wise policy.

Mr. James's proposal for a committee not finding a seconder,

The CHAIRMAN then put the motion for the adoption of the report and accounts, which was carried amidst applause.

The auditors, Messrs. Drury and Elliott, were re-appointed on the motion of Mr. NORTH, seconded by Mr. MONTAGUE.

A cordial vote of thanks to the chairman and directors terminated the proceedings.

THE MAMMOTH GOLD MINES, LIMITED.

A REMARKABLE RECORD OF PROGRESS—THE COMPANY IS MAKING A RETURN OF £60,000 A YEAR, OF WHICH ABOUT ONE-HALF IS NETT PROFIT.

THE first annual general meeting was held at Room 47, Winchester House, on Thursday, "for the purpose of receiving the report of the directors and statement of accounts, and of transacting the ordinary business of the company."

James Hastings, Esq. (chairman of the company), presided.

Mr. CHARLES GOODYEAR (secretary) read the notice of meeting.

A REMARKABLE STATEMENT.

The CHAIRMAN: Gentlemen, the pleasure which we feel in meeting you to-day would have been experienced at an earlier date, but that our articles of association stipulate that the accounts of the company shall be made up to the 31st December in each year. We have, therefore, done our best to conform with that condition, and the report and statement of accounts have been sent to you all, and I hope carefully and pleasurably perused. Before I move the reception of the report and the adoption of the accounts, I will, as is usual with the chairman of a company, make a few remarks upon the past and present history of this fine mining property, and state what I think are its prospects. The directors' report tells you that the transfer of the property took place on the 15th August, 1889, the company having been incorporated on the 6th of May previously. Using all the expedition in our power, we were not able to get the 30-stamp mill fairly started until the 17th of December of that year, but since then, with the exception of a short period when it was shut down for alterations and additions, it has done its work well. It, however, soon became evident to the manager and directors that further milling power was necessary to do justice to the mine. The result was that we last year added 20 additional stamps, making 50 in all, and this mill is now crushing an amount of ore, which represents a gross product to the company of 5,000*l.* a month, or 60,000*l.* sterling per annum. Of this amount more than one half is profit, and I shall be greatly mistaken and disappointed, gentlemen, if this is not the smallest return we shall ever have from the Mammoth Mine. We are now, and have almost all the time been crushing ore of under $14 per ton in value, and we have every reason to believe that this is the lowest grade ore we shall mine. Of this ore we crushed, up to the last day of last year, 17,342 tons. In November last it reached 2,004 ozs., but it contained a considerable amount of silver. Now, you will see, gentlemen, from our report that in July last the board decided to commission one of their number to proceed to the mine to make a personal examination of the company's property, to study the treatment of the ore, and to ascertain what further steps could be taken with regard to additional plant, &c.

SUITABLE PLANT SECURED.

The directors are now in a position to state definitely that the appliances for the treatment of the crushed ore are suited to yield the most economical results. The bodies of ore of the character and value at present being treated with such great profit, amounted at the time of the director's visit to over 50,000 tons, ready for cheap extraction, and in addition extensive bodies of lower grade ore, which will be held in reserve. The directors have also been enabled to give specific instructions with a view to the further development of the higher grade ores, and the reports since received of this work are satisfactory. The work of the mine is in the hands of trustworthy heads of departments, as shown by the fact that the estimated cost of mining and milling, viz., $4 per ton, has since the examination been actually confirmed by the returns. This is very good work, and reflects much credit on the management.

RICHER ORE BODIES EXPECTED.

We have not been picking and choosing, but have taken the ore as it comes, and although we shall be rejoiced when we get into richer bodies, which we confidently expect to do, and very shortly, I think we ought to feel well satisfied with the immense deposits of ore of the present value, which we know we possess, and which has enabled us to show at the outset a nett profit at the rate of over 30,000*l.* a year. If I am spared to address you at another annual meeting, I firmly believe that I shall be able to point to a balance-sheet of a remarkably satisfactory character, which will more than verify the predictions I have ventured to make to-day. I think it may be well, gentlemen, to refresh your minds as to the extent of your possessions known as the Mammoth Mines.

PROPERTY DESCRIBED.

Your property consists of eight mines, known as the "Mammoth," "Mammoth Wedge," "Mars," "Raven," "Remnant," "Remnant Extension," "Jenny Lind," and "Nightingale." The total length along the vein is 3,000 ft., and width 600 ft., and we have four mill sites of 5 acres each, all situated in Pinal County in Arizona. The mines are distant about 50 miles from Tucson Station on the Southern Pacific Railway. There is a good waggon road from the mine to Tucson. The Tucson Globe and Northern Railway, now in course of construction, will pass within 8 miles of the mine. The river San Pedro passes a short distance from the mill, thus supplying ample water all the year round. The machinery, which is all new, comprises a steam engine of 120 h.-p., a 50-stamp mill, the stamps being of 750 lbs. The total crushing capacity is 100 tons a day. Each battery is fitted with self-feeders, copper amalgamating plates, sluices, &c. In addition there are six Frue vanner concentrators, two Blake ore crushers, and a very large stock of mining tools and supplies. The mill, engine-house, and ore platform are lighted by electricity, a special 20 h.-p. engine being fixed in the engine-room for this purpose. All the necessary buildings, such as stores, workshops, assay offices, &c., and buildings for the *employés* are on the property. The trade with the Mammoth Camp is large, and regarded as so permanent that the merchants of Tucson 50 miles distant, and those of Benson, about 70 miles distant, were each anxious to secure it by building a road to the mine.

ACCESS TO THE MINES.

The Tucson people were first in the field, and by their exertions with the county authorities and their own subscriptions, to which we contributed some 300*l.*, a new road is being made from a point 15 miles from the mine on the old road. This new road decreases the distance by about 8 miles, and is of better grade than the old one, and avoids the ravine. It has also the advantage of opening up a large timber district, from which the company can draw its supplies of fuel more cheaply than at present. About half this road is now built. I make rather particular mention of this road because my experience of mining camps is this, that those enterprising traders who cater for the necessities of mines, and spend their own money in doing so, have generally a very accurate knowledge of the capabilities and probable duration of the mine itself.

PROPOSED TRAMWAY.

Another great improvement to our property, if we carry it out, will be the tramway. Surveys have been made and estimates obtained of a wire tramway from mine to mill, a distance of about 3 miles. Such a tramway would reduce the cost of transport to 25 cents per ton, or less than half the present cost of hauling by mule team. On the present output the saving would be over 2,000*l.* a year. Negotiations are pending for erection of this tramway with Mr. Fletcher (the late owner of the Mammoth), to be paid for by the company out of the saving on hauling or otherwise. Referring now to the balance-sheet, there may be certain large items about which you will require more detailed information. For instance, on the debtor side is one of sundry creditors. This is made up by the debenture interest due from 15th August, 1889, to 31st December last, nearly 17 months, and amounts to 9,217*l.* 7s. 2d. Then there is an item of 950*l.* for the maintenance of the mine; 462*l.* for trade accounts, balance of salaries, &c., and the mine wages for December last, which make up a total of 12,993*l.* 12s. 5d. On the credit side, under the heading of expenditure in England, is the item of 2,615*l.* 10s. 4d., in which are included all the legal charges, printing and stationers' bills, directors' fees, salaries of all kinds, rent, rates, and taxes extending over a period of one year and eighst months, namely, from the 6th of May, 1889, when the company was incorporated, to the 31st December last. I would like to take advantage of the present occasion to speak in high terms of the manner in which we have been treated by the vendor of the property, Mr. Fletcher.

JUSTICE TO THE VENDOR.

He has done all that he could to help us in every possible way, not only

by being very patient with regard to the payment of what was due to him, but he has incurred considerable outlay in securing the adjoining mining property, in the hope that the Mammoth Company may see its way to acquire it, without any profit to himself other than would accrue to him as a large shareholder, and Mr. Fletcher has never sold a share or a debenture. Now, with regard to these other mines, we have recently had the opportunity of meeting Mr. Fletcher's son, and discussing the matter with him, and he has written a letter to the board, in which he says :—

IMPORTANT LETTER.

Paris, le Jan. 21st, 1891.

Chas. Goodyear, Esq., Secretary Mammoth Gold Mines, Limited.

Dear Sir,—Yours received. I wired you yesterday inquiring date of stockholders' meeting, as if it is this month I will return to London for it. Now, as to the Collins Mines, if I am not there you may inform the stockholders that Mr. Fletcher is the owner, I think, of three-quarters of that property, and that we will not dispose of the same before May 1st next, and undoubtedly not then. Our interests are identical, and while we are such heavy holders of Mammoth stock we would not see the Collins get into other or outside hands. We bought entirely to protect the Mammoth, not as a private speculation, and we must hold it to protect ourselves, not daring to separate the two properties. In the spring we shall, on consultation, undoubtedly be glad to accept your offer to prospect the mine with an option to purchase at some figure then to be agreed upon, as the writer does not think, under any circumstances, that these properties should be separated, and now that Mammoth has got on such a good and independent footing she should control these mines.

Yours respectfully,

(Signed) FRANK W. FLETCHER.

A MINIMUM PROFIT OF 20,000*l.* A YEAR.

We have also just received letters from his father to the same effect, that a working arrangement can probably be entered into prior to a purchase, from which the Mammoth Company shall derive great advantage. I have now, gentlemen, told you pretty fully what we have done in the past, and are doing in the present. One word about the future. Every member of an assemblage like this one, accustomed to facts and figures, will perceive that we shall soon be handling a large amount of profit, say, to begin with, a minimum of 20,000*l.* a year, after paying debenture interest and all expenses at home and abroad, and you will ask, you are indeed met here to-day, expecting to hear what we are going to do with this sum. Well, gentlemen, my answer to that important question will be this: The last clause in our report tells you that the board have under consideration projects for largely increasing both the mining and milling capacity. To do this, we must necessarily indent upon some portion of that 20,000*l.*, but, probably, not to a very large extent ; and I have foreshadowed to you the kind of arrangement which we hope to make with the present owner of the adjacent claims. We must also avoid the terrible mistake of not keeping well ahead with our development work.

FUTURE PLANS.

What inroads in our nett earnings these plans and provisions for the future will make I cannot precisely calculate to-day, but I will go this far and say, that whatever the balance may be it will go as dividend to the share capital, and it will probably mean 30 or 40 per cent. per annum to begin with to the lucky purchasers of our shares at their present ridiculous price. But whatever your board resolves to do in this important matter, will be done with the utmost regard to your interests, and at the end of the present quarter we hope to be in a position to tell you what we have done, and how much we can allocate as an interim dividend upon your shares. That, gentlemen, is how the matter stands at the present moment, and it is occupying the most careful attention of the board. Nothing, I am sure, can be fairer to the contracting parties than an arrangement such as this, whereby the probable purchaser tests the value of the goods before he closes the bargain. Of course, all mining properties are more or less an uncertainty, and if these adjoining claims had been sufficiently developed when my co-director visited them, to prove that they were equal or perhaps superior to the Mammoth in extent and richness, Mr. Fletcher's single purse, well filled though it may be, would not, perhaps, have been equal to the occasion, and certainly we ourselves would not have been able to buy them. If we decide to acquire these mines and add them to the Mammoth, you will probably possess one of the largest gold mining properties in the United States, and as development proceeds and justifies our doing so, we can go on adding to the stamping power at our present mill up to almost any amount. I may state that a recent crushing of ore from these adjoining mines assayed $14 per ton. I do not wish to conclude my remarks, gentlemen, without expressing the thanks which we feel here to the staff at the mines, to whose experienced and economical working our success is so largely due. Whatever your directors may decide upon doing in the future, we feel satisfied that there are brains at the mines, together with honesty and energy, to carry out our instructions and attain complete success. I now beg to move the reception of the annual report, and the adoption of the statement of accounts, inviting any discussion and enquiries which the shareholders present may think proper to introduce. (Cheers.)

The CHAIRMAN here invited the fullest discussion.

A SHAREHOLDER : Is Mr. Fletcher an Englishman or an American?

The CHAIRMAN : An American.

Mr. WINCHESTER : I have very much pleasure in seconding the adoption of the report.

Carried unanimously.

The CHAIRMAN : The next point is the appointment of auditors, and of those we have we can only speak in the highest terms.

On the motion of Mr. REECE, Messrs. Monkhouse, Goddard and Co., were unanimously re-elected.

A GOOD TELEGRAM.

The CHAIRMAN : I have pleasure in reading to you the last telegram from the mines. I was expecting some gentleman to rise and ask questions, but failing that I will read this telegram, which deals with the output for the last month :—

"Shipped bullion amounting to $11,300 ; for the month of January it amounted to $21,600 ; for the whole month, total amount crushed, 2,884 tons. The mill has run 29 days during January. Remitted to the bank the amount which is $21,600."

(Cheers.)

A SHAREHOLDER : That is not equal to the 60,000*l.* per annum you mentioned.

The CHAIRMAN : It does not include the full clean-up. This telegram came within two days of the end of the month, and the whole could not be included, so that, if anything, it will be over rather than under the average. It is quite keeping up the monthly average which amounts to 60,000*l.* gross per annum. We shall be glad to hear criticisms favourable to our report or hostile. (After a pause). I have simply to thank you for your presence and to tell you most caudidly that

I FEEL VERY SANGUINE

about the future of this mining property. It is a low grade ore mine, and we have apparently any quantity of stuff which we hope to work diligently, and to strike every now and then some richer deposits than those in which we have hitherto been working. If we can make this financial arrangement with the Collins, then I have understated considerably rather than overstated the fact that we shall hold one of the largest gold mining properties in the United States, and certainly one of the richest and the best. I thank you for listening to me as patiently as you have done. (Cheers.)

CHAIRMAN CORDIALLY THANKED.

Mr. REECE : I have great pleasure in proposing a vote of thanks to the chairman.

A SHAREHOLDER : I second it most cordially.

A third SHAREHOLDER : I support it with all my heart. We have had a most interesting meeting, and the prospects of the company are of the brightest description. (Hear, hear.)

The CHAIRMAN : Your thanks are an incentive to us to renewed exertions on your behalf. (Cheers.)

THE EXPLORATION CO., LIMITED.

THE FIRST YEAR SHOWS THE HANDSOME PROFIT OF 57,596*l.*

THE directors have pleasure in submitting to the shareholders the annexed statement of accounts, from the formation of the company to the 31st December, 1890, showing a profit available for dividend amounting to 57,596*l.* 3s. 5d., of which 41,433*l.* 6s. 8d., equal to 3s. per ordinary share and 9*l.* 12s. 4d. per founders' share, has been already distributed as an interim dividend. Out of the balance undistributed, 16,162*l.* 16s. 9d., the directors recommend the payment of a final dividend of 1s. per share on the ordinary shares, and 3*l.* 10s. per share on the founders' shares, carrying forward a balance of 1,762*l.* 16s. 9d. After deducting preliminary expenses and cost of office furniture, the balance of the premium of 1s. per share on the issue of the share capital, viz., 1,886*l.* 8s. 9d., is carried to reserve. The shareholders will doubtless agree with the board in considering the dividends satisfactory, especially as the last six months of 1890 were singularly unfavourable to the development of the business of the company. It is believed that circumstances will, during the present year, favour the completion of several very promising transactions which the directors have now in hand.—ARCHIBALD MCKINLAY, Secretary.

SAN JACINTO ESTATE, LIMITED.—The offices of this company have been removed to Copthall Avenue (Albert House), E.C.

FOUNDED 1871. **BANKERS:—ALLIANCE.**

"MINING WORLD" Stock and Share Agency.

CORRECT INFORMATION IS THE BASIS OF SUCCESSFUL DEALING IN MINING SHARES.

THE AGENCY CAN COMMAND AND SUPPLY THIS TO INVESTORS.

GENERAL FOREIGN MINES.

Many of these deserve special attention. Profits may be secured by acting upon sound advice in Buying certain Shares, whilst losses may be avoided by timely sales.

INDIAN MINES.

The upward movement has commenced. The information possessed by the Agency is invaluable for those wishing to Buy or Sell Shares in this Market.

KAFFIR MINES.

Special efforts have been made to secure the best and most reliable information as to the management, resources, and prospects of South African Mines in which the profits and losses have been alike phenomenal.

GREAT CARE IS NEEDED BEFORE INVESTING.

Those doing business through the Agency are kept informed as to any exceptional news in connection with the Companies in whose Shares they are interested. Purchases can be made for forward delivery, and sales effected for Cash.

All communications should be sent to

W. DUNBAR QUINLAN,

234, 235, 236, GRESHAM HOUSE, OLD BROAD STREET, LONDON, E.C.

Telegraphic Address—"QUINLAND, LONDON."

London: Printed for the Proprietors by Straker Brothers, & Co. and Published at the Offices, 234, 5, & 6, Gresham House, Old Broad St., E.C., Saturday, Feb. 14, 189

THE LISTS WILL CLOSE ON WEDNESDAY, THE 18TH INSTANT.

SECOND ISSUE.

The Dividends declared have been as follows:—

For half-year ending 31st Dec., 1889, on the Preference Shares, 8%; on the Ordinary Shares, 15% per annum.
,, ,, 30th June, 1890 Ditto ditto
,, ,, 31st Dec., 1890 Ditto ditto

WOODHOUSE AND RAWSON UNITED, LIMITED.

SHARE CAPITAL:

ORDINARY SHARES ... ... £300,000.
PREFERENCE SHARES ... ... £250,000.

Of the above, the First Issue, namely, £200,000 Ordinary Shares and £150,000 Preference Shares, has been allotted.

The Directors, in accordance with powers conferred upon them at the General Meeting of Shareholders, held on the 9th January, 1891, invite Applications for the Balance, viz.:

20,000 ORDINARY SHARES OF £5 EACH.

There is no present intention of calling up more than £2 10s. per Share.

10,000 PREFERENCE SHARES OF £5 EACH,

entitled to a Preference as to Capital and to 7 per cent. Preferential Cumulative Dividend per annum, together with a further 1 per cent. in every year in which the Ordinary Shares have received a Dividend of 10 per cent. or upwards. And

£100,000 5½ PER CENT. 1891 DEBENTURE STOCK

(PART OF A TOTAL ISSUE OF £200,000.)

The above 5½ per cent. Debenture Stock is created partly to pay off the existing 6 per cent. Debentures, and partly to pay off the balance of the sum deposited with the Company as a Guarantee Fund.

The Debenture Stock will, upon the existing Debentures being paid off, which will be done by the Directors as soon as possible, become a first charge upon the entire undertaking.

The Debenture Stock is redeemable in 10 years at £105, being 5 per cent premium, or at an earlier date (but at the same premium), if with the consent of two-thirds of the holders of the Stock. Interest is payable half-yearly, at the Company's Bankers, on the 1st February and 1st August in each year; the first payment will be on the 1st August next, calculated from the dates of payment of the Instalments.

The prices of issue will be, for the Ordinary Shares 5s. per share premium, and for the Preference Shares and Debenture Stock, par.

Payment is to be made as follows:—

ORDINARY SHARES.		PREFERENCE SHARES.		DEBENTURE STOCK.	
On Application	10s. per Share.	On Application	10s. per Share.	On Application	5 per cent.
,, Allotment	10s. ,,	,, Allotment...	20s. ,,	,, Allotment	20 ,,
,, 15th April, 1891	10s. ,,	,, 15th April, 1891	20s. ,,	,, 15th April, 1891	25 ,,
,, 15th May ,, ...	10s. ,,	,, 15th May ,, ...	25s. ,,	,, 15th May ,, ...	25 ,,
,, 15th June ,, ...	15s. ,,	,, 15th June ,, ...	25s. ,,	,, 15th June ,, ...	25 ,,

Any of the above instalments may be anticipated, carrying interest from date of payment.

Of the above upwards of £20,000 has already been applied for.

As stated by the Chairman at the general meeting of Shareholders, the objects of the issue are to provide capital for the constantly increasing business of the Company, and to carry out various additional proposals, including a contract for the lighting of a portion of the City of Paris, and further to enable the Directors to pay off the balance of the £75,000 deposited with the Company, which they can now do on advantageous terms.

The last report of the Directors to the Shareholders, and the accounts of the Company to the 30th June, 1890, are enclosed herewith, which will enable intending subscribers to make themselves acquainted with the financial position of the Company, and so render it unnecessary to enlarge upon the great success which it has attained since its formation; the Directors are able to state that the outlook for the Company continues to be of the same satisfactory character.

The dividends declared have been as follows:—

For half-year ending 31st Dec., 1889, on the Preference Shares, 8 per cent.; on the Ordinary Shares, 15 per cent. per annum.
,, ,, 30th June, 1890 Ditto ditto
,, ,, 31st Dec., 1890 Ditto ditto

Besides paying the above Dividends, it will be seen that the Company has written off £7,421 off the Patents Account, and have placed the following sums to Reserve Funds, viz.:—

£15,000 to the Geueral Reserve Fund,
£10,000 to the Goodwill Reserve Fund,
£1,000 to Employés Pension Fund,

and, in addition, carried forward £16,335 undivided.

To give some idea of the extent, and at the same time variety of the operations of the Company, a *résumé* of last year's work is enclosed herein, by which it will be seen that almost every kind of article connected with electricity is manufactured at the works of the Company, and, in addition to which, as will be seen, important financial operations connected with electrical industries have been completed.

There are necessarily numerous contracts in connection with the formation of the Company and of the business, too numerous to set out, and applicants will be deemed to have notice of such contracts and to waive their rights to further particulars thereof, whether under Section 38 of the Companies' Act, 1867, or otherwise.

Prospectuses and Forms of Application can be obtained from the Secretary at the Offices of the Company.

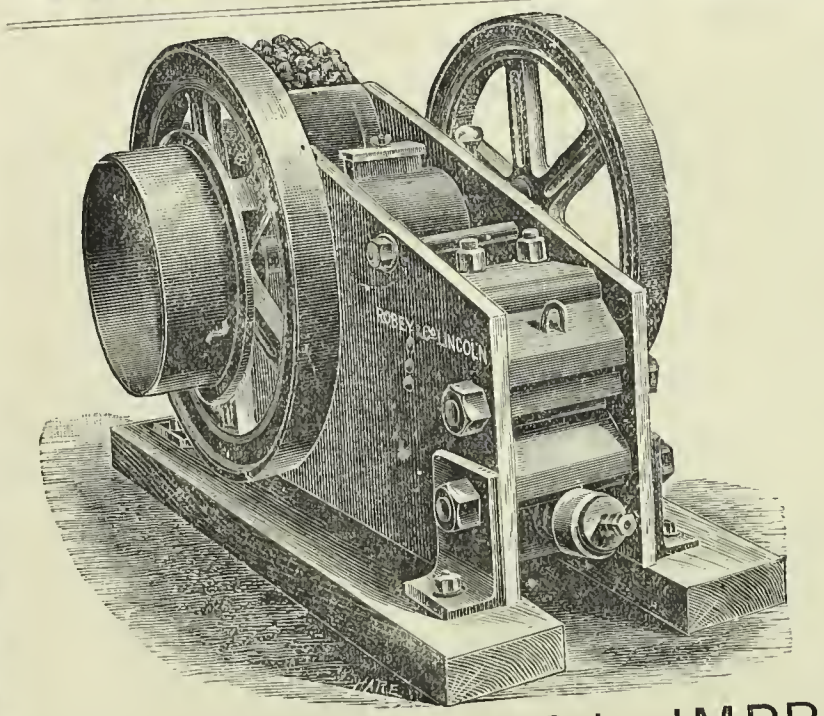
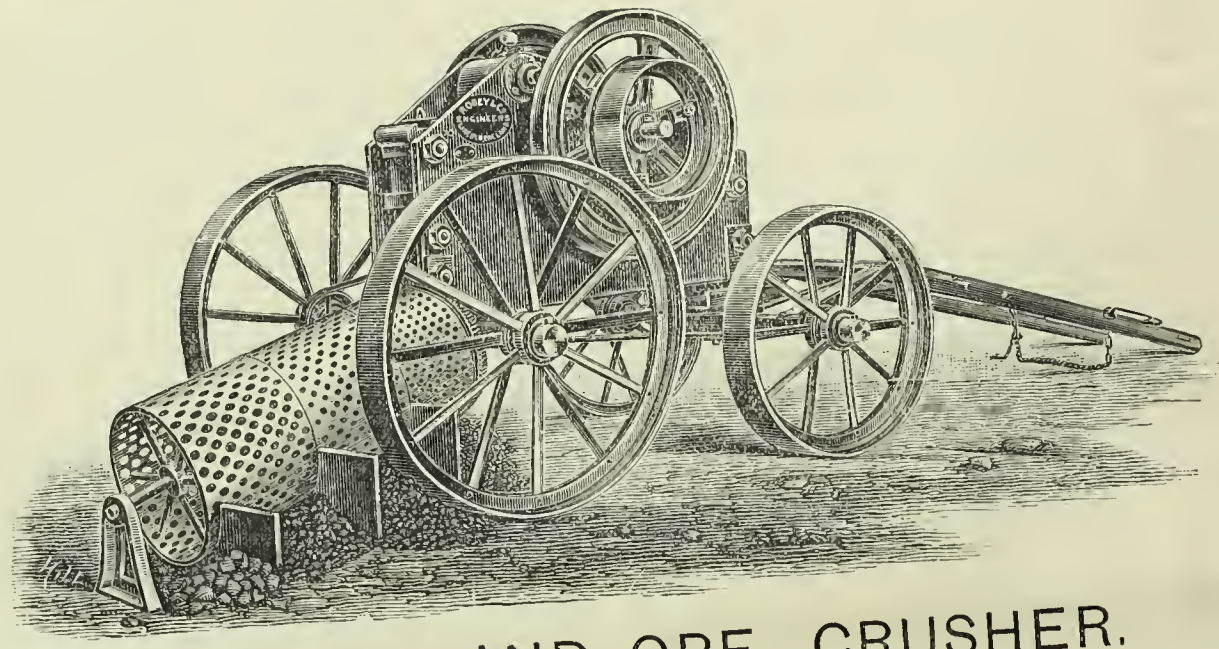
ROBEY & CO., Globe Works, LINCOLN.





ROBEY & CO.'s IMPROVED STONE BREAKER AND ORE CRUSHER.

ROBEY & CO.'S STONE BREAKER AND ORE CRUSHER, for crushing Ores, Quartz, Road Metal, Railway Ballast, Cement, Phosphates, Coke, Coal, &c.

The above illustrates the most simple form of Stone Breaker made, and has no equal for easy transport over bad roads or mountainous countries. Steel has been largely employed, and in the place of the usual heavy Cast-iron Frame, a neat and much stronger Frame of rolled steel is used, with a saving of some tons in weight. The great depth of the side gives it increased stiffness, and the materials of which the machine is constructed ensure great rigidity and thorough adaptability for heavy work.

The parts are few and simple, and thoroughly accessible for oiling, adjusting, and cleaning, and the liability to breakage is reduced to a minimum.

The jaws are easily renewed, and are made of our own special mixture and treatment, rendering the face well suited for quartz. These jaws can be adjusted while the machine is running so as to reduce the material to any desired size, and are adapted for either cubing or crushing.

PROSPECTUS.

The Company has been formed for the purpose of acquiring the invention of Mr. Ernst Gustav Hoffmann, of a combined weighing, printing, and delivery machine, together with the patent rights granted to him for the United Kingdom of Great Britain and Ireland.

Although automatic machines have now been in use for some years, and have become of recognised public utility, earning large profits, it is believed that no machine has been brought into public use nearly approaching in ingenuity or earning capacity, the Quadruple Delivery Machine invented by Mr. Hoffmann.

An inspection and trial of the patented apparatus, which applicants for shares are invited to make, will show a simple and ingenious weighing and delivery machine, of elegant and attractive design, and perfect in its automatic action. The following has been supplied by those conversant with its details as a description of its action:—

The customer stands upon the base of the machine, places a penny in the slot, and, by the automatic action of the machinery, is weighed. The machine, at the same time, delivers for the penny a card, upon which is printed the customer's weight and the date (having printed upon one side the portrait of some public character); and a packet of chocolate, (or sweatmeats or matches, &c.), without any act or movement being necessary on the part of the customer beyond placing the penny in the slot, and drawing out the card from the front of the machine. The glass cylinder in the front of the machine, as also the vacant spaces on the portrait-card or weight-ticket, are available for advertisements. It is believed that there is no other machine before the public which weighs, prints the weight, and delivers a card and a packet of chocolate, sweets, or matches, &c., at one operation. The machine possesses a simple contrivance to minimise fraud; base coin or discs of metal being visible as soon as they are inserted.

The machine delivers to the customer for one penny the following:

1. £25 insurance against general accidents on date of issue, if terminating fatally on that date or within 21 days thereafter.
2. Purchaser's weight with date automatically printed on a card.
3. A packet of chocolate, sweets, or matches; and
4. A portrait of some public character.

There is ample room in London alone for the use of at least 1,000 machines, in good paying positions, and of course other large towns and seaside resorts can utilise profitably a very large additional number. The directors hope to place 1,000 machines as soon as they can be manufactured. A calculation has been made upon the basis of 1,000 machines being set at work, and these it is confidently expected will earn the net profit estimated below.

ESTIMATE OF TAKINGS AT £1 PER WEEK EACH MACHINE.

Income per week.		
1,000 machines at £1 per week each		£1,000 0 0
Advertisements, on 1,666 gross plain printed portrait cards at 2s. 6d. per gross		208 5 0
1,000 cylinder advertisements, at 3s. per box per week		150 0 0
		£1,358 5 0
Expenditure per week.		
Sweets, matches, cards, &c.	£416 10 0	
Rents for placing machines, commission, wages, offices, salaries, repairs, insurance, &c.	350 0 0	
		£766 10 0
Net profit per week		£591 5 0
Estimated net profit per annum ...		£30,771

The above estimate is put merely by way of illustration, but it is expected that the income will be very much greater, owing to the machines being of vastly superior attraction to the machines now in public use; nevertheless, the above profit would be sufficient to pay a dividend of 16 per cent. per annum on the ordinary shares, and 40 per cent. on the founders' shares, besides allowing a large sum to be placed to a reserve fund.

One of these machines was, by the permission of the Chief Commissioner of the City Police, put up in the Avenue of the Royal Exchange, on July 12 (Hospital Saturday), and took £5 1s. 3d. in one day.

As a further test of the popularity and utility of automatic machines it would appear, by the balance-sheet of the Sweetmeat Automatic Delivery Company, Limited, dated November 21, 1890, that that company took £40,612 15s. 6d. by sales in one year.

With reference to the cost of making these machines, Messrs. George Salter and Co., of West Bromwich, the well-known manufacturers, have offered to supply them at a price on which the above calculation has been based.

An important feature is that this Company have arranged with a London Accident Insurance Company to insure each customer who meets with a fatal accident on the day of issue of the portrait and weight card, in the sum of £25, in accordance with the conditions printed thereon.

There is also little doubt but that the machines will be largely used in places of public entertainment, hotels, stores, drapery and other business houses, where the proprietors may desire their own advertisements to be printed on the portrait and weight card. A considerable number of applications for machines have already been received by the vendor.

Another great advantage of Hoffmann's invention is that novelty can be continuously sustained without alteration of the machine, by the introduction of new and interesting articles, which need not be uniform, or of the ordinary shape, but may vary from time to time both in form and size. That the card will be retained is in the highest degree probable, for otherwise the customer will lose—(1) the benefit of the insurance; (2) the record of weight; (3) the portrait. Thus the advertisement on the cards cannot fail to be of exceptional value to the advertiser, and as a necessary consequence a source of large income to the Company.

These advertisements are in addition to those in the front of the machine, and in the revolving cylinder, some of which will always be visible to the mere looker-on.

The terms of the contract for sale of the patent rights by the vendor to the Company provide for the discharge of the purchase money payable to the vendor either in fully paid shares, or part in cash and part in shares, or all in cash; in respect of the fully-paid shares, the same to be allotted in the proportions of ordinary and founders' shares as defined in this prospectus, viz.:—one founders' share for every 10 ordinary shares. The contract also provides that the purchase money, which has been fixed by the vendor if paid wholly in fully paid shares at £95,000, shall be reduced proportionately if paid wholly or partially in cash, as therein specified. The vendor undertakes all expenses attending the formation and underwriting a portion of the capital of the Company, down to the allotment of shares. In relation to these expenses, and to the subscription for part of the shares, as also ordinary trade agreements, certain contracts and arrangements have been entered into with various persons, which may constitute contracts, within the meaning of section 38 of the Companies Act, 1867. Applicants for shares shall be deemed to waive the insertion of dates and names of the parties to any such contracts, and to waive any further compliance than herein appears with section 38 of the Companies Act, 1867, and applicants for shares shall also be deemed absolutely to waive all rights to compensation under the Directors' Liability Act, 1890.

On so technical and complex a question as the legal validity of the patent rights, applicants for shares are not asked to rely on the judgment of the persons issuing this prospectus, but opinions of the eminent counsel, Mr. J. Fletcher Moulton, Q.C. (to whom one of the machines with the specifications has been submitted on behalf of the vendor) have been obtained, and applicants for shares are invited to inspect these as well as the machine itself, at the offices of the Company.

A contract for the sale to the Company has been entered into between Ernst Gustav Hoffmann, of the one part, and The Quadruple Delivery Machine Company, Limited, of the other part, dated the 16th day of February, 1891, which contract, with the memorandum and articles of association of the Company, can be seen at the offices of the Company.

Applications for shares should be made on the form accompanying the prospectus, and sent with the deposit, to the head office of the National Provincial Bank of England, Limited, in London, or any of its branches throughout the Kingdom. In any case where no allotment is made the deposit will be returned to the applicant in full, and where the number of shares allotted is less than the number applied for, the surplus will be credited in reduction of the amount payable on the shares allotted.

Prospectuses and Forms of Application can be obtained of the bankers, solicitors and brokers, or at the offices of the Company.

Dated in London, February 16, 1891.

QUINLAND—LONDON.

MINING MARKET.

City, Friday Evening.

PRICES FALL AWAY—THE GOLD FIELDS DEAL AND THE MARKET—ST. JOHN DEL REY DEBENTURES TAKEN UP—VICTORY MINE—SPECIAL REFERENCES TO MINES—VAN RE-CONSTRUCTION A SUCCESS.

Until yesterday the Mining market had held up its head tolerably well, but to-day it showed a disposition to droop, very much the same as happens in the case of paterfamilias on a Sunday afternoon after a full meal. Towards the close of Thursday afternoon the market slackened, and sellers were seeking buyers, and finding none. Later on there was a lapse into complete somnolence. Brokers seeing this moved dejectedly homewards, and their wives acted wisely if they said nothing to them that evening about additional household expenditure. In better spirits they repaired to the Rialto on Friday morning, and though at the opening there was a shaking of the dry bones, yet, later on, prices fell away in almost every section of the market, and resumed their mummified condition.

In the Indian Market the first effect of the issue of the Mysore circular was to cause a drop in the shares of that company; and a rise in those of Goldfields. This was the case, although the Mysore circular announced a 6s. balance dividend, making 75 per cent. for the year. The views of those for and against the proposed purchase of 268 acres from the Goldfields Company are pretty fully set forth in our leader columns. The directors naturally expect that 75 per cent. and the valuable property acquired will maintain quotations, but certain shareholders, notably those who look at things through market spectacles, seem to think that there will be a wet blanket thrown upon Mysores directly Goldfields shareholders begin to turn their newly-apportioned scrip into cash. Still as M. Thiers used to say, "the future is to the wisest."

Goldfields, after selling the 268 acres, has still a "little property" of about 8,000 acres left. It has made a second sale, on terms not yet announced, but believed to be at least equivalent to those to be submitted to the Mysore shareholders. If the directors go on like this they, along with their shareholders, will soon become incipient millionaires not to say mining Maharajahs. By the by, the Maharajah of Mysore is about to visit this country. It would be a novelty at an Indian mining meeting could he be persuaded to attend, and deliver his views on the subject. There have been big dealings in Devala-Moyar shares, which would have gone to much better prices but for the appearance in the market of large numbers of sellers wishful to take profits measured by pence.

The next most important market has been that commonly designated "The General Foreign." In this the rises have been out of proportion to the falls—few of the former and many of the latter. Colorados are better, probably because the reports from the mine are now comprehensible to ordinary mortals, and Dickens Custers advanced on good buying. Colombian Hydraulics and New Gustons are also firmer, but, with these exceptions, the foreign shares that are down present a doleful list. They are led off by Tolima with a fall of ½, whilst Frontino has lost 5s. of its big rise last week. Other shares for the most part are merely fractionally down. There is better news from Gold Hills. North Tolima is trying to issue 20,000*l*. worth of preference shares, so as to work its Fortuna Mine on a larger scale.

We are delighted to be able to mention that the St. John del Rey debenture scheme may now be regarded as an assured success. 58,000*l*. has been subscribed, and the other 1,200*l*. which will justify the board in going to allotment, will probably be made up within the next few days. Our satisfaction is complete at being able to make this announcement, because the success of the debenture issue saves the company the long, the costly, the delaying, and the disorganising process of re-construction. Of course, the full, debenture issue has not been taken up, but we have not the least doubt it will be before the present funds are expended. St. John del Rey shares will certainly (if the shareholders permit it to do so, and the issue lies entirely with them) achieve a success likely to far eclipse that of its near neighbour, Don Pedro, which was also saved from ruin by a debenture issue. An immense weight must have been removed from the minds of Mr. John Hoekin and his colleagues by the success of their proposals.. Shareholders who have not yet subscribed have now had an example set them which they should lose no time in following.

A telegram from the Eberhardt manager announces that he will lose no time in resuming work on the Eberhardt Old Mine. The call foreshadowed at the meeting has been made, and for the convenience of shareholders it is payable in two instalments of 3d. each, but no transfer of shares can be registered until the full amount of 6d. has been paid.

The Copper market has moved upwards—thanks to the improved price of the metal. Rio Tintos have led the way, followed by Quebrada, Cape Copper and Tharsis.

We have had numerous inquiries relative to the Victory Mine, and the position affairs have assumed since the recent meeting. We are happy to say that Mr. T. H. Watson has joined the board, and negotiations are now proceeding with another large shareholder for a similar purpose. The management is no longer in the charge of Mr. Nicholls, but in that of Mr. Lewis, in whom the directors have every confidence. We understand that the board propose to call a meeting shortly.

The news we published regarding Mammoth Company last week has had the anticipated effect upon the shares, which are almost double the price at which they were quoted 10 days ago.

In the Australian market the feature of the week has been the rise in Day Dawn, consequent upon the receipt of a telegram announcing the striking of a 3 ft. wide reef in the new lease, which carries gold in paying quantities. The shares are up nearly 3s. on the week, and Australian Broken Hills advanced 2s. on the declaration of a 1s. dividend. Shareholders of Broken Hill Proprietary Company are urged to keep up their spirits, because nothing is wrong with the mine; but it is difficult to do this when one sees one's shares "dwindling vilely."

In the African Market there has been considerable animation; but shares come out of the strife of the last few days lower in price. This has been notably the case with Simmer and Jack, whose share register is higgledy-piggledy. A similar remark seems, in a sense, to apply to Graskop — the company that recently paid a dividend under the happy circumstances to which we called attention at the time. So far as regard

Gold descriptions. In the land department there has been a moderate revival, in which South African Gold Trust, Oceana, Silati, Gold Fields of South Africa, Johannesburg Estates, and one or two other companies have participated. Explorations were better on the meeting. Diamond shares are down, but to-night a fairly satisfactory cablegram has been received from the Kimberley mine.

The position of Cornish shares is dealt with in our leader columns. Speculators have their eyes rather upon the tin market than upon the intrinsic merits of the mines. Shares have recovered for the most part, and notably Dolcoaths and Tincrofts. The returns from Drakewalls do not appear to have been duly considered by the public. 60 tons of arsenic soot have been produced in about a fortnight; 105 tons of copper and 5 tons of tin in about a month, yielding altogether nearly 1,000*l.* revenue. A correspondent writes: "The shares ought to be worth buying at present prices."

Van re-construction will be a success. It is with real pleasure we are able to announce this, for the stopping of this old and valuable home mine would be little short of a calamity. Over 30,000 out of 45,165 shares are already applied for, and if the shareholders do not make haste to absorb the balance there is no doubt that a syndicate will be formed, who, much to their own profit, will take advantage of the shareholders' neglect.

The outlook for next week is fairly satisfactory, and we should not be surprised to see cheap shares especially dealt in at improved prices.

Kaffirs.

There has been a fairly good week's business, although in some cases prices are lower than last week. This has been occasioned by the very severe storms which have just occurred at Johannesburg and its immediate vicinity. The most important declines have been in Geldenhuis and Simmer and Jack, while Pigg's Peak, City and Suburban, Crown Reef, Robinson, and Stanhope are also lower. The only rises to call for attention have been in Ferreira and Langlaagte Block B. The market generally closes weak.

Business:—Those down on the week are as follows:—Pigg's Peak, Ordinary, $\frac{1}{8}$; Preference, $\frac{3}{8}$; Aurora, $\frac{1}{8}$; Battery Reef, 1s.; Central Langlaagte, 1s.; City and Suburban, $\frac{3}{16}$; Crown Reef, $\frac{1}{8}$; Durban Roodepoort, $\frac{1}{16}$; Geldenhuis, $\frac{5}{8}$; Glencairn, 6d.; Henry Nourse, $\frac{1}{8}$; Heriot, $\frac{1}{8}$; Jumpers, $\frac{1}{16}$; Luipaards Vlei, $\frac{1}{16}$; Main Reef, 1s.; May Consolidated, 2s.; Moss Rose, 1s.; Robinson, $\frac{1}{8}$; Royal, $\frac{1}{16}$; Simmer and Jack, $\frac{7}{16}$; Stanhope, $\frac{1}{8}$; and Witwatersrandt (Knight's), 1s. 6d.

Those higher are Bantjes of 1s.; Black Reef, 6d.; Bothas Reef, 1s.; Dornkop, 6d.; Ferreira, $\frac{1}{2}$; Langlaagte, $\frac{1}{16}$; Ditto Block B, $\frac{5}{16}$; Modderfontein, 6d.; and Salisbury, New, 6d.

South African Lands.

A considerable volume of business has been transacted in this class, more especially in South African Gold Trust and Oceana, both of which have risen. On the other hand, London and South African Exploration, London and Orange Free State and Read's Drift have all been offered, and close lower on the week. British South African Chartered appear a cheap purchase at present prices.

Business.—Those showing a fall are as under:—British South Africa, Chartered, $\frac{1}{16}$; London and South African, $\frac{1}{4}$; London and Orange Free State, $\frac{1}{4}$; Moodies, 10s. paid, $\frac{1}{16}$; Read's Drift, $\frac{1}{8}$; and Zoutpansberg, 1s.

The following have risen:—Exploration, $\frac{1}{16}$; Gold Fields of South Africa, $\frac{1}{16}$; Johannesburg Estates, $\frac{1}{16}$; Oceana, $\frac{1}{8}$; Silati River, $\frac{1}{16}$; and South African Gold Trust, $\frac{1}{8}$.

Indians.

Goldfields of Mysore have again been the feature of this market and when it became known that the Mysore Company would probably give 25,000 fully-paid shares, which is equal at the market price of Mysore shares to 150,000*l.* in cash, for a small piece of this company's ground, the shares were eagerly sought after, and they advanced to 1*l.* 16s. 3d. buyers. In addition to the above sale, it has just leaked out that another sale has been made to a company to be called the "Rood Block" at almost as good a price, and seeing that Nine Reefs and other companies must soon become purchasers, it will not surprise us to see the shares at a much higher figure. Champions, Mysore Reefs, and Nine Reefs have been in steady request, and it appears there are very few shares on offer. Mysore Gold have been slightly depressed, and close lower on the week, though they have recovered part of the fall they experienced yesterday.

Business:—A rise is recorded in Goldfields of Mysore of $\frac{1}{8}$; Nine Reefs, $\frac{1}{16}$; South East Mysore, 3d.; whilst those showing falls are Champion Reef, 1s.; Mysore Gold, $\frac{3}{16}$; and New Devala-Moyar 3d.

Australians.

A fairly active business has been transacted in this class. Australian Broken Hills have been in demand on the announcement of

1s. dividend. It is certainly strange that the shares of such mines as Gympie Great Eastern, Day Dawn P.C., and Mount Morgan should remain at the present low prices, seeing they all pay dividends regnlarly. Day Dawn Block has made a very important discovery, and should it continue as at present there is no reason why the shares should not again go to par. They certainly appear cheap at 7s. 6d. This is a rise on the week of 2s. 9d.

Business :—A rise is to be noted in Australian Broken Hill of 2s., Cumberland, 3d.; and Day Dawn Block, 2s. 9d. The falls are in Gympie Golden Crown of 3d.; Gympie Great Eastern, 9d.; Kangarilla, $\frac{3}{16}$; Mosman, 3d.; Mount Shamrock, 3d.; and Scottish Australian, $\frac{1}{8}$.

COPPER.

The rise of 5s., which took place in the price of copper on Monday, put life in most of the shares of this description. As usual Rio Tintos lead the way in the upward move and are considerably higher, while Quebrada, Cape and Mason have improved in a smaller degree. The market closes firm.

Business :—Those closing higher are Capes of $\frac{1}{8}$; Quebrada, $\frac{1}{4}$; Rio Tintos, $\frac{7}{8}$; and Tharsis, $\frac{1}{8}$; whilst others remain firm at last week's quotations.

GENERAL FOREIGN SHARES.

There was some lively dealing the early part of the week, but prices have in several instances been affected, like jobber and broker, by the fogs. Frontinos have gone back somewhat, which is hardly to be wondered at after the heavy rise, but why Tolima should have fallen 10s. on the report, when the manager assnres holders of a mnch better statement next month, appears strange. Pahang Corporation, Richmond, Orita and Old Lout are lower.

Golden Gates, which at one time reached $2\frac{1}{2}$, have fallen to 2, $2\frac{1}{4}$, in consequence of a heavy storm at the mines, although the manager wires to say it has not done any injury to the works.

New Guston had the chief rise of the week. Colorados are spoken of as likely to go much higher. There has been a steady enquiry for California, Eberhardt, Loma, Colombian Hydraulic, Russells, and Ynruari.

Business.—Those quoted higher on the work are as under :—Colorado Silver, 6d.; Colombian Hydraulic, $\frac{1}{8}$; Dickens Custer, 9d.; Kapanga, 3d.; New Guston, $\frac{1}{8}$; New Viola, 3d.; St. John del Rey, 3d.

Those lower are Almadas, 6d.; Amador, 6d.; American Belle, 1s.; Coromandel, 6d.; Elkhorn, $\frac{1}{16}$; Emma, 6d.; Flagstaff, 9d.; Frontino and Bolivia, $\frac{1}{4}$; Golden Feather, 6d.; Golden Gate, $\frac{1}{8}$; Lisbon Berlyn, 3d.; Montana, 1s.; New Gold Hill, 1s.; Old Lout, $\frac{1}{8}$; Orita, $\frac{1}{8}$; Pahang Corporation, $\frac{5}{16}$; Palmarejo, 6d.; Richmond, $\frac{1}{8}$; Tolima, $\frac{1}{2}$; and West Indian, 6d.

The following list shows the principal changes which have taken place :—

	Last Week.			This Week.	
Almada	3/6	4/	...	3/	3/3
Amador	7/	8/	...	6/6	7/6

LATEST FROM THE MINES.

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—The board have declared an interim dividend of 1s. per share, being at the rate of 5 per cent. upon the capital of the company, payable on Monday, March 16 next. The transfer books will be closed from March 7 to 18 next, both inclusive.

BRILLIANT.—The company has cleaned-up 1,650 tons for 3,500 ozs. gold, value 13,000*l.*, and declared a dividend of 2s. per share.

BROKEN HILL PROPRIETARY.—In connection with the decline in the price of the shares they have received a cablegram from Melbonrne stating that there is nothing wrong with the mine beyond that the capacity of the furnaces has been reduced temporarily owing to scarcity of water, but this will in no way interfere with the dividend.

DAY DAWN BLOCK AND WYNDHAM.—A cablegram from the general manager at Charters Towers gives the result of the crushing for the period ending the 14th instant "514 tons crushed; yield of gold, 975 ozs.; approximate value, 3,365*l.*; total expenses, 1,220*l.* We have strnck a reef 3 ft. wide in the new lease, containing gold in paying quantities."

DAY DAWN P.C.—A telegram gives the result of this company's crushing for the fortnight ending Feb. 14, viz. :—"1,150 tons, 1,034 ozs." (Estimated value, 3,515*l.*). The directors have sold, through Messrs. Johnson, Matthey and Co., the gold, ex Taroba, which realised 4,726*l.* 13s. 4d., and have been advised of a further shipment per Jumna of 782 ozs.

KAPANGA.—Telegram from manager :—"Since last message have crushed 80 tons; yield, 60 ozs. Appearances are favonrable."

MIDAS.—Cable from the mine : "Yield for week, 74 ozs."

MOUNT LEYSHON.—A cable dated Feb. 17 has been received from the manager at Charters Towers, giving the fortnightly crushing : "640 tons crushed, 315 ozs. gold; 20 stamps mill ran 288 hours; estimated value, 710*l.*"

NEW QUEEN.—A cablegram gives the result of crnshing for the past fortnight : "255 tons (yielding) 265 ozs. (gold); air compressor and rock-drills working satisfactorily." This company has sold, through Messrs. Johnson, Matthey and Co., the bar of gold, weighing 451 ozs., ex Taroba, which realised 1,591*l.* 11s. 7d.

SUNBURST.—The company partially cleaned up for a fortnight's work, 240 tons, yielding 780 ozs. gold; value, 2,900*l.* An interim dividend of 1s. per share is declared. The final clean np will take place at end of this month.

FOREIGN MINES.

ELKHORN.—Cable from Capt. Plummer :—"Bullion shipped for week ending Feb. 14 $9,000."

GOLDEN FEATHER CHANNEL.—Cable from Col. Frank McLanghin, the company's general manager at Oroville :—"Heavy storm raging here from Friday to Sunday midnight. Encountered terrific weather, but there is no damage. Everything is going well and weather very fine."

GOLDEN GATE ALLUVIAL SYNDICATE.—A cable from Col. Frank McLaughlin, the company's general manager at Oroville, states :—"Greatest storm for many years; commenced midnight Friday, ended midnight Sunday. River flowed 3 ft. over dam, which passed through ordeal triumphantly. Weather now very fine. and everything is going well."

KETCHAU (PAHANG).—Encouraging assays of samples of thc ore have been published by the company.

LA PLATA.—Results for Jan.—Mine royalties, $1,100; dump royalties, $305; profit for the month, $1,250. The prospects at the mine are enconraging.

NEW GOLD HILL.—Cable from the superintendent :—"I started the stamping mill the 3rd inst. Putting throngh the low-grade ore first, and will get into some of the 160-ft. shoot ore in a few days." Samples of ores recently received from the mine, and which were taken from the discoveries lately made, having been submitted to Messrs. Johnson, Matthey and Co. for assay, give the following results :—Martin shaft, from 4 ozs. 1 dwt. 12 grs. to 11 ozs. 2 dwts.; 160-ft. level west from Barnhardt shaft, from 16 dwts. 12 grs. to 6 ozs. 5 dwts. per ton.

NEW PIERREFITTE.—The company has sold 250 tons blende to Mr. J. F. Kimmel, at 4*l.* 16s. per ton, f.o.b. Bordeaux.

PITTSBURGH CONSOLIDATED.—The manager cables :—"Two mills working at present. Bullion produced, two weeks, $2,750."

RIO TINTO.—The company notify that at the 22nd half-yearly drawing of their 5 per cent. bonds, 1880, to be held on thc 28th inst., bonds amonnting to 25,600*l.* will be drawn, to be paid off at par on April 1.

TOLIMA.—The snperintendent telegraphs the January returns :—"Returns, 4,500*l.* Profit over 2,000*l.* Machinery only worked half-time. Profit will be much larger next month. Shaft sunk 8 ft.

Bottom of engine shaft worth $1,500 per fm. Sankey's winze worth $1,500 per fm. 100 fm. west worth $800 per fm."

Ruby (Feb. 17)—Telegram received from Eureka :—"13 tons ore on company's account smelted at Salt Lake, producing to company $830."

United Mexican.—Telegram :—San Cayetano : Gross returns for week ending Feb. 14, $2,700 ; expenditure, $4,150 ; loss, $1,450. El Cubo : Gross returns for week ending Feb. 14, $5,750 ; expenditure, $4,900 ; profit, $850.

Zaruma.—January produce telegraphed thus :—"Mill working 13 days crushed 270 tons of quartz, producing 165 ozs. of bullion. Heavy rains have collapsed mill flume. It will take 10 days to get renewed."

Home Mines.

Atlas Tin.—The directors call attention to the fact stated in the last report that the lode is getting larger and of better quality in depth. They have great hopes therefore of meeting with a good lode in the deep adit, and as the necessary machinery for stamping and dressing is erected and paid for, the mine can be very cheaply worked.

Ticketing for Tin Ores.

A tin ticketing took place at Redruth on Tuesday last, when 251 tons were offered, with the following results :—

Value of Ores Sold from Each Mine.

	Tons.	Cwts.		Per ton. £	s.	d.		Value. £	s.	d.
Carn Brea	35	0	.....	50	17	6	.....	1,780	0	0

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

Kimberley Diamond.—A cable announces the result of two trial washings :—"103 loads top ground, 23 carats ; 240 loads hard ground, 53 carats.

Moodies.—Cable from the head office in Pietermaritzburg :—"369 claims rented or leased ; 2,470 tons crushed by claim-holders yielded 823 ozs. of gold.

Wassau.—The yield of gold for the month of Dec. last was 90¼ ozs., of the nett value of 344*l*. 10s. 8d. During this month the mill worked 17 days, and crushed 165 tons of ore, giving a yield per ton of 0.53 ozs.

United Langlaagte.—The manager reports for Dec.—Mill ran 30 days, crushed 5,000 tons of ore, and returned an output of 1,563 ozs. of smelted gold, or an average of 6.25 dwts. per ton of rock treated. Working expenses, inclusive of development, amounted to 16s. 9.94d. per ton and left a profit for the month of 1,432*l*. 19s., exclusive of redemption. A total of 176 ft. of driving and rising has been put in on the south reef second level.

Barrett.—The mine manager reports Jan. 13 :—December gold 190½ ozs. forwarded. Mill working well, with full supply of ore. Alluvial : In my last I reported that we had apparently struck pay gravel, and this proved correct. We took 33 ozs. out of the boxes on the 10th inst. Whether we get more or not is, of course, uncertain, but the find is in itself satisfactory. (A 50-oz. nugget has since been cabled.) At Poverty creek we have not yet cleaned up the large paddock. Prospecting party still at work, and prospects favourable.

Virginia (Transvaal.)—Capt. Joseph Richards cables : "The workings on the Von Brandis claims continue to show the most satisfactory results ; the lodes in the 50 ft. (windlass) shaft, and the 80-ft. level south of Curtis shaft retain their widths as previously advised, and continue to show good colours of gold by pan washing. My opinion as to the value of the property remains unchanged. Work is being pushed ahead with all speed." The funds for the completion of the purchase of the Von Brandis and Pentland claims and the 10-stamp mill and appliances have been remitted.

Cerro de Pasco.—Letters have been received from Mr. Howse, the mining manager, dated Jan. 11, in which he states that he anticipates cutting the west reef at about 85 ft. depth in the uew shaft, and the middle reef about 20 ft. from the foot of the shaft at the 100-ft. level in the eastern cross-cut. Of the three reefs prospected near the bullion block, the middle reef, which is about 1 ft. wide, gives the best prospects in the pan, about 10 dwts. There are other reefs lying parallel and to the east, all of which will be intersected by the cross-cut. At the west end of the property driving on the middle reef is being continued, and Mr. Howse hopes to come into pay ore before long. The reef is quite 4 ft. wide, but still gives poor results in panning.

Akankoo (Feb. 14.)—The following important telegram has been received from Mr. Doering :—"Mine sumped tangle (sic.), down." This means that the mine has been cleared to the 100-ft. level, a plat cut with water sump below it, and the Tangye permanent steam pump fixed. Stoping and crushing can now be commenced. Mr. Doering writes on Jan. 12 as follows :—I have the highest possible opinion of the mine, and now that things are to be done miner-like, I have every confidence in ultimate success. I have got a great deal to put straight, and when doing things systematically one piece of work must follow another, hence a little delay will take place before crushing commences, but when I do begin I expect the work to go on regularly month after month.

May Consolidated.—December report :—Development work, a formerly reported, was continued until the 20th of the month, when it was decided, as a temporary measure, to suspend it partially, and confine mining operations chiefly to the stoping of ore for the supply of the two batteries. This was decided upon principally owing to the scarcity of native labour. As we have a large quantity of ore in sight, this will cause little or no inconvenience. All work formerly reported on the second level in the Annie shaft has gone on as usual. The reservoir for water will be completed in about two weeks' time, when the pump will be fixed, and driving on the lodes commenced to meet the works in the second level from the May shaft. In driving and raising during the month, nothing new has occurred in regard to the bulk or value of the lodes. Mills : The old 20-stamp battery ran regularly.

Pigg's Peak Estate.—Extract from Mr. Murray's letter, dated Jan. 11 :—Devil reef : The rain has very seriously interfered with our work at this point ; however, I am doing the best I possibly can ; up to date only 50 tons have been delivered at the battery, whereas we should have had 150 tons. I am very short handed for labour, it being impossible to get the natives to work, and on this account I can do no work on other portions of the concession. I am making a working plan of the work on the reef, and will send you a copy as soon as completed. I will also send a tracing, showing where it is intended to put the 10 head of stamps when removed, and the source of water supply for driving power. I regret very much that the board were not able to form any idea as to the exact locality where the rich strike was made. As to giving measurement of work performed, it has been an impossibility to give anything definite as to extent, &c., as all work has been surface work. I am now taking everything as it comes, making no selections, and as soon as I get a good face on the hill, I may be enabled to form some idea as to what we have. The ore now going through the battery is good 2 oz. stuff, and is getting better. I expect the month's crushing to go from 3 to 5 ozs. per ton. In the cutting on west side of hill I have put up a windlass, and will sink on reef as long as the gold shows, the south cross-cut has 17 ft. yet to go before getting to a point directly under the shaft. The above letter was delayed a week by the floods in South Africa. From an advice received from Cape Town it appears that the mail for the following week has also been delayed.

REVIEWS.

Laxton's Builders' Price Book for 1891, Containing Above 72,000 Prices. Originally compiled by William Laxton. London : Printed and published by Kelly and Co., 51, Great Queen Strect, Lincoln's Inn.

This work, of which the present is the 74th edition, has come to be recognised as a standard book of reference on the building trade and cognate industries. The general condition of the trade is described as satisfactory, but the condition of the labour market evidently causes the compiler some uneasiness. We may add, in support of our opening remark, that this book is the one which is referred to in the Law Courts in disputed cases.

The Ingersoll-Sergeant Drill Co. (of America).—The company intimate that, having purchased the entire European rights in the Ingersoll Drill Patents, and the business of Messrs. Le Gros, Mayne, Leaver and Co., of 60, Queen Victoria Street, London, E.C., they will continue temporarily to carry on the business at the same offices, pending its establishment on a more extensive basis. They further wish to state that Mr. W. Mayne Treglown, from the New York works, is now in attendance at the above office, to give any person interested in the subject full information as to the most modern system of tunnelling and mining as carried on in America by the Improved Ingersoll-Sergeant Rock-Drill.

Hansard Publishing Union.—An application was made yesterday to Mr. Justice Chitty on behalf of the Debenture Corporation for the appointment of a receiver and manager of the Hansard Publishing Union. The Debenture Corporation had advanced 250,000*l*. to the Union on the faith of an agreement that debentures for that amount should be issued to them, and on the security of a deed. The deed was executed after the writ in the action was issued, but the debentures had not been issued. An issue of 50,000*l*. worth of debentures was made prior to the agreement with the Corporation, and in respect of that issue a receiver and manager has been already appointed. The present applicants proposed to have the same geutleman appointed. The Union is largely indebted to unsecured creditors, and if the business were stopped serious inconvenience would result. A petition for the winding up of the company has been presented, and it will be heard this day week. On the above statement by counsel Mr. Justice Chitty appointed a receiver and manager, the management to continue for six months.

New Hoover Hill.—Report for month of Jan.—Provost shaft : Sinking below the 50-ft. level, sunk for the month 16 ft. The vein has greatly improved in the past week ; it looks as if it were coming into a good bunch of ore at this point. The principal part of the gold obtained during the month was got from there. Driving south at this level, we have driven for the month 23 ft. ; the ore continues low grade. I have stopped breaking ore around these old workings, as it is too poor too mill. The mill ran for the month 19 days, crushed 782 tons of ore, yielding 62.07 ozs. of bullion, which I am shipping you.

BRITISH MINING INTELLIGENCE.

D'ERESBY AND GWYDYR (Feb. 18).—No. 10 level: In south cross-cut we are still getting strings and good lump of lead. We have had less spar and lodey ground during the week, but have more spar and lead mixed through it to-day again. I have suspended the driving of main level north from shaft for cross-cutting the lode. This cross-cut will be 8 fms. north of No. 2, and 13 fms. from shaft cross-cut. The lode looks very well, is of a lead-bearing character, and carries a mixture of blende. No. 9 level: In No. 1 winze, south of shaft, we have started a stope. The lode has improved, and is now worth 15 cwt. per fm. The stope over level north of shaft is communicated with the small sump sunk in bottom of No. 8, and is still worth 1 ton of lead per fm. No. 8 level: The main level north from shaft is suspended for the present and a stope started in the ore ground we passed through a month ago, which is worth ½ ton of lead to a fm., and promising to improve. The stopes south of No. 2 winze south of shaft are worth 15 cwt. of lead to a fm. Surface: The fine dry weather we have had for a month now has very much reduced the feeders supplyiug our reservoir, but we have still enough water for crushing and dressing.—H. NOTTINGHAM.

DRAKEWALLS (Feb. 18).—Lode in 160 east highly promising; 7 tons mundic mixed with a little tin, and occasional rich stoues of copper. In consequence of breakage in balance-bob progress not so good. In 160 west lode greatly improved; 11 tons mundic, and saving work for tin. In rise, back of 160, 12 tons mundic; 2 fms. for 12 ft. risen in month; expect to communicate with winze in bottom of 147. Stope in back of 160 west: 10 tons mundic per fm., mixed with a little tin. Lode in 147 east: 4 tons mundic. In 147 west: Lode very kindly; 4 tons of mundic with good stones of copper and a small proportion of tin; 3 fms. 1 ft. driven; water still flowing. In winze bottom of 147 east: 12 tons mundic for length. 9 ft. In stope bottom of 132 east: 7 tons copper and mundic. In 132 west: 4 tons copper and mundic. Coombe Company carting away arsenic soot, estimated, 60 tons. Copper (computed): 105 tons sold to-morrow. Purpose selling a little over 5 tons tin to-morrow.

EAST BLUE HILLS (Feb. 19).—During the past four weeks the pitches have yielded very well, and on the whole are improved. The 30 east end is a little changeable owing to cross-heads, but, on the whole, worth 15*l*. to 20*l*. per fm. The 35 east end and stope continue about the same as last reported. We are busy at the floors getting ready a parcel of tin for next ticketing.—W. NANCE.

EAST GRASSINGTON (Feb. 18).—Hammond shaft: The lode in the 47 west is from 18 to 24 ins. wide, carrying lime spar, barytes and a nice branch of lead ore, worth 20 cwt. per fm.; the country rock continues tight and spare for progress, the richest point being the sole or foot of our drivage. Stope in back of level in a vein 18 in. wide, worth 12 cwt. of lead ore per fm. King's sump: Drivage and stope eastward work together, 30 cwt. of lead ore per fm. No. 2 sump: Is sunk 48 ft. below the 47, lode improving in size and value as we get clear of the disturbing influence of the horizontal bed, and is to day 18 ins. wide, the filling matter being chiefly soft sugary spar and gossan, well mixed with patches of good quality lead ore. Stope in intermediate level in a vein 18 ins. wide, worth 12 cwt. lead ore per fm. Stope in back of 37 east, in a vein 2½ ft. wide, worth 11 cwt. of lead ore per fm. Harris main engine shaft: In the 47 east we have passed through a large lode filled with gossan and spar, and well lined with large cubes of grey and blue lead ores; another joint came in obliquely on the north side, and the vein is almost perpendicular with well-defined walls carryiug spar, barytes, gossan, and lead ore, worth 22 cwt. per fm. Stope in back of level worth 10 cwt. of lead ore per fm. Stope west of shaft worth 11 cwt. of lead ore per fm. We have resumed driving the 37 east, which is in a hard bar of knotty ground, which will probably coutinue to the heave. Stope in back of level, worth 11 cwt. of lead ore per fm. Good progress is being made in re-opening and repairing water level. Dressing and surface operations pushed forward with energy. We duly delivered parcel of lead weighed off last week, and are daily carting ore towards another smelt.

LEADHILLS (Feb. 16).—Brown's vein: The 145-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, showing more quartz of an improving nature, but just dried enough for producing ore. The stope above the 145 south of Jeffrey's shaft is worth 35 cwt. of ore per fm. The stope above the 145 south of Wilson's shaft is worth 20 cwt. of ore per fm. The stope above the 145 north of Wilson's shaft is worth 40 cwts. of ore per fm. No. 4 winze below the 130 north of Jeffrey's shaft is in a vein 7 ft. wide, mainly spar, with spots of ore not to value. The three stopes above the 130 north of Jeffrey's shaft are worth 25, 15 and 15 cwt. of ore per fm. respectively. The stope above the 130 south of Jeffrey's shaft shows spots of ore, which are mending fast. The stope above the 130 north of Wilson's shaft is worth 20 cwt. of ore per fm. Fair progress is being made in the sizing of the 115-fm. level north of Jeffrey's shaft. The stope below the 115 north of Jeffrey's shaft is worth 25 cwt. of ore per fm. The stope above the 115 south of Wilson's shaft is worth 30 cwt. of ore per fm. The 85-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, and looks unpromising for ore. The 70-fm. level south of Wilson's shaft is in a vein above 4 ft. wide, better mixed with quartz, but yet too dark stones for producing ore. The 35-fm. level south of Flat Rod shaft shows a vein 5 ft. wide, yielding 30 cwt. of ore per fm. The stope above the 35 south of Flat Rod shaft is worth 30 cwt. of ore per fm. Sarrowcole vein: The rise above Gripp's adit, north of George's Roust vein shows spots of ore only.—T. NEWBIGGING.

MID-DEVON.—Report for week ending Feb. 14.—Surface: Machinery doing good duty; not quite four revolutions per minute to cope with influx into shaft. A shaft: Water in fork to the 80. C shaft: The cross-cut south from under winze at the 60 driven by six men 1 fm. 1 ft. 6 ins.; total distance from level 2 fms. 4 ft. 6 ins.; the strata is very favourable, being composed of garnet, quartz, axinite, and hornstone, intermixed with a little chlorite and yields 10 cwt. of copper ore per lineal fathom for size of drivage.—J. NEILL.

PRINCE OF WALES (Feb. 18).—We have no perceptible change in any part of the miue since last week. In the cross-cut north from the bottom of the shaft there are still indications of the lode being in that direction. In the cross-cut south there are small tinny veins to be seen, and a little water issuing from them. The lode in the 166 both east and west is much the same in size and character as last week. —S. ROBERTS, J. PROWSE.

ROMAN GRAVELS (Feb. 19).—The 155-fm. level is now driven south from the cross-cut about 1½ fms.; lode in the forebreast of very promising character, producing nice stones of lead ore and blende. The 140 north is driven 79 fms. 1 ft. We have been proving the lode or lodes here since last week, but the men are goiug forward now with the idea of holing to the winze from the level above as soon as possible, and we value the vein at present being carried, say 3½ ft. wide, at 3 tons of lead ore, and ½ ton of blende to the fm. The said winze coming down at a point, say 7½ fms., in front of said forebreast, is 9 fms. 4 ft. deep, the vein at this depth being worth 2½ tons of lead ore per fm., aud improving. When these points have been communicated a very good section of ore ground will have been laid open, and one which we hope will not only continue up to the winze, but north thereof also. It is worthy to note that we are now laying open a far richer lode at this level than was seen above either at the 125 or the 110, and we can come to no other conclusions but that the 155 north will lay open, if not a richer, certainly a longer run of ore ground underneath. The 140 south is driven 79 fms. 3½ ft.; lode in present forebreast 2½ ft. wide, producing stones of lead ore and blende. The stopes throughout the mine taken collectively are looking better this week than when last reported. The two stopes in back of 80 south of Jones' winze are together worth 4½ tons of lead ore, and 2½ tons of blende per fm., and the four stopes in back of the 110, 6 tons of lead ore per fm. Other points are without change to notice. The 50 tons of lead ore sold to day realised 420*l*.—A. WATERS.

SOUTH DARREN (Feb. 19.)—The stope under the 142 level west is worth 1 ton of silver-lead ore per fm. The two stopes above this level are just as reported last week, worth 15 cwt. and 10 cwt. of silver-lead ore per fm.—J. MITCHELL.

WEARDALE LEAD.—Report for week ending Feb. 14:—Ore raised for week, 69 tons; ore dressed for week, 89 tons; ore, slag, aud fume smelted for week 141 tons, producing 73 tons of pig lead.

WEST WHEAL GRENVILLE (Feb. 17.)—The cross-cut driving north at the 120 is extended 87 fms. 4 ft. The granite in this drivage is similar to that reported last week. The 120 east on No. 4 has been extended by shaftmen 6 ft. from main cross-cut. We have engaged six men to coutinue this end, and the shaftmen will now be placed to cross-cut the lode at the 130-fm. level. The 100 cross-cut south has been extended 15 fms. 5 ft. 6 ins., and continues in killas rock. The boring machine has been removed from here to drive east at the 120 on No. 2 commencing in this drivage yesterday moruing.—J. SKEAT, N. TEMBY.

WHEAL CREBOR (Feb. 17).—We are still making good progress in driving the 156-fm. level east of the new shaft. The lode now in the end is 7 ft. wide, containing capel, friable spar, honeycomb quartz, peach, white iron, and a small quantity of arsenical mundic and copper ore. We expected ere this to have met with a paying lode in this level; but looking at the large lode we have, and seeing that the ground and most of the bunches of ore in the mine have an easterly dip, we still hope that a good lode will yet be found further east going down below the level. The winze in the bottom of the 144 west of cross-cut is getting slower to sink. To hasten it on we are taking a part of the lode only, about 4 ft. of the width of it, which is worth 4 tons of mixed ores per fm., the remaining part, which is worth 4 tons of ore per fm., will be taken away with the stope after the winze is holed to the 156-fm. level. The lode in the end driving west of cross-cut is 1 ft. wide, yielding 1 ton of mundic aud ore per fm. Seeing that the lode still continues in the same course which it was reported some weeks ago to have taken, viz., turning more to the south, and that it is likely to splice out to the main lode a few fathoms further west, we do not think it worth while, unless it quickly shows some signs of improving, to continue this drivage much further. Our stopes and pitches through the mine are looking about the same as they have been for some weeks past.—P. D. HOLMAN.

WHEAL METAL AND FLOW (Feb. 18).—The lode in the 27 end is changing, and, from all appearances, for the better, and is composed of a tinny capel, and in about 4 fms. or 5 fms. more driving will bring us over the shoot of tin we had in the 35-fm. level. The Flow is producing its usual quantity of tin.—S. P. CURTIS.

WHEAL UNY (Feb. 18)—Hind's engine shaft is being sunk with fair speed. No change in the lode since last week. We must get down a few fathoms in settled rock before we see any great change. The ground we are sinking through will pay for stoping when we get the lift down and open out the ends east and west, which may improve in driving. The lode in 230 end west is improving, turning out some good stoues of tin; now worth 11*l*. per fm. We have communicated the winze in bottom of 193 west with 203, and now stoping at this point by eight men.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO.—Report for fortnight ending Jan. 24:—Mining explorations: The cross-cut west at tunnel level west of No. 1 winze was driven 9.5 ft. on couutry rock. The cross-cut west at 24 fm. level 13 ft. north of No. 7 winze was driven 12.0 ft. also on country rock. We expect to cut the 100 lode by both cross-cuts at a short distance. The north eud of the 24-fm. level on the 100 lode was driven 23.8 ft., about 7 ft. of which was on partly mineralised ground, the balance on barren ground. We seem to be passing a disturbance of the lode. Total explorations, 45 3 ft. Stoping: In back aud sides of main stope above the 24-fm. level we took away about 16 fms. In back of 31-fm. level south of No. 7 winze we stoped out about 8 fms., making a total of 24 fms. In the other places no stoping was done in the fortnight, and the only change noticed was a slight improvement in the southern part of the 31 stope near No. 6 winze. Surface work—Ore dressing: Rough ores extracted from the mines, 634 car loads, estimated at 507 tons; yield from same after cobbing, 285 tons. Stamping: Cobbed ores and sifted smalls sent to mill, 310 car loads, estimated at 297 tous; assay value, as per daily battery samples, 37 ozs. per ton, against 44.6 ozs. the previous fortnight. Chlorodising roasting: Stamped ores sent to the reverberators 589 charges, estimated at 295 tous. Assays: Raw pulp to furnaces (average of 14 samples), 40.8 ozs. per ton; roasted pulp from furnaces, samples from doors (average of 14 samples), 36.7 ozs. per ton; samples from heaps (average of 14 samples), 28.6 ozs. per ton; silver chlorodised, 94.7 per cent.; salt used from 4 to 4½ per cent.; solubility of roasted ore in water, 11.4 per cent.; solubility of roasted ore in hypo. sol., 11.5 per ceut. Leaching: Roasted ore served to vats, 213 tons; average ley of same, 29.2 ozs. per ton (against 27.7 ozs. the previous fortuight); average ley of tailiugs discharged, 2.3 ozs. per ton. Precipitate obtained: Jan. 3, 3,278 lbs., assay value, $6,174.05; Jan. 10, 2,638 lbs., assay value, $4,931.55; Jan. 17, 1,920 lbs., assay value, $6,231.54. The clean-up, made Jan. 24, is

being dried and calcined, and its value is not known, but is expected to be considerably less than any of the above, as little new ore entered the vats during the past week. Refinery: Bullion obtained and sent to the Alamoo Mint for coinage: Jan. 17, 8 bars, valne (gross), $8,438.55; Jan. 24, 8 bars, value (estimated) $8,400. The cupel is running again, and is expected to produce six bars during this week. Smelting: In the fortnight under report we obtained 1,884 bars pig lead, worth in silver $9,086.77. The total product for the campaign (24 days) is 3,144 bars, with an assay value of $14,587.42, or an average daily product of 131 bars, worth $607.81.

ARGENTELLA (Feb. 12).—No. 2 Marine level: Driven east 4 ft.; we have now two well-defined walls dipping north at an average of 2 ft. 6 ins. per fm.; the lode is now 6 ft. wide; the ground has changed entirely, it is a very promising lead-bearing killas. Near the foot-wall we have had some stones contaiuing very rich silver-lead; the ground is more mineralised throughout. To cnt a rich lode here will be no snrprise to me; it may occur sooner than I expect; the ground is letting out more water. The roof of the smithy will be ou in a few days. The mule road is complete.—J. B. Roberts.

AUSTRALIAN BROKEN HILL CONSOLS.—Manager's report for the fortnight euding Jan. 8:—Engine shaft: 370 level west driven 2 ft.; total, 76 ft. Country so hard as to render further driving without rockdrills too slow and expensive. 280 level west driven 18 ft.; total, 299 ft. No change. An iucline level to follow down the shoot of rich ore has just been started. Rise at 195 ft. commenced opening the ground eastward abont halfway between the two levels, and at once struck an outlying portion of the rich vein which was recently worked. A few bags of snlphide of silver chlorides aud iodide of silver have been obtained, and althongh the grounds has again become broken there is ample evidence that we continue in the shoot of rich ore trending upwards, and may at any moment strike another bonanza. Winze from 180 level, connecting with rise from 280, sunk 10½ ft.; total, 36½ ft., and connection completed. Block 95: Shaft sunk 7½ ft.; total, 83 ft. Gronnd continues to improve, and is getting more jointy; patches of mundic appear frequently, accompanied by specks of galeua. Block 97: North shaft sunk 10 ft.; total, 10 ft. This is a new shaft started to cut a lode running parallel with our main lode, and lying about 120 yards north thereof. A trial shipment of 1,331 bags, weighing 61¼ tons, consisting of five different classes of ore, assaying up to a maximum of 100 ozs. of silver to the ton, and 39 per cent. lead, has been made during the fortnight to the Government Smelting Works at Freiberg.

BONNIE DUNDEE.—Mine manager's report for fortnight ending Dec. 20: No. 6 tributers have been stoping from the back of No. 2 south-west level on from a foot to 18 ins. of fairly mineralised stone, with about the same amount in face of stope at present. They are now putting through a crushing of about 27 tons at the company's mill, and will clean up on Tuesday next. No. 5 lease: The heavy mundic reef the tribnters had in the stope at the time of my last report has nearly cut out, and they are now starting to drive north-east from the nnderlie to prospect the brown stone and take out a trial crushing. They have about 12 tons of stone broken. No. 7 south-west level has been driven a further distance of 16 ft., and the level north-east from bottom of winze a distance of 11 ft., making 27 ft.; driving from both sides. We broke through with the two levels, laid the road and had everything squared up to the winze on Tuesday, the 16th ult.; total distance of level to side of winze from the old underlie, 132 ft. In the level from the winze we had a foot of good stone, but had very little in the level from shaft. The reef along the bottom of level so far is small, but good stone. After breaking through we continued driving west from winze with six men in three shifts, and have driven a distance of 7 ft., with an average of 1 ft. of good stone, and looking well in the face at present; it will be necessary to push this level with three shifts to get 20 ft. or 30 ft. away from winze before we can start to stope with any advantage from this side. After breaking through with levels, I started six men stoping from north-east side of winze, have had from 6 ins. to a foot of good stone. There is about a foot in the face of stope at present. Have raised abont 15 tons of stone for the company, and 27 tons for tributers; total for the fortnight 42 tons. Company's stone in hoppers 37 tons. The water is falling off a little, making a difference of eight hours less pumping a week. Machinery in good order.

BRATSBERG.—Report for week ending Feb. 7.—Hofnung Mine: There is nothing new to report at the different points at No. 2 adit level. No. 3 adit level is improving in value, now yielding ¾ ton per fm. The rise in the back we have snspended for the time, but the lode is still worth ¾ ton per fm. At No. 4 level, the lode is 4 ft. wide, and yielding fnlly 1 ton per fm. For convenience in working, we find it most advantageous to stope out a piece of ground at the rise, communicating Ball's shaft with this level before we start sinking below No. 4 level. Johannes Mine: The men are making satisfactory progress in driving the cross-cnt here. The level driving east on Howard's lode is now worth ¾ ton per fm. Surface work and remarks: The weather here has been very favourable for the bnilders engaged on the dressing honses. As far as practicable for the present the roof of jigging department is finished, aud we have commenced to strengthen and repair the wall of the crnshing house preparatory to raising the roof. The injnry done to the stone-breaker and driving gear has been repaired. The jigging water wheel is now in its position, and the fitter is engaged about fixing the gearing and making ready new main driving shaft for the jiggers, the iron conplings for which we have jnst fetched from Kragero. It being reported that the ice on the lakes to Strengen is strong enongh for driving, we shall send four horses there to-morrow.—J. D. Holman.

BRITISH BROKEN HILL (Jan. 7.)—No. 1 shaft, second level: The work in the new section is still giving us great tronble. The falling of pieces from the roof of the vugh ahead of our timbers has continued all the week, thus adding to the weight to be held back, and also jarring the timbers with the fall. Nevertheless we are persevering with the work, and are making sure, though at present slow, progress. No. 2 shaft, first level: Good progress is being made with the timbering, and some good lead ore has been broken in making room for the square sets. No. 7 shaft, 50-ft. level: These stopes are still yielding lead ore, the bulk of it good enongh to go direct to the new smelter. No. 5 shaft: The south drive has been extended 8 ft., making its total length 226 ft. The ground this week has been considerably harder than heretofore, and the vein of ore has not been continuous as previously, but has been found in bunches or pockets. The stope above the drive has yielded a fair grade of ore, but the body is irregular and apparently of no great extent. Surface: The foundation for the engine to drive the smelter and saw mill is now being built, and the excavation for the blower foundations are being made. The fine and retaining wall and stack base are completed, and the furnace crucible is being built in. A strong force ofmechanies is now employed on the alterations to the ore dressing plant.

CALLAO BIS (Jan. 18).—The directors have received advices from the mines as under:—Independiente: Since the 5th inst. the shaft has been continued a further distance of 5½ ft; from surface 130 ft. Ground very hard, with water so quick, it is difficult to make any satisfactory progress. The No. 2 level west has been continued a further distance of 16 ft.; from shaft 152 ft.; lode 3 ft. wide, of fair valuc. The No. 2 raise has been advanced 26 ft. through lode of fair value, showing an average width of 5 ft., but at present a little mixed with cascajo. Distance from the back of No. 2 level, 50 ft. At this point we have commenced to drive east to make communication to the No. 1 west level to ventilate this part of our mine, as the air is beginning to give us trouble. The No. 1 level west has been continned a further distance of 25 ft.; from raise, 63 ft.; lode 1 ft. wide, of fair value. At this level we have commenced to open out a stope to receive our cascajo from various points for future work; lode shows 8 ft. wide, of good value, with visible gold. Mill results: 343 ozs. bar gold (see mill report). Owing to the bad weather and holidays, our qnartz could not be carted to the mill, so as to keep it steadily ruuning. However, better results may be expected by the next mail. Surface work: The ground is dug out for fonndation of Cornish pump; therefore, we shall commence at once to lay our timbers for same. Independiente mill: The frame work for boiler house is completed; although the weather has been so bad, it has impeded the progress considerably. Our mill boiler is still on the road to this mine. The roads have been so bad, it was impossible to carry such heavy machinery.

CANTABRIAN (Jan. 14).—Hasting's engine shaft: The timbering of the ends of this shaft is being proceeded with satisfactorily, and, as soon as the ordered timber is delivered on the mine, no time will be lost in completing its collaring up to surface, when we shall immediately divide the same and put in footway. McKeand's shaft: The stope in back of the 12-metre level west of cross-cut, east of shaft, will produce about 6 cwt. of copper ore per fm.; here the lode is presenting a most promising appearance, and, therefore, we are hoping it will improve in ore yield. Carter's shaft: In the 12-metre level east of shaft, the lode is 12 ins. wide, and worth 6l. per fm. for copper ore, a promising-looking lode, this end is being explored in unwrought ground, which, jndging from its present favonrable appearance, bids fair to open up a good run of mineral. From this point we sent to surface this week some splendid copper ore. The weather has considerably improved.

CHAMPION REEF.—The superintendent, under date Jan. 28, writes as follows:—Mining: The lode in the 160 end north at Dalyell's shaft has improved considerably since last week; it is about 3½ ft. wide, of good strong-looking qnartz, and carrving rich streaks of free gold. The average assay from across the whole width of lode is 1 oz. 10 dwts. 19 grs. per ton. On the strength of this improvement, I telegraphed to you on the 22nd inst. as follows:—"Lode opening up well; north drift Dalyell's shaft 3 ft. wide, gold visible throughout."

COLORADO SILVER.—The manager, writing under date Jan. 31, states that 60 men are working at 21 different points, and the main drifts have been advanced 50 ft. in the fortuight. Terrible mine, 15th level: Lode 4 ft. wide; mineral vein 3 ins. wide. The 8th level west is now in 470 ft. from Silver Ore shaft. This drift has shown great improvement since last report, and the indications are very favourable. Coin lode: There is a marked improvement in each of the three levels being driven westerly on this lode. Mammoth tunnel level: Lode 3 to 4 ft. wide; mineral vein 1 to 3 ins. wide; ore milled, 97 ozs. silver, and 21 per cent. lead per ton. Brown lode, Brown adit level: The returns from this stope will, it is expected, be fully equal to those from the level above. Brown tnnnel level: Ore milled, 135 ozs. silver, and 12 per cent. lead per ton. Mammoth tunnel level: Lode 4 ft. wide; vein 1 to 3 ins. wide. This drift is showing better than at last report. The ore market is much more settled, and the ore which had been kept in hand has now been sent to the smelters. The product of sale is expected by next mail.

DAY DAWN P.C. (Jan. 3).—Report for fortnight.—The output of quartz is 379 trucks; to the Excelsior mill 384 tons, to the Defiance mill seven dray-loads. With reference to the work underground there is nothing fresh to report. 1 discontinued work below on Dec. 24, and have dnring the holidays cleaned out the boiler, done a few necessary repairs to the engine, overhauled the stone-breaker, and put in new screens in the quartz hopper, and after getting np steam I had two days' repairing at the main truck road in the shaft. Work was resnmed on Jan. 2. I have taken no measurements, as little or no work has beeu done in the main levels dnring this fortnight. I might just state that the stone in the main levels and stopes is abont the same as when last reported on. At No. 2 shaft I had the boiler cleaned out, the engine and air compressor overhauled and put in thorough working order. Work being commenced below on Jan. 2. The contractors have sunk the winze on the No. 4 west level an additional 10 ft., making a total depth of 39 ft. We have not cut anything in this winze as yet. I have nothing fresh to report from the other portions of the mine, as very little work has been done below during the holidays. Lease 1,280: The work done in the above mine during the past fortnight has been confined exclusively to keeping the water down, of which the late rains have caused quite an influx. —T. Lester.

ELIZABETH (WYNAAD).—Mr. H. Punnett writes Jan. 6:—The sample of ore I sent to Mr. Adams to assay gave 10 dwts. 14 grs. of free gold. I am quite satisfied with the result, and am sure my board will be also. I am now, so to speak, simply champing my bit to follow up this leader, and hope I shall get permission to do so shortly. The ore treated was a fair sample from the Elizabeth reef, and as the cost of working would not exceed 3 dwts. per ton, the assay is most satisfactory.

ESMERALDA (Feb. 3).—The manager writes: The west cross-cut has been extended 47 ft.; total, 75 ft. from the main drift. We will start raising for the Durande vein to-day. At a point 42 ft. from the south drift we cut a ledge of mixed quartz and porphyry abont 4 ft. wide. This was sampled thoroughly, and six samples assayed, which varied from 9 dwts. to 13 dwts. of gold per ton, or an average of half-

an ounce. This is very encouraging. We will drift on this ledge, and shall hope to strike ore of a higher grade before long.

A cablegram received 19 inst. reports: "That the Durande vein has been cut in No. 3 rise, and that the necessary connection is now being made with the south winze."

FLAGSTAFF.—Report from A. L. Swope, dated Jan. 31, received Feb. 19:—As I said in my last report that it would take me nearly all next week to finish timbering, I have completed it, and from now on will be able to make good returns, as we have a large body of rich ore in south-east drift. It is now 12 ft. wide, and still continues to widen as we go. It is now 4 ft. thick, and very nearly all first-class ore. This is the largest body of ore we have had since I came here. It has turned down towards the seventh level at about 25 degs. Have sunk on it 11 ft. Shall not carry it so large. I will start an "incline" as small as possible, so as to get down as fast as we can to see what it is below. This ore carries plenty of silver-lead with the yellow crystallise mixed all through it, and is very hard to pick. I shall put two men at work at the seventh level, and cross-cut under where the mineral is going. It will take quite a long drift, that is, if the ore keeps the same pitch as it is now. I have some 10 tons or more out of the "incline." Will commence now and stow it away in "seven." I sent you a cablegram on 26.

GLENROCK.—Extract from letter dated Dunedin, Jan. 6; received Feb. 19:—Premier mine: We now hold not only good titles to all the properties contained in the schedule, but also to an additional battery site and water race, applied for by me on behalf of the company, which, no doubt, will prove a valuable acquisition iu the event of our ever requiring to crush with more than 40 heads. Crushing yielded 107 ozs. 19 dwts. retorted gold from 215 tons quartz and mullock, simply got in extending our top level and in driving along the line of reef. Of course, this has come from an entirely new shoot to any yet discovered, and consequently is no proof of what the mine will do when the main reef is reached. The bank advanced 3*l*. 15s. per oz. pending assay, and it is expected 2s. 6d. to 2s. 8d. per oz. additional will be received. Contractors will be in full swing to-morrow.

HARRIETVILLE (Jan. 9).—Fortnightly report.—The following is the progress made during the past fortnight, viz.:—Mons Meg Mine: The cross-cut west of the level north of tunnel J has been extended 5 ft., making a total of 18 ft. At this point the footwall of the lode has been intersected, thus proving it—the lode—to be 25 ft. wide between walls. A little gold has been met with throughout the whole width, but until we have made a trial crushing of say 60 tons from this new shoot, for which we are now making preparations, nothing definite can be said regarding its actual value. We have risen 10 ft. on the footwall on a vein 4 ft. wide. This vein is poor in the rise, although it shows fair gold at the level. The south drive 100 ft. above tunnel J has advanced 2 ft.; total, 180 ft. The lode is 6 ft. wide, and payable throughout, although the hanging-wall portion is not of average quality. The rise at the back of the 50-ft. level above tunnel J has communicated to the 100-ft. level, having advanced a further distance of 15 ft.; the lode averaging 6 ft. wide, and being of ordinary payable quality. The rise at the back of the 100-ft. level north has been put up 20 ft., and communicated to the shaft below the 170-ft. level above tunnel J; the lode here is 1 ft. wide, but poor. The Mons Meg lode has now been entirely drained by the drive coming south from tunnel D, so that we are enabled to sink on the heart of the auriferous shoot, for which purpose preparations are being made. Returns: The returns from this mine since Dec. 24 after 10 days crushing are 152 ozs. 1 dwt., from 332 tons of ore crushed, also 3½ tons of pyrites assaying 5 ozs. per ton. We shall in future clean up every four weeks. Guerdon: Tunnel J has been extended a further distance of 12 ft. towards the Guerdon lode, making a total of 361 ft. from the Mons Meg lode. The ground is hard. Tiddledee Mine: The drive south of tunnel D towards the Mons Meg has advauced 6 ft.; total, 867 ft.; the lode is 7 ft. wide and carries colours of gold. Water is copious owing to our draining the Mons Meg workings. New lease: The winze below the drive south of tunnel D on the new shoot is now 12 ft. deep, having been sunk ouly 2 ft. during the fortnight owing to influx of water caused by late heavy rains; the lode is 2 ft. wide and payable throughout. The rise on the same shoot is up 40 ft. and carries a lode 2 ft. wide of payable quality. The drive south-east of tunnel C towards new shoot has advanced 13 ft.; total, 32 ft. The ground is favourable for driving. The drive south-east of tunnel B towards new shoot has been extended 14 ft.; total, 44 ft. The ground being fairly hard. Returns: Since Dec. 24—10 days' crushing—170 tons of ore have been crushed from this mine for a yield of 42 ozs. of gold, and 2 tons of pyrites assaying 7 ozs. of gold per ton. In addition to the returns mentioned, 29 ozs. 6 dwts. of gold have been obtained from the cleaning of some old copper plates formerly in use at our old mills. South Mons Meg: The drive north of the lower tunnel has advanced 30 ft.; total, 210 ft.; the lode is 3 ft. wide, and continues to carry a little gold, although not yet in payable quantities. The Christmas and New Year's holidays being over, all the men have again settled down to work throughout the mines. Surface: I should mention that the shallow tunnel north of tunnel D is now in 59 ft., having been extended a further distance of 9 ft. during the fortnight. We have here intersected the line of the new lode, and shall have to drive 20 ft. north in order to get under the point where gold was discovered at the surface. Machinery: Both the crushing and rock-drilling machinery is working satisfactorily. We have erected a small Root's blower at tunuel A to supply air to the drive south of tunnel D towards Mons Meg.—T. G. DAVEY.

MOUNT MORGAN EXTENDED.—The last letters received from the local committee at Rockhampton state:—Our prospects are good, and I consider we are very lucky in finding the country we are sinking on in both shafts to offer such favourable auriferous indications. I have every reason to believe that at a depth the Emmanuel will be a noble vein that will amply repay you for all your expenditure. We have treated in our mill 50 tons of stone for Booth and party, for which they have paid 50*l*.; this is placed to the credit of the mine. We have this day commenced to treat 12 tons of stone for the Phœnix Company, at an agreed price of 1*l*. 10s. per ton.

MOUNT ZEEHAN (TASMANIA).—The manager writes, under date Jan. 5, as follows.—Progress report for this week is:—Montaua: West cross-cut driven 5 ft. 6 ins.; country harder; total distance driven, 248 ft. 6 ins. South cross-cut: Winze sunk 4 ft. 6 ins., and timbered up; total depth, 9 ft. Queen Extended: No work has been done in mines, as miners have not returned from holidays. Wc pump water out of the shaft to-day, and commence driving to-morrow if we can get water out, and enough miners turn up to make up a partnership. The weather here is very rough and wet, and no steamers have been in Trial Harbour for some time. There are about 30 tons of ore ready for shipment at Trial, and 30 tons more bagged at mines ready for delivery. No ore has been raised this week, as the workings in the underhand stope (opencast) have not been in operation since ceasing for the holidays. I purpose getting it pumped out this week if the weather permits; it is at present flooded beyond the power of hand pumps to cope with it. New discoveries: I have reported to you all new discoveries as they occurred if they are of sufficient value to wire you. I will do so, otherwise they will be noted in my weekly letter.

— The manager wired on Jan. 26 that he had cut a lode, which is likely to prove very valuable.

MYSORE REEFS (Jan. 28).—Fortnightly report.—Harvey's shaft: The winze below the 460-ft. level has been sunk 4 ft. 6 ins., now 6 ft. 6 ins. below this level. We are going down in a mass of low grade quartz, worth, according to assay, 1 dwt. 7 grs. of gold to the ton. Cross-cut east of the 460-ft. level has been advanced 13 ft., now 36 ft. 6 ins. from the level only. A few stringers of quartz have been seen which are not worth following; this is suspended, and the men put to resume the sinking of the shaft. Intermediate level south, between the 320-ft. level and the 400-ft. level, has been advanced 10 ft., now 30 ft. from cross-cut; the lode is still of greater width than the drivage, and worth, according to assay, 5 dwts. 16 grs. of gold to the ton. Stopes in back of 400-ft. level: The lode is from 12 ft. to 15 ft. wide, and worth, according to samples washed, 5 dwts. of gold to the ton. Stopes in back of 320-ft. level: The lode is 7 ft. wide, and worth, according to samples washed, 8 dwts. of gold to the ton. We had everything in readiness to resume the sinking of Harvey's shaft when an accident occurred to the air compressor, the bed plate having broken in two pieces; this will take us until Saturday next to repair.—Capt. M. SCANTLEBURY.

MYSORE-WYNAAD CONSOLIDATED (Jan. 28.)—Report for fortnight:—North shaft: This shaft has been sunk 5 ft., making a total depth of 100 ft. 6 ins. We have also during the fortnight put down the 8 in. lift of pumps, which is now working satisfactorily. The engine was started on the 22nd inst., and forks the water with ease. We have occasional stringers of quartz in the bottom going down almost vertically, but the best stringer which carried gold continuously from surface has dipped away to the west, whilst the old works passed through about 15 ft. above were in the foot, or east side of the shaft. We, therefore, propose after sinking a foot or two more to cross-cut east and west to prove these points, and ascertain if the shaft is going down at the right angle to intercept the best portion of the lode. I expected the shaft to be fully in old works at the present depth, as our largest old workings are immediately to the south, but apparently they do not dip north so fast as was anticipated. I do not expect these cross-cuts to take up much time, and shall continue the sinking as quickly as possible. There is a good deal of surface work to do around the shaft as yet, so that it will be some little time before all our arrangements are perfected. I am putting up a house over the engine and boilers, and building a tauk to give a supply of water for engines and compressor, and I am also preparing loadings for the small compressor from Mysore-West, as I want to run a rock-drill in south shaft as soon as possible. South shaft: This shaft has been timbered for 37 ft., and the collar raised 6 ft. 3 ins. It has also been sunk 6 ft. 6 ins.; the total depth is now, therefore, 48 ft. 9 ins. from surface. The rock in the bottom is getting very hard, and is now wet, so that water will shortly be coming in. I shall get poppet heads and a winding engine up here very soon now, and hope to have a rock-drill running by the end of Feb. All other surface work is making satisfactory progress, and I expect the bungalows will be ready in about a fortnight.—L. EVANS.

NEW CALIFORNIA.—Mine report for the second half of Jan.:—Shaft: Sinkiug below the 2,000-ft. level in 2,089 ft. Excellent progress is being made with this important work, and we have to report a further improvement in the vein, which during the last few days has been yielding some fine blocks of ore, assaying over 3 ozs. gold per ton. This is most encouraging. The 2,000-ft. level: Drift west of shaft, in 600 ft. The vein here is 18 ins. wide, composed of good veinstuff, which will pay to mill. The 2,000-ft. level east of shaft in 66 ft.: A bifurcation of the vein having been met with, and the footwall branch (or north vein) being the larger, the drift followed it without, however, much success. We shall now cut through to the south branch and follow that vein. The 1,900-ft. level: Winze No. 2 (1,900-2,000) west of shaft down to 66 ft. The vein in this working is not quite as good as when last reported, and is now about 18 ins. wide. The 1,900-ft. level: Stopes east of No. 3 winze (1,800-1,900) and intermediate drift east of No. 3 winze. These workings have yielded a good quantity of rich ore during the month, and the drift has opened up valuable stoping ground which will contribute considerably to our output for February. The lode is from 2 ft. to 3 ft. wide. The 1,700-ft. level: Prospecting in bottom of level at 266 ft. west of shaft. We have opened up a large vein of low grade milling ore which will not pay to follow further for the present. The 1,500-ft. level west of shaft, south vein, east of junction. These stopes continue to yield ore of good grade, with a small width of vein.—RICKARD.

NEW DEVALA MOYAR (Jan. 27).—The 116-ft. level: The improvement in the drive west continues, but the stone is not yet of milling value. We have driven 8 ft. in this end; total length, 116 ft. Drive east: The total length in this drive is 84 ft., and we have removed the drill from this point and put it in the 78-ft. level stope to extend the stope in length westwards, and leave an arch over the winze 100 ft. west. The stopes are yielding their average quantity of milling stone, and the battery is running. I have remitted 135¾ ozs. of bar gold by this mail, the produce of October and November crushings.—R. B. JOHNSTON.

NEW EBERHARDT.—The mine manager reports under date Feb. 1, as follows:—Number of tons of ore extracted and assorted for the week, 26 tons; assay value of the same, as per mine samples, $42 per ton. The general appearance of the mine remains about as last reported. The amount of ore taken out for the week is a little less than that mined for the week previous, but this falling off is owing to the death of one of our miners on the 29th inst., and our mine was in consequence thereof closed down, but I hope next week to be able to get the 30 tons again.

— The following cable has also been received:—"Your instructions are having every attention; mine weekly output quantity, 36 tons.

OURO PRETO (Jan. 22).—Passagem—Incline shaft No. 1: Stuff was cleared, and road laid down for another 11 metres, making a total depth of about 30 metres under the 365 level. Incline shaft No. 2: About 25 cubic metres of ground were broken in the stope in the roof, but towards the middle of the month the water in the shaft increased so much that the men were driven from the stope. A wire-rope transmission is now being placed from the rods in No. 1 shaft to work pumps in No. 2 shaft, and it is hoped that all difficulty with water in this shaft will be easily overcome. The 365 level south-west was advanced 1.80 metres, the lode still being much pinched by a bar of hard schist. Work was much impeded in both ends and rises at this level on account of bad air, due to change in the season. The 365 level north-east was driven 2.10 metres. A branch of ore is standing across the breast, but the lower part of end is in schist. Rise 24 over 365 north-east shows small lines of ore and tourmaline in hard schist; it was advanced 2.30 metres. Rise 25 at 365 south-west was put up 2.25 metres, full size, in quartz well spotted with pyrites. Both this and the preceding rise are new works started to open out stopiug ground over the 365 level. The 315 level north-east shows an improvement, the quartzite cutting out and being replaced by quartz. It was advanced ouly 0.90 metres, the men being required for other work. Rise 21 over 315 south-west: The lower half of the rise is in ore of fair quality, but there is a thick bar of schist against the hanging-wall; distance risen was 1.70 metres. Rise 23 over 315 north-east was started in massive quartz, but this was cut out by a thick bar of quartzite, in which the ore continues at present. The 265 level south-west was advanced 1.80 metres in unproductive schist. with only a small line of ore against the roof. The 265 level north-east was driven 4.40 metres, and still continues full size in massive lode, carrying good patches of pyrites and tourmaline. Rise 22 over 265 south-west went up 6.20 metres, full size, in a fine body of ore, composed of quartz with good lines and bunches of arsenical pyrites, which still continues in breast. Cross-cut under 235 was driven 1.60 metres in footwall schist, without change to note. The 175 end south-west has lately shown signs of improvement, and there is at present a branch of ore about 0.50 metres thick against the hanging-wall; distance driven was 4.80 metres. Rise 17 at 175 south-west was advanced 4.40 metres on a regular body of lode, about 2.50 metres thick, of fair quality ore. Winze at 120 level north-east was sunk a further 4.20 metres, the last 2 metres being in footwall schist. No ore having been found the winze has been suspended, and the men put to drive the end. Stoping: In the north-east section the stopes at 165 are still opening out well. The upper stope has now crossed the 120 level, and will go up through the ground between No. 2 shaft and Buraco Secco, whilst in the lower stopes the ore is about 4 metres thick, and show a tendency to make downwards. A large amount of ore has been broken in floor of old stopes at 235, but the quartz carries little pyrites. Since the communication of the shaft stope to the 235 stopes the opening has been enlarged, and a good deal of ore stoped from the sides, though the lode at this point is smaller than formerly. A large mass of quartz carrying strings of pyrites throughout is being quarried in the north-east side of No. 2 shaft, aud as soon as the 265 end north-east is under it a rise will be put through to open it further. Iu the south-west section no stoping was done at the 365 on accouut of bad air, but at the 315 work was carried on regularly in six stopes. The holing of stopes Nos. 4 and 5 has facilitated transport, and the run of stopes along the same line extends over a length of 80 metres. The lode in the stopes over the 265 continues very regular, and of good quality, but the inner stope is getting near the sink at 215, and until the ore is opened at a lower level by the 265 rise will not produce much. A fair amount of ore was obtained at this level as well as the 215 by removal of pillars no longer required. Surface: A good deal of work has been done on the watercourse to repair damage done by the rains, bnt no serious stoppage has occurred, and everything is now in fair working order. A wire-rope tramway has been fixed for bringing sands from the 40-stamp mill up to the furnace, and answers the purpose very well. A force has been employed on the new canal for bringing water to chlorination maohinery, and work on the new furnace is in a forward state

PESTARENA (Feb. 16).—No. 1 lode: The 160 north has a lode 2 metres wide, valued at 5 tons per fm., at 12 dwts per ton. The winze under 130 uorth is not yielding sufficient ore to value at present. The 90 east carries a lode ½ metre wide, worth 6 tons per fm., at 1 oz. per ton. Caunter lode: The 120 east yields 3 tons per fm. at 9 dwts. The winze under the 110 east, 6 tons at 15 dwts. The 90 west, from old cross-cut, 5 tons at 15 dwts. In the 70 west the lode is taking a more northerly direction, and becoming more perpeudicular: it gives no ore of value. The 70 and the 46 going east are not productive for the present. No change in the cross-cuts. The Morghen adit is suspended. The stopes continue to produce the usual quantity of ore. At surface the mills in the lower house are working at reduced speed owing to the scarcity of water, and the intense cold is causing serious inconvenience to all surface work. The machinery is maintained in its usual state of repair.—W. Roberts and W. H. Trelease.

WEST ARGENTINE.—Extract of letter from J. H. Sutter, dated Silvertown, Jan. 27 and 28:—Silver Ledge Minc—workings of mine: The shaft has been sunk about 54 ft., and timbered; here we have cut a station 6 ft. wide, 7 ft. long, 8 ft. high. We are driving three leadings; the north level has been driven about 8 ft.; here we have some low-grade ore. The cross-cut to the east has been driven about 10 ft; total width so far 22 ft., and about 21 ft. from footwall we cut a streak of talc. We are driving on to see what will come next. We have some low-grade in this cross-cut in streaks and bunches. The south level has been advanced about 23 ft. We are driving on the gouge, and have met ore from ⅛ in. to over 2 ins.; it comes and goes like all mines in this district have done at this depth; see assays. We have also low-grade ore in this drift, of which you have the assays; the enclosed are not from this low grade nor the high grade. Grey copper: This ore has some grey copper mixed through it. We must sink a shaft at least 100 or 125 ft., though 150 ft. would be better. It has improved very much in the last 50 ft., and as depth is required for rich minerals in this district, it will be to our advantage to go down as speedily as possible. I have taken five assays, which gave the following:—No. 1, 70 ozs. silver and 2 per cent. lead; this was out of the (?) from solid lumps. No. 2, 27 ozs. silver and 2 per cent. lead, from a piece of rock next to gouge. No. 3, 3 2-10 ozs. gold and 48.60 ozs. silver; average of grey copper streak with but little grey copper in it. We have not got to the streak. No. 4, 20 ozs. silver; greyish rock to see if it contained silver. No. 5, 26 ozs. silver and 3 per cent. lead; average of gouge. This not the low-grade ore; it is out of the streak where we find the high-grade.

THE MONEY MARKET.

City, Friday Evening.

The Money Market, with the progress of the Revenue collections, combined with the operations of the Bank in connection with the assets of Messrs. Baring's old firm, the railway dividends, and other claims, has materially improved, and three months' bills are now quoted fully 2⅝ to 2¾ per cent., and money for short loans has advanced to 2½ to 3 per cent., the demand being mainly to avoid paying 3½ per cent. at the Bank for seven day loans. The final instalment of one million has been returned to France. Nevertheless, the Bank return, owing to a reflux of coin and notes from circulation, shows a decrease of only 440,000*l*. in the reserve to 15,600,000*l*., which compares with 16,000,000*l*. at this time last year, when the rate was reduced from 6 per cent. (at which it stood at the close of 1889) to 5 per cent. The Revenue collections have increased the public deposits by two millions, depleting the private deposits by over one million, the increase of liability or balance further affecting the proportion, which is 2 per cent. lower at 39 per cent. The return of Treasury bills, on account of the French gold, has apparently increased the Government securities by nearly the million, and the private securities have augmented 432,000*l*. The Treasury bills allotted on Monday last went at the equivalent of a discount under current rates. The exchanges, owing to this improvement in the market, have ruled more favourable to this country.

Business at the Stock Exchange has been in a very stagnant state during the past week, and in several descriptions prices have hardly moved at all, aud in the others the movements have been only moderate. A trifling decline has taken place in the Funds, and Colonial Inscribed Stocks were lower on balance. Foreign Government Bonds have been well supported by Continental purchases, and Italian have exceptionally risen 1½. South American Loans have met with more enquiry and have steadily risen throughout, Chilian being purchased on the more favourable news which led dealers to assume that the president will be compelled to resign. Buenos Ayres issues after being depressed by the startling advances in the premium on gold recovered on its decline, and the announcement that the dividend on the 1886 loan will be paid in gold. Ecuador Bonds were purchased on Continental account. The satisfactory traffic announcements of the Home Railway Companies had a favourable effect upon the market, and Brighton "A" has risen 2½, South Western 3, Great Western and Great Eastern 1, but the Scotch lines were dull. Only trifling alterations were reported in the American Railroad market, but these were mostly of a favourable character. Grand Trunk stocks Show a slight reduction, and Mexican were affected by the fluctuations in silver. In the Miscellaneous market the features have been at the variations in Allsopps Brewery issues and Hansard's Publishing Union, which, if fresh capital is not raised, will have to be wound up.

In the discount market to-day money was scarcer, and the pressure mostly iu the morning, when loans for a day or week were 2½, 3 per cent. Bills of two and three months' commanded 2¾, ⅞, and six months' were nearer three. The deposit allowauces are to be advanced again on Monday next.

The Bank of England to-day received 50,000*l*. in sovereigns from Oporto. Bar silver was unsettled, and Rupee Paper fell 1 per cent., the Four and a-half per Cent. to 77.

The Stock Markets have presented a somewhat chequered appearance to-day, but the variations have not been particularly startling. The Funds, together with Indian Government and Colonial Inscribed Stocks, were weak, while as a rule Foreign Government Bonds were higher. The upward movement was conspicuously marked in South American Stocks, which have again risen ½ to 1, completing an advance of 5 to 10 and even 15 per cent. in extreme cases from the prices ruling on Weduesday last. Chilian were also higher, and amongst Internationals, Portuguese were prominent, with a rise of nearly 1 per cent., Italian, Russian, and Turkish 1871 being a trifle easier. The premium on gold at Buenos Ayres has agaiu crept up to 250 per cent. Home Railways were steady, with advances of ½ in Great Western and ⅞ in North Eastern, while North Western dropped nearly 1 per cent. on large offers of stock being made owing to the remarks of the chairman at to-day's meetiug on the probable effects of the action of the "rates committee." But few alterations are reported in the American Railroad Market, but these in the majority of cases were of a favourable character. Grand Trunk stocks were firm, while Mexican (Vera Cruz) receded a trifle. Buenos Ayres Railway stocks moved in an adverse direction, excluding the Great Southern, which rallied ½ to 159. Banks were firm. Nitrates neglected. Telegraphs easier, and Bell's Asbestos, and Salt Union ¼ to ½ lower; but Land shares commanded more money.

Annexed are the final quotations to-day:—Consols Account, 97⅛, 97¼; Egyptian Preference Three-and-a-Half per Cent., 94½, 94⅜; Egyptian Unified, 98¼, 98½; French Four-and-Half per Cents., 103½, 104½; Hungarian, 92⅜, 92⅝; Italian, 94⅜, 94⅝; Mexican, 92, 92½; Peru Corporation, 10½, 11½; Ditto Preferred, 29½, 30½; Russian, 1873, 99½, 100; Portuguese, 56⅞, 57⅛; Spanish, 77 7/16, 77 9/16; Turkish, 1871, 98½, 99¼; Turkish Defence, 102¼, 102⅜; Caledonian Railway, 117⅜, 118¼; Great Eastern, 92¾, 93; Great Western, 165⅝, 165⅞; Brighton "A," 154¾, 155; North Western, 179, 179½; Metropolitan, 77⅜, 78¼; Metropolitan District, 30½, 31; Midland, 152½, 152¾; North British 49¼, 49½; North Eastern, 163⅞, 164⅛; South Eastern "A," 94, 94½; Nitrate Railways, 13¾, 14¼; Mexican Ordinary, 43¼, 43¾; Grand Trunk 9⅜, 9½; Grand Trunk First Preference, 62⅛, 62⅜; Grand Trunk Second, 41¼, 41½; Grand Trunk Third, 22¼, 22½; Canadian Pacific, 77, 77¼; Denver Preference, 19, 19¼; Erie, 20⅛, 20⅜; Milwaukee, 56½, 56¾; Lake Shore, 114¼, 114¾; Louisville, 77⅜, 77⅝; Atlantic First, 32⅞, 33⅛; Ontario, 17½, 17¾; Ohio, 18, 18½; Norfolk and Western, 56¾, 57; Reading, 16¼, 16½; Reading 5 per Cent. Bonds, 55, 56; Union Pacific, 45½, 45¾; Wabash Preference, 18¾, 19¼; Ottoman Bank, 15⅛, 15⅜; Anglo-Telegraph, 47¾, 48¼ National Telephone, 4⅞, 4⅞; Hudson's Bay, 18½, 19; Suez Canal, 97, 98; Guinness Ordinary, , 319, 321; Allsopp's, 35, 38; Bryant and May, 13¾, 14; Eastmans, 12¼, 13¾; Hansard's Union Ordinary, 2¼, 2¾.

REPORT OF MEETING.

THE PROVIDENT CLERKS' MUTUAL LIFE ASSURANCE ASSOCIATION.

JUBILEE REPORT — ACCUMULATED FUNDS, £1,600,000 — GREAT INCREASE OF BUSINESS—ADVANTAGES OF JOINING AN OFFICE LIKE THIS.

THE fiftieth annual meeting was held at the City Terminus Hotel, on Wednesday.

Edward Coleman, Esq. (chairman), presided.

Mr. GWYER (the secretary) read the notice and the report.

GRATIFYING STATEMENT.

The CHAIRMAN : Gentlemen, it affords me much pleasure to meet you in so large a number as I do on the present occasion. I may say that on the last occasion of our meeting I had the privilege of stating to you that, since the commencement of our association in 1840, it had had a career of uninterrupted prosperity, and it afforded me the opportunity of offering to you my hearty congratulations on entering upon its 50th year. How much greater is the honour and privilege on the present occasion when I present to you the 50th annual report and balance-sheet with the 50 years work completed. It shows that its usefulness has extended, its success is unchecked, its vitality is unabated, and its accumulated funds are considerably augmented. (Cheers.) Gentlemen, as a matter of course, it is a necessity for me to pass in review the details of the balance-sheet, which you have accepted as read, and I do so with pleasure. The only point with me is lest it may lead me to travel over the same road year by year, and it does happen so, because

IT IS THE ROAD OF SUCCESS

from first to last, and I can travel no other. (Cheers.) I have to ask your attentiou to the fact that the new assurances affected are 1,061 policies for 214,460*l*., being somewhat in advance of the preceding year, and yielding a new annual income of 7,013*l*. The total premiums, less re-assurances, are 122,583*l*., and the interest and dividends show a total of 63,450*l*., together making the annual income 186,033*l*. That in itself is a very good showing for a year's work, and whilst we show that it is not inflated or augmented by any large consideration for annuities which stands in your balance-sheet at the moderate sum of 996*l*.—annuities granted upon the revised scale adopted by the association. Now, gentlemen, on the other side, you will see that our claims show 75,100*l*., being an increase on the preceding year, which was abnormally low, as you will recollect; but considerably less than in 1888, and well within the actuarial expectation. It may be interesting to remark here that our total claims paid in the 50 years amount to 1,450,209*l*. (Cheers.) Gentlemen, I come now to a point which you will see in our balance-sheet—policies surrendered, 5,479*l*. Last year they were 2,000*l*. more. The year before they were 4,000*l*., and I am glad to know by communications that have passed during the year with several of our friends that they highly appreciate the notice given with reference to the surrender of policies last year, and it has checked a misuse of moneys in connection with those surrenders. They are not losing so large an amount as they would do in surrendering policies as was the custom some years previously. Many of them take an interest in the question.

YOU KNOW MY IDEAS UPON SURRENDERS.

We as an office do not like them. We would rather not have surrenders. When they do come, any time a policy is surrendered, the policy holder can never receive his money back or not nearly so, because the office has taken the responsibility of assurance during the period intervening, and must have some balance left to meet such liability. Gentlemen, the next item is a question of 5,012*l*., and if we were always to listen to some people who would introduce business to us, we should be paying a very much larger amount of commission than we do, and in the result we should not be able to stand before you with so good a showing as we have to-day. That 5,012*l*. has varied very little during the past six years. On the premium income it is only 4*l*. 1s. 9d. per cent., and on the total income of the year 2*l*. 13s. 7d. per cent. Then I come to the question of management expenses, which you will see are slightly increased. One item arises from some increase of salaries and also repairs to the house and offices in connection with the covenants of the lease upon which we hold the property. I do not know that there is any special item to remark upon under the expenses of management other than to say that they are most moderate and most carefully guarded, and show that on the premium income the management expenses only reach 10*l*. 4s. 4d., and on the total income only 6*l*. 13s. 10d. If we chose to include the commission, the total cost to the association on the premium income would be 1¼ per cent., and on the total income, 1⅜. Gentlemen, after passing in review these points in connection with our balance-sheet we are able to show that at the end of the year we can carry forward 71,328*l*. towards the accumulated funds,

MAKING THEM 1,599,645*l*.

(Cheers.) I now invite your attention to the second schedule of our balance-sheet, and there you will see that there is nothing special to refer to in reference to our liabilities. They are very simple and clear, and comprise but a very small amount. On the other hand, our assets, we are pleased to say, show a very large and sound investment. Mortgages on properties, rates, and public works and life interest reach 785,464*l*., and our investments in British Government securities, Indian and Colonial Government Bonds, railway stocks, gas companies and freehold premises, and rent charges amount to 774,824*l*.—a total of 1,560,288*l*. The amount of agents' balances, 10,285*l*., is principally due by large railways and the post office—Great Eastern, Great Western Great Northern, and Railway Benevolent, making up 8,390*l*. of the amount you have there. In reference to the outstanding premiums, they are the premiums due for November and December—less the amount paid to the end of December, a total of 7,231*l*. Since Dec. 31 nearly the whole of that amount has been received. The outstanding interest, 2,521*l*., has, I believe, wholly come to the credit of the account since the close of the year. The accrued interest, 16,939*l*. upon the various stocks is calculated in the ordinary way, leaving out of consideration the railway stocks and gas companies, which we might have taken into account. That is important. Many dividends have come to hand since the close of the year, and that amount is very much reduced. The cash on deposit is 16,000*l*. That is a less amount than we had this time last year, and the whole of it is now invested in sound securities. The policies actually in force at the present time are 23,055 for 4,521,667*l*. Assets in hand, which I have referred to, amount to 1,599,646*l*., being 35*l*. 14s. for every 100*l*. assured with the association. (Cheers.) Now I may also add to this that the market value of your securities on Dec. 31 stands

CONSIDERABLY IN EXCESS

of the amount standing in our accounts against those stocks. (Cheers.) There is in this excess value a full 50,000*l*. more which might be brought into the account, supposing that account were closed at the present moment. We have had to contend for some time with a tendency to earn a lessened amount of interest upon our investments. I am glad to tell you, however, that on our gross assets we receive 4*l*. 1s. 2d., and on our invested assets 4*l*. 4s. 1d. (Cheers.) That is a condition, at the present time, which I conceive to be most satisfactory. There is one point in our report to which reference has been made, and that is the question of competition and other matters interfering with the expenses of the business during the year. One matter that has stood in our way has been the unsettled condition of many employments from which we derive a large number of members. I allude to our railway friends, who are constantly giving us assistance in that particular, in a way that affords us very much pleasure. There are also some large establishments which have helped us. We have had from the Post Office a good and large business, mainly from the out-lying offices, more than for this year from the London office. Our past year's business from the London office has not been equal to what we have had at times, but is more than made up by business we have derived from the out-lying portion of the post office service. There is another thing that militates against us in some measure, and that is competition. Gentlemen,

WITH FAIR COMPETITION

the Provident Clerks do not fear any injury to their interests. A mutual office, as you know, having so large an amount at stake has to be carefully guarded as to the admission of others whose lives might not be quite so genuine or sound as we should like them to have been, or range so well by the side of those already accepted, and hence it is that we have to be especially guarded, because by any relaxatiou of our careful examination of lives before acceptance, or by any offer of advantages to the disadvantage of present policy-holders—if claims came unduly in consequence, those present policy-holders would have to bear the brunt of the battle, and pay the money. I know the present board are very careful, but the board, in all future time, should be equally so, and jealously refuse to admit business into the office other than that which is upon the level of the business already on their books. I feel this strongly, because we have had in many cases inquiries made. People say, "Other offices offer us so and so, and so much commission," but, gentlemen, we say our tables are not prepared for large commissions. We are not prepared to give better terms to incoming policy-holders than we have given already to the assurers who are with us, and whose policies are now running. We dare not damage their interest. We like to have all the business we can upon like terms, but we are not prepared to be beaten down, and thus possibly admit an element into the working which might seriously interfere with the business already in hand and with the accumlated funds. I think the facts speak volumes in reference to the

GREAT ADVANTAGES WHICH ASSURERS HAVE

in coming to an office which is matured, is fairly earning its income, is not distributing beyond its power, is growing in every respect, and that can say to its members, we show you as clean a balance-sheet as it is possible to show in the City of London, and we challenge the closest scrutiny. A closer scrutiny you could not have than our friend, Mr. Young, pays to the accounts through all the valuation, and his valuation last made showed how we had not divided up to what our surplus would indicate we might have done, but had guarded the interests of the future by a large surplus. We doubt not but that at the period of the next valuation he will find a like satisfactory condition of the office, and one with which all reasonable members will be satisfied. I do not say there are not some unreasonable members, for we occasionally must have them, but of this I am sure, that the association has proved itself to be of immense value to a class of persons who, if it had not been for the Provident Clerks in the year 1840 would not have talked of insuring their lives, and at that time offices did not care to insure for so low a sum as 100*l*. Gentlemen, we have educated the public since that time. We have done good service, and we now come before you at this termination of our 50th year, and

I GLORY IN THE RESULTS,

which I have now the pleasure of putting before you, and of asking you to accept by the motion I shall now propose:—"That the report and balance-sheet placed before you be received and adopted." I invite the fullest and freest discussion. (Cheers.)

Mr. EDMONDS seconded the motion, which was carried unanimously.

On the motion of Mr. ARDRON (of the General Post Office), seconded by Mr. LISTER BAYNES (of the Bank of England), a vote of thanks was passed to the directors, and their remuneration raised from 1,800*l*. to 2,300*l*.

Mr. O'BRIEN delivered a long address in explanation of his grievances against the chairman and the board, but on submitting an amendment to the foregoing resolution it was negatived.

The retiring directors and auditors were re-elected, and the staff thanked for their services.

NEW VISO.—The following is an extract from a letter received from Nancarrow at the Viso Mines, and may prove interesting to some of our readers:—"They have made a good discovery of tin at a mine about 7 leagues from here, at a mine belonging to the Germans. It has been found in a series of branches running through a decomposed channel of ground, about 20 yds. wide, at or near surface. They have already got out 12 tons of good tin, as the result of a fortnight's work, mostly in magnificent stones."

THE MYSORE GOLD MINING CO., LIMITED.

THE NEW PROPERTY TO THE WEST TO BE ACQUIRED FOR 25,000 FULLY-PAID SHARES—IMPORTANCE OF THE ACQUISITION FULLY SET FORTH—A BALANCE DIVIDEND OF 6s. DECLARED, MAKING 75 PER CENT. FOR THE YEAR.

I BEG to call your attention to the annexed notice, convening an extraordinary general meeting, to be held on the 27th inst., for the purpose of considering an important proposal for the extension of the company's property, and to pass resolutions, if approved, relating thereto. Many of the shareholders are aware that the Champion lode, which traverses the company's property from north to south, has a westerly dip, or inclination, and that at certain depths it must pass out of the land owned by this company into the adjoining land to the west held by the Gold Fields of Mysore, Limited. The directors have always had before them the contingency of having to acquire, if possible, this western ground; but not until recently has the question assumed so definite and urgent a form. Circumstances have now arisen, and the condition of affairs has so changed, that it becomes a matter of vital importance for the Mysore Company to take immediate steps to acquire the land in question, so that mining operations in depth may be continued for a lengthened period. It has now become evident from recent workings in the Mysore Mine that the lode in depth has assumed a much flatter angle than was apparent in the upper workings, and consequently will dip out of the sett sooner than had been anticipated. Assuming the dip of the lode to continue at about its present angle, it is estimated that the boundary would be reached at a depth of 1,700 ft. upon the course of the lode. Rowse's shaft is already 780 ft. deep, thus leaving only about 900 ft. still to sink. The sinking of shafts on the Colar Goldfields is much more expeditious now, with rock-drills and improved native labour, than it was a few years ago, and Rowse's shaft has been sunk to the depth stated, in a comparatively short space of time. The average rate of sinking, of late, has been 30 ft. a month. At this rate, and assuming the lode to continue to dip at the same angle, the shaft would reach the boundary in about 2½ years. In view of this fact, the board have felt it incumbent upon them, to take steps with the object of securing the land to the west, in order to preserve the existence of the mine. Although the question was the subject of discussion at a board meeting some weeks ago, and overtures had been made to the Goldfields Company, it had not been intended to bring the matter before the shareholders until the annual general meeting, which will probably be held next month. In the meantime, however, an offer having been received by the Goldfields Company from independent parties, of a large sum in cash for this identical piece of land, it became necessary for the directors to come to a decision on the matter, and to call the shareholders together at the earliest possible moment, otherwise the opportunity of acquiring the land would have been lost. Negotiations were accordingly entered into with the Gold Fields Company, and the directors have the satisfaction of informing the shareholders that (subject to approval in general meeting), they have arranged to purchase the block of land, comprising about 268 acres, on the western boundary of the Mysore property, extending for the entire length of the sett, and for 1,500 ft. wide for the consideration of 25,000 shares of the Mysore Company, to be issued as fully-paid. When it is remembered that this ground comprises a run on the line of the Champion lode for a length of nearly 1½ miles, and that the lode is one of the richest in the world, and further, that the acquisition of the land is in the board's opinion a practical necessity, the price must be considered fair and reasonable. In conclusion the acquisition of this ground will, in the opinion of the directors, materially strengthen the position and prospects of the company.—W. H. ROWSE, Secretary.

At a meeting of the directors held on Thursday it was resolved—"That a balance dividend for the year 1890 (free of income tax) of 6s. per share be, and is hereby, declared, payable on March 10, 1891, to the shareholders on the books of the company on the 25 instant, and that the transfer books be closed during the said 25 instant." This dividend will make the sum distributed out of the profits for 1890, 15s. per share, or 75 per cent. upon the capital of the company.

THE YURUARI CO., LIMITED.

THE secretary advises receipt of the mid-monthly mail from the mines, dated Chile, Jan. 23.

In it Mr. Pryor reports that in terms of instructions he has suspended pumping operations at Cenicero, as it is not necessary to keep the mine dry below the ninth level, which will effect a large monthly saving. He reports that "the present communication between the Cenicero and Water shafts does not render us altogether independent of Cenicero, because, owing to a mistake by my predecessor, there is a difference between the No. 9 level, Cenicero, and the No. 5 level, Water shaft, of 20 ft. I propose driving No. 9 level, Cenicero, west under Water shaft, say, 125 ft., and sinking the Water shaft another 100 ft. to that level, when a perfect communication will be formed, and the Cenicero shaft thenceforth rendered unnecessary for hoisting operations. I hope that this work will be completed within two months, and I estimate the cost will not exceed 1,500*l.* I had begun driving three months ago in the hope that the returns from the upper levels would enable me to complete this without financial assistance, but, as you are aware, the reduction in the yield of quartz in Nos. 4 and 5 levels has rendered this impossible. You may rest assured that everything will be done as speedily and economically as possible so as to produce the best results at the earliest possible date."

Mine report will follow as customary by next mail.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

Investors in all classes of Stocks and Shares should read Mr. Thos. Thompson's Mining and Investment Circular, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

Lester and Hook are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

Lester and Hook advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

Telegraphic Address: — "LONGEVOUS, LONDON."

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

RECOMMENDATIONS FOR CURRENT ACCOUNT:—

INDIAN CONSOLIDATED,
MYSORE REEFS,
NINE REEFS,
MYSORE WEST,
MYSORE WYNAAD.
DEVALA MOYAR.

All recommendations this month have, up to the present, been correct, and large profits to our followers the result.

We make Mines a special study, and invite correspondence, whether business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly, irrespective of account day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. Clients may rely on fair treatment at our hands. We are members of the Mining Exchange, and subject to the rules and regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Greenwell Hamilton.—Not known here; will write you in a few days.

S. P. (Leeds).—Keep them; they all pay dividends, and are four of the cheapest shares on the market.

Shady.—Better have nothing to do with the parties named. Simply a bait.

Mister (B. K.)—Certainly hold your shares. The company has even better prospects than you estimate.

Discontented.—Simply a reaction, which was expected. Shares should be held.

Ambrose (Bilston.)—Although only a small profit, advise you to take it.

U. U. U.—The mine is looking well, and we are given to understand that next month's profit will exceed last, in which case shares should improve.

Uncertain.—Will never do any good. In our opinion they should be sold.

Anxious.—Both fully and partly paid shares, we find, are being dealt in. Day Dawns should be held. Will get particulars about others named and write to you further.

Nickleby.—The management is respectable, and we feel sure you can rely on the report referred to. Advise you to keep your shares for the present, anyhow.

Roman.—Must re-construct. Advise you to hold your shares and support the directors.

Impoverished.—It is considered a good purchase, and likely to prove, very shortly, of a most profitable nature. The directors have looked at the matter from a business point of view.

Birmingham.—Shareholders were dissatisfied, and would not re-elect the chairman.

The Mining World.

LONDON: SATURDAY, FEBRUARY 21, 1891.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

THE MYSORE GOLDFIELDS AND ITS PURCHASE.

AT the meeting of the Mysore shareholders called for Friday next, of which we shall as usual publish a *verbatim* report, there can be no doubt whatever that the board will by a triumphant majority carry their proposals. The management of affairs has hitherto been so able—the board must pardon us if we say it has been conspicuously so from the mining point of view, with which, of course, Messrs. John Taylor and Sons are principally concerned—that the great bulk of the shareholders wisely leave themselves entirely in the hands of the directors. It may partake of what one would almost call blind confidence; for we venture to assert that never did the directors of a mining company possess in larger measure the confidence of shareholders than do those of the Mysore Mine. At the same time the directors, who are primarily responsible for the financial arrangements of the company, must be aware that a minority of shareholders—possibly an important minority—do not view their present proceedings with unmixed feelings. They regard the Goldfields shareholders as decidedly having the best of the present bargain. They view with some trepidation the effect possibly of a large proportion of the 22,000 shares, which the Goldfields directors will proceed to distribute, coming upon the market as affording a chance for an unscrupulous bear attack, from which the board should have guarded them; and they are fearful as to what the effect of this very knowledge, not to speak of the actual sales, may have upon current market quotations. The board, of course, will reply, "You have had 75 per cent. this year, and that should satisfy you; and, after all, it is not so much our business to look after the speculating part of our constituents, who are in to-day and out to-morrow, as it is to have a care for the interests of the investing shareholders, and notably for the permanence of the mine." The force of this reply is great, but still those Mysore shareholders, whose views we are trying to express, regard with concern the repeated waterings of the capital that have taken place, and point to the fact that whereas the company commenced with a capital of 150,000*l.*, it will finish next Friday with one of 225,000*l.*, and in justice to some of these gentlemen who can more readily grasp a financial fact of this kind than a mining detail which involves the dip of a lode, they almost naturally wonder how it comes to pass that a company which had so much property a year ago that it was able to make a sale of part of it to the Champion Reef Company, is now so destitute of that very article that it makes a purchase from a neighbouring concern at a cost of 150,000*l.*, that is if we value Mysore shares at about their present price. They ask in conclusion—and this is *the* important question by which all the others are to be determined—have we value for the money in this latest purchase?

"Yes," reply the management with united voice. Mr. Taylor declared it at the original Goldfields meeting of which the confirmatory one was held on Thursday. "Yes," exclaims Mr. Rowse, whose welcome return from the field where he has done Indian mining much service, is notified this week, "because your lode will soon leave you if you do not follow it." "Yes," cry the directors in chorus, led by the chairman, Sir Charles Tennant, "because the purchase is vital;" and in the face of the testimony of those who *ought to know*, shareholders cannot do otherwise than accept their recommendations, pass the special resolutions that will be submitted, we hope unanimously, and leave the responsibility with them.

The circumstances of the case are strikingly set forth in the business-like circular which the directors posted yesterday to their shareholders, the full text of which will be found in another column. The Champion Lode has a westerly inclination which, in 900 ft. further sinking, will carry it into the Goldfields territory. Truly, then, is this purchase described as a matter of "vital importance" to the existence of the mine. It may be asked, why was not the purchase made before, when the land could have been acquired more cheaply; but the answer is that the lode assumed a flatter angle than was apparent in the upper workings, and "consequently will dip out of the sett sooner than was expected." It will do so at the end of two and a half years' working if the present rate of sinking (30 ft. per month) be maintained. Hence the urgency of an early purchase; and another reason was that there were other buyers in the field. Another portion of Goldfields has indeed been actually sold to a new company, and not to Nine Reefs, as the market thought yesterday afternoon. The Mysore, for its 25,000 shares, has acquired 268 acres out of the 8,000 in possession of the happy Goldfields shareholders, and the Mysore board think that "the price must be considered reasonable," and we repeat they are the best judges. It is obvious, from the foregoing, that the meeting next Friday will be one of the most important the Mysore Company has ever held. Who would have said a few years ago, when the shareholders in response to the entreaties of Mr. John Taylor resolved to throw their last 13,000*l.* into a further sinking of their shaft, that the position of affairs would be such as is presented to-day? Who?

THE EXPLORATION CO.—"NOT A MINING COMPANY."

WHEN Mr. Horace B. T. Farquhar rose to address the Exploration shareholders, in the vocabulary of the reporters, he was "received with cheers." The shareholders had previously looked at the balance-sheet, where they found to their intense satisfaction a profit of 70,000*l.* When from the balance-sheet they looked at Mr. Farquhar, "eyes did smile to eyes that smiled again." Mr. Farquhar was in high spirits, and was apparently ready for anything from a polka to a quadrille. Considering the jubilant state of the accounts, his language was that of extreme modesty, and the brush was handled by him with delicate touch as he painted the bright picture of the company's prospective prosperity. Now, both he and the shareholders are to be congratulated upon their good fortune, though their cold-blooded repudiation of mining, the pivot of all their good luck, scarcely entitles them to be complimented upon their gratitude.

Shakespeare, whose knowledge of human nature (whatever it might have been of company nature) will not be denied, said that ingratitude was "sharper than a serpent's tooth," and some of those interested in mining will say that the Exploration Company "rounded" rather shabbily on the industry that begot them. The profit of 70,000*l.* and the dividends declared out of this amount were made principally, might we not say almost wholly, directly or indirectly, by mining, and the official Stock Exchange Year Book, lately issued, describes the operations of the company as consisting "in the purchase and sale of mining properties *previously explored by the company.*" If this does not justify the public in calling the Exploration Company a mining company (whatever it may call itself) then language has no meaning, and the dictionary had better be cast into the flames. Mr. Guedella, whilst taking his dividends out of profits earned, as we have said, directly or indirectly by mining, wished it to be known that "We are not a mining company;" and the chairman was equally emphatic when he said, "It is right about our not being a mining company—we are not." But whatever Mr. Guedella and Mr. Farquhar may say the public will still join the market in calling the Exploration Company a mining company, and in proof of their accuracy in doing so, they will not only point to the before-mentioned quotations, but also to the fact that its shares are purely dealt in in the mining section of the Stock Exchange. It is no use either the chairman or the shareholders setting up theories which facts contradict. The Exploration Company, though open to other classes of business, has become identified irrevocably with mining by its own prospectus, by the nature of its business, by the indirect admissions of its friends, and by the sources from whence its profits have mainly been derived.

CORNISH MINES AND CORNISH SHARES.

THERE has been rather a sharp recovery in Dolcoath shares this week in anticipation of a satisfactory dividend at the forthcoming meeting, but with this exception the market for Cornish tin shares has been about as flat, stale, and unprofitable as it could be without utterly collapsing. And yet the market for manufactured tin has kept fairly steady at about 90*l.* per ton, and the statistical position of the metal gives no ground for alarm with regard to the future of the home industry. At this week's ticketing in Cornwall the amount of black tin returned showed a slight improvement upon the previous week's total, and yet the smelters who, as our readers are aware, act practically as buyers and sellers, felt justified in knocking 10*s.* per ton off the previously existing price, moderate as that was in all conscience. The effect of the further reduction has been to put down the quotations of several of the shares. In London, as we have pointed out upon more than one occasion, speculators and investors alike have, as a very general rule, ceased to take any interest in Cornish mining, and they are little likely to adopt a different policy while the producers remain at the mercy of the smelters' "ring." Perhaps we can hardly blame those who stand in the position of being at once buyers and sellers for looking after their own interest. Human nature is pretty much the same all the world over. But the objection which prudent investors have to the system is that there is really no free market for what they produce, and they have this further objection, that, in many of the mines, at all events, operations are more or less com-

pletely controlled by those who, in one form or another, do business with the producing concerns, whether as smelters, bankers, or merchants, or a combination of the three. In the locality, it is true, somewhat different sentiments have prevailed in the past, but we should think that even the people of the Duchy must recognise what a great amount of harm has been done, and is being suffered by the antediluvian methods of business that prevail. Of course, mines such as Wheal Grenville, South Condurrow, and Wheal Agar are more or less free from purely local influences ; but they also would benefit if by some means or another the producers could be freed from the thraldom of those who at present dominate the industry. With a view of showing how the prices of Cornish tin shares have moved within the last year or so, we append a table giving particulars of the highest and lowest prices touched in 1890, the quotations at the close of last year, and those current yesterday :—

	Prices in 1890.		End of 1890.	Price Feb. 20.
	Highest.	Lowest.		
Carn Brea...	77½	59¼	60¾	54⅜
Cook's Kitchen...	25⅛	17¼	17¼	11½
Devon Great Consols	1¼	½	1⅛	1 1/16
Dolcoath	99¾	58⅝	78¼	74
East Pool...	33¼	19½	22½	21¼
Prince of Wales...	1¼	5/8	⅞	⅝
South Condurrow	8½	6	6½	5¾
South Frances	13	9	11	9
Tincroft	42	27	35	33½
West Basset	3¼	1	1⅝	1¼
West Kitty	11½	6⅝	8¾	9
West Seton	2¼	⅛	1¼	1/16
Wheal Agar	20½	11¼	13⅛	11¼
Wheal Basset	9½	7	7½	5¾
Wheal Grenville	19¾	11	11½	13¼

From this it will be seen that since the close of December last Carn Brea has fallen 6 ; Cook's Kitchen, 5¾ ; Dolcoath, 4¼, after this week's recovery of about an equal amount ; East Pool, 1¼ ; South Frances, 2 ; Tincroft, 1½ ; Wheal Agar over 1¾ ; and Wheal Basset, 1¾. Against these declines there have been rises of 1¾ in Wheal Grenville, and ¼ in West Kitty : but the rise in Wheal Grenville is more than counterbalanced by the call which has been made for working the eastern portion of its ground. We may add that the price of tin is barely 1*l*. a ton less than it was at the close of last year.

KNYSNA.

The shareholders on Wednesday held a meeting, which it is not improbable will prove to be the turning point in their fortunes. In the first place, we must congratulate them upon having in Mr. Candler a most painstaking and self-sacrificing manager. Not only has his work come out with credit from the ordeal of a sharp inspection by Mr. Edgar Taylor, but at a time when there was no one to help the company with money, he and his friends actually financed it, in order that a test crushing might be produced. On a consideration of the whole of the facts, Messrs. John Taylor and Sons decided to accept the management on condition that the shareholders would find them the wherewithal to develop the mine. Their requirements for this purpose are 15,000*l*., and the way the money will be spent was described by Mr. John Taylor in the earlier portion of the meeting, and specifically by his brother, Mr. Robert Taylor, towards its close. In addition there are certain liabilities to be cleared off, and possible contingencies to be provided for, so that the board decided to attempt, by a sort of voluntary system, to raise 25,000*l*. It so happened that shareholders who had taken part in Dickens Custer reconstruction were present at this meeting and wisely, as well as plainly, declared that the voluntary system whatever it might do in the matter of education would not apply to a company in the throes of raising funds. A committee was thereupon appointed, and the meeting adjourned for a fortnight, when no doubt a scheme of re-construction on the too-familiar lines will be presented. Such a scheme is sure to meet with the support of the shareholders, because there is a fair chance of success shadowed forth by Messrs. Taylor, and there is absolute certainty that their money will be wisely expended.

THE MEXICAN ASSOCIATION MAKES A GOOD START.

A good start is almost everything in a race, and in the career of a joint stock company is has nearly the same significance. Well, the Mexican Association has made a good start. At the end of eight months working the directors are able to declare a dividend at the rate of 12½ per cent., and as it is largely interested in mining, its proceedings cannot be without concern to our readers. The business so far has been managed with prudence and skill, and the directors may claim to have placed it upon a solid foundation. Apart from the idle questions asked by a Mr. Johnston, as to which the fullest information was given in the prospectus which he is presumed to have read before he took his shares, the discussion turned largely upon the termination of the relations between the company and Mr. Pond, so far as regards the latter gentleman's capacity as managing director. General regret was expressed that through untoward circumstances Mr. Pond's connection with the company has been severed by mutual consent. The statements made on this subject, both by the chairman and by the various shareholders who spoke about it, and by Mr. Pond himself, were in perfect good taste, and couched in the language of moderation and a due appreciation of the interests of the association. Mr. Pond made the association. That fact is not denied. It arose out of his own business, and the value also of that business has never been called in question. He practically formed the company. Before the appeal was made for public subscriptions, 106,000 out of the 123,000 shares had been subscribed by himself and his friends. He described the association as "my only hope in life," and he promised the directors any assistance they might ask him to render. There is, therefore, no schism. All are working harmoniously to promote the interests of the association, and we shall be surprised if the satisfactory results reported last Wednesday are not exceeded by those which the directors will be able to announce 12 months hence.

TRANSVAAL PROSPECTING CO.

No one will be prepared to deny that a company prospecting in the Transvaal, and transacting a business in South African securities generally, has had very little chance during the last 12 months of making a satisfactory profit for its shareholders. It was, therefore, not surprising that the chairman of the Transvaal Prospecting Company was not able to make a very pleasing statement of the year's operations to the shareholders at the meeting on Tuesday last. This, however, was counter-balanced by the encouraging remarks he made as to the immediate future. He told them there had already been a very satisfactory rise in some of the securities, and he held out the hope that they would soon be able to realise at a profit. There is no doubt that things in the Transvaal are looking up, and, therefore, we do not think the shareholders will be too sanguine if they look forward to a better report next year.

PROVIDENT CLERKS' MUTUAL LIFE ASSURANCE ASSOCIATION.

The fiftieth annual report and accounts of the Provident Clerks' Mutual Life Assurance Association (which were submitted to the members at the annual general meeting held at the Cannon Street Hotel, on the 18th inst.) showed that the new assurances effected in 1890 were 1,061 for 214,460*l*., producing a new annual income of 7,013*l*. 14s. 10d. The income for the year from premiums was 122,583*l*. 3s. 11d., and from interest and dividend 63,450*l*. 15s. 6d., and after providing for all known claims and demands, the balance on the year's working amounted to 71,328*l*. 7s. 1d., which increases the accumulated fund of the association to 1,599,645*l*. 12s. 5d. The claims by death amounted to 75,100*l*. 4s. 6d., including bonuses, assured under 289 policies, and 18 endowment policies for 2,888*l*. have also matured. The foregoing figures are very remarkable, and derived emphasis from the fact that they represented 50 years completed business of this wonderfully successful office. They testify to the careful management of the directors and staff, and in no department more than that of the investment of the vast funds which the members have contributed. To obtain an average rate of interest of over 4 per cent. in times like the present on securities, the actual value of which is at least 50,000*l*. more than that set down in the accounts, is an achievement of which the management may well be proud, and with which the members may well be satisfied.

NORTH TOLIMA SILVER MINES.

Proposed Issue of Preference Shares.

The directors of the North Tolima Silver Mines, Limited, have issued a circular to their shareholders, setting forth the present position of the company. The development of the Esperanza Mine has continued to progress satisfactorily ; the returns from this mine having shown a steady profit on the working, and there appears to be mineral in abundance, but up to the present the grade has been low, though at any time richer mineral may be met with ; but the development of the Fortuna mine which has long been advocated by the superintendent as containing mineral of much higher grade, and which it is believed would, if prosecuted, put the company into a dividend paying condition in a short time, has unfortunately been much delayed owing to want of capital. A special report has been made by the superintendent on this portion of the company's property, in which he states what he considers necessary for the efficient working of the mine. In order to carry out his recommendations and to pay off the company's creditors (the company's agent being a creditor to a large extent), it is estimated that 20,000*l*. will be required. If this sum is provided, the remaining liabilities can be discharged by the issue of debentures, and the Fortuna Mine can be thoroughly developed, and the Esperanza Mine work continued. The directors therefore propose to offer for subscription this 20,000*l*. share capital in the form of preference shares, having a preference as to capital and with a cumulative preferential dividend of 10 per cent. per annum. In the event of applications for capital being received in excess of the 20,000*l*. required, the directors will allot such 20,000*l*. in preference shares in proportion to the respective applicant's present holdings. In the event of this scheme not being taken up by the shareholders, there is nothing before the company but the necessary delay and expense occasioned by re-construction, and looking at all the facts as they are presented in Mr. Green's report which

accompanies the circular, we cannot but think the shareholders will adopt a wise course if they decide individually to take up their proportion of the preference shares, and thereby put the company on something like a firm foundation.

KANGARILLA PROPRIETARY SILVER MINES, LIMITED.

REPORT OF MR. ROSEWARNE.

A CIRCULAR has been issued by the directors of this company containing the report of Mr. Rosewarne on the Aclare Mine. This gentleman made an examination of the mine on Dec. 28 last, and states :—"The work already done is confined to about 150 ft. north and south of Singleton's shaft and to about 180 ft. in depth. Thus only a very small proportion of the lode has been in any way tested. Above the 120 ft. north there is a block containing 4,500 tons. Above the 120 ft. south another block with 1,000 tons. In the 180 ft. north there is a block in which ore has been proved for some distauce, and I have placed it on a low estimate of 3,000 tons. 180 ft. south contains the best show of ore, and the block already opened contains 9,000 tons. Besides this, there is, say, 2,000 tons on surface, and it must be borne in mind that all along the bottom of the 180-ft. level, there is a large body of ore proven, which only requires sinking winzes to render available. Take the 20,000 tons, this will make 4,000 tons of concentrates, which should average, clear of smelting, &c., 13*l*. per ton. The cost of mining will be fairly high on account of the hardness of the ground. I can hardly form au estimate of the actual cost, but 30s. per ton on the rough ore should cover expenses of breaking, dressing, timber and management, also proportional amount of dead work. The erection of the concentrating plant should be proceeded with at once, estimated cost 4,000*l*., including buildings, &c. Houses, offices, &c., will cost 1,000*l*. Development of mine, until machinery is in regular working order, and returns obtained, 5,000*l*. Total, 10,000*l*. I intend making an application to the commissioners of railways for a siding within 2 miles of the mine, and after this is granted, will then consider the question of tramway from the mine." Mr. Rosewarne concludes his report by stating that he is very much pleased with the bottom level, and the developments taking place there have further strengthened his previously expressed opinion as to the value of the mine.

PERSEVERANCE GOLD MINING CO., LIMITED.

AT the meeting of the shareholders of this company held in June last, it was decided, after considerable discussion on the position, to wait the result of the following year, and to leave it to the directors to form and suggest a scheme of re-construction at the next meeting. This meeting is now about to be held, and the directors in issuing their report have put before the shareholders the scheme which they propose should be adopted, which is briefly as follows :—A new company is to be formed with a nominal capital of 160,000*l*. in shares of 1*l*. each, to be issued credited with 18s. paid up, and thereby leaving a liability of 2s. a share ; the shareholders in the existing company to have the right to apply for one share in the new company for each share held in the existing company. It now remains with the shareholders to say whether they will risk another 2s. a share, or whether they will go into liquidation. We venture to think that they, as sensible men, will adopt the former course, and re-construct the company. To lead them to this conclusion, they have not only the report of Mr. Fry, who speaks very highly of the property, but also the experience of adjacent properties, such as the Indian Consolidated, Devala-Moyar, and Indian Gold Mines of Glasgow, which have recently been receiving encouraging reports, and have attracted a large amount of public iuterest. We have little hesitation in saying that if the Perseverance company is put in possession of sufficient funds to provide the necessary machinery to develop the property in a miner-like way, the shares will be quoted at higher prices on the market, and the company will stand a very good chance of making one of those discoveries which have lately altered the whole complexion of the affairs of certain other Indian mines.

MERRY AND CUNINGHAME, LIMITED.

THE large colliery and iron-stone properties owned by the firm of Merry and Cuninghame have long been famous, not merely in Scotland, but throughout the commercial world. The present company is formed to acquire as and from Nov. 30, the Carnbroe Iron Works, the North Motherwell Colliery, the Auchinraith Colliery, the Bardykes Colliery, and the Inkerman Coal and Ironstone pits, all situate in the counties of Lanark and Renfrew. The whole of these properties have been valued by Messrs. Farebrother, Ellis, Clark and Co., who, in the concluding paragraph of their report, certify as follows :—"We are of opinion that the before-mentioued works, collieries and pits, together with the buildings, machinery, plant, tools, and stock-in-trade (set forth in the inventories), together with the goodwill and brands, are of the value of three hundred and ninety-two thousand, six hundred and twelve pounds (392,612*l*.)" The prospectus leaves nothing to be desired on the score of fulness of detail, and every effort has seemingly been made to place the whole of the facts frankly and fully before intending investors. There is also the report of Messrs. Cooper Bros. and Co., the well-known chartered accountants, who testify that the average annual profits of the five properties for the three years ending May 31, 1890, were 37,939*l*. 6s. 5d., of which the largest contribution was made by the Carnbroe Iron Works (14,729*l*.), and the smallest by the Inkermann Pits, 2,304*l*. The last year, that is, the year ending May 31, 1890, was the most prosperous, and bears out the impression gathered from the figures that the business is steadily improving. In that year the profit was 54,012*l*. The Messrs. Cooper have even carried their investigatious to the end of last November, and found that the half-year's profit alone, estimated on the same basis as their previous certificate, was 31,552*l*. 2s. 10d., again showing the improving character of the concern. 16,250*l*. will pay the interest on the 5 per cent. debenture (150,000*l*.) and on the 7 per cent. preference shares (125,000*l*.), so that there is an ample margin. It will be remembered that (including goodwill) the estimate of Messrs. Farebrother, Ellis, Clark, and Co., was 392,612*l*., and the company is to acquire the whole of the property so valued for 350,000*l*., 150,000*l*. being payable in cash, 125,000*l*. in fully-paid ordinary shares, 40,000*l*. in debentures or cash, and 35,000*l*. in preference shares or cash. The directors include three of the vendors and four independent Scotch gentlemen, largely engaged in mercantile operations. The debenture and preference shares are offered for subscription, and judging from the certificates we have quoted they seem to present every appearance of a good investment.

MID-DEVON COPPER MINING CO.

THE report of the directors states :—Since the half-yearly meeting of shareholders, held on Aug. 20 last, the cross-cut south, which was being driven from the 60-fm. level, and which at that time had been extended about 5½ fms., has been extended to the south wall of the lode, being a total distance of 16½ fms. Although this cross-cut was driven on a cross course in ground of a fairly promising character, it did not result in any important discoveries of ore, and, therefore, it was resolved to continue the main drainage east, which was further extended 10 fms., thus reaching a point 89½ fms. east of the C shaft, but without discovering any material alteration in the character of the strata. The No. 3 stope at the 50-fm. level has been worked with the object not only of raising ore but of further developing the mine at that point. It has yielded on an average 3 tons of copper ore per cubic fm., but at present is only equal to 2¾ tons per cubic fm. ; the strata, however, is very promising for an early improvement.

"YANKEE GIRL" SILVER MINES, LIMITED.

OUTPUT FOR FIRST HALF OF FEBRUARY.

Feb. 19.—The mine superintendent cables to the following effect :—"Output to Feb. 15, 320 tons. Owing to the scarcity of cars we have, so far, only been able to forward 220 tons to the smelters."

In a cable received from Mr. Crawford, this morning, he states :—"That the railroad from Silverton to the mines which has been blocked by snow the last 10 days will, he expects, re-open very shortly. The assay of one of the cars just sampled gave 1,180 ozs. of silver per ton. Mines look spleudid.—B. MCNEILL, Secretary.

NEW GUSTON CO., LIMITED.

OUTPUT FOR FIRST HALF OF FEBRUARY.

THE mine superintendent cables to the following effect :—"Ore shipped, 300 tous." This result has been obtained in spite of the very severe weather that has prevailed at the mines, and which has considerably interfered with the regular transport of ore.—B. MCNEILL, Secretary.

MOUNT MORGAN EXTENDED GOLD MINING CO., LIMITED.

DIRECTORS RECEIVE DECIDEDLY MORE FAVOURABLE NEWS.

Feb. 17.—The directors have just received a report from the local committee (per Mr. Robert Ballard, M.I.C.E.), dated Rockhampton, Dec. 31, 1890. The information conveyed thereiu appears to the directors of so important aud satisfactory a nature that they deem it their duty to forthwith make the same known, through the medium of this circular, to the shareholders. The report states that :—"On Monday, 22nd inst., paid off men for Christmas holidays. Hope to start work again Friday, Jan. 2, but breakdown in pump will prevent starting sinking shaft No. 3, Immanuel, before Monday, Jan. 5. Mine Manager Miller prostrated by fever ; sent away on 26 sea voyage to Maryborough for fortnight ; cooler climate may restore health. Will conduct operations myself during his abseuce. Men engaged on 22 were :—On the mine, 19 ; outside the mine, 7 ; total, 26. Sinking during the week was :—No. 3 shaft Immanuel, 1 ft. 6 ins. ; No. 4 shaft Immanuel, 1 ft. 6 ius. ; total, 3 ft. Pump at No. 3 shaft Immanuel broke down. The repairs are being effected by Mr. Paton. Assays : Our assays this fortuight have been taken from large general samples of the stone all over the shafts, giviug a fair average of the whole strata sunk through. They are very gratifyiug. I sent you a telegram on the 26. (This has appeared.) Shaft No. 3, Immanuel, at the end of the year is 81 ft. deep. We are now sinking through a large body of ore, which at 81 ft. deep gave an average yield of gold, 19 dwts. 14 grs. ; silver, 2 dwts. 10 grs. ; bullion, 1 oz. 2 dwts. The stone is of a most uniform character, being a blue ore, similar to the ore in shafts No. 1 and 2, but you will observe that the proportion of silver is fortunately much less. The prospects of this shaft are very good. I shall continue to sink until I cut a footwall. You are justified in having the most sanguine hopes from this shaft, and from the Immanuel vein geuerally ; never before were your prospects so good. From 72 ft. to 81 ft. we have been sinking through real solid vein stuff, aud no sign as yet of any foot or hanging wall, and I should not be at all surprised at the vein proving to be of great size and richness as we get down and open it out. It will not take long, if the stone continues, to assure the prospects of your mine. At this stage they are very promising, and I predict that next Christmas will see you solid in the London market. Shaft No. 4 Immanuel is 31 ft. deep at the end of the year. The stone at the bottom of the shaft is a rotten diorite, or ryolite. A general sample of the stone gave 4 dwts. 22 grs. of gold and traces of silver. We have passed through 11 ft. now of this sort of stuff, viz., from 20 ft. to 31 ft., the prospects of this shaft are very promising. I have great hopes to strike it rich when I strike the Immanuel in the shaft. On the 22 we completed treatment of another 12 tons of stone for the Phœnix Company, from which we gave them 33 ozs. of pure gold. I charged them 30s. per ton for the small lot. Our mill now has obtained so good a name in the district that next year I anticipate plenty of outside work—but I hope at uo receut date to keep the mill profitably occupied with our owu stone.—G. L. S. MAGGIOLINI, Secretary.

THE directors of the New South National Building and Loan Association, Limited, of Cumberland Gap, Tennessee, have declared a half-yearly dividend at the rate of 14 per ceut. per annum, due on the 28th inst.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

To the Editor of the Mining World and Engineering Record.

SOUTH AFRICAN TRUST AND FINANCE COMPANY.

Sir,—The vice-chairman, Mr. Trench, in replying to the adverse criticisms on the directors' fees and expenditure, was pleased to say that three of the speakers held 150 shares between them. Two gentlemen rose and denied the soft impeachment, and I should like to add, as a possible third, that my holding is 1,000 shares, and two friends present at the meeting, who shared my views, each held 800 more. I think, with you, the directors would have done well to have taken heed to the universal feeling of the meeting and gracefully declined the full pound of flesh, which, under the articles of association, they are entitled to draw, whether or no they pay their shareholders a dividend. Allow me also, Mr. Editor, to congratulate you upon your true and correct report of the meeting.—I am, &c.,

J. W. Doré.

Stormont, Potters Bar.

NATIONAL SOCIETY FOR THE EXEMPTION OF MACHINERY FROM RATING.

THE TAXATION OF MACHINERY.

Sir,—May I ask a portion of your valuable space to call the attention of your readers to the Bill for the Exemption of Machinery from Rating which is down for the second reading on Wednesday next, the 25th inst. It is of the utmost importance that a decisive majority should be obtained in the division, and your readers who are interested in the question will greatly assist if they will at once write to their parliamentary representatives urging them to attend and vote in favour of the Bill. The list of members who voted against the measure last time can be had from the subjoined address.

It is very remarkable to find the members for such constituencies as Newcastle and Sunderland opposing the measure.—I am, &c.,

G. Humphreys Davies,
Secretary.

22, Buckingham Street, Adelphi, London.
Feb. 18.

VAN MINE.

Sir,—Can you give any information with reference to the progress being made in the reconstruction of this company. Of course it is scarcely reasonable to expect the directors to have furnished it in the present stage of affairs; but as a deeply-interested shareholder I should be glad to know if my fellow shareholders have adopted the same course that I myself have taken, that is to say, subscribed not merely for my proper holding but for double that number if I can possibly obtain it. I should also like to know whether any work is being done at the mine, and the name of the new manager, for after the expression of feeling at the last meeting I assume that a new one will be appointed.—I am, &c.,

Holder of Vans.

London.
Feb. 20.

[Our many correspondents who have written to us about Van Mine will find their questions answered in the "Mining Market."—Ed. *M. W.*]

THE BRILLIANT GOLD MINE.

Sir,—The solemn warning issued through your correspondence column last week by a hydrophobist, who had been "bitten by a Queenslander," comes, alas, too late; for the "plantiug" of the shares of the Brilliant Mine on the British public—which he so much dreads—has already been effected most completely. Of the 50,000 shares in the company, over 40,000 are now held by residents in the British Isles.

Nor do those "victims" appear to groan very loudly under the infliction, strange to say; and the reason of such horrid contentment on their part lies probably in the fact that those who bought early have had double their purchase-money returned to them in the last 12 months in dividends, and all the holders are now able to command 7*l.* for their shares, while receiving dividends without interruption, averaging about 2*l.* 5s. per annum.

There are now, and always have been, plenty of gold mining ventures over in Queensland as good as the Brilliant, waiting and willing to be similarly "planted," but it requires on the part of the stay-at-home British "planter" a trifle of common sense and intelligence to pick them out from the rubbish; and those are qualities which your correspondent with the rabies appears by his own admission to be deficient in.—I am, &c.,

Arthur Forbes.

16, Cornhill, E.C.

"OOREGUM ORDINARY SHARES."

Sir,—I do not see much purpose in further continuing this correspondence, and I shall not trouble you again. The "Compiler of the Charts" still harps on one string, and the directors who hold, or held, the presumed illegal preference shares should be grateful for his appeal *ad misericordiam* on their behalf. He keeps dwelling on the hardship involved; but what of the hardship to scores of investors in the ordinary shares during the last twelvemonth who have bought them entirely on the strength of the decision hitherto? Assume an affirmation of the judgment by the highest Court, to be followed by a mere amiable indulgence to those whom the decision would affect, would these late investors have no cause of complaint? Many friends of my own take a very contrary view.

Your correspondent talks of further law proceedings in case of an adverse decision. Hitherto the law expenses have been fathered upon the company—those who will gain and those who will lose alike. Are we to understand that in the above case the mere personal attempts at disembarrassments of those involved are to be made the company's affair? Surely this would be illegal. Time alone will show who is in the right; but I shall indeed be surprised if the ordinary shares do not relatively gain should the highest Court decide against the preference holders.—I am, &c.

Ordinary Shareholder.

Weymouth,
Feb. 18, 1891.

AUSTRALIAN MINES.

Sir,—I was very pleased to see the letter last week referring to the Brilliant Company. The repeated telegrams that are being spirited into the London papers herald the flotation of this concern on this market, and I would bet the last dollar I possess that directly afterwards the returns will fall off, the dividends will disappear, and the company will follow the miserable path already trodden by New Queen, Livingstone, Bonnie Dundee, Eaglehawk, and the vast tribe of other companies I could name, the shares of which floated at one time at par are now either unsaleable or only so at a terrible discount.

There is one Australian company that telegraphs its prices over almost day by day, and there are papers that actually publish them. Of what value can these prices be? By whom are they sent? Who pays for them? For I know by experience that telegraphing from Queensland very soon mounts up.

Then I observe there is the Raub Australian Syndicate, which has some properties in Borneo, Singapore, or Pahang—it does not matter which. A meeting was held this week, and I see it stated in print that the Press were excluded. What could there have been to conceal. I must frankly own that I have lost some money by Australian mines, and, therefore, perhaps appear to speak in rather a jaundiced way. Still, this consolation is left to me—that if I had taken the advice of interested persons, who advised me to hold my shares for better prices, I should have less in the bank than I have now. The best commentary upon this "dis-interested" advice is this—that I sold the shares I was advised to keep, and realised more for them than I could do at the present time. I am disposed to think that in a mining deal as between the cute colonist and the artful Yankee, the former most decidedly takes the cake.—I am, &c.,

Also Bitten by Queensland.

Feb. 19.

MINING IN CARDIGANSHIRE, 1891.

Sir,—Mining in this part of Wales has very much improved of late. Most of those mines that are being worked are looking better than they have for some years past. And it really is a pleasure to write such good news. At the Esgair-hir Mine, the most north-eastern one of the county, now being in work, is the first to make mention of. After a lapse of some months of frost and snow, when all were idle, they are now making ready a good parcel of lead for the market, and I hope, from present appearances, they may be able to continue to sell ore for many years to come. To the south of this mine, about 2 miles, we come upon the old Camdwfr or Camdoor Mine, now known as Bryn-r-Afr or Goats-Bank. This is the richest and the most profitable mine in the county for her depth. They are sending away about 50 tons monthly from here, and if they would employ a greater number of hands, they might double or treble that amount. Other parties there are who have begun east and west of this property, and who can say we may ere long have to make mention of these rising and young mines as stars of the hills? I trust it may so happen, for of late years, for the want of such mines, most of our best workmen have gone to the south coalfields, and there, it appears, have settled down. To the south-east of this mine we pass the Plymlymon Mine, still in its glory, and near to this is the Great West Van, now taking its old name as Esgair Lle, going on as fast as it can, and looking very well in some of the underground levels. No more mines in this district are being worked as yet, but down in the Ponterwyd district they are starting the Old Boy, the River Mine, also Bwlch-Gwynu, Penrhi, and others. By and by we may hope to see the whole district in full swing. Going further, now down the vellcys below, we pass through Cwmbrwym, which is still at a stand, but for how long I cannot say. Goginan Mine is the next, and the most western property as yet being worked. All the eastern ground of the neighbourhood has been taken up by a well-known mining engineer, and we may soon expect to see all of it afloat. To the west is the ground I alluded to in my last letter to your paper. I began then by giving a sort of an outline of the property, and having been from home for three months throughout the north of Wales, I had not the chance of doing so until now, but as I am anxious to see this lot of mining and mineralised property moving, I then strove to get some one or more to join me in working it, as it would be too heavy and expensive for one person alone. I am still of the same opinion, and wish that someone would come in with me. I ask nothing from him or them, even to the half of the mine—only to enable me to clear off the small amount of purchase of right of working; and this I could explain to anyone who might be disposed to come in with me, and make of it one of the first mines in the Principality. Considering that at the Goginan Mine for the six years I lived there we returned about 60,000*l.* in that time, over 9,000*l.* annually, why cannot it be done in the new undertaking? It has never been tried. The lode is plainly to be seen running through the valley, away through the Oak Forest, on to the river Rheidol and far beyond, until eventually swallowed up in the mighty ocean. So that from the old mine I have a clear run of 3 miles upon the course of this as well as other lodes that are known to exist in the country. The two roads go through the land, only about from 5 to over 7 miles from the station and shipping port of Aberystwith. Shall be glad to answer questions from any one, or to inspect and report on any of the mines throughout the country.—I am, &c.,

Sampson Trevethan,
Consulting Mining Engineer.

Capel Bangor,
Near Aberystwith.
Feb. 17, 1891.

The Chilian Revolt.—A telegram was received yesterday, stating that the Chilian insurgents captured Iquique on the 17th inst.

M. B. Foster and Sons, Limited, have declared a dividend at the rate of 8 per cent. per annum for the six months ending Dec. 31, 1890, upon the ordinary shares, after paying 6 per cent. per annum upon the preference shares.

REPORTS OF MEETINGS.

GOLDFIELDS OF MYSORE, LIMITED.

RESOLUTIONS CONFIRMED—SALE OF PORTION OF THE PROPERTY TO THE MYSORE COMPANY—A SUCCESSFUL FUTURE BEFORE THE COMPANY.

AN extraordinary general meeting of this company was held at the Offices, No. 6, Queen Street Place, on Thursday last, for the purpose of confirming the special resolution passed at an extraordinary general meeting held on Jan. 29. (See MINING WORLD, Jan. 31.)

The Right Hon. Lord Ribblesdale presided.

Mr. JOHN GARLAND (secretary) read the notice convening the meeting.

THE TERMS OF THE SALE.

The CHAIRMAN: Gentlemen, the object of the meeting is to confirm the resolution you have just heard read, and which I now move be adopted and passed. I will take this opportunity of congratulating you upon the negotiations with the Mysore board for the sale of a block on the western boundary of your property having been carried through, and those of you who are Mysore shareholders will already be in possession of the circular which has been issued by the Mysore Company to-day. By the terms of that sale 25,000 fully-paid up shares of the Mysore Company will be handed over to the Goldfields of Mysore Company in consideration of that exceedingly valuable block of land. Your board propose that 22,000 of these shares shall be distributed amongst their shareholders, which will give one share for every 10, and which at the present price of Mysore shares is

EQUIVALENT TO A 12S. DIVIDEND.

(Applause.) As to the other 3,000 shares, we propose to devote that to replacing the capital of the Goldfields Company. I may point out that this will be entirely at our service for the development of our property. I may also take this opportunity of telling you we have to-day concluded a contract for the

SALE OF ANOTHER PORTION OF YOUR PROPERTY,

and when the terms are made public to you I think they will meet with your cordial approval, and will be as satisfactory to you as the completed sale with the Mysore board. I do not know that I have anything else to say. I can only repeat what I said the other day. I believe we have an extremely valuable asset in the Champion Reef shares. Mr. Rowse, who has just returned from visiting that property, expresses himself highly pleased with it. The Goldfields Company holds 22,000 shares in that company. As to other things, of course we shall try and back up the policy which we initiated some little time ago, and which I think you will agree with me we are carrying through with some success—the sale of portions of our property. (Cheers.)

Sir CHARLES TENNANT: I beg to second the resolution. The object of the meeting was really to include Mr. Frank Taylor as one of the managers, which I am quite sure you will all endorse. As the chairman of the Mysore Company I might, perhaps, state that, in becoming the owners of this adjoining piece of ground, we have done very much for the good of the Mysore Company. I think it has added considerably to the value of that company's property.

A SHAREHOLDER: When will the dividend become actually payable?

The CHAIRMAN: It has, of course, to be passed by the shareholders of the Mysore Company. A meeting will be held on the 27th of this month, when the chairman of the Mysore Company will put it to the shareholders, and I have no doubt it will be carried through. Directly we have the means of distributing it we shall do so.

MR. ROWSE'S OPINION OF THE CHAMPION REEF.

Mr. ROWSE, having been requested by several shareholders to give his views of the property, said: Gentlemen, I am very happy to have the opportunity of responding to the request of the shareholders, and to express my views especially upon the question of the value of the Champion Reef property. The conclusion to which I have come after a very careful inspection of the whole of the properties belonging to the Champion Reef Company is that, I believe, it will become

ONE OF THE MOST VALUABLE MINES UPON THE COLAR GOLDFIELD.

I did not come to that conclusion hastily, nor without, as I think, sufficient grounds for it. My great reason for believing that this property will become one of the most valuable is this—as you are aware the former workers upon this goldfield followed the vein down as far as they were able to, but meeting difficulties, as we suppose, with regard to water and other matters they abandoned it, and the history of the field so far has shown clearly where these old workings have been followed down great riches have been found. With regard to the Champion Reef itself, it is a very striking fact that on that property there is

A CONTINUOUS RUN OF OLD WORKINGS

through the whole length of the property, with two very slight exceptions. There are two breaks, and those breaks, I believe, are accounted for first by a dyke, which passed north of Garland's shaft at the southern end of the Champion Reef, and by another dyke, which passed north of Ribblesdale's shaft. With these two exceptions there is a continuous run of old workings through the Champion Reef property, and which, from the result of past experience, there is no other conclusion to come to but that the Champion Reef property will be a very valuable one. It is known to you that in Garland's shaft a very valuable discovery was made in the bottom of the old workings, which happened while I was on the field. There was a lode 3 ft. wide, showing a streak of visible gold, certainly 10 or 15 ins. in length, and the assay of that lode, taking out the visible gold which appeared, was over 3 ozs. It is clear, I think, that we have just touched the southern end of the shoot, and after sinking Garland's shaft and driving north upon this shoot, I have no doubt you will find you will be raising considerable quantities of ore from Garland's shaft. (Cheers.)

QUESTIONS.

Mr. BEAUMONT asked what proportion the property sold bore to the whole of the property of the company.

The CHAIRMAN: I think it is 260 acres out of about 8,000. Our object will be to put back the whole of the original working capital in sales.

Mr. LLOYD: Has Mr. Rowse anything to say upon any other part of the property except Champion Reef?

The CHAIRMAN: Mr. Rowse did not inspect the Goldfields property as a commissioner.

A SHAREHOLDER: Is it the intention of the directors to divide amongst the shareholders the 22,000 shares in the Champion Reef company in the same proportion?

The CHAIRMAN: No.

A SHAREHOLDER'S OPINION OF THE FUTURE PROSPECTS.

Mr. ARCHIBALD SMYTH thought the directors had exercised a very wise discretion in the way they had treated this matter. They were much indebted to the chairman for his explauation and also to Mr. Rowse. He (the speaker) thought they were only just beginning to learn something about these Indian goldfields. (Hear, hear.) They all knew it took a long time to mine and sink shafts and drive levels, but in this case some rapid progress had been made during the last two or three years, and the directors and managers here, and the managers out there, were all beginning to find out what they had got. He thought they had got something wonderfully rich, and he was not the only person in London who thought so. (Hear, hear.) Many of his clients were strongly of the same opinion. He knew it was the intention not to look upon the market price of the shares, but he thought their shares at the present time were selling for a mere nothing to what they would fetch later on. (Hear, hear.)

The motion was then put to the meeting, and carried unanimously.

Mr. SMYTH proposed a vote of thanks to the chairman, the directors, and the mauagers, which was carried unanimously.

The proceedings then closed.

DE KAAP GOLD MINES.

DIRECTORS CUT A BAD FIGURE AT THE MEETING—THEY ARE SEVERELY CRITICISED—THE ACCOUNTS SIGNED BY THE AUDITOR SUBJECT TO A REPORT THAT IS NOT PRODUCED—A COMMITTEE APPOINTED.

A GENERAL MEETING was held on Monday, at the Guildhall Tavern, Gresham Street.

Mr. Laurence Cloete (the chairman of the company) presided.

GOOD REPORTS, BUT NO GOLD.

The CHAIRMAN said he did not occupy a very pleasant position as the chairman of a company which had no dividend to pay, nor such grand prospects as he anticipated it would have by this time when he took shares. There were a great number of diggers working on properties surrounding theirs, but this was one of the very few companies in that part of the country. They had, in the first instance, very glowing accounts of the property, and the directors also had private information from one of the greatest authorities in the Transvaal (Mr. Woodward), who was appointed the inspector of all mines connected with the Goverument, and who had to give his report when diggers wanted any particular facilities from the Government. That gentleman expressed great faith in this property, and they had his opinion in addition to the reports referred to in the prospectus. As regarded the mine, in their longest level they got some rich stuff, assaying 10 ozs. to the ton, but it then became less, and he believed the latest assay was about 4 ozs. to the ton. There was not very much of it; but he thought the report of Mr. Bowden was that of a pessimist.

A WET BLANKET EXPERT.

Anyone who knew Mr. Bowden would tell them that his reports were always on the very worst side; but that was better than having a too glowing report. He himself would not have advanced the money he had if he had thought that Mr. Bowden was too sanguine a man. The company had water power which was magnificent, a mine which was in a healthy climate, and they had got gold; every report showed a certain assay, although, of course, in driving they came across a great many places that were blank. He hoped the shareholders would agree to keep pegging away for another six months or so—for which purpose they would have sufficient funds at their command—and then have another meeting, and consider what was best to be done. They had limited the expenses to a few hundred pounds a month. It was, of course, open to shareholders to say they were going for the directors. (Cries of "Yes; we will.")

A SHAREHOLDER: Stop their fees. (Cheers.)

The CHAIRMAN said the directors had knocked their fees down from 2,000*l.* a year to 500*l.* The bulk of the fees standiug in the accounts were taken in the first nine months of the company's existence; but when it was found that things were not turning out so satisfactorily as they could wish, the directors agreed to cut them down. (A SHAREHOLDER: Will you return them?) So far as he was personally concerned, he would be willing to put the fees into the mine, because he had the utmost confidence in it. He hoped they had come there, not for the purpose of quarrelling, but of finding a policy. No doubt many present knew what gold mining was, particularly in the district in which their mine was situated—they struck a rich vein in a certain part, and then, perhaps, went on working month after month almost on the blank.

OH! OH!

He considered that they had a far better property than a great many of the Mysore mines. (Laughter.) He did not say the Mysore Mine, but mines. It was in the hands of the meeting whether they were going quietly to work the property or wreck it, hut he urged them to go on as they were for another four or six months, and then, if they

were not satisfied with the position of things, appoint their committee or new directors.

A SHAREHOLDER: Is there any hope for us?

QUITE TRUE.

The CHAIRMAN: Certainly; but you cannot get results in a day. The Graskop was working for five years without any result, but the other day they declared a dividend.

Mr. HALDINSTEIN said if the vendor had made a false statement as to the property, the shareholders had their remedy against him.

A SHAREHOLDER asked if Mr. Clocte was not a vendor.

The CHAIRMAN: Certainly not.

WHO ARE THE DIRECTORS?

The SECRETARY (Mr. Burgess), in reply to a shareholder, said the present directors of the company were Mr. Cloete, Mr. Muir, Mr. Hosking, and Mr. Dixon. The former directors resigned—Mr. Daniel King, from serious illness, on July 18; Mr. Cargill, on Dec. 29; Mr. Vanderbyl, on Oct. 15; Mr. Sampson Hill, on Nov. 28; and Mr. Harry Graumann, the vendor, went to the Transvaal 12 months ago.

Mr. HALDINSTEIN: Were any of the directors who have resigned part and parcel of the vendors?

The SECRETARY: Only Mr. Graumann, that I know of.

Mr. HALDINSTEIN complained that the balance-sheet was merely a copy of the cash-book. It contained, among other items, "Cash on deposit at the Stock and Share Auction Bank, 470*l.*; and with the Development and Investment Company, 4,589*l.*" He wanted an explanation of those items.

Mr. W. F. TURNER declared the balance-sheet

ONE OF THE MOST EXTRAORDINARY DOCUMENTS

ever printed in the City of London. He would not detain the meeting by going into the question of management, but come to the kernel of the whole thing, which was the money on deposit with the Development and Investment Company and the Stock and Share Auction Bank. As to the last, he could only say that it was not a bank at all. He might also point out that one of the original directors of this company was a director of that Stock and Share Auction Bank—Mr. Cargill. Then, what was the Development and Investment Compauy? He found from the return at Somerset House that it was practically the Cloete family, who held 1,320 fully paid-up shares out of 1,432 shares issued. He asked for a full explanation of the circumstances under which this money came to be deposited with such a company, which, he found, was now in course of liquidation. (Oh, oh.) Then he thought

THE REPORT OF MR. LAURIE

(the auditor) ought to be read. The speaker drew attention to the statement in the prospectus that the company had 100,000 tons of ore available, aud said he did not know what the word "available" meant in regard to gold mining, but supposed that only a court of law would be qualified to determine. The statement was repeated at the statutory meeting of the company by Mr. Graumann, but they knew now from reports that there was no such thing available. He thought a statement of that kind ought to have been explained by the chairman in his speech that day. No sensible body of shareholders would accept such a report as they had now, and he should move that it be not adopted, unless the chairman could give some satisfactory explauation of the points which had been raised. He kept an open mind as to that, and if he were satisfied would cheerfully withdraw his amendment. (Applause.)

MR. CLOETE SANGUINE.

The CHAIRMAN said as to the amount put down in the accounts as deposit, since the date of the accounts it had been considerably reduced, and was now something like 2,000*l.*, and for that 2,000*l.* the company had got the security of 30,000 or 40,000 shares in Grey's Mine in the Witwatersrandt. There was no market in London for them, but within 48 hours of an indication being made he would be able to get those shares taken up. He had himself been finding 400*l.* to 800*l.* a month for the purpose of keeping the mine going, and he was ready to coutinue doing the same thing; they knew it would take about 250*l.* a mouth in future to keep the mine going, and he was quite willing to find that amount. He admitted that there was a certain amouut of moral responsibility attaching to him in regard to the amount deposited in the way complained of.

Mr. JOHN WHITLARK asked that the auditor's report should be read.

The CHAIRMAN read Mr. Laurie's report, which drew attention to the amouuts at deposit and an amount in dispute concerning some electric plant, and stated that until certain matters were explained, he was not able to give a satisfactory certificate. The chairmau said in regard to the electric plant, at the time the mill was ordered there was a question of how it was to be driven, and the manager reported that the only way was by electric power. At the time the Graskop Company had an electric plant, but as that company was a little bit disorganised, being about to go under new management, they did not want it immediately, aud two or three members of the board went and saw it at work, and it was taken over from the Graskop Company. It was true that the books did not quite clearly show the transaction, but, in consequence of great pressure on his time, he had left a great deal to the other directors. He had never seen the auditor as to the accounts, so as to be able to explain those matters. There was no question but that they would work the electric plant for the company. He urged the shareholders not to go against the directors until they saw what they had got to go against them for.

WHO WERE THE BROKERS?

Mr. HALDINSTEIN said he wanted particulars as to the amount of 1,537*l.* standing in the accounts for brokerage.

A SHAREHOLDER: Who were the brokers?

The CHAIRMAN: There were about 20 of them.

Mr. C. DIXON said he was asked by Mr. Hosking to join the board, and he was induced to do so, but when he found out the position of the company he consulted some of the largest sharcholders as to whether he should not resign. A few weeks after he was appointed, a telegram came from the manager stating that unless money were remitted he should abandon the property. A little while after that a demand was made by some solicitors for an amount due, and Mr. Cloete said he would see them; but he did not do so, and there was then a petition to wind up the company, to settle which the directors had to collect a sum overdue on the shares in respect of calls. At the first board meeting after he (Mr. Dixon) joined they obtained the fixing of a day for the present meeting, and it was for this, primarily, that he went on the board. He found that to get a special meeting called would require a demand from the holders of about 15,000 shares, which would involve great trouble. It had been a very trouble-some thing to put the auditor in possession of the facts he required for the audit. The old directors practically resigned when the money was exhausted, for when he joined the board the balance at the bank was 18*l.*, and then two cheques were out for directors' fees. (Oh, oh!) He considered Mr. Cloete was morally responsible for the money paid to the two companies on deposit, but he found that these matters were arranged by a finance committee consisting of Mr. Cloete, Mr. Vanderbyl, and Mr. King. There was no entry of this transaction in the minute book, and there was some doubt in his mind as to whether the other directors knew of the money being lent. What Mr. Cloete said about the present position was practically right, the amount now due in regard to the deposits being about 2,400*l.*

Mr. HOSKING said he felt in an anomalous position as a director of the company, because he was sitting on a board with

GENTLEMEN WITH WHOM HE COULD NOT WHOLLY AGREE.

He did not think anything ought to be said against the manager in reference to the compauy not possessing any water-rights at the present time. Mr. Bowden was called upon to manage a property which was said to have 100,000 tous of quartz practically ready to be milled, but he found, as a matter of fact, that that was not true; and that being so, he did not see the use in spending money every month in retaining the water-rights, when those rights could be obtained whenever they wanted them.

Mr. HALDINSTEIN thought that explanation was satisfactory.

Mr. HOSKING said his position on the board had not been a happy one, and he was very glad to have the co-operation of Mr. Dixon. He believed there would be a very good chance for the mine if they could arrange to carry it on for another six or 12 months, which the unpaid calls, if collected, would enable them to do.

READY TO RESIGN.

In the course of the discussion which followed, the CHAIRMAN and Mr. MUIR expressed their readiness to resign, and Messrs. DIXON and HOSKING said they would leave themselves in the hands of the meeting; they were not anxious to continue on the board, but would do so if the shareholders desired it. (Applause.)

A SHAREHOLDER asked how long notice it would be necessary to give the secretary, aud was informed three months.

Another SHAREHOLDER asked, who was the solicitor to the company when it was brought out?

Mr. MICHAEL ABRAHAMS said he was, but afterwards resigned. He was, he said, ready to answer any questions that might be put to him.

Mr. LEVOI (solicitor) said he held no official position in the company, but was a shareholder, and had acted for it in one or two matters. The claim, in reference to which there was a petition, was a very trifling affair, and would not cost the company much. Whatever it was, a hundredfold as much had been got in through his exertions. Speaking as a shareholder, he thought it was quite clear that the chairman and Mr. Muir and also the secretary would have to go, and he suggested that the meeting should nominate directors to succeed Messrs. Cloete and Muir, and then let the present board confirm the appointment, because otherwise there would be the delay of having to call a meeting for the purpose of appointing directors.

The CHAIRMAN said he should be quite willing to appoint any gentleman the meeting might nominate, and then to retire from the board himself. He complained that many things had been sprung upon him by his co-directors at this meeting relating to matters in regard to which they had not previously spoken to him.

A COMMITTEE.

Sir E. GALSWORTHY thought the time had come when the meeting should take some practical step. If this were a prosperous mine, it could not, he said, continue prosperous, because it was a house divided against itself. He had heard so much that day that he confessed he should like to hear something more, and, therefore, he thought there should be a committee of investigation appointed, who would determine whether any steps should be taken for the recovery of the shareholders' money. He thought the best plan would be to leave the board as it stood, on the distinct understanding that one or two of them would resign if required to do so by the committee. He was extremely sorry to hear that their friend, Mr. Abrahams, had resigned, for he took his shares because that gentleman was their solicitor.

Mr. TURNER then moved: "That a committee of investigation be appointed, to consist of Messrs. A. Hibbert, W. Davidson, W. Haldinstein, and W. F. Turner, with power to add to their number, with power to examine the officers of the company, all books aud documents, and call in such professional assistance as they may require, and report to an adjourned meeting to be held withiu two months from this date, and that the directors and secretary be requested to give every facility to the committee of investigation in the discharge of their duties."

Mr. HALDINSTEIN thought it would be well if they could accept the resignation of Messrs. Cloete and Muir, and appoint two others that day, with the present board, to confirm the appointment. He thought they ought to secure the services of Messrs. Dixon and Hosking. (Hear, hear.)

Mr. TURNER said if the amendment were carried he should be prepared to support the appointment of two directors.

Mr. RAIT was urged to accept an appointment to the board, but said he could not possibly act.

The amendment was then put and agreed to, with two or three dissentients.

Mr. WHITLARK said his experience was that a committee of investigation was a disadvantage as a rule, and only resulted in much waste of time and money.

Sir E. GALSWORTHY pointed out that the shareholder was out of order, the amendment having been carried.

The CHAIRMAN: Will you appoint a director to join the board during the time of the investigation? These gentlemen who say they have not got a majority on the board can then have one.

A SHAREHOLDER: Would Sir E. Galsworthy h lp us?

Sir E. GALSWORTHY: Not for all the fees the directors ought not to have taken. (Laughter.)

After some further discussion, Mr. Turner agreed to join the board, and the proceedings closed.

THE KNYSNA CONCESSION GOLD MINING CO., LIMITED.

MESSRS. JOHN TAYLOR AND SONS WILL DIRECT THE MINING OPERATIONS IF THE SHAREHOLDERS FIND MONEY TO CARRY OUT THEIR PLANS—A COMMITTEE APPOINTED TO CONSULT WITH THE BOARD ON A RE-CONSTRUCTION SCHEME.

THE second ordinary general meeting was held at Cannon Street Hotel, E.C., on Wednesday.

Mr. H. Houldsworth Grierson (director) presided.

Mr. W. F. GARLAND (secretary) read the notice of meeting.

DELAY IN CALLING THE MEETING EXPLAINED.

The CHAIRMAN: I have been called upon somewhat unexpectedly to occupy the chair to-day. Our chairman does not find it convenient to be present. I have a note from him to say that it is impossible, and under these circumstances I hope you will extend your leniency to me, because I am not very accustomed to preside at meetings, but will make a short statement to you of the present position of affairs, and further statements will be made later by those competent to give you particulars about the mining developments. In the first place, you will perhaps naturally ask why we have been so long in calling this meeting. It is two or three months over the year since the last meeting was held. Owing to the great delay in the delivery of the machinery at the mines, and through difficulties in transport from the port we found that we could not realise our expectations. When we last met we expected that before the next meeting we should have the mill and machinery at work, plenty of reserves of ore, regular crushings, and the mine in thorough working order. These expectations have been disappointed owing to different causes, and when we came to consider the matter thoroughly, we thought it advisable, although we had every confidence in our mining engineer, Mr. Candler, to get further advice, and a report upon the mine as a whole. We, therefore, approached Messrs. John Taylor and Sons, and are glad to be able to say that we induced them to take the matter up. On consultation with them we came to the conclusion that, in your interests, we should get

A FULL AND INDEPENDENT REPORT

from them on the mine. They caused this report to be made, and, of course, that also led to some delay. We were anxious to have this report and a full knowledge of the position of affairs before we called you together. We have now the report, which has been circulated amongst you, and we think you ought to be satisfied with the position and prospects as therein shadowed forth. Of course there are some natural disappointments amongst us all that we are not in a position at present to give a return for the capital expended. But after all is said and done, we have only expended 20,000*l.* odd upon this mine, and I believe I am justified in stating that

MR. EDGAR TAYLOR, WHO REPORTED FOR MESSRS. JOHN TAYLOR AND SONS,

was satisfied that that expenditure had been most judiciously made, that there was no evidence of extravagance anywhere, and that the works had been laid out with judgment, skill, and foresight. To use his own remark, "the work has been well done." There was nothing that he could suggest that he would alter if he had the advising of the work on the mines. I think this ought to be very satisfactory to us as showing that the gentlemen we appointed to take charge of our interest is one who is thoroughly capable, and who has done his duty most faithfully. The capital, we find, is not sufficient to continue working, developing and laying out the mine as it must be before it produces results, but, from the report of Messrs. Taylor, we consider that we are quite justified in asking you for further money to sink deeper. You remember that as we have gone in depth the richness of the ore has increased, and the

RICHEST PART OF THE MINE IS AT THE LOWEST POINT WORKED.

This has occurred in a great many other mines, and it is well known as you go down you get increased richness, and there is no reason why that should not be our experience. There are great possibilities for this mine, and having made this judicious expenditure, having a well-equipped mine as well as machinery, and everything required, and only wanting more money to sink the shaft and extend the levels, I think it would be a great pity that another effort should be wanting on the part of the shareholders. Mr. Taylor will address you presently, and Mr. Candler is also here to give you any explanation, whilst I am ready to answer questions. There will be afterwards an extraordinary meeting to consider the scheme that we will lay before you to provide working capital for the mine. I now move "That the report and accounts be received and adopted."

Genl. LLOYD (director): I second it.

RECENT CONNECTION WITH THE MINE.

Mr. JOHN TAYLOR: It will, I think, be in the knowledge of the shareholders that our association with this company only dates back to a very recent period. It was not until July last that we accepted the position of managers and technical advisers to your company, and, therefore, it is not its past history that I, of course, can deal with in any way. We were urgently requested to take the position we occupy, and to assist in the technical business connected with the company, and in the letter we wrote accepting that position we said in its concluding paragraph:—"It is understood that if, after careful investigation of the condition and prospects of the company, we feel that its operations are not likely to be successful, we may retire from the management at any time by giving written notice to the company of our desire to do so." As soon as possible we took steps to have those investigations made for which we had stipulated, and the result is before you and deals fully with the mine. The result is that we do not feel any desire to retire from the position we occupy. (Cheers.) Although I have no brilliant story to place before you such as I should wish to have, I feel that the concern is a sound one, and that there is every reason why men of business should pursue it and see whether the evident improvement which has taken place in the comparatively shallow workings may not continue still further down. The mining works are fully described in our report. Mr. Candler is here and can give you details into which I do not propose to enter. I do not know that you will care for me to do so, because the more salient points are really only those about which you need trouble yourselves. It must be clear to all of you, from the report which I hope you have read, that a

MATERIAL IMPROVEMENT HAS TAKEN PLACE

in the appearance of the reef as increased depth has been attained; and therefore there is every inducement to pursue the exploration of the mine, particularly in depth. (Cheers.) The most important part of the mine is described in the report, and nicely shown in the sketch which accompanies it. The important part of the mine now is the 130-ft. level, in which the pay-shoot has been passed through for a length of about 120 ft. The reef is well-defined, and the rock has been shown to average something like ½ oz. of gold to the ton—some of the samples, indeed, going up to about 2½ ozs. In order to prosecute this opening it is quite necessary that the shaft, in the first instance, should be sunk, and we recommend that it should be deepened 100 ft., and that the 130 level should be continued both east and west. Another shaft should I think be also sunk about 900 ft. to 1,000 ft. further to the east, because it appears as if the dip of this mineral band were in that direction. There is no doubt the present appearance of the mine is such as to hold out every inducement to further prosecute this work, and that I have no hesitation in saying.

A STRONG AND WIDE REEF.

The reef is strong; it is from 2 ft. to 5 ft. wide, and is of the character, as my brother Edgar tells you, of a true fissure vein—which is an important point. The formation of the mineralised band at the surface is contorted to a considerable extent where visible, but as depth is attained these disturbances are not noticeable, which is another important feature. I should also point out that there appears to be every probability, by the further sinking of this shaft, that other pay-shoots will be met with which have not yet been found. There is a main one here, and you also have the fact that there is more than one. There are other reefs which can be tested which are at no considerable distance. There is one within 40 or 50 ft., which could also be attacked by this same shaft. The facilities for economical working are very considerable. You have very little water to contend with in your mine, and you have an ample supply from the river for all milling purposes. Then you have a very ample quantity of fuel available from a forest, the timber from which is also excellent for mining and building purposes; in fact, you have everything you require except a greater length and, I hope, a richer quality, of pay shoot. No one can tell whether or not that will be found, but I think you have every reason to go a little further, and test the fact. I am very glad to be able to endorse all the chairman has said, and that my brother should have been able to have told you that the work has been done so well, that it has been laid out and executed in a thoroughly miner-like manner.

JUSTICE TO THE MANAGER.

We are not always able to speak with the same confidence as in this case. I am pleased to be able to do so now in Mr. Candler's presence, who has conducted the work for you. (Cheers.) I think you must feel assured that you have had good value for the money expended. What is now merely required is a further development of payable rock, and in addition an improved mode of dealing with the quartz after it is mined. It is quite evident from the recent information that the gold has not been got out by the simple milling process that is now available, and that you will probably have to supply Wheeler pans. I think, gentlemen, I can safely repeat that the prospects you have before you justify you in coutinuing your operations, but as to the mode of providing capital for doing so, of course that rests with the shareholders. (Cheers.)

VIEWS OF THE MANAGER.

Mr. CANDLER, who was received with cheers, said: I should like to point out that this is the property which was acquired for you by me after I went out there some 18 or 19 months ago. It was acquired after examining the district for some three months previously, and being in a district where no mining had practically been done, and little or no exploration had taken place, I took the precaution to spend time in testing the ground before making negotiations with the vendors to take it over. The work carried on since then has fully justified what I did in the first instance. There has been only one disappointment so far. By the sketch you will see we had tolerably good ore near the surface, and when we sank the shaft 130 ft. we again got into good ore, and perhaps I made a rather hasty inference that it was a continuous shoot from the top to the bottom, and in doing so I may have made certain calculations about reserves, which are hardly borne out by the report of Messrs. John Taylor and Sons, from which you will find instead of it being continuous, further explorations proved that there were two shoots. I do not know that that is a disadvantage with this exception, that it for the time reduced our output of quartz available for crushing. At any rate, it was satisfactory in this way, that it proved the ore to be auriferous and to improve in depth, and that if there are two shoots, which is extremely probable, there will be others as we go deeper. Regarding the milling of the ore, unfortunately the mill was delayed owing to the serious illness of the oxen, which had to convey it to the mine.

A MANAGER WHO HELPS HIS COMPANY WITH MONEY.

We had to take the mill 40 miles through rough country, and by the time it was erected, our funds were nearly exhausted. I and friends in Port Elizabeth so far assisted the company as to take up 3,000 of the reserve shares at par, so that we might carry on the operations and make a test. (Cheers.) Of course, we could have bought the shares for half the value in London, but we did that to provide funds. At the end of the tests we got 5 dwts. from the bottom of the mine, but found techuical difficulties in the way, and the low state of the company's funds did not justify us in pursuing work. That is the

explanation why work has not been carried on more continuously. For further exploration we must provide additional money. Although we find fuel and wood of the best quality it is very hard—a kind of iron wood. Mr. Barrington is in the room, whom I have met out at Knysna, and he will endorse the statement that it requires the chisel to split it, and we must have machinery for the purpose, for at present it is very dear to cut. We shall require a small additional engine to sink the second shaft, but as to the pans, I do not suggest buying them until we carry the shaft down another 100 ft. I am glad to hear the chairman and Mr. Taylor speak so favourably of the work done.

THE STAFF HAVE DONE THEIR UTMOST,

and have worked hard. We were in a new district, and knew that if we were successful we should get the full credit. The Government—that is the Government of which the Premier is Mr. Rhodes—and the Commissioner of Crown Lands in the Colony, first in conversation and then by letter, has agreed to grant the company a total

SUBSIDY OF £1,000 FOR SHAFT SINKING.

(Cheers.)

Mr. Spyer: Have the directors a large holding in the company? and will they join proportionately in the re-construction?

A Shareholder: I find the directors have drawn 1,200*l.* in fees, but I propose that they should be paid by results, up to, say, 50 per cent. on the dividends received. (Laughter.)

The Chairman: The directors hold 19,345 shares, all purchased and paid for. (Cheers.) The chairman holds 1,145, I hold 600, Genl. Lloyd 600, and Mr. Walker 17,000. The latter is the gentleman who was elected a director at the last general meeting, but is now in Malta for the benefit of his health. Our manager holds 9,000. (Cheers.) The directors' fees, including office expenses, are 921*l.*, and

THESE ACCOUNTS ARE FOR 17 MONTHS

—from July, 1889, to December, 1890. The proposal of 50 per cent. on the profits would not be likely to meet with approval. (Hear, hear, and laughter.) There has been a good deal of work at all events by some of the directors, though, with the Messrs. Taylor to assist them, their responsibility will be lessened.

The report was unanimously adopted.

Mr. Laurence Cloete, the retiring director, was not proposed by any shareholder.

The Chairman said that in this case, as no one moved Mr. Cloete's re-election, he ceased to be a member of the board.

Genl. Lloyd proposed the re-election of the chairman, Mr. Grierson, whom he described as a most hard-working director, and who, if anything had to be done, was always the first to be ready to do it.

The motion was carried unanimously.

The Chairman, in reply to a question by Mr. Campbell, said the board would not fill up the vacancy, and, in fact, the new company would be formed, and it was not at present known who would be the directors.

Mr. James Logie, on the motion of Mr. Vallance, was voted the sum of 15 guineas for auditing the accounts for the 17 months to Dec. 31 last.

EXTRAORDINARY MEETING.

The meeting was then made extraordinary for the re-construction purposes set forth in the Mining World last week.

The Chairman proposed the first resolution "That the company be wound up voluntarily under the provisions of the Acts 1862 and 1867."

Mr. Campbell, asked that Mr. Pullbrook, who had experience in these matters, should explain the position.

THE SOLICITOR ELUCIDATES.

Mr. Pullbrook: The facts are these:—You, as a limited company have expended your capital, and as you require further money, you have to go through the cumbrous process of re-construction of your company and forming another. The new company provides for the transfer of your interest in the old company to the new. You have certain shares of 5*s.*, entitled to nine-tenths of the profits, those shares in the new company have the same rights and are changed share for share. There are certain shareholders in the old company entitled to 1-10th of the annual profits, instead of which they are to have 1-5th in the new, so that thereby every shareholder gets his fair rights. Shareholders after having heard the report of Messrs. John Taylor and Sons are likely to come forward and subscribe the capital required, in which case they get an equal interest for any new money they put in. If you do not provide money, then possibly arrangements may be made by which outsiders may come in and the shares of dissentient shareholders will be sold for their benefit. Unless re-construction is carried through, those shares are worth nothing; but if further capital be obtained, they will be worth something. The shareholders will have the first option of any underwriting arrangement which may be made.

SCHEME DISAPPROVED.

Mr. Campbell: I do not think you will get the money by this scheme.

The Chairman: I differ from you, for in the reports before us we have now something to go upon, and we shall appeal principally to our shareholders, who number between 800 and 900, and to whom the effort proposed ought not to come as a great sacrifice, as all round their holdings are small. I cannot pledge myself as to what the directors will do, but personally I will do all I can in the matter. I have thorough faith in the report presented to-day, and will put as much as I can into the company, and have no doubt my colleagues look upon it in the same way. In fact, we look to strengthening the board considerably in the new company.

DICKENS CUSTER COMMITTEMEN SPEAK.

Mr. Kelly: The shares must be underwritten by this scheme, or you will never get the money. We are deeply impressed with the chairman's honesty of purpose, but as to his scheme—unless he submits one to force the shareholders it will never succeed. I know it only too well by my experience as a member of the Dickens Custer committee. (Hear, hear.)

Mr. Bull: I can quite endorse what Mr. Kelly has said, for I was chairman of that very committee.

The Chairman: There is no forfeiture of shares for failing to subscribe. We propose to ask you for 25,000*l.* capital. The calls will be easily spread, and there is a provision for underwriting.

Mr. Daniel C. Griffith concurred in the views expressed by Mr. Kelly and Mr. Bull.

A Shareholder: I think that great confidence will be given, owing to the company being under the management of Messrs. John Taylor and Sons, and also to the excellent report of the manager to-day.

A Shareholder: I suggest that a committee be formed to consult with the directors.

Mr. Candler: I, as representing 20,000 or 30,000 shares, will second that proposal. (Carried.)

The following gentlemen were then appointed members of the committee:—Mr. Bull, Mr. Kelly, and Mr. Griffith.

THE FINANCIAL POSITION FULLY STATED.

Mr. Robert Taylor: The important point has been raised as to the working capital for the future development of the property. There are certain liabilities which have to be met out of the 25,000*l.* to be raised, including the cost of the re-construction, which will amount together to 3,000*l.*, or rather more. The figures I have more particularly to deal with are those in connection with the working of the mine. When we prepared our report we based our calculations for future working of the mine, and prospecting work on other portions of the property during a period of 18 months. We estimate the mining expenses at 500*l.* a month. That has been gone carefully into with Mr. Candler, so that that would be an outlay of 9,000*l.* We should require for the purpose of sawing the timber a certain appliance and a long wire rope, for which I am unable to give the exact estimate, but it would be between 1,500*l.* and 2,000*l.* That is an absolute necessity. Then some further expense has to be incurred with the hoist, say, 1,000*l.*, and we have put down for contingencies, prospectiug and developing other reefs if the trials prove favourable, 3,000*l.*—

A TOTAL OF 15,000*l.*

With that sum, and the mine well equipped as it now is, we ought to be able to fully prove this property, which we now think holds out sufficient prospects to encourage that expenditure. The manager, Mr. Candler, has recently come from the Cape on this business and at his own expense—(hear, hear)—and it would be most useful, in my opinion, to have him on the committee. (Cheers.)

Mr. Candler was unanimously asked to serve, and after the chairman had been thanked for presiding, the meeting was adjourned for a fortnight.

THE MINES TRUST, LIMITED.

THE COMPANY SUFFERS FROM THE UNIVERSAL DEPRECIATION IN SECURITIES—A DIVIDEND OF 3 PER CENT.—BETTER OUTLOOK FOR THE CURRENT YEAR.

The first annual general meeting of this company was held at Winchester House, Old Broad Street, E.C., on Wednesday, Feb. 18.

Mr. Samuel Pope, Q.C., presided.

Mr. F. E. Lander (manager) read the notice convening the meeting, and the report and accounts were taken as read.

THE CHAIRMAN'S STATEMENT.

The Chairman: Gentlemen, taking the report and accounts as read, there are a few observations which, as representing my colleagues in the chair, I should desire to make. The report is not as satisfactory as one would desire—(hear, hear)—but one takes some comfort from the thought that it might have been worse. There are, however, two or three matters in the report upon which we desire to have the opinion of the meeting. I daresay you all recollect that the central idea, which found its expression in the formation of the association, was, that an association which invested capital in a considerable variety of securities—of mining securities, especially—might be expected from the principal of average to be able to conduct such a business with success. No doubt that is, theoretically, an excellent idea, but the experience of the last five or six months in the City has shown that in securities of that class there has practically been no average at all—it has all been in one way, and therefore, although exercising

GREAT CARE AND CAUTION,

your directors have invested only, as far as we are aware, and as far as we believe, in good securities, not having anything like a rotten investment, as far as we know, upon the list; still, the universal depression which prevailed last Christmas reduced the nominal value of the stock in which we have invested. The first matter upon which some observation may be necessary is this. In the balance-sheet we have adopted what we believe to be the right course, viz., to take the securities which have not been realised at their cost price, and not at the nominal value which they represented at the particular date on which the accounts were made up, because, obviously, if you were to take them at that date, you would either have a fictitious profit next year, or debit yourself with a loss which has not actually accrued. We have, therefore, thought it a proper principle to take them at cost price, at the same time informing you that if they had been taken at the apparent nominal price, they would have shown a certain depreciation of value. That depreciation in our view is only temporary, and by holding to the securities, and realising when opportunities offer, we do not expect that apparent loss will become a real one. Indeed, the course of the market during the last few weeks, to a small extent, has improved the condition of things beyond that exposed on Dec. 31. (Hear, hear.)

RESULT OF THE YEAR'S OPERATIONS.

You will see by the balance-sheet that the result of the year's entire operations, taking that view of the value of our securities, is that there is a small profit to the credit, and available for dividend, and the first thing upon which we desire to consult you is whether you, as shareholders, think that the most prudent course is to divide that

money, or carry it over to next year, so as to provide for any further contingencies. You will observe the report speaks of the recommendation of the board that a dividend should be declared, but the reason why that recommendation appears is simply this—by the articles of association all dividends are declared at the general meeting with the assent of the shareholders themselves, but no dividend can be declared at any general meeting larger than that recommended by the board. If, therefore, the board had recommended no dividend, the discretion of the shareholders would have been controlled and no dividend could be declared by yourselves.

OUGHT THE PROFIT TO BE DIVIDED?

We thought it desirable it should be a matter for yourselves to decide, and we therefore recommend a dividend in the report; but as trustees we shall be equally well pleased if you will exercise a certain amount of self-control, and not divide the money. If you say you will have a dividend, there is the money available. If you think the proper course is to carry the amount over, we, as trustees, will be equally satisfied.

TRUSTEES REDUCE THEIR FEES.

I may say, without taking any credit to ourselves for the action, that we, as trustees, have felt that we ought, though we have had a great deal of expenditure of time and anxiety in the management of the business—that we ought to forego part of our fees, and we have, therefore, foregone some 800*l*., which, according to the articles of association, we should have been entitled to charge. So that we are quite willing to recommend not only that you should deal with this matter of the dividend as a matter of prudence, but we are ourselves willing to contribute to the general self-denial which should characterise the concern. That is really the substantial matter which has to be dealt with by this meeting—whether or not the dividend should be declared, and if so, what shall be the amount within 3 per cent., which the board recommend. Any amount within that is for you to decide, but beyond that the articles of association prohibit you from going.

THE RESULT OF THE YEAR'S EXPERIENCE.

I have one other observation to make. The result of the year's experience leads the trustees to the conclusion that mining securities are in their very nature of too speculative character, and are too subject to periods of depression to render it probable that any great profit can be derived from speculative investment by the ordinary way of the market. They look rather to taking an interest in the development of new concerns where good business may result. For instance, we have, in a very modest way I admit, but still as indicating the sort of business to which we propose in future to turn our attention—we have taken a moderate interest in the exploration of Mashonaland. We think better profits can be made in this way than by buying at the market price, and trusting to the events of the market to give us that which, after all, cannot be a very considerable profit. Of course, most of you will anticipate that most of those who are constantly upon the market are much more likely to get a profit from such business than a machinery which can only operate by consent of a board, which only meets at stated periods, and do not sit from day to day upon the steps to see how the market goes. A considerable portion of our business has been in the making of advances on the deposit of mining securities, in accordance with our articles of association. We anticipate a considerable increase in that class of business will result in the coming year, and a larger sum to be available for dividend than in the present case. The question, therefore, now is, whether any dividend, and what shall be declared by this meeting under the circumstances, and we shall then proceed to the discussion of the ordinary formal business. I beg to move "That the report and accounts, as presented by the trustees, be received and adopted."

Col. REGINALD THYNNE, C.B. (trustee), seconded the motion.

DIRECTORS OR TRUSTEES.

Mr. J. C. CHAPLIN: In ordinary limited liability companies there are appointed directors and sometimes there are additional trustees. The directors direct the business, and the trustees are supposed to be responsible for the investments. Here we have a company of considerable importance, but no mention whatever is made of directors.

The CHAIRMAN: The trustees in this case are the same as directors. We are directors who are merely called trustees by the articles of association.

Mr. G. W. ALLEN said he did not complain, and no sensible man who knew the course of the City within the last 12 months would complain, that the directors had not been able to send out a flourishing report. The point to be considered now was with reference to the immediate future. There were two ways, by which it seemed to him they could improve their position—one would be by endeavouring to get command of more capital, and the other would be by reducing the expenses. He could say, from an accurate knowledge of the feeling of two or three very large shareholders, that there was a decided objection just now to meet a new call—(hear, hear)—and one of the things he would ask the board was that the directors would undertake to make no calls without summoning a general meeting to consider the matter.

THE WORKING EXPENSES.

The next matter he wished to speak about was the working expenses. Notwithstanding the liberal way in which the directors had anticipated the wishes of the shareholders by renouncing some of their claim, he still thought the expenses were exceedingly large compared with the capital. (Hear, hear.) He had had the advantage of a conversation with the secretary, and had learned from him that so far as the office expenses were concerned they had already been reduced, so that the only people they could hope to bleed with any success were the directors. The fees of this board had been arranged when everyone was full of rosy anticipations as to the future, but now that

THEY HAD COME TO SOBERER TIMES

it was very necessary they should enquire into this matter. He thought the directors should meet the shareholders to the fullest possible extent. He would not make it a formal resolution, but he wished to get some information on these two points. (Hear, hear.)

FOUNDERS' SHARES.

Mr. HORTON said that, according to the balance-sheet, of 100,000 shares, there were only 33,000 ordinary shares issued, while the whole of the founders' shares were issued. Why was this? Was it not usual for the founders' shares to guarantee the whole capital of the company? Why did you go to allotment with so small a subscription?

The CHAIRMAN: Because we thought we could do a profitable business with it. The capital which was issued or offered to the public was 250,000*l*. (50,000 shares) only, and of that two-thirds was actually subscribed.

A SHAREHOLDER asked for information as to the names of the companies in which the money had been invested.

The CHAIRMAN did not think it would be in the interests of the shareholders. It might satisfy the curiosity of the shareholders, but would not be to the advantage of the company.

A SHAREHOLDER thought the office expenses excessive, and also the rent. He did not wish to approach the directors in an unfriendly or hostile spirit, but they were all living upon their incomes, and had put money into this concern, hoping for some return. He would certainly second the proposal that no further call be made unless with the consent of the general meeting.

Another SHAREHOLDER said he would support the adoption of the report, and especially as to the dividend. He had just increased his holding.

Mr. MCLEAN asked whether it was only in South African mines that the company had invested. He wished to know whether there were no investments in Queensland mines. As regards the holding by some shareholders of founders' shares out of proportion to the ordinary shares, that question had not been answered, and he wished to know what the chairman had to say about it. He thought the report should be adopted, and a dividend declared.

A SHAREHOLDER asked upon what basis the 12,000*l*. had been arrived at. Was it the estimate of the auditors, or was it a rough estimate made by the directors.

The CHAIRMAN said it had been arrived at by comparing the price the securities cost with the price on the day as shown by the Stock Exchange list, and those figures had been compared by the auditors.

SHAREHOLDERS WANT AN UNDERTAKING THAT NO CALL WILL BE MADE.

Mr. FREWIN, as a very large shareholder, wished to have the promise that no further call would be made. If the directors would give that undertaking, the shareholders would go away perfectly happy.

The CHAIRMAN: We are not able to give such an undertaking, but you may take it from me we have not the slightest intention of making a call unless it is absolutely necessary. (Hear, hear.)

Mr. HILDER asked if it was intended to utilise any of the remaining capital of the company for any new purposes. They did not want to speculate in shares by means of a board. They could do that themselves. He understood when he took shares in this concern that the business of the company would be lending money upon other people's securities.

THE CHAIRMAN'S REPLY.

The CHAIRMAN: Gentlemen, I cannot help thinking that a good deal of this discussion has proceeded under a misapprehension. You are seeking to alter the memorandum of articles under which the company was constituted. It may be that the constitution was unsatisfactory; it may be that it was bad; it may be that it ought, if possible, to be altered, but this is not the opportunity or the way to alter it. There has been nothing done with regard to the founders' shares, which has not been provided for in the memorandum and articles specified in the prospectus, upon which the public subscribed. By the memorandum and articles of association the founders' shares were not allotted by the directors, for they have had nothing to do with it, but the founders' shares were appropriated by those who founded the company and paid all the expenses of the company up to the date of allotment, and if there had been no public subscription and nobody else had applied, the whole of the founders' shares would have remained in the names of those to whom they belong. We are dealing now with the report of the directors who came into the company after it was started, nor can it be reasonably complained of by those who subscribed, because it was all stated on the prospectus. The whole of the founders' shares were appropriated by the original articles to the founders of the company on their subscribing 5*l*. each for them, and paying all the expenses of establishing the company up to and including allotment. The founders of the company no doubt distributed them among those who subscribed for ordinary shares as an inducement no doubt for some of their friends to come in, and I who subscribed for ordinary shares received the proportion of founders' shares.

DIRECTORS PAY FOR THEIR FOUNDERS' SHARES.

There is not a director but who has got his founders' shares by purchase. Each director was allowed to apply and pay for 10 founders' shares at 10*l*. each, while you got your founders' shares at 5*l*. But what I want you to bear in mind is this—if you are dissatisfied with the memorandum of association this is not the time to make that objection. With regard to the administration of the affairs of the company, there has been some just criticism. I was glad to be reminded by one shareholder of the remark I made at our first meeting, that it would not be a profitable thing for the company to speculate upon the Stock Exchange, but that the legitimate business to which they might devote their capital and attention would be the lending of money upon mining securities. I remember the expression I used.

THE DIRECTORS CAUTIOUS.

I said we should be very cautious in the way of investments, and so we have been. At all events, whether we have been or not you will see by the report that that opinion which I expressed 12 months ago is now unanimously concurred in by my colleagues on the board. But let me point out to you, so that there can be no misunderstanding about it, that that was not the primary object with which this company was formed—it was not the primary object with which you joined it. It is very easy for gentlemen who put money into a concern and do not find it so successful as they had hoped, to attend a meeting and criticise the management. With regard to investments, let me point out to you what you joined the company for. You

joined the company with the intention and understanding that its capital was to be invested in various securities so as to average risks. I agree that our experience of the year has shown that that is not the best sort of business, but what is the use of coming and saying we were to blame for carrying out the very object for which the company was formed. With regard to the investments themselves, I must, in the interests of the company, ask you to trust the discretion of the directors, that they

HAVE NOT LAVISHLY OR IMPROPERLY INVESTED ANY OF YOUR FUNDS.

The truth is the depreciation which is spoken of is a mild depreciation compared with that of other securities during the past 12 months. With regard to the expenses, they do bear a large proportion to the amount of capital employed, but I think I may pledge my co-directors as well as myself to keep down the expenses to the utmost possible limit. You must bear in mind that the whole of your directors are gentlemen who have their avocations, who give their time and trouble, and who are entitled to fair remuneration. (Hear, hear.) With regard to the 36,000*l*., although it comes under the general domination of South African investments, only 16,000*l*. is invested in gold mines. We have the advantage of members on the board, who are familiar with South African mines and South African interests generally, but so far as I am personally concerned I have not a penny in South African mines. I have a good deal of money in other mines which have depreciated a good deal more than 16 per cent. (Laughter.) It is not a loss of 12,000*l*. that you have to face, for we do not believe there will be any loss if the market continues with the favourable tendencies it has now. It would not be to the interests of the shareholders to publish our investments. With regard to the directors' fees, I need not say, as far as I am concerned—and I think I may speak for my colleagues also—we will most gladly consider the state of our company, and will not accept of our fees more than we think we are fairly entitled to for the labour we give; but I tell you frankly I cannot afford to work for nothing.

In answer to a question, the CHAIRMAN said they had invested 1,000*l*. in the Mashonaland Syndicate.

The motion was then put and agreed to, with two dissentients.

Mr. NASH proposed that a dividend of 3 per cent. be declared, in accordance with the recommendation in the report.

Mr. HOOD secouded the motion, which was agreed to.

Mr. H. E. M. DAVIES said he concurred with the chairman in his remarks as to their future operations, and proposed the re-election of the retiring director, Mr. Percy Tarbut.

Mr. A. P. MATHESON seconded the motion, which was carried.

Messrs. Cooper Brothers and Co. were re-elected auditors of the company.

A vote of thanks to the chairman close the proceedings.

THE TRANSVAAL PROSPECTING CO., LIMITED.

POSITION AND PROSPECTS—A WAITING POLICY ADVOCATED—THE DIRECTORS HAVE TAKEN NO FEES SINCE 1889 — THE CHAIRMAN HOPES FOR A "BOOM" IN SOUTH AFRICAN AFFAIRS — THE HOLDINGS OF THE COMPANY AND THEIR VALUE.

THE annual ordinary general meeting of the above-named company was held at Winchester House, 50, Old Broad Street, London, on Tuesday, Feb. 17, 1891, at two in the afternoon, for the purposes following, namely:—To receive and consider the statement of accounts and balance-sheet and the report of the directors; to elect auditors in the place of those retiring; and to transact other ordinary business of the company.

Mr. Tavenor presided.

Mr. F. W. SELLICK (the secretary) read the notice calling the meeting.

The CHAIRMAN, in proposing the first resolution for the adoption of the report and statement of accounts, stated that the meeting would have been called earlier but for the fact that his health had been such that it would not allow of his attending. In regard to last year's proceedings, he need hardly inform the shareholders—or anyone interested in matters in the Transvaal—that the year through which they had passed had been a very unfortunate one. All matters in the Transvaal during the past season, and since the last meeting of this company, had

GONE FROM BAD TO WORSE,

but he was very glad to be able to say that the very marked improvement in the returns of gold from the Randt within the last few months were beginning to have their natural sequence in obtaining the support of the public to the gold enterprises of South Africa at this end of the world, which the extraordinary rich character of the discoveries demanded, and it was very gratifying to the board to know that their interests in the Transvaal within the past few weeks had shown a marked improvement. There had been a very satisfactory rise in some of the securities of that region, and the advantage of that to this company—being a prospecting compauy in its real object—spoke for itself. During the past year they had been fortunate in obtaining a very large interest in the Prospecting syndicate which brought out the Citizen Gold Mining Company. They held a very large interest in that company. As a matter of fact, the present holdiug of this company in the Citizen Company's original stock was about 24,000*l*., and he might mention that this property—

THE CITIZEN GOLD MINE—

had been very highly spoken of by those who were well qualified to judge, and they were of the opinion that in the Citizen this company possessed a valuable security of great promise. Although he (the speaker) was not connected with the Citizen Company himself, he felt that he might concur in the remarks made about it, and that when developed it would be a very good mine, as it was one of the largest mines on the Randt. (Applause.) This company (Transvaal Prospecting) also possessed shares in the Chartered South Africa Company—about 960 shares in that company. The present value of those shares was about 2*l*. 10s. each, and from what he heard—and a great deal of confidence was expressed—this year they would become of very great value. (Hear, hear.) Beyond these shares they possessed some shares—fully paid—in the Transvaal Lands Company. The Transvaal Lands Company was a company that possessed an enormous area of territory in South Africa, and had a board of directors of very high standing, and a very able and energetic management on the other side. With the general depression of thiugs in South Africa, land had materially fallen in value, but if what

RUMOUR SAYS

was true, it was quite possible that beforc many months were over the holders of these shares might confidently look for an increase in price in consequence of the discoveries that were being made on other lands. They knew well enough what a rise in the price of shares in the Transvaal meant. It meant, shareholders might have one week shares that they could not sell for 10s., and for which the week after they could get 2*l*. or 3*l*. for them with far greater ease than they could have got 10s. Such were the assets possessed by this company in the securities that he had mentioned. They had, of course, hoped to have done far better in the past year than they had done, but they must still exercise patience. Of course, it would have been much better for the directors and the shareholders also if he had been in the position of coming before them that day and telling them that the value of the shares held by this company had very much enhanced, and that they had sold them at a good profit and premium, and that the board were able to pay, iu consequence, a very satisfactory divideud—that would have been the most gratifying and happy intelligence that the shareholders could possibly have received.

PRESENT POSITION AND FUTURE POLICY.

Now, as regarded the present position of the company and its policy for the future, he did not think that they could do better than carry on the policy that they had done for the past year, that was to keep the shares that they held until the markets mended and favoured their operations, and then to obtain as much value as they possibly could, and if they succeeded in doing that, which he himself felt they would be able to do, he believed that that company would be placed in a very different position to what it was at the present time, and to what it had occupied for the past two years, because it would renovate them with a very large sum of money, which would enable the board to pay a very handsome dividend, and still have a largc amount of money to expend in the original prospecting work for which the company was formed.

THE EXPENSES WERE BEING KEPT DOWN

to the lowest possible limit, and at the present time the total expenditure in London aud the Transvaal was only at the rate of about 700*l*. per annum, including everything, and he did not thiuk that that could be regarded as a monstrous amount to pay annually. Of course, in the past, when things were better than now, they employed a large staff in the Transvaal. Of course, when things improved, the shareholders would only be as glad as the directors that they should spend a little more money in South Africa to make more. (Hear, hear.) They had, he regretted to say, had

SOME MISFORTUNES

in the past year. For example, there had been their holding of 1,500 shares in the Waterberg Transvaal Company. Those shares had depreciated in value, iu consequence of the company going into liquidation, but the liquidation of that company (in which he was, he might say, about the largest shareholder) was of such a character that the assets of the company would enable it to be reconstructed satisfactorily, and that eventually the shareholders in the Waterberg Company might look to get a good return upon their investment. At any rate, he did not think this company need look upon that investment as a bad one. He certainly looked forward hopefully, and he did not think at that juncture that they need feel altogether disappointed with that holding of 1,500 shares. There were several other items of shares held by them; for iustance, those in the Transvaal Prospecting Company of Glasgow, of which they held 250 shares, and they also held shares in Wright's Prospecting Syndicate. They had other things in hand, but their best items were those that he had alluded to in the early part of his speech, viz., the shares in

THE CITIZEN GOLD MINING COMPANY, THE TRANSVAAL LANDS, AND THE CHARTERED COMPANY.

If these shares turned out well the shares of the Transvaal Prospecting Company would, he felt confident, be very much more valuable than their present price of 2s. 6d. or 3s. 6d. each. (Hear, hear.) He regretted that he certainly did not at the present moment see anything that could be done to further the advantages of the company, and he repeated that his opinion was that

THE GREATEST WISDOM

was to go quietly and economically to work, and allow the markets to mend, and then avail themselves of the opportunity of acquiring cash for their assets, and thus put themselves into a position in regard to money, which meant dividends to shareholders, which are

VERY PLEASANT THINGS.

The shareholders must not forget, while dwelling upon the present state of things, that the past often repeated itself, and this small company of theirs when it was started met with an extraordinary amount of good fortune—so much good fortune indeed that he knew that many gentlemen had experienced beuefit by obtaining 20*l*. for each 1*l*. invested iu the compauy. That they actually obtained. Well, that was the first effort of the company, as the small company before it became a large one, and he did not see why it should not be repeated. He did not for a moment doubt, with a fair average, that their good fortune must come for the Transvaal, and for owners, and proprietors and shareholders in the Transvaal one of these days. The circle must be completed. Things must improve, and they must have a far better market than had been the case for the past few months, and they must look forward cheerfully and with confidence to the future, and keep themselves contented in the meantime. He could assure the shareholders that when the favourable opportunities came they would not be neglected by the board. He had nothing further to add; he would be happy to reply to any questions that any of the shareholders desired to ask, and he begged, in conclusiou, to propose the adoption of the report and statement of accounts.

A SHAREHOLDER seconded the motion.

DISCUSSION.

Mr. J. T. ALLSOPP, in a somewhat lengthy speech, complained of the report presented, and of the expenditure incurred by the company both in London and on the spot. He felt that the shareholders were justified in asking for further particulars. And he desired to know what remuneration the board were taking.

Mr. TREDGOLD had hoped the chairman would have enlightened the shareholders on what the company was doing now. They got no such information, but were asked to be content and satisfied with what they had had. He had advocated the purchase of an option in some property beyond the Orange River, in Gilmour territory, but the board had not accepted the offer, which came to him through a *bonâ-fide* friend from the Cape.

After remarks from other shareholders,

The CHAIRMAN, in reply, said that he considered the salaries and expenses at Barberton were moderate, and he was ashamed of the shareholders who had spoken as they had done.

A SHAREHOLDER: Don't attempt to "bully" the shareholders.

The CHAIRMAN, continuing, said the last thing in the world he wished to do was to "bully" the shareholders, and he did not like the word "bullying." As to an offer they received from Mr. Tredgold in regard to property in German territory beyond the Orange River,

THE ADVICE OF THE COMPANY'S SOLICITORS

had been opposed to the directors embarking in it without fuller information. As to directors' fees, the board had not drawn fees since 1889. He assured the shareholders that their interests were not neglected, and the board, he repeated, had not been extravagant or wasteful in expenditure. A percentage was being charged on unpaid calls; they charged 10 per cent.; and they believed that they would get all paid, or only a very small proportion would not be settled. The times had been bad for shareholders, and the board had had to be lenient.

A further discussion followed, and the adjournment of the meeting was advocated.

The CHAIRMAN thought an adjournment was useless. If Mr. Tredgold's offer was considered worth accepting on investigation, the board could accept it without the need of any adjournment.

Mr. OGLE thought that the board might have taken the trouble to go into the matter of Mr. Tredgold's proposition before this.

Mr. TREDGOLD said the deeds could be inspected at the solicitors (who he named) in Lombard Street.

The SECRETARY said he had done all in his power in the matter to carry out the wishes of Mr. Tredgold in regard to investigating the value of the proposal.

THE BOARD ARE WILLING TO FILL THE VACANCIES ON THE DIRECTORATE FROM THE GENERAL BODY OF SHAREHOLDERS.

The CHAIRMAN, in reply to a shareholder, said the board would be happy and willing to fill up the vacancies on the board from the general body of shareholders.

The motion was put to the meeting, and declared carried by the CHAIRMAN.

A SHAREHOLDER challenged the vote.

It was takeu again, when the CHAIRMAN stated seven votes were recorded for the motion, and six against, and he had, therefore, to declare it carried, for the second time.

FORMAL BUSINESS.

The auditors, Messrs. Spain Brothers, having been re-elected at the same remuneration as heretofore,

The proceedings terminated with a vote of thanks to the chairman and directors.

M. B. FOSTER AND SONS, LIMITED.

ANOTHER PROSPEROUS YEAR—A SATISFACTORY DIVIDEND, A BIG PROFIT, AND A BRIGHT OUTLOOK.

THE first annual general meeting was held at 27 and 29, Brook Street, yesterday.

Mr. John H. Foster (chairman of the company) presided.

Mr. ALEXANDER KNIGHT (secretary) read the notice of meeting.

COURSE OF TRADE.

The CHAIRMAN: Gentlemen, in moving the adoption of the report and balance-sheet and the delaration of the dividend of 8 per cent. upon the ordinary shares for the last six months of 1890, making a dividend of 8 per cent. for the year, I must candidly confess that I should have done so with much greater pleasure had not some very adverse circumstances, which occurred in 1890, taken place in the first year of the company's existence. You may remember in the prospectus which was issued on the formation of the company, the average profits were certified by Messrs. Waterhouse and Co., the auditors, and truly certified, to be, on the average of the five previous years, 33,800*l*. odd, and we present to you a balance-sheet showing 33,800*l*. odd—a diminution of 3,000*l*. I would explain as briefly as possible how this arises. If you refer to the same prospectus you will find that the company took over at cost price the stock-in-trade of foreign consignments abroad and afloat to the value of 85,300*l*. I think you will be pleased to learn that of all those consignments 82,300*l*. odd had been sold, and the money is actually in hand. (Cheers.) But the freights which we were compelled to pay upon those consignments were upwards of 2,000*l*. more than the freights payable on the consignments of the previous five years. Therefore, to get a just comparison with those of the previous year we must add to the profits of this year the 2,000*l*. which we had to pay extra, and over which we had no control. (Hear, hear.) That will bring the matter to 35,800*l*. You know that we have taken steps by the presence of

ONE OF OUR DIRECTORS IN THE AUSTRALIAN COLONIES,

New Zealand, aud so on, greatly to consolidate and increase the company's business. We have put half the probable cost of his expenses (which are simply expenses out of pocket, nothing being charged for his time, and he will give 12 months of his most valuable time and best efforts to the company)—I say we have put into the accounts that and some increased expenses for advertising and other things, which would certainly cover half the deficiency of 1,000*l*. Then, gentlemen, there was a small matter, but it is only right you should know it will be a more formidable one in the future, and that is that the

COST OF BOTTLES HAS GREATLY INCREASED.

All the English and some of the foreign makers laid their heads together and raised the price as they said on account of strikes, and the additional price of coal. We made our contracts with foreign houses much more advantageously, and the company when they took the business over, took a large stock of bottles from me at the stock price, and in that way and with the remainder of our stock we were able to tide over the year pretty nearly, but until our foreign friends get the moulds so that we can have exactly the same shape, and the same sized bottle in the future as we have had in the past (which is very important for packing purposes, for the cases are constructed for a certain sized bottle), we were obliged to have some bottle from English houses. That made rather over 100*l*. more, so that we received 600*l*. upon the last thousand. Now I come to the most serious matter—the

FEARFUL AND DISASTROUS FLOOD IN AUSTRALIA.

Sydney for some time, a large portion of it, was under water, and that iu a country where they suffer from drought and not from rain, put a stop to all outdoor amusements, picnics, garden parties, lawn tennis, and those other out-door exercises that the Australians affect so much, I say these floods very seriously affected the trade, but, after all, it was really a blessing in disguise, and a perfect godsend to the agriculturists, though diminishing the profits of the company considerably, for in consequence of these rains, instead of the sheep dying off by thousands from want of water and food, the quantity of sheep has so much increased that the wool clip this year is the greatest and the grandest that has ever been known, and, we hope, and I think with good reason, to participate in the results of so much additional wealth to the couutry, but unfortunately, and very much too closely, there followed that

FEARFUL LABOUR AGITATION

of Australia and New Zealand, which lasted for two months, so that for one-sixth part of the year paralysed was trade entirely. That is the report not merely from our own correspondents, but from the commercial papers—a pure and simple disaster, not of benefit to a single individual, unless it be to the agitators who get up these strikes. (Hear, hear.) You can realise perhaps for yourselves from what has occurred in Scotland lately within our own knowledge just before Christmas. Look at the returns of the North British and Caledonian. See the perfect stagnation and paralysis of trade, and it will give you a faint idea of what two months of it was in a rising colony like Australia.

LABEL PIRATES.

Mr. Balchin's visit to the colony has resulted in a most important discovery—one of the highest moment. We understand that it is a fact, but to what extent we hardly know yet, that piracy exists, for Mr. Balchin discovered, and has seen, a plate with the label of the company engraved upon it, Bass's label also engraved upon it, to be used in substituting some inferior colonial beer for the beer bottled by your company. Now, I need not say that to defend the fair fame and the world-wide reputation which the bottling of M. B. Foster and Sons has is a matter of life and death, because if we lose our prestige and good name the result will be most serious. If Mr. Balchin had done nothing else (and he has done much, and will visit every place where we have agents so as to see the trade is properly conducted) it would have been well worth while sending him out for that one purpose alone of putting a stop to this vile, mean, contemptible and wicked practice. We telegraphed immediately to him to take every step that was necessary, and sent him powers of attorney on which he could act at once so as to bring the delinquents to justice, and have them I hope

THOROUGHLY TROUNCED.

(Cheers.) It may be interesting to you to know that, at the statutory meeting, there was reported a very large increase in the export of ale—not consignments—purchases. That has been very much interfered with by the same causes that have interfered with our prosperity, for what affected the company affected them equally. Still, upon the whole year there has been an increase of 7½ per cent. In the minerals there has been not as large an increase as we could have wished. The cold winter knocked that down, but still nearly 3,000 dozen more were sold than in the previous year. I think you will be pleased with the increase in the home trade. That amounts to 20 per cent. on the year—an increase of 47,300 doz. I think that is very satisfactory, and the increase, if not in the same ratio, is still going on upon the increase of last year. Another matter which I think is a subject for congratulation as showing the energy and ability of the managers and the staff, is that we supply almost all the leading theatres, some with mineral waters, but all with bottled beer. If it is not wearying you I would like to read out the list: Drury Lane, Covent Garden, Avenue, Lyceum, Terry's, Lyric, New Olympic, Princess's, Royalty, Comedy, Toole's, Opera Comique, Savoy, Globe, Shaftesbury, Garrick, St. James's, Prince of Wales's, Adelphi, Vaudeville, Gaiety, Haymarket, Criterion, Strand, and last but not least, that most magnificent and luxurious theatre the Royal English Opera House of Mr. D'Oyly Carte. One more statistic; in that quautity sent out, of course we are liable to returns. Beer does not always turn out as well as we could wish, but in the home trade last year the returns have been one dozen in every 700 dozen sent out, which shows careful management of the stores, and that the beer has been bottled well, and every care takeu of it. There is only one other thing, and I said it last time. If every shareholder would become a customer and recommend his numerous friends to become so also, I am sure your interests would be enhauced and the prosperity of the company even more consolidated than it is. I thank you for your patience iu listening to me, and beg to move the resolution I have already proposed. (Cheers.)

FACTS OF THE CURRENT YEAR.

Mr. ARTHUR GEORGE WHICHELO (director), in seconding the motion, said: I have been identified with this business for 35 years, and therefore may be presumed to have some knowledge of it. As to the home trade, seven weeks have passed of 1891, and the increase

upon the same period of last year is 14 per cent. When you bear in mind that January and February are the most miserable months of the whole year, you will be pleased to know the substantial increase that has taken place so far. Your board are perfectly alive, and anxious to seek new business. Negotiations of great importance have been entered into, and contracts made. Some negotiations are concluded, and some are pending, but I am safe in saying that the result will be a considerable augmentation of business. Probably you may remember that M. B. Foster and Sons is a firm

CHARACTERISED BY THE MOST BEAUTIFUL MODESTY.

(Laughter.) That virtue has hardly descended to the company. We have taken a different line of policy—an aggressive line. In the most friendly manner possible we have carried the war into the camp of our competitors, with the success you have heard. We intend continuing that policy, and I trust next year will show as great an increase over '91 as '91 does over '90. I think there is a fair prospect of it. As to the export trade; with which I am pleased to be more particularly identified, taking an all-round-the-world view of the situation, I can state, as a shareholder, that the popularity of the "Bugle Brand" has been well maintained in every part of the world worth supplying. There are certain parts not worth supplying, and we have no objection to leaving those to our competitors. We are pursuing your interests vigorously in India, where there is a demand for lighter beer. The high gravity has rather gone out of favour, but we are pushing light ale in that region, and I believe our efforts will be crowned with success. We are represented all over the world

FROM JERUSALEM TO MADAGASCAR.

At Zanzibar you are also well represented, and I anticipate the time when a largely improved trade will be done there. The Cape trade is well maintained. The company is most fortunate in having Mr. Balchin's services, who has given them for 12 months for nothing. That is quite unusual. Love does not rule high in the commercial scale—it is generally money; but this is the exception which proves the rule.

The report was carried unanimously.

DISCUSSION AND BUSINESS.

Mr. MOORE asked what had been done to establish a reserve fund? Although he supposed the amount appropriated to the reduction of goodwill had reference to that?

The CHAIRMAN: Yes; and also the 1,094*l.* preliminary expenses which is the nucleus of the fund.

Mr. MOORE hoped the directors would not relax their efforts in bringing the persons to justice who were guilty of the piracy Mr. Balchin had discovered. As one who knew the trade, he quite approved of brewing lighter beers, as the public taste was changing.

Mr. THOMPSON proposed, and Mr. MOORE seconded, the re-election of the chairman and Mr. Matthew A. Whichelo as directors, and it was carried uanimously.

Mr. GLASSON proposed the re-election of the auditors, Messrs. Price, Waterhouse and Co., at a remuneration of 75 guineas.

Mr. BOUSALL seconded the motion, which was carried.

Mr. WATERHOUSE spoke highly of the manner in which the books of the company were kept, and returned thanks for his re-election.

Mr. MOORE, in cordial terms, proposed a hearty vote of thanks to the chairman, the directors, and the staff, and eudorsed the policy of coming to the front instead of that of modesty, which Mr. Whichelo had meutioned as formerly being characteristic of M. B. Foster and Sons.

Capt. HOLLOWAY seconded the motion, which was carried unanimously.

AN "EIFFEL TOWER" BUSINESS.

The CHAIRMAN: Every statement made is absolutely true to the best of our knowledge and belief. This is a fine old business. For 62 years it has been in existence, and you are working upon a grand foundation. May the superstructure rise something like the Eiffel Tower—(laughter)—and be a grander and more lasting one. (Cheers.)

Mr. MERRIT returned thanks on behalf of the staff, and promised that no effort on their part should be wanting to promote the company's success.

COMMERCIAL NOTES.

METALS.

THE Metal Market has been quiet during the current week. Bank rate remains 3 per cent. Bar silver, after decliuing to 44¾d., has recovered again to 45$\frac{1}{16}$d.

COPPER has been fairly steady. G.M.B. Warrants declined from 53*l.* to 52*l.* 7s. 6d., but improved again to 53*l.* cash, and three months prompt to 53*l.* 5s. To-day's prices are 53*l.* 2s. 6d. buyers cash, and 53*l.* 7s. 6d. three months. The statistics for the fortnight were satisfactory. No charters reported from Chili. The total decrease for the fortnight in Liverpool, Swansea, and Havre stocks is 693 tons. We quote English tough, 56*l.* 10s. to 58*l.*; best selected, 58*l.* 10s. to 60*l.*; strong sheets, 65*l.* to 66*l.*; India sheets, 60*l.* 10s. to 61*l.* 10s.; yellow metal, 5¾d. to 6d.; ore, 9s. 6d. to 11s. per unit.

TIN has been quiet. Straits declined from 90*l.* 2s. 6d. to 89*l.* 12s. 6d. cash, and from 90*l.* 10s. to 90*l.* three months, improving again to 90*l.* 5s. cash. and 90*l.* 15s. three months; easing again to 89*l.* 17s. 6d. cash, and closing 90*l.* cash, and 90*l.* 7s. 6d. three months. Australian 2s. 6d. to 5s. premium over Straits. The Straits shipments for first 14 days of February are cabled as 1,485 tons. English ingots, 93*l.* 10s. to 94*l.* The Dutch market has been steady, at 54¾fl. for Banca and Billiton.

TINPLATES steady, and ordinary coke quoted 18s. per box, Liverpool.

SPELTER steady, at about 23*l.* 15s. for ordinary brands, ex ship here; special 24*l.*

LEAD quiet, closing rather firmer. We quote soft Spanish, 12*l.* 10s.; soft English, 12*l.* 12s. 6d. to 12*l.* 15s.; L.B. 13*l.* 5s.; sheets, 13*l.* 10s. to 13*l.* 15s.

QUICKSILVER steady. Rothschild's price is still 8*l.* 12s. 6d.; seconds, 8*l.* 11s. 6d.

ANTIMONY dull and easier, 67*l.* to 68*l.*

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING FEBRUARY 21ST.

Alex Thorn	10 per cent.
Aberdeen Steam Navigation	10 per cent.

Thorn and Co., Ordinary	10 per cent.
Vickers, Son, and Co.	7½ per cent.
West India and Pacific Steamship	7½ per cent.

HOLLOWAY'S PILLS.—Changes of temperature and weather frequently upset persons who are most careful of their health, and particular in their diet. These corrective, purifyiug, and gentle aperient Pills are the best remedy for all defective action of the digestive organs. They augment the appetite, strengthen the stomach, correct biliousness, and carry off all that is noxious from the system. Holloway's Pills are composed of rare balsams, unmixed with baser matter, and on that account are peculiarly well adapted for the young, delicate, and aged. As this peerless medicine has gained fame in the past, so will it preserve it in the future by its renovating and invigorating qualities, and the impossibility of its doiug harm.

SUPPLEMENT.

The Mining World AND ENGINEERING RECORD.

ESTABLISHED 1871.] SATURDAY, FEBRUARY 21, 1891. [ESTABLISHED 1871.

REPORTS OF MEETINGS.

THE MEXICAN ASSOCIATION, LIMITED.

A 12½ PER CENT. PER ANNUM DIVIDEND ON EIGHT MONTHS' WORKING—GREAT POSSIBILITIES BEFORE THE COMPANY—SHAREHOLDERS EXPRESS GENERAL REGRET AT THE SEVERANCE OF MR. POND'S CONNECTION WITH THE COMPANY, AND ASK THE BOARD TO REINSTATE HIM—MR. POND MAKES AN IMPORTANT STATEMENT.

THE first ordinary general meeting was held at Winchester House, on Wednesday, to receive and adopt the directors' report and audited accounts, and to sanction the payment of a dividend. To elect two directors in place of those retiring, but who are eligible for re-election. To appoint auditors for the ensuing year, and fix their remuneration.

J. L. Hale, Esq. (chairman of the company), presided.

Mr. W. F. JACK (secretary) read the notice of meeting.

REPORT SUMMARISED.

The CHAIRMAN: Gentlemen, as you are aware, our accounts extend over a period of eight months, endiug Dec. 31 last, and you will find that in paragraph 3 we state :—

"The company was started without liabilities, and possessed of 35 deferred shares of the Mexican Explorations, Limited. The directors were successful in issuing a company, for which the shares were over-subscribed, and so satisfied were they of its soundness that they still hold an interest in the undertaking, from which they expect a substantial return."

The company alluded to in that paragraph is the Mexican City Properties Syndicate, in which we have a very large interest. From all the information we have received we expect a great deal of profit from that investment. In the next paragraph we say :—

"The directors have made other investments (carefully limiting the amounts), in two of which they are associated with other companies. They are also investigating and proving certain properties with the object of bringing them before the public shortly. Besides retaining a moderate interest in enterprises of which the prospects have thus to a considerable extent been ascertained, they expect to be able to make by these issues a good profit for dividends during the present year." I do not think there is any objection to mention the two investments specially referred to here. One is the Chiapas Syndicate and the other is the Western and General Development Syndicate. I think I need not refer more particularly to the investments mentioned in this paragraph. Then we say :—

"The accounts have been audited, and all the investments, extending as they do over such a short period, have been valued at the actual cost. The 35 deferred shares of the Mexican Explorations, Limited, are treated as a reserve fund, the dividend on which, now accrued, but not included in these accounts, amounts to 341*l*. 16s. 8d., or 9*l*. 15s. 4d. on each share."

At the present moment the investments are quite equal to the actual cost, and there has been

NO DEPRECIATION WHATEVER.

This company is, therefore, better off than the accounts show. Then as to the value of the 35 deferred shares which are mentioned in the last sentence of this paragraph—if we assume their value to be 200*l*. per share, that would represent a sum of 7,000*l*., but I do not profess to be able to value a founders' share. Next year it may pay 20, 30, or 50 per cent., or it might pay nothing, and the same over a series of years. A founders' share might pay large dividends over one series of years, and nothing at all over another. (Hear, hear.) In dealing with such a property it is better to put it in the reserve fund, and not bring it in the accounts in any other way.

"The result of eight months' business enables the directors to propose that a dividend at the rate of 12½ per cent. per annum be paid to the ordinary shareholders, and to the deferred shareholders 4*l*. 9s. 6d. per share. Mr. Pond having resigned his position as director, the board are pleased to intimate that Robert Forrest, Esq., J.P., of St. Fagans, Cardiff, has been appointed in his stead."

I daresay many of you have heard of Mr. Forrest before, but if not I may state, as he has become one of your servants, and as you may like to know something about him, that he is an experienced man of business, a director of several prosperous companies, and has large business connections, and we expect he will be of very great service to the company. Turning to the share capital account there is only one item which I need remark upon, and that is the amount unpaid on allotment of 902*l*. 10s.—since paid 188*l*. 15s. That leaves a balance of 713*l*. 15s., which is quite safe. We can get it at any time, and in the meantime it is bearing a good rate of interest. In the balance-sheet I do not think there is anything I need refer to, unless it be in answer to questions that may be afterwards put. Therefore I turn to

THE PROFIT AND LOSS ACCOUNT.

The first item I need remark upon is that of telegrams, 20*l*. 4s. 8d. Those telegrams are messages passing between this country and Mexico, and the cost per word is 2s. 6d., which will readily account for that item. Then there is a sum of 26*l*. 5s. for the Mexican Union. We happen to be personally acquainted with other companies, and with influential persons doing business in Mexico, and it was thought well to periodically associate with each other, compare notes, and talk over matters relating to Mexico; and so there has been a weekly meeting, and contributions towards any expense that might arise, and our contribution is, as stated here, 26*l*. 5s. Then the rent is down at 242*l*. 8s. 4d. Well, we have other offices giving us the same accommodation at less money at 85, Gracechurch Street. The director's journey to Mexico cost 225*l*. The director who undertook it was Mr. Grothe, who is very experienced in Mexican matters, and we consider we have ample value for that outlay. He brought home a valuable report about the Peregrina Mine, and the large block of building land in the City of Mexico, in which we are interested. He also established in Mexico an agency with Messrs. Benecke and Co., bankers, and I do not think we could have found a better house to represent us in Mexico. He also commenced other negotiations. The next item, and the last to which I need refer, is "paid to the manager for giving up his agreement." That manager, as you may be aware, was Mr. Pond. As these are personal matters it is thought any remarks made had better be reduced to writing, and with Mr. Pond's consent I will read this paper :—

MR. POND'S AGREEMENT.

"This company, as stated in the prospectus, took over the business of Mr. Chas. Pond, trading as the 'Mexican Association.' The terms of taking over were that Mr. Pond should receive, first, the allotment of the 250 founders' shares; second, that he should be manager of the company at a minimum salary of 850*l*. per annum, and that he should receive in addition 100*l*. yearly for every 1 per cent. dividend paid to the ordinary shareholders beyond 8½ per cent.—this agreement being binding for five years. Mr. Pond's affairs, unfortunately, having become involved during the recent crisis, it was felt both by the directors and by himself that his services were not likely to help, but were rather a hindrance to the progress of the company. After some negotiation, the board, with the advice of its solicitors, came to a friendly arrangement with Mr. Pond, whereby he cancelled his agreement for the consideration of 1,250*l*., which sum is that stated in the accounts. Your directors are unanimously of opinion that this payment is of decided advantage to the company, as it relieves it from what would be a very considerably larger payment, should the company make, as they have every reason to believe they will, substantial profits."

I think I have no more to say, except to conclude with the observation that in so extensive and undeveloped a country as Mexico no doubt great profits can be made if sufficient care and the right means be employed. On the other hand, money is liable to be lost by the introduction of worthless schemes. Many of those submitted to us we have regarded purely as promoters' speculations.

POLICY OF THE BOARD.

We shall not risk your money in anything that has not been first thoroughly investigated. I now move "That the report and accounts be received and adopted, and that the dividend therein recommended be declared, namely, 12½ per cent. per annum on the ordinary shares for the eight months ending Dec. 31 last, and 4*l*. 9s. 6d. per share on the deferred shares for the same period."

Mr. FORREST (director): I second the motion.

THE DEFERRED SHARES.

Mr. JOHNSON: In whose possession are those 250 deferred shares which were allocated to Mr. Pond, the late manager, who has been since settled with by this payment of 1,250*l*.?

The CHAIRMAN: They were in the possession of Mr. Pond, and I cannot at the present moment answer in whose possession they are now.

Mr. JOHNSON: Does the payment to Mr. Pond include the acquisition of these 50 shares?

The CHAIRMAN: It includes a settlement of every question between Mr. Pond and the company.

Mr. JOHNSON: And the purchase of the 250 deferred shares.

The CHAIRMAN: He did not buy them. They were given to him as a consideration for his handing over his business to us.

Mr. JOHNSON: Does the payment of 1,250*l*. include the cancellation or surrender of those shares? (Laughter.)

The CHAIRMAN: We have nothing to do with them. They were assigned to Mr. Pond. The payment is for the cancellation of his agreement, and does not include anything respecting the 250 shares.

Mr. JOHNSON: If these have been dealt with, in whose hands are they at present?

The CHAIRMAN: I cannot answer that question. I do not know how he has dealt with them, and for aught I know he may have them still.

Mr. JOHNSON: I want to know. It is very important, and I am sure the meeting will agree with me that it is important enough to insist upon an explanation, having regard to the fact that the 250 shares of 1*l.* each, received by way of dividend out of the profits, represents a sum equivalent to half the money, which is divided amongst the shareholders who subscribed 30,000*l.* It may appear somewhat ungracious to comment upon

A BALANCE-SHEET WHICH OFFERS A DIVIDEND OF 12½ PER CENT.,

and which appears to be both fair and favourable, but even that should not be allowed to cover another matter which is important for the shareholders to know. Having regard to the fact that a dividend has now been declared—450 per cent., not 450 per cent. per annum—we are now being called upon to pay 450 per cent. for the eight months upon these 250 1*l.* founders' shares. In other words, we are paying a sum of nearly 1,200*l.* upon a capital of 250*l.*, and 2,400*l.* upon a capital subscribed by us of 30,000*l.* The 250 deferred shares are, in fact, receiving a sum equivalent to half the dividend which will be received by the shareholders who have subscribed 30,000*l.* I think, while an arrangement of the kind read out was being made, that the directors would have shown some judgment if they had also dealt with the 250 deferred shares, which absorbed so large a profit. I am anxious to know whether the directors have acted in this matter in a way that will commend itself to the shareholders, or whether they, in dealing with Mr. Pond, have secured these 250 shares themselves. (Oh.) I do not know, and I do not say, that it is so, but I ask the question, what has become of them?

A VOICE: I possess three of them, for which I paid 600*l.*

Another VOICE: I possess one, for which I paid 100*l.*

A third VOICE: I paid 100*l.* each for mine.

THE REAL POSITION.

Mr. RUSSEL: The directors paid Mr. Pond a certain amount for the goodwill of his business, and what they paid him is Mr. Pond's property, whether they paid him in deferred shares or in cash. I hold some, and I knew what I was about in acquiring them. I knew I was acquiring part of what Mr. Pond had been paid for the goodwill of his business.

The CHAIRMAN: It is in the articles of association that the founders' shares were to receive so much, and we have no discretion whatever. If you want to know in whose names the founders' shares stand you must consult the register.

Mr. JOHNSON: If it meets with the approval of the meeting that these shares should receive half the profits of the company, let it be so.

Mr. RUSSEL: They receive them according to the terms of the prospectus.

The CHAIRMAN: You cannot help yourselves or go back on the prospectus.

Mr. RUSSEL: It is out of order to refer to a semi-private agreement between the company and Mr. Pond. It is hardly fair to that gentleman to ask questions with reference to the agreement. If Mr. Johnson wished for information I have no doubt the directors or secretary would have given it to him. The shareholder has been answered his question, and it is hardly fair for him to go further in the matter, and, moreover, I do not think the directors would be justified in giving the information in public meeting.

Mr. JOHNSON: I am sorry to differ from the last speaker. Though a dividend of 12½ per cent. be somewhat liberal, yet, having regard to the fact that the amount paid during the eight months is more than three times what the shareholders will get, the question is important.

A SHAREHOLDER: It is not actually more than three times, and besides, if you had gone into the prospectus you would not see as you have done. What has been done is part of the agreement.

The CHAIRMAN: As there are a great many other questions to be asked, I presume you have been sufficiently answered.

MR. POND SHOULD BE RE-APPOINTED MANAGER.

Mr. MURRAY GRIFFITHS: I think if you answer, perhaps there may be other questions to be put. I listened with great pleasure to your statement, and, considering the company has only been started for eight months, it was very satisfactory. I think, therefore, it comes with very poor grace from us on this side of the table to grumble at your efforts, considering this is a new business. I must say, as a fairly large shareholder, and representing other shareholders,

I HEAR WITH DISAPPOINTMENT THAT MR. POND HAS SEVERED HIS CONNECTION WITH THIS COMPANY.

I have no doubt, gentlemen, that you have thoroughly studied the question in all its bearings, but I must draw your attention to the fact that it was Mr. Pond's business that we bought. It is admitted on all sides that it was a good business, that it was thoroughly established in Mexico, that it was owing to his efforts and energy that this company was formed at all, and I think you, gentlemen, on the other side of the table will bear out what I now, as a City man, can say, that it was entirely owing to the subscriptions to these shares, which were obtained by Mr. Pond at the time the company was formed, that the shares went to a considerable premium, and that there was felt a great desire to obtain them. If I may be allowed to suggest to you—your company is in possession to-day of a very fine business, connected with Mexico and everything that pertains to Mexico, but at the same time it is necessary that you should have a manager of some sort, and my humble opinion appears to me that the proper man to be your manager is he on whose recommendation—I would hardly say that—but on the faith of whose name being connected with the company, I for one joined it. I am sure his energy had a great deal to do with forming this company, and I think that

THE LOSS OF HIS SERVICES IS A VERY SERIOUS ONE TO THE SHAREHOLDERS.

I have no doubt you will have something to say upon that point. (Hear hear.) As to his having deferred shares, so far as I understand, he was paid in paper instead of money. (Hear, hear.)

Mr. M. A. BROWN: As a considerable shareholder, who, with my friends, took between 20,000 and 30,000 shares, I would say that I knew a little of the Mexican Association before it was formed into the present company. That Mexican Association formed the Exploration Company, which is a large and successful concern, and no doubt many of you are members of it. When this association was formed the 35 shares of the Mexican Exploration Company, which formed the profit of Mr. Pond, or as he was then "the Mexican Association," were handed over for nothing, or practically so, as part of the business or as part of its assets, to this company. That is a very valuable asset. It has been very good business for this association, and, naturally, for the directors, to manipulate that contract by which the manager was entitled to a large salary and percentage. Those were the terms on which that company was formed when Mr. Pond parted with the Mexican Association. That was done on certain lines and conditions, and included the founders' shares, which have been spoken of to-day. Those shares were sold at high prices to provide the expenses, and probably to provide also Mr. Pond with a certain amount in cash, part of which he retains in paper, for which he handed over all the assets of his business, and his connection in Mexico including 35 deferred shares of the Mexican Exploration Company. Under unfortunate circumstances Mr. Pond has gone through, the directors find it necessary to ask him to break his agreement, and I believe, in a friendly spirit, the transaction has been completed, and he is no longer connected as manager with the company. I am only speaking as representing a large body of shareholders in the north when I say that it would be an act of grace and courtesy, which would benefit the future of this company, if the directors, who, I understand, are seeking a manager, should consider it within their power to

REINSTATE HIM AS MANAGER OF THE COMPANY.

We look upon him as a man of considerable ability, who would bring forward and bring out in his position, as he has already done, a company like the Mexican Exploration, and a man who can do that is not a man whose services should be lightly parted with if they can be retained for the benefit of this association.

VIEWS OF MR. POND.

Mr. POND, who was cheered on rising, said: I am much obliged to you for your kind remarks. I think I can put the position clearly before you. You must remember, gentlemen, that the directors have considered this question fairly to me, and fairly, I think, to the company also. They have gone thoroughly into it, and I should not like in any way that they should be influenced other than they have been up to the present. As far as I am concerned, my only hope in life is this Mexican Association. The capital is in 123,000 shares, and out of that

I HAD 106,000 SHARES IN MY HANDS

before we advertised for the subscriptions from the public. Therefore, one might say that it was more or less subscribed for by my immediate friends. But what I want to say is this, that I have no doubt the directors, if they ever thought my services would be of any use, would avail themselves of them, and they have been assured by me that anything I can do to further the interests of the company I will do to the utmost of my power. (Loud cheers.) I must do it. I have not only business acquaintances in this company, but friends of 20 years standing, of whom there are at least a dozen in this room, who have followed me, and who know I have never yet advocated a bad thing. (Cheers.) I can sell a good thing now as well as I could 12 months ago. People know if I make money my friends do not lose it, and they have known that for many years. (Cheers.) Therefore, my sole hope lies in the success of this association. It it does not succeed—and it must succeed—the blow will be the greatest to me. When I formed this company I only sought for

A PRACTICABLE AND KNOWLEDGEABLE BOARD.

I could have got names, possibly, that would have attracted a good deal of capital, but then I knew I had the capital, and many of the gentlemen in the room knew it too. I had 106,000 shares in my office drawer before I brought out the association. Well, I wanted a good board—the best I could find. I wanted a good mining engineer, a good railway engineer, a good business man, and a good financial man. I was fortunate enough to meet with Mr. Albert Grothe. They told me I was lucky to get such a man, who had immense business knowledge, and I was very glad indeed to have secured him. Then I met Mr. Ferrar, who attends to the railway department, and who has had eleven years experience in Mexico in connection with the National Railway, and who in that connection has acquired a thorough knowledge of the country. Then I secured Mr. Vaughan, who was introduced to me as a good business man, and then Mr. Hale was named as a man of thorough knowledge of company work, and associated with several prosperous and satisfactory concerns. That completed the board. What I might call "the push," I thought I could do myself. Having got these directors to join the board, they have now sat in judgment upon, and decided this question. They have themselves time after time expressed their personal sympathy with me, and regret at having to make this arrangement, but they have done it in the interest of the company, and they thought that its prospects would, to a certain extent, be damaged if I remained as manager, from the fact that I had contracted several loans which I could not for the time renew. The fact is I had several outstanding loans, and they were called in. The money crisis came along at the time, and I had to sell, until I could renew those loans which I have been able since to do. The directors had this question before them, and thoroughly thrashed it out, and throughout

TREATED ME MOST FAIRLY IN EVERY WAY.

I now want to help them, and not to do anything to interfere with them. I am perfectly satisfied with the arrangement, and as regards any services I can render when they are bringing out a company, or if they care to ask me at any other time, I shall be delighted to aid them and to give them the benefit of my experience and knowledge, as far as they may go. (Loud cheers.)

Mr. MURRAY GRIFFITHS: I feel after Mr. Pond's speech it is possible I may have conveyed a wrong impression to his mind or to the board. I do not wish to interfere with the management, or to

say that you have behaved in any other way than with perfect fairness to Mr. Pond, but I do want to suggest, as a man having a knowledge of City people, that I thought it

MOST IMPORTANT TO THIS COMPANY HE SHOULD BE RETAINED

as director or manager. He is a well-known man, and on a company like ours, which is not a savings bank, but in which we wish our money to be used in business, and not kept lying in our coffers, he would be most valuable. If we get no dividend one year, what does it matter. In a new country we must expect speculation. Therefore, we want a man to act as manager under your direction, who shall push our business, and struggle and keep things together. I trust, Mr. Chairman, you will acquit me of any endeavour to interfere with your affairs, or to suggest that you have acted towards Mr. Pond in any but the fairest manner.

The CHAIRMAN put the resolution, which was carried unanimously. He added : Anything that has been said on this occasion in favour of Mr. Pond is

ENDORSED BY THE DIRECTORS.

(Cheers.) We were very sorry to part with him, but he felt equally with ourselves that it would be for the benefit of the company if he resigned his position.

Mr. FERRAR moved, and Mr. VAUGHAN seconded, the re-election of Mr. Hale and Mr. Grothe as directors, and it was carried.

Mr. POND proposed, and Mr. DUVAL seconded, the re-election of the retiring auditors, Messrs. Welton, Jones and Co., at a remunera- of 25 guineas, and it was carried.

Mr. POND : I should like to say a few words in answer to the gentleman who spoke about the deferred shares. I think I can satisfy him about them in a moment. The deferred shares were given in exchange for the goodwill of the business ; 35 shares of the Mexican Explorations, which were then worth 17,500*l*., were handed over, and the deferred shares were also in payment of all expenses incidental to formation and registration, amounting to between 4,000*l*. and 5,000*l*., so that you will see that the value of the 1*l*. shares was quite nominal, and as far as could be ascertained, their actual value at the time they were given to me amounted to 130*l*. or 140*l*. Does that answer your question ?

Mr. JOHNSON : Yes.

Mr. POND : Thank you. It is apparent to most people that the holders of those shares can only succeed by the greater success of the company. While the company gets good dividends, the shareholders have every cause for congratulation. The preliminary expenses were heavy, and all those are invariably paid by the allottees of the deferred shares. As you are here I take this opportunity of saying that this company has

AN EXTRAORDINARILY GOOD PROSPECT OF SUCCESS,

and another thing, the chairman did not mention, which, I think, I should have mentioned had I been sitting where he is, that this company has not done any underwriting whatever, and the profits have not been earned at great, but at small, risks. I may absolutely say that at the outside not more than 2,000*l*. has been risked to earn the dividend that is now declared. (Cheers.) That is gratifying to us, because it proves that the directors thoroughly know Mexico, and that any business they put before us will be worthy of consideration. The greatest care is exercised in everything that comes before them, and I think the company has a very good prospect. My only regret is that I am not to be the helmsman, though I hope to render help.

Mr. RUSSEL proposed a cordial vote of thanks to the directors for their balance-sheet, which he said did them credit.

The motion was seconded and carried unanimously.

NEW VIOLA CO., LIMITED.

THE NEW MANAGER WRITES A HOPEFUL REPORT—DIRECTORS SANGUINE THAT ANOTHER "POCKET" OF ORE WILL BE FOUND SIMILAR TO THE THREE OUT OF WHICH 31 PER CENT. WAS PAID IN THE EARLY DAYS.

A MEETING was held at the Cannon Street Hotel, on Tuesday, "to receive the report of the directors."

Col. G. B. Malleson, C.S.I. (chairman of the company), presided.

Mr. H. M. BENTLEY (secretary) read the notice of meeting.

THE NEW MANAGER.

The CHAIRMAN : Ladies and gentlemen, at our last meeting, on Aug. 5, I told the shareholders present how it was that the mining manager, who up to that time had been on the mine, had been removed, and that we had taken steps to appoint a new manager in his place. We placed ourselves in communication with one of the best firms in the State, and finally succeeded in obtaining the services of Mr. George Kennon, a miner of very considerable repute. The manager arrived at the mine Sept. 13, 1890, and after examination came to the conclusion that the ground between the Engine and Westmoreland shafts having been so thoroughly prospected, it was not advisable to prosecute further development work in that quarter, so he turned his attention to the north-east end of the property, which up to then had not had more than the necessary assessment work done upon it. He commenced sinking a shaft about 250 ft. north-east of the old stope in the Viola claim, and the latest advices concerning this new shaft are that it has reached a depth of 97 ft., and is now in the solid limestone. During the latter part of the year 1890 he found it very difficult to secure good miners ; this, coupled with the fact that the shaft above referred to was in solid limestone, and the face of the main tunnel which he was driving east was in solid rock, the progress has not been so rapid as we would have wished. On Dec. 6 he writes as follows :—

"The main tunnel was advanced 73 ft., the last 40 ft. being in the identical limestone which surrounds the ore in the old stopes. The tunnel is looking so well that I have started two drifts, one to the north-east, and the other to the south-south-west."

On Jan. 6 he writes :—

"The face of the main tunnel now shows carboniferous boulders, cemented together with a honey-combed iron gangue. I will prospect the body of honey-combed iron thoroughly, and will be surprised if we do not find a shoot or vein of mineral in or near it. The cross-cut in blocks R 65, 66, and 67, which is to the north-east of the old ore-body in the Viola claim, has been in the richest looking red limestone I have seen in the mine. I will prospect this ground thoroughly as soon as an air conection can be made."

We have not yet received information from Mr. Kennon that the air connection has been made. In fact, this is the very last letter we have received from him, but it is full of hope. I may further add that Mr. Kennon saw that very good prospects for coming across a pocket of ore were to be found in a piece of property adjoining ours, which he thought could be purchased for $500. We at once telegraphed to him to make the purchase. We have not yet heard that he has made it, but I have no doubt that he has. It is a matter of great regret to us that we have not been able to report to you further success, but we have done all that is in our power. We have secured one of the best managers in the States, and that manager has gone to work, at the most inclement season of the year,

WITH HEART AND VIGOUR,

and the reports which he sends us are full of hope, that before very long we shall come upon a very similar body of ore to that which rejoiced the hearts of the shareholders in the original company. I think I explained to you on the last occasion that all the mines in that part of America (Idaho) are what is called "pockety." You come upon one rich pocket, and there is a vein leading to a second, and so on to a third. Well, the original American company came upon one of those pockets ; we came upon the second in the initial stages of the first English company, and we came then shortly afterwards upon a third, and I now would fain hope that we are well on our way to a fourth, and if we come to a fourth we shall almost certainly have a fifth and a sixth. What I want to call your special notice to this afternoon, as accounting to a certain extent for the fact we have not yet come upon these pockets, is that the winter has been severe indeed in that part of America, that Mr. Kennon only began working in the middle of September, that he was unable at the moment to procure miners of such a quality as he would wish to have, and that notwithstanding all those disadvantages—the severe state of the winter, the absence of good miners and others that need not be specially mentioned—he has still made very substantial progress—a progress which I think may induce us

HOPEFULLY TO LOOK FORWARD TO THE FUTURE.

Gentlemen, the first notice on the agenda is "That the accounts and balance-sheet be passed." I beg formally to move that resolution, and while moving it I have to state that I shall be very glad indeed to answer any question which any shareholder may think proper to put to me. (Loud cheers.)

Mr. MILTON BRADFORD (director) : I second the resolution.

VIEWS OF SHAREHOLDERS.

Mr. THORPE : When we held a meeting last year you were good enough, sir, to accept, on behalf of yourself and colleagues, a kind of hint from me that the greatest possible economy would be used. I am unable to go into the matter of mining. I know it is all a lottery, and every person who goes into a mine ought to consider that it is so, if it is an honest mine, as this really seems to be. (Hear, hear.) I should like to know one or two points about this mine. I should like particularly to know what has happened to the late manager. Perhaps you can tell me, and particularly as to what has happened to him. There seems to have been something very strange in the matter in my poor judgment, and hence I repeat my question—What has happened to him ? I do not know that I need say more than this, but my curiosity is much aroused. Calls are very nasty things. I do not want you to make any formal promise that you will not make any more calls until you meet us again, but I think I should like to get from you a kind of understanding that unless things turn out in such a way as in your judgment, being

THE HONEST AND STRAIGHTFORWARD MEN YOU ARE,

you will not make a call. (Hear, hear.) Unless things are very good indeed I hope you will not make a call without asking us. (Cheers.)

The CHAIRMAN : I am very much obliged to Mr. Thorpe for the way he has put his questions. I can quite understand the anxiety he feels to have some definite information on both points raised, and I stand here for the purpose of giving him, to the best of my power, that definite information. In the first place, regarding what is going on on the other side of the Atlantic, and what it was that took our previous manager from us—I can assure him that amongst the many causes of anxiety from which the directors have had to suffer there is none which has been so great as that to which he refers. We engaged the services of one of the best lawyers in Denver. We have insisted as much as we could that these matters should be brought to a settlement, but we could get no positive reply that a settlement was even in prospect. If we made one proposition, that proposition was altered in a manner which quite prevented our accepting it, and the other side made a proposition which we could not accept. Well, at last this state of things became intolerable, and in order to put an end to it we deputed a member of our board to go to America to settle the question finally and for ever, and I am happy to inform the shareholders that we received only this morning a telegram from our colleague, which I will read to you :—

"Can settle—but will take time."

So, I think, our action in sending him out has been efficacious in putting an end to what, I am not surprised, caused some anxiety to the last speaker. As to what led to the removal, or caused the retirement of our previous manager, it is impossible that I can tell you, or that anyone at this table can tell you, but it is, at all events, a satisfaction to feel that the manager we have secured is a gentleman wholly and solely devoted to us, and wholly and solely under our control. So much for that matter. Mr. Thorpe also expressed a wish that the directors should not spring a call by surprise on the shareholders.

A PROMISE MADE AND KEPT.

Well, gentlemen, I need only recall to your minds that at our meetings, just 12 months ago, I promised the shareholders, in the name of my colleagues, that I would make no call without summoning them here and putting the case before them. (Hear, hear, and cheers.) Now, although no meeting was due in the middle of last year, I did summon the shareholders in August, and then asked them if they would submit, not to a 1s. call which we might have put upon them, as authorised by the articles, but a call of 6d. I am bound to say that the shareholders respouded very gracefully to that suggestion on our part, and gave us full permission to call upon them (and upon ourselves, because we are all large shareholders) to pay up at the rate of 6d. per share, which yielded about 3,750*l*., of which, I am glad to say, all but 165*l*. has been paid up. (Hear, hear.) We have something over a thousand pounds of that still in hand, and I did intend to tell the sharcholders to-day before they left the room that we shall propose to ask them, in about a month or two hence, to submit again to a call of 6d. per share. I think the state of the mine, and the promises held out by Mr. Kennon are such that no man, who has his own interest at heart, and the interest of the mine at heart, can refuse to submit to this small outlay. If the shareholders will agree to allow us to call upon them for this 6d. per share, which is the only alternative to shutting up altogether, I undertake, on behalf of my colleagues, to make no further call upon them without summoning them to meet us and to hear a full explanation of the state of the mine. I think I have answered your questions. (Cheers.)

Mr. STEWART: I am glad the chairman has spoken as he did, because it will not necessitate his replying to questions I was going to put, one of which was as to the sendiug out of a director to America. I think it was at the re-construction meeting, 12 months ago, that I urged some gentleman of good miuing capabilities should be on the board and should visit the mines in America. You, sir, have told us that a gentleman from the board has goue out. May I ask if he is a gentleman of good mining experieucc, and if his reports when reccived, in regard to our uining prospects, will be such as ought to guide us. There arc calls in arrear 165*l*., but have the shares to which those calls refer been forfeited?

The CHAIRMAN: We have sent out intimation that they are liable to forfeiture.

Mr. STEWART: You called the meetiug iu August, which is not a very satisfactory time to choose, and the meeting was not of sufficient importance to cause me to rush to it 600 or 700 miles from Scotland. It was a month or two afterwards that I received a letter as to the call, stating that my shares would be forfeited.

A VOICE: It was received by all in arrear. (Hear, hear.)

Mr. STEWART: I wish to know why I am put in a differeut position from those who are 165*l*. iu arrear. (A VOICE: You are not; and laughter.) My answer to the secretary was this, that when I agreed to take the shares in my proportiou in the re-constructed company it was only upou the assurance, in which it was possible I might have been misled, that unless the prospects of the mine in six months were different from what they turned out to be, no more would be called up. I understood that to be your declaration, and upon that I subscribed my shares. Therefore, I cannot agree to any liability incurred for the further call made. I have 50 shares, and

THE CALL AMOUNTED TO 25S.,

and I did not think it worth disputing, although I was threatened with a letter that I would be prosecuted. I have seen various newspapers with the report of the August meeting, but find they are unreliable. The circumstances justified me or any other shareholder in refusing to pay further calls. (Laughter.)

The CHAIRMAN: The shareholder who has just spoken is perfectly correct in stating that at the statutory meeting, which took place about a year ago, I promised the shareholders I would make no call without summouing them together to meet the board.

Mr. STEWART: I uuderstood it differeutly.

MR. STEWART CORRECTED.

The CHAIRMAN: I did summon the shareholders to meet the board in the month of August, and I did not summon them before theu, because it was not until the month of August that our money was exhausted, and I did not wish unnecessarily to press upon the shareholders, because if we had had, as we always hope to have, good accounts from the uine in June or July it would not have been necessary to ask the shareholders to pay up anything more. The mine would have become self-supporting, and therefore, at very great inconvenience to myself and colleagues, we waited until the last possible moment before putting the question before the shareholders, and if there are any here who were present on that occasion, I think they will bear me out when I affirm that I put the question as fully and as straightly as I could put any question which concerned their interests, and of which I was, to a certain extent, their executive officer. (Cheers.) I told them everything. (Hear, hear.) I told them the whole truth, and asked them if they would subscribe, and they agreed to do so. (Hear, hear.) I think that is a complete answer to the remarks of Mr. Stewart, and as to the letter he received from the secretary it was the same as all the other shareholders received who were in default at the time. (Hear, hear.) Mr. Stewart will find that, according to the articles, the directors have the right without consulting the shareholders to make the calls at certain periods. (Hear, hear.) But it is because we wished to work absolutely in harmony with them, tell them all we knew, and receive from them their ideas as to the future, that we summoned them to discuss these questions with us; and that is the reason I am discussing the same questions with you this afternoon. (Hear, hear.)

Mr. STEWART (who was received with cries of "Time") said: I have no wish to contradict the chairman, but I cannot distrust my own rccollection. I have no doubt you did refer to the summoning of the shareholders before making another call, but I think you stated the extreme unlikelihood of a call being made unless decided progress could be reported. (Cries of "Time.")

COL. MALLESON REFERS TO OUR VERBATIM REPORT, AND CONFUTES MR. STEWART.

The CHAIRMAN: It is most fortunate that I have in my hands the report of a newspaper which is known to reproduce *verbatim* these meetings, and which at this very moment is reporting every word that is being said—I refer to the MINING WORLD. I now read from the report which appeared in that paper of the meeting six months ago:—I told the shareholders that we had a sufficient amount of funds without any further call to work the mine for six months, and pledged myself that I would not make any further call without summoning the shareholders and putting before them the exact position of the company. (Cheers.) That is exactly what I have done. (Renewed cheers.)

A SHAREHOLDER: Will you please reply as to the mining capability of the director who has been deputed to America.

The CHAIRMAN: The director who has gone out to America is not a miner. He has not gone over there on mining business. He is an accountant, and has to settle differences which at present exist between the vendors and the American compauy. We have there a mining expert, Mr. Keunon, and his report holds out what I consider, and what I have described to the shareholders as being, very good prospects.

Mr. PIKE: I am only a small shareholder, but fully appreciate all you have told us, and think we are very much indebted to the board for their services. I have carefully perused the accounts, and see calls in arrear, 499*l*. What has been done to collect them? Those so much in arrear are, of course, liable to have their shares forfeited.

The CHAIRMAN: Of that amount, we have since collected 339*l*., and there is only 165*l*. out at the present time. We have notified to the shareholders that their shares are liable to forfeiture.

Mr. PIKE: Personally, I have had no benefit from the company, though I do not attach any blame to the board for that, as

NO DOUBT THEY HAVE DONE THEIR BEST.

The value of the shares on the market seems practically *nil*, and if this account be correct, and the valuation of the assets be correct also, I really think it would be better to liquidate the company, when you could possibly divide between us 5s. in the £. The prospect of such a division seems better than the working of the mine, besides which it would save us the liability of 1s. 6d. a share.

WHAT VIOLA HAS DONE.

The CHAIRMAN: I should like to remind the shareholders that this company in the first year of its original formation made 21 per cent. per annum; in the second year 11 per cent., and that if we should find another "pocket" there is every chance of our paying the same dividends again. I must dispute the correctness of Mr. Pike's forecast, because, although the assets of the company are valued at a certain amount, if you were to sell those assets in the present state of affairs, when the mine is a failure in the estimation of the world, you would hardly get anything for them, whereas, if you would only contribute your 6d. a share, there is every chance that you may raise the mine to the position in which it was some three years ago,

WHEN THE SHARES WERE 2*l*. AND 3*l*. ON THE MARKET.

There is a certainty of that if we find another pocket, and for my part I cannot imagine anything more suicidal—(hear, hear, and cheers)—than for the shareholders to give up a property which has been proved good, and upon which they have positively so encouraging a report from their new manager. (Renewed cheers.) I told you at the first meeting that it was a pockety property, and that we should find its results out ouly by development. I cannot, I say, imagine anything more suicidal than to give up a property of this description, simply because after working a few months you have not come upon a fourth pocket after three previous ones have been exhausted. The pocket is there, and, in my humble judgment, you are sure to come upon it. I should like to put the question home to the honourable gentleman. He says he is a small shareholder. Supposing he has 100 shares; upon these he would be called upon to pay 600 pence, and rather than do so, do I understand him really to say that he would give up his chances of receiving handsome dividends, and prefer instead the mite he might receive from a distribution of the assets after a forced sale? (Laughter.) I am a poor man also, but do not wish to become still poorer by adopting the course you propose. In any case I cannot understand why you refuse to pass the accounts, because refusing to do that will not ensure the winding-up of the company. I shall put the motion—it is carried with two dissentients. (Cheers.) The next point is the re-election or the refusal to re-elect the retiring director. It is the turn of the humble individual who now addresses you to retire, and he offers himself for re-election.

COL. MALLESON'S PLUCK.

Mr. THORPE: Brother shareholders, I think we must have all been struck on this occasion with our chairmau's pluck. (Hear, hear, and cheers.) Faith will work miracles, and though it has not done so in our case, it abides with the chairman. (Cheers.) At all events, pluck and luck very often go together, and I think in the gentleman whom we have here we have one distinguished in many ways—distinguished notably as the historian of British India—and we cannot do better than re-elect him. Let us put the ship into the hands of a pilot who, when everybody else despairs, will not only stick to that ship, but has the abiding faith that he will bring her triumphantly into port. (Cheers.)

MR. PIKE CONVERTED.

Mr. PIKE: This is the first meetiug I have attended, and from what the chairman has told us I do not think we can do better than continue him in his post. I therefore second the motion.

Mr. STEWART also supported the motion, and expressed a hope that the views of the chairman in regard to the future would be realised.

Mr. THORPE then put the motion to the meeting for Col. Malleson's re-election, and it was carried amidst cheers.

The CHAIRMAN: I am very much obliged to you for the kind manner in which you have re-elected me, and can assure you that I shall devote the whole of my abilities to the development of this mine, aided by the mining expert we have on the spot. I have found iu the management of mines that it is far better and more satisfactory to have a mining captain who is thoroughly competent to advise us from the spot thau to have an expert in London sitting at your elbow, who can only give you advice which he cannot verify by actual observation. I am obliged to Mr. Stewart for the manner in which he has just spoken, and if the "pocket" is found, the existence of

which he doubts, and it should come to the surface, I hope he will be the first to propose a vote of thanks to me. (Cheers.)

Mr. GOOD proposed the re-election of Mr. Lakeman, the auditor, whose services the chairman had extolled, at a remuneration of 15 guineas.

Mr. GREIG seconded the motion, which was carried unanimously.

The CHAIRMAN: There is one thing to be done before I leave this chair, and that is to ask your permission to make a call of 6d. per share in about two months time. I shall not make any other call until the proceeds of that one (about 3,750*l.*) are expended. I am in the confident hope that as we have the summer before us we shall be able when we meet again to congratulate ourselves on having discovered the missing pocket—I think it is the best way in which you can spend your money. It requires but a very little success to raise the value of the shares to a point above par, and our mining captain is, I believe, well on the way towards the discovery of the "pocket." It would be a very great mistake, in my judgment, to give up the mine at the present moment. (Hear, hear. I, therefore, must ask those who are in favour of making this call to signify the same by holding up their hands.

Mr. STEWART: Can you do it legally?

A CALL DECIDED ON.

The CHAIRMAN: Yes—by the articles; and it is only in a friendly way, and in order that we may work in harmony that we take you into our counsels about it to-day. (Hear, hear.)

Mr. PIKE: You have a thousand pounds in hand, is that not sufficient for the present? You can call us together again. (No, no.) What may take place in two months it is very difficult to say.

The CHAIRMAN: I think Mr. Pike has forgotteu that the two next months form usually the worst part of the winter in America, and that the accounts from Idaho represent the ground to be almost unworkable. It costs about 500*l.* a month to work the mine, and I ask your permission in a friendly way (you have given it already in the articles) to make this call.

The motion was carried.

Mr. THORPE proposed a cordial vote of thanks to Col. Malleson for the ability he had shown in conducting the meeting, and this was carried by acclamation.

THE EXPLORATION CO., LIMITED.

A COMPANY THAT HAS RETURNED DOUBLE THE AMOUNT OF ITS PAID-UP CAPITAL IN ONE YEAR.

THE ordinary annual general meeting was held at Winchester House, on Tuesday, (1.) "To receive and consider the report of the directors and the accounts and balance-sheet of the company to be then presented. (2.) To declare a dividend. (3.) To elect a director. (4.) To elect auditors for the year ensuing and fix their remuneration; and to transact any other ordinary general business required to be dealt with at such meeting."

Horace B. T. Farquhar, Esq., presided.

The SECRETARY read the notice convening the meeting.

PROFIT OF 70,000*l.*

The CHAIRMAN: Gentlemen, in moving the adoption of the report I shall not detain you at any great length. I will begin by saying that it is always a pleasure to a chairman to meet the proprietors of a company when he has a fairly favourable report, and a fairly favourable statement of the past and the future to put before them. That, gentlemen, I think I may fairly claim to be the case on this occasion. I shall go at once to the business part of what I have to say. You will see that our gross profits amount to over 70,000*l.*—(cheers)—which is about 250 per cent. upon the paid-up capital of the company. (Renewed cheers.) Out of this we have been able to pay (if you approve the report which is issued, and what we propose to do) 100 per cent. on the called-up capital of the shareholders—(cheers)—besides having paid very handsome dividends indeed upon the founders' shares. Well, gentlemen, when I tell you that this result has been arrived at with practically no risk, it must be deemed satisfactory, I think, to everyone present, and you will readily understand that while this profit has not been wholly made in promotion money, that a very considerable proportion of it has been made out of commissions, that the result is still more satisfactory. But, gentlemen, you will all feel that the duties that are imposed on the direetors and the managing directors in the careful inspection that is necessary of all the innumerable businesses that are proposed to us before it is possible for us to accept any business are of no light kind. You will easily understand what anxious work and what special attention the managing directors and the directors of the company have to give to your interests, because

OUR OBJECTS ARE

to make money, to pay you a good dividend, and to run you into no risk. As long as we do that you will be satisfied, whoever may be the chairman who has the honour to address you on these occasions. I may say that I have been authorised on this occasion by Mr. Hamilton Smith, who is on my right hand, and who is a director of Messrs. Fraser and Chalmers (which was one of the businesses we put before the public in the beginning of last year), to say that the result of the first year's working of that company has been very satisfactory indeed.

FRASER AND CHALMERS, LIMITED, WILL PAY A BIG DIVIDEND.

I think 12 per cent. was about the estimate of profit they hoped to make. That has been exceeded, and they will in the course of a day or two (including the interim dividend already declared) pay 10 per cent. for the first year's working of Messrs. Fraser and Chalmers. I am sure that will be satisfactory to you all to know that. I will now go to the future of the company. I think I may say with some assurance that we have bright prospects in the future. I do not think it perhaps desirable that I should go into any details as to the important businesses we have under consideration—in fact, on hand at this moment; but we are of opinion that they are all promising, and expect that we shall be able to show you in the course of the year that we have some very fine and valuable businesses on hand, which will be profitable, and also we hope—we more than hope—that they will be free from any risk to the company. I might mention perhaps one of them, because, although, perhaps, it is much the least important affair, yet, at this moment everybody's attention is being turned towards South Africa, and it may interest you to know that the reports from Mashonaland, which have been forwarded to the Chartered Company, are most encouraging. I will not say more than this that we feel assured there can be very little doubt about the very large discoveries of gold in that country, and also that our Mashonaland expedition, with the view of taking up claims, has arrived, and that there is every promise, as far as we can judge, of a very satisfactory result. (Cheers.) I do not think I have anything more to say to you, but shall be glad if any shareholder has questions to ask to answer them to the best of my power. I will now move, "That the report of the directors, and audited statement of accounts, namely, the balance-sheet and profit and loss account to Sept. 31, 1890, as presented to this meeting, be, and the same are hereby, received, approved and adopted." (Cheers.)

Mr. FRANCIS ALFRED LUCAS (director): I second the motion.

DISCUSSION.

Mr. THORNE: There are one or two questions I should like to ask, partly on my own account and partly on account of the shareholders, who are unable to be here on account of the foggy weather. There is an item I should like to ask you about—"less preliminary expenses, including cost of office furniture, 5,600*l.*" Is the whole of that written off, and are the preliminary expenses 600*l.*, and the furniture 5,000*l.*, or *vice versa*? I think it would be as well for the shareholders to know what the preliminary expenses are; also whether this amount as a whole is writteu off now. Of course, if that amount is written off it will save considerable trouble in the writing off of so much every year.

The CHAIRMAN: It has all been written off.

Mr. THORNE: Thank you; but being lumped in this way it was difficult to know whether there was some very valuable furniture that had cost the larger part of the sum, or whether the preliminary expense was the smaller amount. (Laughter.) There are one or two other items all massed, and I have generally found that shareholders like to see their way a little as to how the outlay goes. I am now referring to profit and loss account. "Managing directors, excluding directors' remuneration"—we are always pleased when the directors are paid, but it is quite right that we should like to know what are the expenses of the office throughout, and while the auditor was about it

IF HE HAD PUT THESE ITEMS A LITTLE IN DETAIL,

it would have been much more satisfactory to us. It may be a very small matter, and we do not question the figures, but it would be satisfactory if we saw them in more detail. Certainly it may be thought there is great extravagance at the board—I do not say so—but it leaves one open to think so. I will ask your attention to the item "remuneration of managing directors, extra remuneration to the directors." It is quite fair that the directors should be paid, but I think also in this item for managing directors' fees, the amount should be set forth. The larger the dividends we get the more will their remuneration be. But it would be satisfactory if the shareholders knew what the sum was, and also how the participation goes. Then there is the item of sundry debtors, 26,000*l.* I will be glad if you will tell us what that amount is. The last point upon which I will touch is cash at bank. I would ask, not seeing in the accounts any amount for interest on deposit stated in the balance-sheet, if that large item is kept at your bankers. I should have thought the current expenses would have been known, and therefore am rather surprised to see so large a sum at the bank, and nothing stated as received for interest on deposit. It has been a large sum, though it is very much lower now. One can hardly think it is needed, as you would scarcely be called upon at a moment's notice to pay 10,000*l.* or 15,000*l.* down. Therefore, I would like to ask whether that amount is on current and on deposit account. With these few words I conclude by congratulating the board upon the result of their year's labour.

The CHAIRMAN: I will try to answer the questions of the shareholder *seriatim*.

BOARD'S MANAGEMENT COMPLETELY APPROVED.

Mr. ESCOMBE: Will it not be better to wait until other shareholders have spoken? (Hear, hear.) It is a remarkable thing that the gentleman who has just occupied your attention has touched upon the very subjects I intended to dwell upon, though I take an entirely different view of them from what he does. The items he takes exception to I most highly approve of. In the first place, he takes exception to the large amount of cash at the company's bankers. That is an item I entirely approve of. I would rather see a larger amount in your bank than that same amount in bad investments. The larger the balance at the bank and the freer your capital the greater prospect is there of your making money. It is a source of satisfaction that the big transactions in which you have been engaged last year have left you wholly unloaded by one single security of an objectionable or dangerous character. (Cheers.) As regards the 26,000*l.*, sundry debtors, I know nothing about them; but I am prepared, from my knowledge of the company's affairs, to guarantee them for 1 per cent.

I WILL GUARANTEE THE WHOLE OF YOUR DEBTS FOR 1 PER CENT.

(Cheers.) I very much doubt whether the chairman will feel it is his duty to give you information about open accounts, but I am sure he will satisfy you that they are all sound. As regards the preliminary expenses—as an original shareholder, it is within my knowledge that the shares were issued at 1s. per share premium; that 7,500*l.* was thereby realised; that the expense of promotion was 5,618*l.*, and that 1,886*l.* was carried to the reserve, and, therefore, we have no preliminary expenses outstanding, but actually a profit on them. (Cheers.) Whilst congratulating the management on their able conduct of affairs during the year, I do hope and trust they will pursue the policy of never loading themselves up with their own issues. It is a most undesirable kind of business. (Hear, hear.) The shareholders regard themselves purely as an agency company, and if you cannot make money without taking a large interest in

your own issues, I hope you will refrain from doing business until you can, and let us go on year by year as we are doing. (Cheers.)

A SHAREHOLDER: How many shareholders are there in the company?

A SHAREHOLDER: I should like to know the name of the gentleman who is willing to guarantee the debts at 1 per cent. (Cheers.)

CHAIRMAN'S REPLY.

The CHAIRMAN: I will begin by answering Mr. Thorne. The first question was with regard to preliminary expenses, and it has been answered by Mr. Escombe. I will answer it again. The shares were issued at a premium, which realised 7,500*l*. The preliminary expenses, including the cost of office furniture, &c., came to 5,618*l*.; therefore upon that account we had a balance to the good of 1,886*l*. 8s. 9d. (Cheers.) The furniture came to about 400*l*. Then as regards the management expenses and directors' remuneration, we have just moved into a new office, which has been expensive. It is well suited to our purposes. We have been very careful not to engage too many clerks, and to keep down the expenses as much as possible. The remuneration of the directors (I think there are five of them) comes out at the rate of 1,000*l*. per annum for the directors.

Mr. THORNE: Very satisfactory.

The CHAIRMAN: Then, as to the managing directors, they receive no fixed salary, but, according to the articles (which I thought my friend, Mr. Thorne, had read with care), after 10 per cent. has been paid upon the capital, there is 10 per cent. paid to the directors and managing directors. The managing dircctors take half of that, and we take the other half.

Mr. THORNE: Very satisfactory.

The CHAIRMAN: The next item is with regard to New York Agency expenses, which is incurred to get business in the United States. The last question was with regard to sundry debtors, 26,437*l*. Since the balance-sheet has been issued half of that has been returned to us. The rest is money advanced to customers on ample security—to people with whom we are about to transact business. When a shareholder said he would be good enough to guarantee those debts for 1 per cent., so far as my humble judgment goes that would be 1 per cent. in his pocket if we accepted his offer. (Cheers.) I will inform the shareholder who asked the gentleman's name that it is Mr. Escombe. (Cheers.) The deposit account is thus—you will see cash at bank and in hand 18,520*l*., and out of that 14,000*l*. is lent out to brokers at notice, and that goes into the profit. The last question as to the number of our shareholders—I believe it is between 1,200 and 1,300.

The report was unanimously adopted.

The CHAIRMAN proposed "That, as recommended by the directors, and in addition to the interim dividend of 3s. per ordinary share, and 9*l*. 12s. 4d. per founders' share, already paid, a final dividend of 1s. per share on the ordinary shares and 3*l*. 10s. per share on the founders' shares for the period ending 31st December, 1890, be, and is at the same time hereby declared."

Mr. LUCAS seconded the motion, which was carried unanimously.

DIRECTOR AND AUDITORS RE-ELECTED.

The CHAIRMAN: I now propose that Mr. Dillwyn Parrish be re-elected a director.

Mr. LUCAS seconded the motion, which was carried unanimously.

Mr. THORNE: The next matter is the re-election of the auditors, and I move: "That Messrs. Deloitte, Dever, Griffiths and Co. be, and they are hereby appointed auditors to the company for the year ensuing, and that their remuneration be the sum of 70 guineas; and that a like sum be paid to them as their remuneration as auditors up to this date." I presume the board has considered that the payment now made is in proportion to the work done, and I would only ask that the auditors give one or two of the items I have specified in greater detail.

Mr. ESCOMBE seconded the motion, which was carried unanimously.

SUNDRY MATTERS INTERESTING TO SHAREHOLDERS.

Mr. GUEDALLA: In rising to propose a vote of thanks to the chairman for having presided over this meeting to-day—I wish to say that we are very fortunate in having as our chairman a gentleman possessed of so much influence and experience as Mr. Farquhar. I know he has devoted himself in the past year very greatly to our interests, aud so also have the directors, and especially the managing directors, with the result we have all seen. (Cheers.) It would, therefore, be in no carping spirit that I make one or two further observations. Some of us have watched with concern the depreciation in the shares, which have fallen from a premium of 3 per cent. to 1½ per cent. Of course, the board have nothing to do with Stock Exchange quotations, nor should we expect them to concern themselves with the fluctuations of the market, but, at the same time, I think the more the public can be made to understand that this is not a mining company, but that it is a company which takes up all sorts of businesses of an approved kind, and that has a large capital at its back, the better it will be for us. However satisfactory our dividend, we must view with some amount of concern a considerable falling off iu what I may term our capital account.

NOT A MINING COMPANY.

I trust the board will take every opportunity (for I am told that our shares are mainly dealt in on the mining market) from time to time to enlighten the public as to the schemes which are being put forward, most of which are far removed from those of a mining character in themselves, if I am rightly informed. I think it is of some importance, because I cannot doubt from what we have heard, that our shares are worth a larger price than that at which they now stand. As these shares are dealt in on the mining market, perhaps the board will take the public into their confidence as to the real nature of their business. Another hint I will throw out to the board, and that is, if some of these good things come off we, as shareholders, will very

GRATEFULLY RECEIVE INTERIM DIVIDENDS,

and perhaps the board will not wait too long before declaring them. We prefer dividends even to having the money locked up in securities, however unexceptionable may be their character. From what we know of the prudence of the board, we have to congratulate ourselves on our present position, and need have no fear for the coming year, which, if all I have heard be true, will much exceed the prosperity and the earnings of that which is just passed. (Cheers.) I feel most grateful to the chairman, directors and managing directors, for the care, skill and ability with which they have brought the company to its present position. (Cheers.)

Mr. THORNE supported the motion, which was carried by acclamation.

DECLARATION OF POLICY.

The CHAIRMAN: I am sure, on behalf of my colleagues and myself, I return you our hearty thanks for the kind way in which this proposal has been made, seconded, and carried. I must make some reply to two remarks from hon. shareholders, and say how entirely I agree with the first of them with regard to the board not taking up, or loading themselves, with any large interest in any of their own issues. That has been our policy from the first. We do our business thoroughly as agents, and we endeavour to avoid every step by which we ourselves would be likely to run any risk whatever. We content ourselves by doing the utmost we can to avoid locking up our money in any of the undertakings in which we are concerned, but before we have anything to do with them, or before we give them the support of our company, we take the greatest care to investigate and see that they are thoroughly firm and good. With regard to the remarks made by Mr. Guedalla about our not being a mining company, I think they are most satisfactory. We are not. Our business is to avail ourselves, not only of opportunities presented by those connected with us, but of the many opportunities the board have of bringing business before the company as well as of those which may be presented by our shareholders. Our business is to take up all first-class concerns of an industrial character—not mining more than anything else—and, therefore, Mr. Guedalla is quite right in stating that we are not a mining company. With these remarks I again return you most cordial thanks.

THE GAWTON CO., LIMITED.

ERECTION OF REFINING WORKS COMPLETED—HOPEFUL OUTLOOK FOR THE COMPANY.

THE ordinary general meeting of shareholders of this company was held at 20, Great St. Helen's, on Wednesday, the 18th inst., for the purpose of receiving the directors' report and statement of accounts, electing a director and the auditors, and transacting the general business of the company.

Mr. Charles Clark presided.

Mr. EDWIN F. COLMER (secretary) read the notice convening the meeting, and the report and accounts were taken as read.

PROGRESS WITH THE WORKS.

The CHAIRMAN, in moving the adoption of the report and accounts, said: Gentlemen, an unusually long time has elapsed since our last general meeting, and the accounts that are now before you cover a period of 10 months, instead of the customary half-year. The first impression conveyed by these accounts can scarcely have been a pleasing one to any shareholder. But those of you who may have taken the trouble to examine them closely will have seen that in spite of a somewhat restricted output, consequent upon the transition phase which our business has been passing through, our trading account for the 10 months shows a deficit of less than 200*l*. That is to say, our expenses, irrespective of the "refinery account," which is a capital charge, though not yet so dealt with, amounted for that period to 6,394*l*. 1s. 8d., while our sales were, for the same period, 6,207*l*. 11s. 9d., including, of course, the approximate value of the arsenic sold, but still in store waiting to be refined, the nett trading loss being thus only 186*l*. 9s. 11d. This, we may reasonally hope, is the very last time we shall have to show a loss of any kind, for, with our refining works now in full operation, and our wharf all but completed, we ought to be able to make profits steadily.

NEW ISSUE OF DEBENTURES.

Our indebtedness, however, is very heavy, and although we cannot speak too warmly of the indulgence accorded to us by our merchants and our bankers, it is high time that we began to take steps for reducing our pecuniary obligations to them. Those of you who are debenture-holders as well as shareholders will remember that we recently received your all but unanimous consent to a fresh issue of debentures, to rank *pari passu* with your own, as a first charge on all the property of the mine excepting the uncalled capital of 3s. per share. It was afterwards found, however, that this could not be accomplished without necessitating a new mortgage deed, and looking upon this as a needless cost, we have now resolved to offer a new issue of 3,000*l*.—second debentures. If we succeed in placing these, as we think we shall, our financial position will be made easy and comfortable. I spoke just now of a somewhat restricted output of arsenic. I ought to state that the restriction was self-imposed, there being no object whatever in accumulating produce faster than we could deal with it. We shall now go on vigorously. Mr. Bawden will presently read his report, and tell you the exact position of matters up to date. But before calling upon him to do so I wish to put before you a few memoranda which I made when visiting the mine a fortnight ago.

THE CHAIRMAN DESCRIBES WHAT HE SAW AT THE MINE.

The exploratory work in progress consists of driving the 95-fm. level east of engine shaft; driving the 95-fm. level west of cross-cut to east of engine shaft, which will come back towards the first 95; driving the 105-fm. level east of engine shaft; driving the 105-fm. level cross-cut south, which is now in 26 fms., and ought to cut a lode in about 7 fms. further; and driving the 82-fm. level west of the eastern cross-cut. In the 70-fm. level very little has been done; only about 5 fms. driven east. In the 117-fm. level, bottom of the mine, nothing has recently been done. The yield continues good everywhere. The lode in the 95 east has been a little interfered with by a slide, or small cross-course, but it will probably improve again soon, as we have an end 40 fms. to the east of it (coming back towards it.) This, when communicated, will lay open very extensive stoping ground. The stopes are without change. A great deal of excellent ground has been laid open, and there seems no reason to fear any falling off

for years to come. The refinery is a substantial, commodious, well arranged building, well lighted, well ventilated, and in all respects admirably adapted for the work to be carried on in it. One of the refining furnaces was at that time steadily at work, and the first shipment of 114 barrels, or 20 tons of refined arsenic, had just been made. The second furnace has since been lighted, I believe, but Mr. Bawden will tell you about that. The wharf will be immensely valuable to us, not only in convenience, but also in saving much cost that would otherwise have to be incurred. Altogether we feel that the position and the earning power of our undertaking have been greatly improved, and that the long-suffering patience of the shareholders is really at length about to be rewarded.

Mr. EDWARD HUNTER (director) seconded the motion.

AGENT'S REPORT.

Mr. BAWDEN then read his report as follows :—

Feb. 17.—In submitting to you my report on the various points in operation, and the work done between Feb. 28 and Dec. 31, 1890, I beg to say that we have driven, stoped, risen, and sunk 346 fms. 1 ft. 8 ins. of ground, yielding 6,547 tons of arsenical mundic, or equal to 18¾ tons per fm. Of these 6,547 tons, 2,379 tons have been burnt in the flat furnaces, and 4,168 tons in the revolving calciner. During the same period we have extended the 105 cross-cut south 13 fms. 3 ft. 4 ins., making the total length of this cross-cut 26 fms. 5 ft. 10 ins.; and driven the 105, 95, and 82-fm. levels 24 fms. 0 ft. 4 ins. We are now driving the 95 east of engine shaft, and west from a cross-cut, about 100 fms. east from said shaft, and have about 44 fms. more to drive to effect a communication between the two points. This is laying open a very important section of ground on the south part of the lode, which is standing whole from this point to surface. We have also commenced driving the 82 west from the eastern cross-cut in a good course of arsenical mundic. This level will come on over the 95, and enable us to communicate between tho two points for the purpose of ventilation and the more rapid return of the minerals in the lode. The output of 18¾ tons per fm. of tho lode wrought, as mentioned in the first part of this report, is the strongest evidence I can give of the productive character of the lode generally. It affords me great pleasure to be able to state to the shareholders that the works for refining the company's make of arsenic soot are an accomplished fact, and we are now in a position to make the full market value of our product of arsenic. Every care has been taken to make the works as complete as possible, and they comprise two double refining furnaces, 24 chambers to receive the refined arsenic, flues leading to the same, arsenic soot-house between said furnaces, engine room, mill rooms, weighing house and two store rooms, all under one slate roof of 110 ft. long by 60 ft. wide. We have also a convenient changing house for the furnace men. The receiving chambers are roofed with a wood covering, and sides protected for men cleaning out the refined arseuic, with tramroads laid from them to the upper mill-chamber and arsenic soot-house. These works are capable of treating a much larger output than we have hitherto had. To increase the output will receive our best attention, and I believe that we shall have a fair return for the large outlay in furnaces and works that we have been compelled to make during the last few years. There is no falling off in the quantity of arsenical mundic laid open by the development of the south part of the lode above the 117-fm. level, and our attention must soon also be turned to the large quantity of mundic we some years since proved by sinking a winze 15 fms. below the 117-fm. level. The cross-cut south at the 105 should, in the course of a few fathoms further driving, intersect the first of the known south lodes, and we shall be much disappointed if an important discovery of minerals is not made at this point. Situated on the Gawton Quay, on the River Tamar, as our works are, the cost of delivering our make of refined arsenic is very small indeed.

Mr. BAWDEN here exhibited a sample of the refined arsenic and said : That sample was taken in the presence of Mr. Clark when he visited the mine, and has been reported upon by the assayer of the purchaser, who pronounced it

"GOOD ENOUGH."

A SHAREHOLDER : Is it A1 ?

Mr. BAWDEN : It is A1. I do not think it is second to any arsenic in the known world. That is what we have been working for for many years. The accounts would appear to show a heavy balance against us, but that has been expended entirely for the works. When Mr. Clark was at the mine, the second refining furnace was nearly completed, and on Monday last we lighted the fire, so that we shall now proceed as rapidly as possible to refine the 400 or 500 tons of arsenic we have, and deliver it to the purchasers. I think our position has really improved, although our book debts would show a considerable increase the wrong side. At the same time, if the 3,000*l.* of debentures are taken up those debts will be covered without coming out of the pockets of the shareholders in the shape of a call. There has been a great deal done in Gawton without the shareholders having to put their hands in their pockets. If 10 years ago we had had 15,000*l.* or 20,000*l.* to back us up I have not the slightest doubt but that good interest would have been paid long ago, but we have had to work without these means. Had I said to the shareholders we should have to go 2,000*l.* in debt to build those works I do not think we should have had them to-day, and we should be in the same position as formerly. We could not then go to the end of our tether with our product, but we cau do so now, and if we cannot make the mine pay in future, we may say it cannot be done at all. I have a very good opiuion of it, or you may be sure I should not have gone to the expense of putting up those works. Everyone who has seen them appears to be

VERY PLEASED WITH THE WORKS,

and I shall be happy to show them to any shareholder who comes down. The cost of these works have beeu really the whole of the debit we have against us.

Mr. E. M. W. GOSLETT : Will you give us the exact sum that these works have cost ?

Mr. BAWDEN : Up to this time they have cost us 2,100*l.*

Mr. GOSLETT: Was it wise to put it in your accounts as a loss ?

The CHAIRMAN : I think the proper way will bc, as soon as we know the entire amount that thc works will cost to take, a vote of the shareholders to transfer it to capital account.

Mr. BAWDEN : It is bound to be shown as it is now.

Mr. GOSLETT : I should like also to ask about these sundry debtors on share and debenture account—who are they ?

The SECRETARY read the names.

Mr. GOSLETT : I shall move presently that these shares be forfeited. It is no use keeping them on year after year.

The CHAIRMAN : You had better make that as a suggestion.

A SHAREHOLDER asked why the accounts went on for 10 months.

The CHAIRMAN : Simply because wc did not wish to call the shareholders together until we had something definite to put before them. We shall now run regularly.

The motion was carried unanimously.

GENERAL BUSINESS.

Mr. GOSLETT proposed "That Mr. Chas. Clark, the retiring director, be and is hereby re-elected."

Mr. LEMMON seconded the motion, which was carried uuanimously.

Mr. JAMES LAWMAN proposed the re-election of the auditors Messrs. Francis Nicholls, White and Co.

Mr. E. M. W. GOSLETT seconded the motion, which was carried unanimously.

Mr. BAWDEN: I would impress upon all the shareholders to take their proportion of the debentures. If we owe the merchants 1,300*l.* or 1,400*l.* we cannot run away from them, and go to the chcapest market, but if we are freed from everybody, we can buy in the cheapest market. I am hoping if we can once turn the balance to the other side we shall be able to increase our works gradually without it being felt by the shareholders., I do not mean Gawton to stay where it is. For the last 20 years this mine has not been sunk 1 ft.—that is the main engine shaft. We have put down a winze 15 fms., and that has gone through a lode that will yield 40 tons to the fm., so that we have got something to look forward to.

A vote of thanks was accorded to the chairman and directors, after which the proceedings closed.

POTOSI, LIMITED.

A FAVOURABLE REPORT CONFIRMED BY TELEGRAM.

UNDER date, Peru, Jau. 23, 1891, Mr. Pryor writes :—I was underground at Old Potosi yesterday morning, and trust that we havc now broken through the floor of bluestone, which has so retarded our work and reduced our returns. (N.B.—A telegram of later date from Mr. Pryor states : "Penetrated bluestone ; prospects very favourable.") In the extreme west of the bottom stope I now find a lode 3½ ft. wide of solid quartz, showing colour and of satisfactory quality. In fact, I do not recall one word which I have said in favour of this mine, and the periodical appearance of these floors of bluestone is merely characteristic of the region. The Socorro lode is also looking very well at the point now being worked as cheap and haudy to the mill. Here the quartz is extremely free for breaking, aud as almost all of the tramming is a matter of gravitation, the mining cost is very slight.

PUBLICATIONS RECEIVED.—"Annual Report of the Director of the Mint to the Secretary of the Treasury for the fiscal year ended June 30, 1890"—Washington : Government Printing Office, 1890 We have received from the Institution of Civil Engineers the following publications :—"More on Tramway Permanent Way ;" "Abstracts of Papers in Foreign Transactions and Periodicals ;" "McLaren on Steam on Common Roads ;" "Pole on Mental Calculation."

"MINING WORLD" Stock and Share Agency.

CORRECT INFORMATION IS THE BASIS OF SUCCESSFUL DEALING IN MINING SHARES.

THE AGENCY CAN COMMAND AND SUPPLY THIS TO INVESTORS.

GENERAL FOREIGN MINES.

Many of these deserve special attention. Profits may be secured by acting upon sound advice in Buying certain Shares, whilst losses may be avoided by timely sales.

INDIAN MINES.

The upward movement has commenced. The information possessed by the Agency is invaluable for those wishing to Buy or Sell Shares in this Market.

KAFFIR MINES.

Special efforts have been made to secure the best and most reliable information as to the management, resources, and prospects of South African Mines in which the profits and losses have been alike phenomenal.

GREAT CARE IS NEEDED BEFORE INVESTING.

Those doing business through the Agency are kept informed as to any exceptional news in connection with the Companies in whose Shares they are interested. Purchases can be made for forward delivery, and sales effected for Cash.

All communications should be sent to

MERRY & CUNINGHAME, LIMITED.

INCORPORATED UNDER THE COMPANIES ACTS, 1862 TO 1890.

SHARE CAPITAL, £250,000, DIVIDED INTO 12,500 ORDINARY SHARES OF £10 EACH, £125,000; 12,500 SEVEN PER CENT. PREFERENCE SHARES OF £10 EACH, £125,000.

The Preference Shares are entitled to a Cumulative Preferential Dividend of 7 per cent. per annum, and to a priority over the Ordinary Shares in the distribution of assets.

FIVE PER CENT. DEBENTURES £150,000.

The Debentures will be issued in 1,500 Debentures of £100 each; they will bear interest at the rate of £5 per cent. per annum, and be secured by a Trust Deed in favour of the undermentioned Trustees, and will constitute a first charge over the whole of the heritable property, buildings, fixed plant, and leases comprised in the Contract of Sale; they will be repayable 30th November, 1910, subject to earlier redemption on six months' notice, by drawings at the price of £102 10s. per Debenture, the first drawing to take place not earlier than November, 1895. The whole of the £125,000 Ordinary Shares are taken by the Vendors. These Shares will not in any year be entitled to dividend until £10,000 has been set aside out of profits for the redemption of the Debentures, and after such redemption as a reserve fund, until such fund amounts to £125,000. The above Debentures and Preference Shares are offered for subscription, payable as follows:—Debentures:—£10 on Application; £40 on Allotment; and £50 One Month after Allotment. Preference Shares:—£1 on Application; £2 on Allotment; £2 One Month after Allotment; and £5 Three Months after Allotment.

PROSPECTUS.

THIS Company is formed for the acquisition from Messrs. Merry and Cuninghame, as from November 30, 1890, of—

The Carnbroe Ironworks,
The Auchinraith Colliery,
The North Motherwell Colliery,
The Bardykes Colliery,
The Inkerman Coal and Ironstone Pits,

all situate in the counties of Lanark and Renfrew.

VALUATION OF PROPERTIES.—Messrs. Farebrother, Ellis, Clark and Co. have recently valued the whole of the properties, and their report is as follows:—

We have surveyed the several properties known as the Carnbroe Ironworks, Auchinraith, Bardykes, and North Motherwell Collieries, and the Inkerman Coal and Ironstone Pits, all in the proximity of Glasgow and other manufacturing towns and shipping ports.'

The Carnbroe Ironworks are held in fee simple subject to feu duties; the collieries and ironstone pits on leases as per schedule annexed. They are conveniently situated for disposal of output by railways with ample sidings; the collieries and pits are well and usefully opened up; and in the case of Bardykes and North Motherwell fitted with new coal washing plant of great capacity.

To the properties are attached managers' residences, offices, cottages for the workmen, with other requisite buildings and railed ways.

We have also checked the estimates of the quantities of coal in the several fields upon the data of the plans furnished to us, showing the worked and unworked areas, and the faults and wants, together with the several sections of the seams. The result of our calculations enables us to arrive at the conclusion that on the data of these plans and sections the quantities in the schedule furnished to us by Mr. John Hogg (Messrs. Merry and Cuninghame's engineer), are fairly estimated, and the totals of which are as follows:—

The Mineral Field Auchinraith	Total	5,055,100 tons.
,, ,, North Motherwell	,,	5,727,050 ,,
,, ,, Inkerman	,,	2,549,461 ,,
,, ,, Bardykes—Total quantity of		
Coal, less 10 per cent. for loss in working	,,	7,445,165 ,,

In arriving at these conclusions, we necessarily have to rely upon the information given to us by the engineer at the collieries, but which we have every reason to place confidence in. These estimated quantities are amply sufficient to maintain present output during the currency of the leases.

We are of opinion that the before-mentioned works, collieries, and pits, together with the buildings, machinery, plant, tools, and stock in trade (set forth in the inventories), together with the goodwill and brands, are of the value of three hundred and ninety-two thousand six hundred and twelve pounds (£392,612).

(Signed) FAREBROTHER, ELLIS, CLARK AND CO.

29, Fleet-street, London, E.C., February 17, 1891.

The schedule of the several properties referred to in the above report of Messrs. Farebrother, Ellis, Clark and Co. is as follows:—

THE CARNBROE IRONWORKS.—All that property, situate in the parish of Bothwell, near Coatbridge and Airdrie, known as the Carnbroe Ironworks, together with the railways, sidings, and numerous buildings thereon, held in fee simple, subject to feu duty of £476 9s. 8d. per annum, and for the year 1877, and every 19 years thereafter, if demanded, an additional rent of £148 4s. 8d.; and for the year 1873, and each 19th year thereafter, an additional rent of £328 5s.

THE NORTH MOTHERWELL COLLIERY.—All that leasehold property, situate in the parish of Dalziel, between Motherwell and Bothwell, and known as the North Motherwell Colliery, together with the railways and numerous buildings thereon, held for a term of 31 years from Whit Sunday, 1889, at a minimum rent of £3,000 per year, or royalties or lordships, as set forth in lease.

THE BARDYKES COLLIERY.—All that leasehold property, situate about two miles from High Blantyre, known as Bardykes Colliery, held under two leases and a lease for a wayleave, one of the first-mentioned leases being for a term of 31 years from Whit Sunday, 1874, at a minimum rent of £380 per annum, or royalty or lordship, as set forth in lease—the second lease being for a term of 31 years from Whit Sunday, 1874, at a minimum rent of £1,400 per annum, or royalties or lordships, as set forth in lease, but, subsequently, by written agreement, reduced—the lease for wayleave, or right of way, on a railway between the Hallside Estate and the Caledonian Railway, for carriage of coal and ironstone, being for a term of 30½ years from Martinmas, 1874, at a minimum rent of £200 per year, or royalty of 1d. per ton (20 cwt.) on all minerals carried.

THE AUCHINRAITH COLLIERY.—All that leasehold property, situate at Blantyre, known as Auchinraith Colliery, held under four leases—one being for 31 years from Whit Sunday, 1888, at a minimum rent of £2,000 per annum, or royalty or lordship, at rates set forth in lease; one lease being for 31 years from Martinmas, 1888, at a minimum rent of £250 per annum, or royalty or lordship, provided in the lease; one lease being for 21 years from Whit Sunday, 1872, extended, by endorsement, to 31 years from Martinmas, 1888, at a minimum rent of £200 per annum, or lordship provided; one lease being for 31 years from Martinmas, 1888, at a minimum rent of £200, or lordship on output.

THE INKERMAN AND WALKINSHAW.—All those leasehold properties known as Inkerman and Walkinshaw, held under three leases—one being for 21 years from Martinmas, 1879, at a minimum rent of £500 per annum, or royalties or lordships, as therein provided; one lease being for 21 years from Whit Sunday, 1880, at a minimum rent of £500, or royalties or lordships, as therein provided; one lease being for 30 years from Martinmas, 1889, at a minimum rent of £750. per annum, or royalties therein provided.

The valuation also includes all the several buildings, cottages, offices, workshops, engine-houses, and other erections on the said properties, together with the machinery, fixed and other plant, railways, tools, implements, and stock, &c., all as set forth in the inventories supplied by Messrs. Merry and Cuninghame.

(Signed) FAREBROTHER, ELLIS, CLARK and CO.

CERTIFICATE OF PROFITS.

Messrs. Cooper Brothers and Co. have examined and audited the books of account of the various properties, and have furnished the following certificate of profits:—

We have examined the books and accounts of the businesses of Messrs. Merry and Cuninghame, carried on at the undermentioned works for the three years ended May 31, 1890.

We find that the average annual profits, without charging interest on capital employed, or providing for depreciation, were as under:—

	Average Annual Profit.	Year ended May 31, 1890.
Carnbroe Ironworks, Lanarkshire ...	£14,728 9 3 ...	£20,969 12 9
Auchinraith Colliery, Lanarkshire ...	10,896 14 8 ...	14,183 7 8
North Motherwell Colliery, Lanarkshire	7,199 2 0 ...	10,570 3 2
Bardykes Colliery, Lanarkshire	2,840 5 9 ...	6,246 13 5
Inkerman Pits, Renfrewshire	2,304 14 9 ...	2,042 3 11
	£37,969 6 5 ...	£54,012 0 11

These profits will be reduced by £5,000 per annum, which we consider a sufficient sum for head office expenses and administration of the new Company.

(Sigued) COOPER BROS. and CO.,
Chartered Accountants.

14, George Street, Mansion House, London, E.C.,
January 6, 1891.

At the request of the directors, Messrs. Cooper Brothers and Co. have, during the present month, continued the examination of the accounts, and they certify that the profits for the six months ended November 30, 1890 (on the same basis as their previous certificate) are £31,552 2s. 10d.

The annual amount required for payment of interest on debentures (£7,500) and dividend on Preference Shares (£8,750) will be £16,250.

The works will be taken over as going concerns as from November 30, 1890, from which date the profits will belong to the Company, the Vendors from that date receiving interest at the rate of 5 per cent. per annum until payment. All the book debts up to November 30, 1890, will be received by the vendors, and all liabilities to that date will be discharged by them.

The vendors, who, with the Corporate Trust (Limited), are promoters of the Company, have fixed the purchase price for the whole of the properties including in Messrs. Farebrother, Ellis, Clark, and Co.'s valuation at £350,000, payable as to £150,000 in cash, £125,000 in fully-paid ordinary shares, £40,000 in debentures or cash, at the option of the directors, and £35,000 in preference shares or cash at the option of the directors.

The Contract of Sale, made the 17th day of February, 1891, between John Charles Cuninghame, John Cuninghame, and Robert Main of the first part, the Corporate Trust, Limited, of the second part, and James Mackintosh, as trustee for the Company, of the third part, provides for the payment of all legal and other expenses attending the negotiations of the purchase, the reports upon the properties and accounts, and the incorporation and registration of the Company, and also all brokerage, advertisements, legal and other expenses attending the formation of the Company; also one-half of the costs of, and incidental to, the conveyance of all the properties to the Company, including stamp duties. In relation to these and other matters arrangements have been entered into with various persons, also arrangements have been made for guaranteeing the subscription of capital, which may constitute contracts within the meaning of the 38th section of the Companies Act, 1867. There are also various contracts connected with the several properties as a going concern which it would be inexpedient to publish. Applicants for shares must be deemed to waive the insertion of dates and names of the parties to any such contracts, and to accept the above statements as a sufficient compliance with the Act.

The memorandum and articles of association of the Company, copy of the contract of sale, and of the reports of Messrs. Farebrother, Ellis, Clark and Co., and of Messrs. Cooper Brothers and Co., respectively, also the draft of the deed of trust for the benefit of the debenture-holders, can be inspected by any intending subscriber at the offices of the solicitors of the Company.

Applications for debentures and preference shares should be made on the form accompanying the prospectus, and should be forwarded to the Company's bankers, accompanied by a remittance for the amount of the deposit, and if paid by cheque, then payable to the order of the bankers to whom the same may be sent, or they may be sent direct to the secretary, at the offices of the company.

If the whole amount applied for by any applicant be not allotted, the surplus amount paid on deposit will be appropriated towards the sum due on allotment. Where no allotment is made, the deposit will be returned in full.

Prospectuses and forms of application can be obtained at the offices of the Company, or at the offices of the bankers, brokers, and solicitors.

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

BROKERS ON THE PAVEMENT—A BUSY WEEK—INDIAN AND GENERAL FOREIGN SHARES UP—OTHERS MOVE IRREGULARLY—FACTS AND RUMOURS.

THE Mining Market, though not fairly aroused from the lethargy in which we left it last week, has yet manifested a good deal more vitality than some other general departments of the Stock Exchange, of which mention could be made.

There has been a good attendance of brokers, and the mining door of the Stock Exchange has decidedly been the most popular. The position of outside dealers is, however, a little invidious. It may be said of them, in a sense purely Pickwickian, that "they are known to the police."

The Mining Market has both an inside and an outside, and in this sense does not differ from the human body. Its *inside* is within the sanctuary of its own premises at No. 9, Old Broad Street—in other words, the Mining Exchange, which, however, must not be confounded with a private firm trading under a somewhat similar name. Its *outside* is on the pavement in front of the Broad Street entrance to the Stock Exchange.

In former times there used to be a sort of crescent, bounded by a jeweller's shop on the south and a fruit shop on the north. Up and down this crescent the members promenaded, exposed to all sorts of weather. Recently, however, this part of Old Broad Street has been improved. The crescent has disappeared and the pathway has been made straight. More recently still the omnibus traffic, that descended like an avalanche towards the Liverpool Street stations, has been diverted and goes *viâ* London Wall, but vehicles going in the direction of the Bank proceed thither by the old route.

Under these new conditions outside dealers thought that at last, unlike the dove that left the patriarchal boat, of which Noah was the captain, they had found some rest for the soles of their feet. But no. Their dealings with one another and with Stock Exchange members are accompanied by inharmonic cries of "move on" from the police, and of "keep the path clear" from the Stock Exchange officials, Exclamations such as these are apt to destroy the harmony of prices, and mar the smoothness of bargains. They are not in accordance with the everlasting fitness of things. and those who started the Mining Exchange (the chief of whom was Mr. Thomas Thompson), dream of a time when the duties of the police will be transferred to the opposite, or Mining Exchange side of Old Broad Street, and when the Stock Exchange members. whilst postulating before the outside brokers, will be told by the police to "move on," and by the Mining Exchange officials to "keep the path clear."

In the early part of the week, dealings were restricted by the settlement which was somewhat heavy, but passed off satisfactorily.

The market has been most eventful, perhaps from its Indian side. We have nothing to say here about the Mysore meeting to-day. We claim in our report, and in our leading article practically to have exhausted the subject. The market does not for the moment view the Mysore purchase with favour, for the shares fell upon it whilst those of the Goldfields rose. We fancy that in this deal the latter company has the best of the bargain. Mysore Goldfields have been at 2*l*., and we shall not be surprised to see them much higher. Other sales are in the air, and are rapidly assuming parchment form. Champion Reef shares are also better, but Nundydroog and Ooregum suffer on a comparison with last week's prices. There has been a good deal of Nine Reefs buying, and the shares have fluctuated very much. For a reference to Ruby Mines of Burma see diamond section. Some remarkable assays are published this week by the Indian Gold Mines of Glasgow. This is a Wynaad company, and shows assays from distinct parts of its reef of 4 ozs. and even 5 ozs. to the ton. A boom in Wynaad mines is within the domain of the possibilities. Perseverance is to re-construct, with a 2s. liability.

Some of our readers appear to be a little perplexed as to the relative merits of Mysore West and Mysore Wynaad, and repeatedly write to ask—"In the shares of which company should we invest?" Here is the relative position of the two companies. Mysore West has 125,000 shares ; Mysore Wynaad, 250,000 ; both of the nominal value of 1*l*. each. On Mysore West shares there is a liability of 2s.; on those of Mysore Wynaad a liability of 1s. The financial position of each company is practically the same, as the full amount called up would in each case produce the same. For a market rise Mysore Wests seem to look the most desirable, seeing that in case of greater activity (which may with all but certainty be expected) there would be fewer shares to come on the market. Moreover, of Mysore West shares only 84,939 are issued, whilst of Mysore Wynaad the full 250,000 are issued.

In the Foreign market there has been a good deal of life in Callao Bis shares. Crushings from the new property have been very gratifying, and seem to point to these shares as being very much below their real value. The following table embraces the facts :—

Month.	Tons crushed.	ozs. of Gold.	Amount realised by sale.
1890.			£ s. d.
Oct. 20 to Nov. 21	500 ...	586 ...	2,239 6 7
Dec. 19 ...	380 ...	556 ...	2,159 4 0
1891.			
Jan. 16 ...	455 ...	343 ...	1,320 2 1
Feb. ...	545 ...	695 ...	—

Don Pedros have been depressed on a rumour that the water difficulty had again presented itself, but we have the best authority for stating that such an assertion is absolutely without foundation, and that the prospects of the mine were never better than now. From Frontino and Bolivia comes the news that the profit for Dec was 3,501*l*., which contrasts with 7,300*l*. telegraphed as the result for Jan. The shares are up on the week. We shall soon know the value of the New Russell quartz, for the Gold Ores Reduction Co. has almost completed the erection of its plant. The profit on the last clean up of the Colombian Hydraulic was 1,350*l*. Gravel Gold must soon come into gold-bearing ground. The returns from Orita have of late not been so good. As a rule general foreign shares are up on the week. and notably Pahang Corporation. This must not be confounded with Pahang Exploration, which is quite a different concern. We are glad to see Pahang Corporation shares up, having so frequently called attention to the promising character of the enterprise. The rise this week has been quite 10s. Palmarejos are also up on rumours as to the near completion of the railway; and the news we published last week in regard to the success of the St John del Rey Debenture Scheme sent the shares up 1s. 6d. Montanas are also better, and there has been some demand for Great Eukaby Silver. Attention may profitably be called to New Pierre-

fittc, which has paid during thc year the brilliant dividend of 60 per cent. The shares are rarely dealt in, for reasons set forth at the mceting.

Turn we now to thc Kaffir market. The Transvaal Gold Exploration Co. held a meeting yesterday, which was attended by many brokers, who expressed themselves satisfied with the explanations given from the chair. Au important telegram has been rcceived by thc Sheba directors, that the manager expects to commence crushing on Monday, and that there is an improvement in the mine. The dealings in Land sharcs have becn of a fluctuating character, and do not call for comment.

In the Diamond market there has becn a fall in both De Beers and North East Jagersfontein. In regard to New Jagersfontein, we hear there has been an enormous fall of yellow ground, and very little work is being done. In the Diamond market the sensation of the week has undoubtedly been Burma Ruby, which rosc rapidly on good news from the mine, published amongst our telegrams. At one time during the week they were as high as $\frac{3}{8}$ premium.

African Gold shares havc becn featurcless. Simmer and Jack shareholders are asked to send in their certificates for verification.

In the Copper markct shares have been lifcless, but we may call attention to the valuable reversion Cape Copper shareholders havc in one-half of the profits henceforth to bc derived from thc Briton Ferry Chemical Manure Co. Thc dividends paid by this concern were last year $27\frac{1}{2}$ per cent.. and would have been $12\frac{1}{2}$ per cent. more but for a fire. The capital has been returned in four years.

In the Australian markets the changes for the most part ha ve been for thc better. notably, Australian Broken Hills, on the telegrams published from the mine ; and for a similar rcason Bonnie Dundees and Kangarillas are both up.

We have only now to mention Coruish shares. which have again been extremely depressed—Tincrofts falling nearly 3*l*. Against this rccord thc solitary set off is Killifreth, which advanced on the declaration of a 5s. dividend, after a suspension of distributions for nearly cight years.

The outlook for next week is highly promising in the Indian and General Foreign section. By next Monday the report of the Mysore meeting will have been fully digested in the country. We shall then see if the shareholders endorse the opinion of the market, or whether they elect to act upon a contrary opinion of their own.

South African Lands.

This class has bcen somewhat neglected for the moment, and although there have not been any blocks of shares offered for sale prices appear to have drooped for want of business. Explorings and Occanas havc most of all recded, while Chartered and Goldfields (S. A.) have also declined.

Business.—Those closing lower are as under:—British (S. A.) Chartered. $\frac{1}{8}$; Exploring, $\frac{1}{4}$; Goldfields of South Africa, $\frac{1}{8}$; Johannesburg Estate, $\frac{1}{16}$; Occana, $\frac{1}{4}$; and Southern Land, $\frac{1}{16}$. The rises are in Moodies, fully-paid, $\frac{3}{16}$; and Transvaal Gold, 6d., whilst others are unchanged on the week.

Making-up Prices. Feb. 24, 1891.		To-night's Prices.
$1\frac{3}{8}$	Bechuanaland	$1\frac{5}{16}$ — $1\frac{7}{16}$

Kaffirs.

The market has been fairly good, although in several instances prices mark a fall. Pigg's Peak have again been freely dealt in at improved prices, while Ferreira and Sheba have also been quoted at higher prices.

Wemmer, Henry Nourse, Geldenhuis and Durban-Roodepoort have been pressed for sale, and have all fallen.

Edwin Brays have been sought after by some of the best dealers in the Kaffir market, and, from being almost unsaleable, are now freely dealt in.

Business :—The undermentioned close lower :—City and Suburban, $\frac{1}{8}$; Croesus, 6d. ; Durban Roodepoort, $\frac{1}{8}$; Geldenhuis, $\frac{3}{16}$; Gleucairn, 6d. ; Henry Nourse, $\frac{1}{4}$; Johannesburg Waterworks, $\frac{1}{16}$; Jumpers, $\frac{1}{16}$; Langlaagte, $\frac{1}{8}$; Langlaagte Block B Main Reef, 6d. ; Stanhope, $\frac{1}{8}$; Wemmer, $\frac{1}{4}$; Witwatersrandt Knight's, $\frac{1}{16}$; Wolhuter, $\frac{1}{16}$.

Those closing higher are the following :—Pigg's Peak, Ordinary and Preference, $\frac{1}{8}$ each ; Sheba, 1s. 6d. ; Aurora, $\frac{1}{16}$; Ferreira, $\frac{1}{4}$; Forbes Reef, 6d. ; May Consolidated, 1s. ; and Vogelstruis, $\frac{1}{8}$.

Indians.

There has again been a busy week in this class. Champions have improved, and Goldfields of Mysore are also strong. An attempt was made on Wednesday and Thursday to depress the price, one of the rumours being that the Mysore shareholders would reject the terms of sale, but since the meeting held this afternoon things have chauged, and the shares have been dealt in up to 40s.

Mysores have been weaker, but holders must remember they are now quoted xd. of 6s., which is payable on the 10th inst.

Business.—Those up on the week are Champion Reefs of $\frac{1}{8}$; Gold Fields of Mysore, $\frac{3}{16}$; and South-East Mysore, 6d. ; whilst the falls are in Balaghat of 1s. ; Indian Consolidated, 3d. ; Mysore Gold, $\frac{1}{4}$;

Mysore West and Wynaad, 3d. each ; Nine Reefs, 3d. ; Nundydroog, ⅛ ; and Ooregum Preference, ⅛.

DIAMONDS.

The feature of the week has been the dealings in Burma Ruby shares, which have been eagerly songht after, and at one time freely changed hands at ⅜ premium, strong buyers, but although not closing at best they show a good advance on the week. De Beers have been again offered, and close a weak market at lower prices.

Business.—A fall has taken place in De Beers, ¼ ; Gordon, 1s. ; North East Bultfontein, ⅛ ; whilst the only rise is in Burma Ruby of $\frac{7}{16}$.

AUSTRALIANS.

Australian Broken Hills have been in good demand, and improved in price on dividend announcement. They close firm, though not at their highest. Day Dawn Block close firm on buying from Australia. Kangarilla have also been inquired for, while British Broken Hill have been freely offered, and close lower.

Business :—A rise has to be noted in Australian Broken Hill of 2s. ; Bonnie Dundee, 1s. ; Day Dawn Block, 3d. ; and Kangarilla, $\frac{1}{16}$; whilst those lower are British Broken Hill ¼ ; Mosman and Mount Shamrock, 3d. Others as last quoted.

COPPER.

The dealings in this class have been flat, stale and nnprofitable, and, on some forced sales from Paris, prices receded, and close lower all round.

Business :—Those down on the week are Capes of ⅛, Panulcillo $\frac{1}{16}$, Quebrada ⅛, Rio Tinto ¼, and Tharsis ⅛, whilst others remain as last quoted.

GENERAL FOREIGN SHARES.

Pahang Corporations have been in strong demand, and it is expected that much higher prices will be seen shortly. The settlement found the market short of the stock, and on the execntion of some buying orders, the shares rose 11s. 3d., and close strong.

Gravel Gold, Colombian Hydraulic and Tolima have all been inquired for, and the two last mentioned have risen.

In Lomas there has been a free market, and some thousands of shares have changed hands. They close firm at 2s. 3d., 2s. 9d., with every appearance of going higher. Palmarejos have experienced some good buying, and are in demand at enhanced prices.

Callao Bis, California, Montana, New Guston, New Russell, St. John del Rey, and Yankee Girl have all been inquired after, and close slightly firmer, while Richmonds have been offered at lower prices.

Business.—The upward move is to be noted in the following :—American Belle, 1s. ; Argentella, 3d. ; Callao Bis, 3d. ; Colombian Hydraulic. ⅛ ; Elkhorn, ¼ ; Frontino and Bolivia, $\frac{3}{16}$; La Plata, 3d. ; Loma, 3d. ; Montana, 4s. ; New Guston, ⅛ ; New Russell, 3d. ; Pahang Corporation, $\frac{9}{16}$; Palmarejo, 2s. ; St. John Del Rey, 1s. 6d. ; Yankee Girl, 6d. ; and Zaruma, 6d.

Those showing a decline are Colorado of 3d. ; Don Pedro, ¼ ; Flagstaff, 3d. ; Golden Feather, 1s. ; New Gold Hill, 3d. ; Potosi, 3d. ; Richmond, ⅛ ; Spitzkop, 3d. ; and Venezuelan-Anstin, 3d.

The following list shows the principal changes which have taken place :—

LATEST FROM THE MINES.

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—Telegram from the managing director, dated Feb. 20 :—"Raised since last report (dated 6th inst.) 3 tons of ore, containing 25,497 ozs. silver. Fifth shipment consisting of $8\frac{1}{2}$ tons of ore, containing 38,770 ozs. of silver, will be shipped for London per steamer leaving Adelaide on Mar. 4."

BONNIE DUNDEE.—The following cable from the managing director at Charters Towers :—"Have crushed 325 tons for a yield of 710 ozs. of gold. The value of this crushing is 2,310*l*., and the average yield per ton of quartz, 2 ozs. 3 dwts."

BROKEN HILL PROPRIETARY.—During the week ending 19th inst. there were 4,848 tons of ore treated, yielding 824 tons of lead, containing 169,680 ozs. silver. The leaching plant realised 8,200 ozs. ; making a total production of 177,880 ozs. silver.

GYMPIE GREAT EASTERN.—A cablegram from the mine, dated Feb. 25, gives the result obtained during the past month :—"24 days, 500 tons, 434 ozs., 1,500*l*. value, 750*l*. profit."

MIDAS.—Cable from the mine :—"Yield for week, 51 ozs."

FOREIGN MINES.

BELCHER CONSOLIDATED.—Have rnn 40 tons of ore through neighbouring mill, averaging $30 free gold per ton. Intend pushing work in this body of ore.

COLOMBIAN HYDRAULIC.—Cablegram of the result of run No. 170 : "We have cleaned up after a run of 26 days, during which time we have washed 570 hours ; the gross returns are 2,400*l*. ; the nett profit is 1,350*l*."

ELKHORN.—Cable from Capt. Plummer :—"Bullion shipped for week ending Feb. 21 was $8,000."

ISLAND BLOCK.—A cable is to the effect that 240 ozs. of gold have been obtained since the 4th inst. (three week's sluicing), that the expenses at the mine have been about 25 per cent., and that the mine looks splendid.

NEW RUSSELL.—A telegram has been received by the Gold Ores Reduction Company from their manager to the following effect :—"I have finished roasting furnace. Active operations will now be commenced in the course of a few da ys."

PENJOM-PAHANG.—Cable from the manager :—"Crushed 30 tons, producing 18 ozs. of gold."

RUBY.—Major Kunhardt, R.E., Chief Engineer of the Burma Ruby Mines, has commenced mining operations for the first time on a large scale ; one washer has been erected and is now at work. The large washer, which could not till now be carried over the bad Government roads, has at last arrived and is being erected in a favourable site. Major Kunhardt telegraphs on the 25th inst. from Mogok : "Prospects are encouraging."

Sambas Exploration.—Cablegrams from the manager at Sambas, Western Borneo :—"Feb. 19 : Boedock Mountain : Have discovered a well-defined lode, width several feet ; crushing free gold and pyrites ; in all probability mother lode." "Feb. 21 : The manager and engineer have arrived from Australia." "Feb. 25 : I have to-day shipped to you from Boedock alluvial gold, weighing 35 ozs."

West Indian Corporation.—The directors have made a call of 6d. per share, payable at their offices, 49, Queen Victoria Street, E.C., on or before Mar. 17, 1891.

Home Mines.

Cornish Abandoned Mines.—An official return has been issued giving a list of abandoned mines. distinguishing those which have been closed more than 10 years, such mines being open to the inspection of the public on application to the Secretary of State, without the consent of the person who was the owner at the time of abandonment. In Cornwall 456 mines have been closed. of which 189 have been closed more than 10 years. Five were closed during last year.

Killifreth.—The accounts showed that the labour costs had been 1,778*l.* ; merchants' bills, 1,134*l.* ; bank charges 26*l.* On the credit side 85 tons 3 qrs. 5 lbs. of tin had been sold for 4,822*l.*, and the total, less dues, was 4,761*l.* This left a profit on the sixteen weeks' working of 1,783*l.*, and a balance in hand of 1,821*l.* Out of this a dividend of 5s. a share was declared.

West Seton.—It is rumoured that West Seton is about to stop. This will be a sorry business for Camborne, as thereby a large number of persons will be thrown out of employment, which will in consequence teud to lower the price of labonr, which is too low already.

Wheal Agar.—The improvement in the bottom of this mine is considered in Cornwall to be of considerable importance.

FOR LATEST PRICES

AND ALL PARTICULARS OF FOREIGN MINES

SEE PAGES 330 AND 331.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

Graskop.—Dec. crushing of 294 ozs. has been sold through Messrs. Johnson, Matthey and Co. for 1,138*l.* 0s. 3d. or 3*l.* 17s. 5d. per oz.

Sheba.—A cable from the general manager states :—"We propose to start crushing on Mar. 2 ; ore in winze is improving."

Mashonaland Agency.—Mr. H. L. Stokes, C.E., has been appointed manager in South Africa, and sails to-day in the Drummoud Castle for the Cape on his way to Mashonaland.

Oriental and Sheba Valley.—Cable :—"Re-started 30 yesterday ; hope to start remainder next Saturday." (The above refers to the 60-stamp mill which recently stopped working on account of the fall of the retaining wall.

Simmer and Jack.—The company notify that certificates at present in circulation must be sent in for exchange, and that they will shortly announce a day after which old and provisional certificates will not be recognised for purposes of transfer.

Gordon Diamond.—Mr. Justice Kekewick having confirmed the scheme of arrangement proposed by the liquidator, the New Gordon Diamond Co., will be registered immediately, and we are informed the payment of 2s. 6d. per share for the debenture stock will be required early in March, aud the works at the mines will then be resumed.

Swaziland.—Report from manager, Jan. 16 : The work in the battery is rapidly approaching completion, and Mr. Castle informs me that he thinks he will be able to finish his work at the end of this month. The wood trestlework connecting the tramway with the shoots for ore of the battery, Mr. Castle thinks can be done by ourselves after his departure. I have a sawyer and boys cutting planks for the battery, and for the ore shoots in the mine. In accordance with instructions from Mr. Edgar Taylor, I am sending out prospectors on the mountain ground on the north of the concession.

Pigg's Peak Estate.—Cable from Barberton : "Have discovered two rich leaders, Devil's (reef). Sinking on them. Copper plates looking well. Anticipate increased returns." Mine report—Devil reef : No. 1 cross-cut north in a total distance of 63 ft., it having passed the point where it was expected to intersect the rich ore. I will now turn and run west parallel with the main drive. No. 2 cross-cut south is in 80 ft. ; face shows a few colours. Put down a shaft on top of hill to follow the gold found while putting in an open cutting to be known as No. 1 cutting. We are down 15 ft., and it still carries a little gold. When first started it showed an 8-oz. prospect. Work has been stopped, owing to scarcity of labour. I am also putting in an open cutting to be known as No. 2 cutting. It is 70 ft. north of No. 1 cutting, and on opposite side of hill from where we are now taking ore, it shows gold in panniug. In taking out ore for the last two crushings, I had to leave everything I considered would not pay to shift to our battery. In consequence we had to throw all the surface dirt on a dump, and only take high grade. By this method I covered up considerable good ore, and I am now compelled to take this (low grade) to the battery before I can get any more high grade ore. I am obliged to take this off before I can work, in order to follow the streak of rich ore. As I wrote you last week, a plan of work is now being made, and will be completed as soon as weather permits. Since I began work at this reef we have not had a week pleasant weather, rain all the time, and as the white men have to live in tents, the work is rather disagreeable, and good progress cannot be made. Labour : Native labour is still scarce. Mine report for week ending Jan. 24 :—Devil reef : No. 1 cross-cut north-east driven 2 ft. ; total, 65 ft. No. cross-cut south-west driven 5 ft. ; total, 85 ft. No. 2 cross-cut north-east driven 8 ft. ; total, 45 ft. The rain shows no sign of letting up. We have had one day's sunshine in 34 days, so you can imagine the time we have had trying to do outdoor work.

COMMERCIAL NOTES.

Metals.

Copper has been steady. G.M.B. Warrants sold from 53*l.* 3s. 9d. to 53*l.* 5s. cash, and 53*l.* 12s. 6d. to 53*l.* 7s. 6d. three months. To-day the Market broke down, and sales were made from 53*l.* to 52*l.* 12s. 6d. cash, and 53*l.* 5s. to 52*l.* 17s. 6d. three months. We quote English tough, 57*l.* to 58*l.* ; best selected, 58*l.* 10s. to 60*l.* ; strong sheets, 65*l.* to 66*l.* ; India sheets, 60*l.* 10s. to 61*l.* 10s. ; yellow metal, 5¾d. to 6d. ; ore, 9s. 6d. to 11s. per unit.

Tin has been rather firmer. Straits sold from 90*l.* to 90*l.* 5s. cash, and 90*l.* 2s. 6d. to 90*l.* 12s. 6d. three months. To-day prices are easier, from 90*l.* 2s. 6d. to 89*l.* 17s. 6d. cash, and 90*l.* 7s. 6d. three months. The Straits shipments to yesterday were reported as 2,380 tons. We quote English ingots 93*l.* 10s. The Dutch market has been quiet. Banca, 54½fl. ; Billiton, 54¼fl. The Billiton sale to-day went at an average of 66½fl. parity. 90*l.* 10s. per ton. The Dutch Trading Co. will offer in public sale on Mar. 19, 25,200 slabs Banca, of which 1,200 slabs are refined ; also 3,200 slabs of Billiton.

Tinplates slightly easier at 17s. 9d. to 18s. for ordinary coke, Liverpool.

Spelter steady, but not much doing. Ordinary brands, 23*l.* 15s. to 23*l.* 17s. 6d. ex ship here ; special 24*l.*

Lead steady ; soft Spanish, 12*l.* 10s. to 12*l.* 12s. 6d. ; soft English, 12*l.* 12s. 6d. to 12*l.* 17s. 6d. ; L.B. China pigs, 13*l.* 5s. ; sheets, 13*l.* 10s. to 14*l.*

Quicksilver stagnant. Rothschild quotes 8*l.* 12s. 6d. ; seconds 8*l.* 11s. 6d.

Antimony dull ; 66*l.* to 67*l.*

Western Counties and South Wales Telephone	5 per cent.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

CALLAO BIS SHARES.

SIR,—These shares look uncommouly cheap considering they were at 3*l*. when no crushings at all were being made. The new property appears to have been a real plum, and I shall be greatly surprised if the shares do not shortly see their old price. The management is good and so is the mine.—I am, &c.,

NEITHER "BULL" NOR "BEAR."

ST. JOHN DEL REY.

SIR,—The information you gave last week touching this company must have been most welcome to the shareholders, who were naturally very anxious abont the debenture issue. Now that the debentures have been taken up, I regard the success of the enterprise as practically assured. I know more money will be required, but that will be provided without half the difficulty that has been found in getting off the recent issue. I advise St. John del Rey shareholders to hold on, and those who are wise to pick up shares as they can.—I am, &c.,

J. M. C.

Feb. 25.

HOME MINES.

SIR,—It is not my business to sound the dirge of home mines, but how is it possible to give them any support in their present conditiou. The facts recorded in your "Miniug Market" for the last few weeks are deplorable, and show a steady all-round fall, the exceptions being very few. Lead mining as an industry is almost dead; copper mining has long siuce departed, and tin mining appears to be in a very precarious condition. Trace these facts to what we may — trace them to royalties or rents or to bad management, yet this remains, that home mining is gradually going from bad to worse, and will soon be a reminiscence rather than an actual industry. I wish I could think otherwise, but as several of my friends have recently been talking to me upon the subject I thought that my views, dirge-like though they be, would not be unacceptable to your readers. Of course, iu speaking of home mines I do not refer to collieries and to ironstone coucerns.—I am. &c.,

DISAPPOINTED.

A HINT TO DIRECTORS.

SIR,—Allow me, through the medium of your valuable columns, to call attention to the very reprehensible practice on the part of directors of rendering accounts with such items as the following:—"Directors' fees, secretary's and clerks' salaries, office rent, travelling expenses, &c.," frequently the figure stated running into as much as 6,000*l*. or 7,000*l*. In many cases, doubtless, this is done with no intentiou to mislead the shareholders, but I think it is calculated to do so. I have frequently at meetings to ask that the items may be given separately. Surely it is no great trouble to state this information clearly in the accounts. I have noticed the same thing in a balance sheet only just received, viz., that of the Pahang Exploration Co., where the items lumped together amount to over 6,000*l*. I hope that this hint will be taken, at any rate by those boards who have no reason for withholdiug the information.—I am, &c.,

J. B.

[In most cases these sums are "lumped" to cover up extravagance. —ED. *M. W.*]

THE HARMONY GOLDFIELDS.

SIR,—Shareholders who ventured out on Wednesday to attend this meeting must have expected to hear something interesting. How different were the facts in regard to the Harmony meeting. The meeting was called for the purpose of hearing Mr. Mockford's views of the Harmony property, and also the Potsdam Reefs and Sutherland Reefs properties, and was a joint meeting of the shareholders of the three companies. This gentleman has just returned from the Transvaal, and it was only natural that shareholders should expect to hear something interesting from him, but as a matter of fact they scarcely heard anything at all. The acoustic properties of the Great Hall in Winchester House are not everything that could be desired, but when the orator is not possessed of a very strong voice, and is continually turning his back to his audience, it is quite impossible to hear. Apart from this, however, it appeared Mr. Mockford had very little to say of a definite character. His speech was delightfully vague and did not leave a good impression on my mind, whatever may have been the result with my fellow shareholders. The glowiug reports of the properties which once came regularly are now no more to be seen, and 1½ oz. to the ton is now spoken of as against as much as 50 ozs. I have come to the conclusion that we cannot look forward to a very bright future under the present management.—I am, &c.,

ONE WHO WAS AT THE MEETING.

PROVIDENT CLERKS' BENEVOLENT FUND.—The annual meeting of this fund was held on Wednesday evening, at the City Terminus Hotel, under the presidency of Mr. Hugh Colin Smith, the treasurer. The chief business was to receive the report read by the hon. secretary, Mr. J. E. Gwyer, which was of a satisfactory nature, and to elect 16 additional annuitants. Motions in both senses were agreed to, and a special appeal for aid in regard to the forthcoming festival was made by various speakers. This festival will take place at the City Terminus Hotel on Apl. 17, and any aid in reference thereto will be gladly received at the offices, No. 27, Moorgate Street, E.C.

REPORT OF MEETING.

THE DANUBE COLLIERIES AND MINERALS CO., LIMITED.

£10,000 IN DEBENTURES TO BE RAISED AMONG THE SHAREHOLDERS.

THE ordinary general meeting of the proprietors of the above company was held recently, at Winchester House.

Mr. R. E. Wemyss presided.

The CHAIRMAN said that the position of the company with regard to paying a dividend was not so satisfactory as he could have wished, but the prospects of the company itself with regard to their colliery was very hopeful. The ordinary time for their annual meeting was not until April, but as the books of the company had been audited, he thought it desirable that they should meet and discuss the prospects of the company. The shareholders would notice in the report that the board had decided to issue 10,000*l*. worth of debentures, and taking into consideration the prospects of the company, he did not think that that amount was too high. He strongly urged the shareholders to do all they could in respect to raising those debentures, as it would be a great advantage to all concerned in the company if the money could be raised without having to apply outside their own shareholders. It could be raised outside, but the rate at which they would have to borrow it would mean ruin to the company. He had a large interest in the concern himself, and he put the matter before them so that they would nuderstaud that

WHILE PROTECTING THEIR INTERESTS HE WAS SAFEGUARDING HIS OWN.

The amount required to be raised would have been much smaller had it not been for the fact that allotment money to the extent of 10,000*l*. had not been paid. The estimates as to the income of the company were based on the price of coal being 8s. 4d. per ton and he was glad to be able to inform them that the coal trade had made considerable improvement, and those calculations would be more than fulfilled. Samples of their coal had been favourably received by the trade, and he thought that they would be able to sell more than they could get out. There had been a large amount of money spent upon the railway, but as the permanent way was not in a very satisfactory condition it was absolutely necessary in order to put it in proper condition for carrying the coal. With respect to the 10,000*l*. of debentures required, the board had headed the list with 2,000*l*., and he hoped when the circulars were sent round to the shareholders they would all do their best to make up the amount. He concluded by moving the adoption of the report.

In answer to questions the CHAIRMAN said that if it was the wish of the shareholders to have the debentures convertible into shares at the option of the holders, the board were quite williug that it should be done, aud would take the matter into consideration at their earliest convenience, although it would not be legal to pass the resolution at the present meeting. With regard to the private prospectus issued concerning the company, he had never seen it until that moment, and if the property had ever been offered to the public before he was not aware of the fact, and according to that prospectus the company was worth donble at the present time than it was then. He was determined to make the company a paying concern, and if the shareholders did not provide the additional capital, he had made up his mind to do so himself.

The report was adopted, and other formal business having been transacted, the proceedings terminated.

REVIEWS.

THE JOINT STOCK REGISTRATION MANUAL. By Walter L. Skinner. London: Birchin Lane.

UNDER the above title, another of Mr. Skinner's handy half-yearly volumes has just issued from the press. The book contains particulars of all companies registered from July 1 to Dec. 31, 1890, and the large amount of information to be found within its pages—carefully prepared and concisely stated, as all Mr. Skinner's statistical works are—cannot fail to be of great use to those interested in public companies. It frequently occurs that promoters, solicitors, stockbrokers, and others have to pay visits to the office of the Registrar of Joint Stock companies at Somerset House for the purpose of inspecting documents, but possessing this little volume many a journey aud much time may be saved. The particulars given include the title of the company; the object for which it is coustituted; the amouut of capital aud the denomination of the shares; or, in case of a company limited by guarantee, then the limit of contribution agreed to by the members. The names of the subscribers connected with the formation of the company are furnished when the information is cousidered to be interesting, and the abstracts thus afford a full guide to the origin of every company registered, whatever its importauce—large and small alike.

THE SENATE HOUSE here, correspondiug to our House of Lords, has recently been lighted from the mains of the Eletricity Supply Company for Spaiu, Limited, who have a large ceutral station outside the city. The light was last night witnessed by Her Majesty the Queen, and appears to have been a brilliant success, judgiug from the satisfaction expressed by Her Majesty on the occasion. We understand there are about 1,500 incaudescent lamps installed in the building. It will be remembered that the system of the English company mentioned is that known as the High Tension Alternating Current Transformer system.

HOLLOWAY'S PILLS.—Factory Operatives and Workers in Mauufactories.—The remarkable remedies which have been discovered and perfected by Thomas Holloway, and which have for more than fifty years been successfnlly used in every quarter of the globe, are especially useful in all the manifold ailments which afflict those who by reason of their occupation are confined for years, or all their lives, in crowded buildings and workshops. Holloway's Pills and Ointment are associated remedies, the former restoriug the vital powers when diminished, and always acting as an efficient blood purifier, whilst the latter relieves local maladies, checks inflammation, and acts as a cleansing and healing agent in cases of bad legs, bad breasts, ulcers and unhealthy sores of all kinds.

BRITISH MINING INTELLIGENCE.

DRAKEWALLS (Feb. 20).—Cutting ground for top plat on south side at 160. In 160 east lode is yielding 7 tons of mundic stones of copper and saving work for tin. In 160 west, 10 tons mundic and saving work for tin. Rise in back of 160 communicated with winze bottom of 147 east. Lode in stope back of 160 west, 11 tons mundic; also intermixed with a little tin. No change in 147 east. Lode in 147 west, 4 tons mundic, mixed with tin and occasional good copper. Winze in bottom of 147 east communicated with rise in back of 160. Stope bottom of 132 east, 6 tons copper and mundic. Bottom of 132 west, 4 tons copper and mundic. Jiggers on mine, and in good condition. Last clean-out of arsenic soil, 64 tons 4 cwt. Sold on 19th, 5 tons 4 cwt. 1 qr. 5 lbs. of tin at 49*l*. 10s. Copper sold on 19th, 105 tons computed, weighed 105 tons 15 cwt.

LEADHILLS (Feb. 23)—Brown's vein: The 145-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, showing quartz of a decidedly better character, and ore worth 5 cwt. per fm. The stope above the 145 south of Jeffrey's shaft is worth 35 cwt. of ore per fm. The stope above the 145 south of Wilson's shaft is worth 20 cwt. of ore per fm. The stope above the 145 north of Wilson's shaft is worth 35 cwt. of ore per fm. No. 4 winze below the 130 north of Jeffrey's shaft is in a vein 8¼ ft. wide, charged with quartz and spots of ore not to value. The three stopes above the 130 north of Jeffrey's shaft are worth respectively 15, 20, and 25 cwt. of ore per fm. The stope above the 130 south of Jeffrey's shaft is worth 10 cwt. of ore per fm. The stope above the 130 north of Wilson's shaft is worth 25 cwt. of ore per fm. The sizing of the 115 north of Jeffrey's shaft is going on satisfactorily. The stope below the 115 north of Jeffrey's shaft is worth 30 cwt. of ore per fm. The stope above the 115 south of Wilson's shaft is worth 40 cwt. of ore per fm. The 85-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, shows some dampness, but otherwise it is unfavourable for ore. The 70-fm. level south of Wilson's shaft shows a vein above 4 ft. wide with more quartz, but without ore. The 35-fm. level south of Flat Rod shaft is in a vein 6 ft. wide, showing a nice character of stone, and damp with ore worth 20 cwt. per fm. The stope above the 35 south of Flat Rod shaft is worth 40 cwt. of ore per fm. Sarrowcole vein: The rise above Gripp's adit north of George's Roust vein is spotted with ore not to value.—T. NEWBIGGING.

SOUTH DARREN (Feb. 26.)—Six men have taken a tribute pitch in the bottom of the 142 level east at 7*l*. per ton of lead ore. There is good ore in this pitch; in the driving it was valued from 15 cwt. to 1½ tons of silver-lead ore per fm. We are pushing on drawing and dressing. On Saturday next, we intend to sample 15 tons of silver-lead ore.—J. MITCHELL.

WEARDALE.—Report for week ending Feb. 21:—Ore raised for week, 74 tons; ore dressed for week, 87 tons; ore, slag, and fume smelted for week, 145 tons, producing 73 tons of pig lead.

FOREIGN MINING INTELLIGENCE.

ANTIOQUIA.—The directors have received advices from Mr. J. H. White, dated Dec. 31, 1890, and from Messrs. Restrepo, dated Jan. 12, 1891. The statement for the month of December is as follows:—255 tons produced 137 ozs.; average 10 2-10th dwts. Estimated value of gold, 376*l*.; cost at the mines, Medellin, and in London, 558*l*. 18s. 10d.; estimated loss. 182*l*. 18s. 10d. During the month sums amounting to 91*l*. 2s. 2d., included in the above statement of costs, were expended in Colombia on capital account. The wire rope incline for conveying ore to the new mill was still unfinished, owing to the precipitous ground down which it proceeds.

ARGENTELLA (Feb. 19).—No. 2 Marine: Set to six men at 50 fcs. per metre. The forebreast shows a little improvement, producing stones of mineral containing more pyrites and spots of rich silver-lead. Quartz reef: We have started a new level north of this reef. I expect they will be under cover by the end of this week. Ogliastrone Valley: We are taking off the surface rock so as to drive alongside of the large body of iron pyrites. Will be able to report fully next week if they succeed in reaching the north side of the pyrites by then. No. 3 Rowe's workings: Driving towards Affricani, set to six men at 95 fcs. per metre. The forebreast is rather hard, producing a little pyrites, also letting out more water. All other work making satisfactory progress.—J. B. ROBERTS.

ASIA MINOR (Feb. 7.)—Ara Dere: The winze in the sole of the level is sinking on a wide lode which during the past few days has much improved. Chief Mine: Petri main level is at present looking decidedly favourable, and we anticipate a further improvement shortly. The lode in the end east from long cross-cut will yield 1 ton of silver-lead per fm. This we consider is a good improvement and hope it will continue. We are preparing to drive a level west and expect to meet the ore gone down from the slopes above. The lode in the rise is worth 25 cwt. and in the winze 30 cwt. The exteusive block of ground east and west of Savalan Pass is yielding in the aggregate 25 to 30 cwt. Dolu Dere: We are expecting to cut the lode in the cross-cut every day. The winze is being sunk in good ore.

AVALA.—In Shuplia Stena, stoping was carried on all through the mine, but stope No. 2 is still the best, yielding 148 tons of good ore. A new stope, No. 30, is promising, and carries heavy ore. Fresh ore has also been found in stope 26 above the Jerina adit. The development levels are being pushed on, and produced 32 tons of ore; total ore mined, 310 tons. The excavation for shaft is nearly finished. Severe weather prevented much ore being carted to works. Reduced 355 tons of ore.—W. E. FRANKS.

BALAGHAT-MYSORE (Feb. 4).—North engine shaft: I regret to say the loading of the balance bob at surface has lately been in a very unsatisfactory state, and was gradually going worse. We have, therefore, been obliged to stop the pumping engine and thoroughly overhaul and repair the loading; consequently have not been able to make progress with the sinking of this shaft and the driving of the bottom levels as we should otherwise have done, such a stoppage having caused the bottom of the mine to be filled with water. I am, however, pleased to say the water is now in fork again, and all the points in full working order. The shaft is now down about 94 ft. below the 500-ft. level. The quartz is again somewhat smaller, but assays about 15 dwts. The 500-ft. level north has only been driven 12 ft. 6 ins., or 434 ft. 6 ins. from the shaft. The quartz continues small, being only about 6 ins. wide, and assays 14 dwts. 22 grs. The No. 1 winze in the bottom of this level has been sunk about 4 ft., or 35 ft. 8 ins. below the level. The quartz is fully 2 ft. wide, and assays 1 oz. 6 dwts. 19 grs. of gold per ton. The stope in the back of this level yields quartz of about 1 ft. wide, and assays 4 ozs. 11 dwts. 14 grs. of gold per ton. We have again resumed the driving of the 500-ft. level south. It is now 85 ft. 6 ins. from the shaft. The quartz is about 4 ins. wide, and assays 3 ozs. 7 dwts. 8 grs. of gold per ton. The 410-ft. level north has been extended 7 ft. 9 ins., or 826 ft. 9 ins. from the shaft; the lode is of a kindly appearance. The No. 2 winze in the bottom of this level has been sunk 5 ft., or 90 ft. below the level; the lode occasionally yields a little quartz, but as yet it is not enough to value. The No. 4 winze in the bottom of this level has been sunk 4 ft., or 55 ft. below the level; the quartz has become much smaller, and not of much value. The stopes in the back of this level produce quartz of about 1 ft. wide, and assay, on an average, 3 ozs. 2 dwts. 2 grs. of gold per ton. The plat stopes in the back of the 410-ft. level north yield quartz of about 8 ins. wide, and assay 1 oz. 10 dwts. 18 grs. of gold per ton. The plat stopes in the back of the 330-ft. level produce quartz of about 9 ins. wide, and assay 4 ozs. 9 dwts. 11 grs. of gold per ton. The machine winze in the bottom of the 330-ft. level north has been sunk 10 ft. 6 ins., or 22 ft. 6 ins. below the level; the quartz is about 6 ins. wide, and assays 1 oz. 10 dwts. 18 grs. of gold per ton. The stopes in the back of this level produce quartz of about 1 ft. wide, and assay 2 ozs. 1 dwt. 4 grs. of gold per ton. The 270-ft. level south has been driven 33 ft., or 641 ft. 6 ins. from the shaft; the lode is at present unproductive. The stopes in the back of this level yield quartz of about 9 ins. wide, and assay 1 oz. 10 dwts. 1 gr. of gold per ton. The stopes in the back of the 270-ft. level north yield quartz of about 9 ins. wide, and this week only assays 5 dwts. 22 grs. of gold per ton. Haines' shaft: Owing to the outbreak of cholera on the field we have not been able to maintain our full supply of labourers; have therefore been obliged to remove the coolies from this part of the mine, consequently have not been able to make the progress intimated in my last report. I am, however, very pleased to say the cholera has considerably abated, and that the coolies are again returning to their work, so that we are now enabled to resume operations at this shaft, and it is now being pushed forward as rapidly as possible. Surface: The engineer and carpenter are getting on fairly well with the erection of the new winding engine and pit-head gear at Haines' shaft, and all the other surface work is progressing satisfactorily. The clean-up for last month is as follows: 950 tons 13 cwt. 2 qrs. of stuff, or about 350 tons of quartz, yielding 465 ozs. of gold.—J. PRYOR.

BONNIE DUNDEE (Jan. 3).—Mine manager's report for fortnight.—On Wednesday night, Christmas Eve, we stopped all work underground except repairs, and blew off the boiler, cleaned the boiler and flues, and got up steam again for Monday morning, when we started full work again in the mine. During the holidays we repaired a part of the underlie, where the heavy ground broke some of the timber; also gave engine, pump, and working gear a good overhaul, and everything is now in first-class working order. Have raised 30 tons of stone for the eight days for the company; total in the hopper, 67 tons. I trust that the new year will be a prosperous one for the company.

BRATSBERG.—Report for week ending Feb. 14.—Hoffnung Mine: No. 2 adit is worth ¾ ton per fm. No. 1 rise here is yielding 1 ton per fm., and No. 2 rise a similar quantity of ore. At No. 3 adit the lode has lessened in size considerably, inasmuch as it is at present yielding only saving stuff, but we think this is only a temporary change. No. 4 level is producing fully 1 ton per fm. We are stoping away the lode east and west of the rise communicating this level with Ball's shaft, and the necessary timberwork for hoisting the stuff through this shaft is in hand, and as soon as sufficient room is made so that the stopers will not inconvenience the sinkers we shall start sinking below No. 4 level. Johannes Mine: At the rate of progress now making we hope to strike this lode in the cross-cut from Howard lode at the end of the present month. The level driving east from Howard lode is now worth ½ ton per fm. Surface work and remarks: With the exception of one day we have had very favourable weather for the work about the dressing machinery buildings. The Elizabeth Morton, with a cargo of ore, sailed the 7th inst. Unfortunately, the unusually early closing of navigation hindered us in freighting down to Skien the ore, so as to ship the quantity intended, but there is under weigh about 140 tons which we shall in the meantime make up to an ordinary cargo, so as to be ready for loading very soon after the lakes are navigable again.—J. D. HOLMAN.

BRITISH BROKEN HILL (Jan. 14.)—No. 1 shaft, 2nd level: The extension of the new section has continued to be attended with the difficulties and dangers before described, and the work makes but slow progress in consequence. No. 2 shaft, 1st level: The timbering of the old stope here is progressing well. Only a small force is on the work as yet, preparing for a larger number of men when required. No. 7 shaft, 50-ft. level: Work has been continued all the week, but the ore body now appears to be nearly at an end, and probably the men will not be kept in these stopes much longer. No. 5 shaft: The south drive has been extended 6 ft., making its total length 232 ft., without any important change. Stoping has been continued, and a fair grade of carbonate ore has been broken, though it has not been less uniform in character than during the last two weeks. The south drive has now been stopped, and the men are starting to sink the shaft, which will now be carried down with all possible speed. Surface: The erection of the furnace has been stopped, waiting for the engine and balance of furnace material from Adelaide. A strong force of carpenters is engaged in the dressing mill.—J. HOWELL.

CALLAO BIS (Feb. 1).—Independiente: Since 18th ult. shaft has been continued a distance of 6 ft.; from surface, 136 ft. No change has taken place. The ground is very hard, besides a quantity of water to contend with, which impedes the progress of sinking. I have commenced to drive the cross-cut at this point to intersect the lode. No. 2 level west has been continued a further distance of 13 ft.; from shaft, 165 ft.; lode 2 ft. wide. During this drivage the lode has been very large and split into small veins of quartz. However, I am pleased to say at present the lode is more defined, and shows a better appearance. No. 1 level west has been continued a further distance of 17 ft.; from raise, 80 ft.; lode 2 ft. wide, of fair value. No. 1 level east has been driven 20 ft.; lode 2 ft. wide, of fair value, where communication is made to the No. 1 west. This gives good ventilation to the No. 2 level west, besides opening up a good piece of stoping ground. No. 1 west stope has been extended from raise 15 ft.; lode shows 16 ft. wide, of good value. Surface work: Very little has been done to the foundation of Cornish pump. The carpenters have been employed in erecting the house for mill, boiler, and engine room.

New mill: The roof of boiler and engine room is completed. Boiler in its place, and mason work completed. One end of the frame work of mill erected. Everything has been pushed as fast as possible to have the mill working at the earliest date. The mill engine is on the road to this mine, but we are obliged to leave it until better weather.

— The directors have received a telegram dated Feb. 26, which states: "545 tons; 695 ozs. Mine is looking well."

CHAMPION REEF.—Superintendent's report for the fortnight ending Feb. 2.—Mysore section: Carmichael's shaft has been sunk 3 ft. 3 ins.; total depth, 226 ft. 6 ins. The sinking is very little, owing to a scarcity of coolies. There is very little change in the rock since last reported. A cross-cut has been commenced from bottom of shaft east to cut the lode. Ribblesdale's shaft has been sunk 5 ft.; total depth, 215 ft. 6 ins. Small branches of quartz, which have been almost vertical in the shaft, are now dipping west. This appears to indicate that we are getting near the lode. Garland's shaft: Siuking on the underlie on the course of the lode, 3 ft. 6 ins.; total depth of shaft, 195 ft. Besides this work we have sunk 2 ft. 6 ins. in a sump, making the total depth of sump from bottom of vertical shaft, 7 ft. 6 ins. Most of the water is now collected at this point. The timbering in connection with the turn in the shaft has been brought down to within a convenient distance from bottom of shaft, and the sinking will now be continued on the lode. Dalyell's shaft: Sinking, 3 ft.; total depth, 206 ft. The sinking has been kept back a little owing to other work being done in the shaft. The lode continues very regular, but it is small. The 160 drive north at this shaft has been extended 8 ft.; total length of drift, 61 ft. 6 ins. The lode is fully 3 ft. wide of solid quartz, and since the last report the quality of the ore has improved considerably; several good specimens of visible gold have been taken out. Assays from across the whole width of the lode for the fortnight have given an average of 1 oz. 8 dwts. 10 grs. per ton. At present it is difficult to say if this is the same shoot of ore as that met with at Garland's shaft, or whether it is a separate shoot. It has a very strong appearance, and will probably make up close to the other shoot of ore. Assuming this to be the case, which is very feasible, it will open up good stoping ground between the two shafts. Coromandel section: Driving cross-cut east at the 320-ft. level, Prospect shaft, 2 ft. 9 ins.; total length of cross-cut 21 ft. Have cut through the lode, which is 2 ft. wide. A drift north on same has been driven 4 ft. 6 ins. The lode in the end is 2½ ft. wide, but of low quality. The 290 end south has been extended 6 ft. 3 ins.; total length, 119 ft. 3 ins. The lode is pinched to a few inches in width. The winze below this level has been sunk 6 ft. 9 ins., but no other portion of the lode has been cut; total depth, 33 ft. 6 ins. The winze below the 260 level north has been sunk 3 ft. 9 ins.; total depth, 60 ft. The drivage south from bottom of this winze is 3 ft. The lode at this point has improved in appearauce, and is now nearly 3 ft. wide; the assays are still low, only giving 2½ dwts. per ton. Surface work: At Mysore section we started the air compressors last week, and they are working very satisfactorily. We have the rock-drills at work at Ribblesdale's and Dalyell's shafts, and hope to commence work with them in the other shafts in the course of a few days. The large water tank is well advanced, also the excavation for pumping and winding engines and bobpit at Garlaud's shaft. At Coromandel section costeaniug pits have been sunk at different places on the Coromandel and Prospect lodes, with a view of tracing the exact run of the lodes through this rock.

COLAR CENTRAL (Feb. 4.)—Eastern section, North division: New shaft has been sunk 14 ft., making a total depth of 200 ft. As we have now sunk to the required level we shall proceed immediately to cut plat and commence drifting north. The ground in this shaft is hard and much disordered, owing to the close proximity of the east and west dyke. We hope to get away from the influence of this in drifting north. South division, Main shaft: The 260 ft. west cross-cut has been driven 6 ft., making a total of 49 ft. from shaft. The country is hard but letting out a little water. The 260 ft. drift north has been driven 15 ft.; total, 32 ft. from west cross-cut. There is a soft seam with a little quartz in it about 3 ins. wide. The 260 ft. drift south has been driveu 18 ft.; total from cross-cut, 29 ft. There is a small branch of quartz about 3 ins. wide also, showing only a trace of gold. Marden's shaft: The 240 ft. drift north has been driven 18 ft., or a total from shaft of 117 ft. The quartz is from 6 to 9 ins. wide, carrying a trace of gold. The 240 ft. drift south has been driven 14 ft.; total from shaft, 70 ft. Quartz about 10 ins. wide, but of no material value. Machiuery continues to work well throughout the mine.—A. S. B. OAKLEY.

COLOMBIAN HYDRAULIC (Jan. 19).—Operations at the mine during run No. 169: Since last writing we have been washing continuously at Clarke's banks, and hope to make a clean-up in the course of a week. With the object of saving time, it is very probable I may only clean up the fork sluice this time, and not disturb the main sluice at all. As this fork sluice is only 210 ft. long we cannot expect very much from it. The general appearance of these banks continues very good, and though we have not yet advauced far enough to know whether we are in a new channel, it is certain that our sluice enters at the very centre of a deep depression with high bedrock showing at a little distance on each side.—A. E. OAKES.

DAY DAWN BLOCK AND WYNDHAM.—Manager's report for fortnight ending Jan. 3:—No. 9 level: The contractors have driven a further distauce of 11 ft., making total distance from the eastern boundary 561 ft. There is no change in the formation. Nos. 4 and 5 stopes: There is no change to report in these stopes. The stone raised is of payable quality. No. 2 underlie shaft: This shaft has been suuk a further depth of 2 ft., making total depth below 1,108 ft. plat, 302½ ft.; this is the reqnired depth to meet No. 9 level. After the necessary timber has been put in, it will be advisable to open out to meet the drive. The 805-ft. level west: About 12 ft. of driving has been done on the new reef. The reef is from 4 to 6 ft. in thickness, and appears to be payable. The nuumber of men employed will be increased during the coming fortnight. The 630-ft. level west: This level has been timbered for 66 ft. from the shaft. Progress has been slow, owiug to the drive not being previously timbered, and also owing to about 30 ft. of the western portion of it having collapsed some time ago. I expect to reach the end of the old workings during the coming week, when better headway will be made with three shifts. No. 3 shaft: The cross-cut has been further driven 8 ft., making total length of same 61 ft. There is a diorite formation in the present end 3 ft. thick, with hard granite on both sides. The cross-cut will now be stopped, and the underlie sunk a further depth of 50 ft. Geueral: The mine was idle for three days—Christmas holidays. Advantage was taken of the holidays to clean out the boilers at No. 2 and No. 3 shafts.

EAGLEHAWK CONSOLIDATED (Jan. 10 and 19).—The rise at the 750 level has been put up 15 ft. during the last fortnight; total, 38 ft. The reef in this rise is not payable but shows a little gold, and from its appearance we may find more very soon. The reef is all that can be desired, except that it is not payable at present. The 650-ft. level north has been extended 26 ft.; total, 817 ft. The reef in this drive is solid and well-defined, but not payable. We have about 50 ft. more to drive before rising to connect with the old limited workings.

EMERALD OF COLUMBIA.—The manager writes, (Jan. 4.)—We have continued widening the canal up to the point 24 metres above the bridge, which leaves about 90 metres to do. This latter part contains two more of the best veins, very promising ones with fine crystals. With regard to lowering, we have done another metre in a leugth of 100 metres, includiug the first good vein near the bridge, where we now are eight metres in rock. The vein is decidedly improving, crystals are getting finer in quality, and some seem to be beginning to have a very light green shade; pyrites are also eutering this vein in bigger pieces, which I consider to be very favourable,

EMMA (Jan. 31).—Since my report of 24th inst., work at the mine has progressed as follows:—In the north-west part of the mine the drift from top of upraise from No. 4 level advanced 20 ft.; total, 45 ft.; this drift is following the vein south-east; the vein is from 4 to 5 ft. wide, filled with low-grade ore, carrying a large percentage of iron. The quality of the ore shows some improvement this week, but is yet of too low grade to save as marketable ore; we are, therefore, saving it for treatment in the concentrating mill. The cross-cut from Cincinnati level, and running towards the footwall, advanced 14 ft.; total, 33 ft. Yesterday we cut the ore channel showing some ore, but as yet we are not into it far enough to determine the value; however, the appearances are very flattering. In the south-east part of the mine, being worked from old Emma tunnel, we have advanced 20 ft. in low grade ore; the vein holds its width, but the ore continues in pockets, we have, therefore, mined only second grade ore, of which we mined some 20 tons. Cross-cut from No. 3 level south-east, and running towards hanging-wall, advanced 4 ft.; total, 122 ft., with no material change in character of rock. We are near to hanging-wall with this cross-cut; upon cutting it we should find ore. The ore mentioned in my report of 24th inst. has been sampled, assayed, and sold as under: 14,528 lbs. net ore, at $108.10 per ton, 2,000 lbs., $785.23; 39,783 lbs. net ore, at $30.20 per ton, 2,000 lbs., $600.72; total, $1,385.95. —H. C. WALLACE.

ESMERALDA.—The manager reports by cablegram, Feb. 26:—"In No. 3 rise Durand the ore is 10 ins. wide; average value, 18 dwts. gold per ton. It is expected to connect with the south winze next week." He writes under date Feb. 10:—The drift on the ledge cut in the west cross-cut lowest level had been extended 31 ft., and that the first 10 ft. carried a 4 in. streak of good rock, assaying high in silver, viz.: 67 ozs. silver and 12½ dwts. gold, worth 19*l.* per ton.

FLAGSTAFF (Feb. 7).—Since my last report I have made fair progress both in the number of feet driven, and the number of tons of ore extracted. South-east drift: The winze that I am sinking here to the seventh level is now down 29 ft. There is a large body of ore here, but mostly second-class. We are not taking out any more than is necessary, so as to get down as fast as possible. I am runniug a cross-cut on seven so as to intercept the winze that we are sinking. I started in from the drift that Mitchell called the hanging-wall drift; have driven it 15 ft.; it is looking fine; the rock is mixed all through with iron ochre. I will call this hereafter new cross-cut. This has been driven 15 ft. the past week. I hope to find pay ore here soon. South drift: This is now in 15 ft.; have got three pipes of ore here that are 2 ft. square, and all of it is the very fiuest kind of ore. It is very nearly solid silver-lead. Number of tons of ore mined the past week. 71, being 31 tons first-class, and 40 tons second-class.—A. L. SWOPE.

GOLDEN GATE ALLUVIAL.—The head-dam stands in first-class condition, not a bolt or plank has been affected, and it is truly a monument of solidity, backing the river *débris* far up stream, and tightening day by day by the natural swelling of the timbers and the solid packing of the fine river silt and heavy *débris* that is gradually forming against the up-stream face. The remarkably small rainfall permitted work to be carried out during Dec. and Jan., which we did not expect to accomplish before Apl., but which, being done now, will prove of great assistance in enabling us to successfully carry out the effort that I will make to open the claim at the earliest date ever known in the history of river-mining. The river is now at a lower stage than it was when we were building the head-dam, and, as but little snow has fallen in the mountains at this late date, it assures us of a long season's work in the claim. I feel safe iu asserting that we will open the Gate at a date that will be weeks in advance of the earliest time at which mining has been done in the auriferous rivers of California, and that with the appliances aud methods I will have iu operation for handling and disposing of the *débris* and water, the coming season will see all of our expectations realised.—F. MCLAUGHLIN.

— The following has been received by cablegram from Col. Frank McLaughlin:—"Weather very fine, after additional severe storms. Head-dam and all works in splendid condition.—MCLAUGHLIN."

GOLDFIELDS OF MYSORE.—Superintendent's report for the fortnight ending Feb. 2:—South shaft: The winze below the 206-ft. level has been sunk 5 ft. 3 ins.; total depth, 33 ft. 6 ins. During the last 3 ft. of sinking there has been a great improvement in the lode, which still continues. The rich streak of ore is abont 1 ft. wide, and can be traced the whole length of the wiuze. The quartz has a much better appearance, and carries visible gold. Assays from the rich streak of ore give 2 ozs. 6 dwts. 11 grs. per ton. An average sample from the lode all the width of wiuze, or 4 ft. of the lode from the hanging-wall, gives an assay value of 1 oz. 5 dwts. per ton. The sinking of south shaft has been resumed. We shall probably have to siuk about 50 ft. before intersecting the lode. The prospects of getting a more valuable lode at this depth are very encouragiug. The sinking of the winze will be contiuued, in order that we might effect a communication at once on the shaft reaching that depth.

GRAVEL GOLD (Jan. 20).—Works: During the month of Dec., the average number of men was 263, 159 of these were employed on the Agua de Dios and Guali sections, 81 upon the ditch from Rica to San José, cleaning away slides and puttiug iu gates aud flumes, and 23

at Rica laying pipe and preparing for running. By next mail we hope to be able to report that the second syphon has been laid, and if all goes well we should be ready to run by the end of Feb. with the San José water, and in about two months' time I anticipate being able to deliver the mine with the ditch complete to Agua de Dios all in working order.—W. S. WELTON.

GYMPIE GREAT EASTERN (Jan. 8).—Fortnightly report.—During the past fortnight there has been only nine days' work done in the mine. At the 730-ft. level the cross-cut and rise have been extended 12 ft.; total, 377 ft. from the shaft, and drives extended north and south 7 ft. each way. The reef is greatly broken up, and not much quartz showing. There is a little gold showing in the hanging-wall leader. There is fair country coming in the roof of the rise. I believe a few feet more of rising will bring us to the slate, where we should get gold in the reef. 10 head of stampers started crushing for the Nicholl's Lease Co. on Monday, 5th inst. I shall start crushing from the mine on Monday fortnight, as I believe we shall have some gold in the Orient reef then. The boiler of the winding engine has been repaired. Everything about the mine, winding engine, and battery is in good working order. There are 24 men employed, 17 on the mine and seven at the battery.—J. JAMES.

INDIAN CONSOLIDATED (Feb. 2.)—Phœnix section: No. 1 level advanced 8 ft. for fortnight; no change of importance to notice in the appearance of the end from last report; the small vein of lode matter still continues, and the hanging-wall still holds regular and clean. Tramway level extended a further distance of 10 ft.; this end shows a vein of lode matter 3 ft. wide, a foot of which is clean quartz carrying a fair amount of mineral, but too much importance need not be attached to it, as it is not formed properly, and I do not expect it to last. Our stoping operations have gone on as usual, and call for no particular meution. The underhand stope, bottom of No. 1 level, shows the lode in one part pinched from 4 to 3 ft. wide during the last week; we are keeping a full force of coolies at this point, the quartz from here being payable. In stope E the lode has got very irregular and poor, but we hope to be clear of this disordered part in a few days. A make of quartz at our highest point at north end of tramway backs gives us reason to expect more stoping ground in this direction, the opening up of which is in hand, and shall be kept going without delay. Our usual monthly clean up of mill was made on Jan. 31, and 10 head of stamps started again same day.—J. FRY.

— (Feb. 4).—Colar section—No. 1 new shaft: We have fixed a donkey-pump at this point, and are forking the water. We have not yet resumed sinking, but hope to make a start to-day. No. 2 new shaft: 210 ft. north has been driven 17 ft. 9 ins., or a total of 84 ft. 6 ins. from shaft. The end remains unchanged in appearance. We are bearing more easterly now. The water is still quick at this point. The 210 ft. south has been driven 15 ft. 9 ins.; total length, 83 ft. 3 ins. We have a little quartz on the footwall side of the drift, which during the week has pauned from 3 to 5 dwts. The 210 ft. south-east cross-cut has been driven 7 ft.; there are stringers of quartz in the present end. The 210 ft. south-west cross-cut has been driven 6 ft. 9 ins.: the end is letting out a good deal of water. Main shaft: 240 ft. north drive has been advanced 11 ft. 9 ins.; total length, 78 ft. 3 ins.: there is very little quartz in the present end, the ground looked more promising a few days ago, and we hoped we were close to a larger make of quartz. We shall bear away slightly more to the west for the next few blasts. No. 5 shaft: 156 ft. north has been driven 2 ft.; total, 179 ft.; the ground remains very hard. The 156 ft. north-east cross-cut No. 1 has been driven 2 ft., or a total length from drift of 79 ft., and suspended; 14 ft. 6 ins. were driven on a stringer of quartz running north from this cross-cut, but the quartz died out again. The 156 ft. north-east cross-cut No. 2 driven by rock-drill 20 ft.; total length, 65 ft.; the appearance of the ground here is more favourable again. The country is beginning to underlie west, and looking less disturbed. The 425 ft. winze north drift driven 2 ft.; total, 18 ft. 3 ins., and suspended. South drift driven 4 ft. 6 ins.; total, 29 ft. 9 ins.; lode full size of the drive, but valueless. The 450 ft. winze has been sunk 3 ft.; total depth, 14 ft.; lode 2 ft. wide, assaying 2 dwts. 14 grs. The 450 ft. back stope: Lode 1 ft. 6 ins. wide, and assays 9 dwts. 16 grs. New machinery: The loading for the new air compressor engiue will be completed in a couple of days, and I hope we shall receive the heavy parts of the engine in a day or two.—A. S. B. OAKLEY.

KAPANGA (Jan. 2).—The 420 north is still in disordered country; at present there are two veins of quartz from 2 to 3 ins. in width each; at this moment they seem inclined to turn more to the westward. The 420 south: The reef is 6 ins. wide, very flat, and making a big bend to the eastward. It is composed of very clean white quartz and a little clay; it looks good enough for carrying gold, but up to now none has been seen. Intermediate level: The reef formation from wall to wall is over 4 ft. wide, composed chiefly of pug, with a little friable quartz, nothing to value. In the stopes back of this level colours of gold have been seen; the reef is 8 ins. wide. In the stopes back of Blythe's level the reef will average 9 ins. wide; a little gold is seen at intervals. 300 north on Scotty's: The reef is from 5 to 6 ins. in width, carrying a nice regular footwall, with heads crossing the drive carryiug the iron pyrites. This is a very good sign, but before we get anything good the sandstone must chauge, at present being of too dark a colour. Kapanga reef, 300-ft. level: The reef is now only 4 ins. wide, scarcely anything but clay. This is a very great change, as before it was very wide. The reef is more flat than usual, and has a slight bend; therefore, if it opens out a little wider again, the chances are that we shall get a patch. I have still great confidence in this part of the mine. From the foregoing you will see that prospects are not very encouraging in one sense, and yet in another they are, as I hope for improvements at the 300-ft. level on the Kapanga and Scotty's reefs.—W. H. ARGALL.

MONTE DEL ORO.—Mine agent's report for the fortnight ending Feb. 17:—Taylor's engine shaft: This shaft has attained a depth of 48½ ft. below the 244-ft. level, 6 ft. beiug suuk in the fortnight. Unfortunately, a run of ground occurred, carrying away three setts of timber, and the time occupied in clearing the stuff and re-timbering the ground caused a considerable delay iu sinking; the lode continues some 4 ft. wide, and it is still composed principally of slate, a sample from which assayed a trace of gold. Shaft No. 6: The lode in the 244-ft. level north of this shaft is 3 ft. wide, and its composition chiefly slate; the two samples obtained from it both yielded a trace of gold ou assay. During the two weeks the level was advanced 17½ ft., making a total length of 398 ft. The west cross-cut is also being extended at a satisfactory rate, the amount driven since the last report being 14 ft., thus making its total length 163½ ft. The only change to note is that the end is in a harder rock. In the intermediate level north good speed is made, as it is now 73½ ft. long, showing an advance of 15½ ft.; the lode matter is about 3 ft. wide, and there is now a stringer of quartz in the footwall. Two samples have been assayed, the first giving a trace, and the second 1 dwt. 23 grs. of gold per ton. The quartz in the 186-ft. level north is about 2 ft. wide, but it has altered in appearance, the two samples taken assayiug respectively 3 dwts. 21 grs., and 1 dwt. 7 grs. of gold per ton. Throughout the fortnight capital progress was made in driving, 17 ft. being driven, making the present length of the level 536½ ft. Low's engiue shaft: Here 19½ ft. have been sunk, the ground timbered, the shaft collared (making the total depth 26 ft.), the windlass fixed, and now sinking is being continued at a very good rate.

MOSMAN.—Manager's report fortnight ending Jan. 10.—North Australian Mine: I have nothing of importance to report as having taken place in this mine during the last fortnight. Work is proceeding as usual. Eastward Ho Mine: Very little work is being done in this mine. Wyndham shaft: This shaft has been sunk, during 14 days, 30 ft.; total depth from surface, 659 ft. A slide has come in and cut the reef out. The other side of this slide, however, when reached, may bring us to a better quality quartz than has hitherto been met with during sinking. Some little stopiug if going on toward old Eastward Ho lease. The reef looks to be getting better quality. As proceeded with, additional hands (there are only two men working there at present) will be put on at once to open it up more thoroughly. Levels will also be started at once at about 550 ft. from the surface on quartz.

MOSMAN.—The manager reports the result of crushings as follows: By letter, dated Jan. 10, crushed at date, 106 tons, yielding 195 ozs. of gold; by cable Feb. 27, 293 tons, yielding 680 ozs. of gold, or together 399 tons, yielding 875 ozs. of gold. The value of these crushings is 2,975*l*., and the yield per ton, 2 ozs. 4 dwts.

MOUNT ZEEHAN.—The manager writes under date Jan. 12, as follows:—Progress for the week: Montana: West cross-cut driven 10 ft. 6 ins.; total 255 ft.; formation clay slate. South drive: Winze sunk 5 ft.; total 14 ft. 6 ins.; seam of ore is about 6 ins., varying, in slate formation; 21 cwt. first-class ore extracted from here. Open east stope: Water pumped out and clearing for stoping ore. We have ore of 8 ins. thick in south stope. North stope worked out to boundary. Through rough weather, no ore has been shipped from Trial Harbour for some time.

NEW DEVALA-MOYAR (Feb. 3).—The 116-ft. level, drive west: We have extended this end 5 ft.; total distance, 121 ft.; the rock continues hard, yet has a more kindly appearance of late. Stopes are being worked vigorously, as we have as many hand-drillers as we require, and the quartz maintains its average. The battery is stopped for the monthly clean-up, and we have crushed 300 tons of quartz. I hope to get crushing started to-morrow.—R. B. JOHNSTON.

NEW EBERHARDT (Feb. 8).—Mine manager's report.—Mine: The general appearance of our mine is as yet quite promising. I am hopeful of obtaining ore in larger quantities; but if our hopes in this direction will be realised can only be determined by pressing vigorously onward at this point as long as these, our good, prospects continue. Total weight of ore extracted and assorted for the week, 32 tons; assay value of same as per mine samples, $40 per ton. Ore teams: I regret to have to inform you at this time that we have been obliged to suspend the further hauling of ore for the present, not, however, from the lack of ore (for we have at this time 150 tons of ore on our mine dump), but owing to the condition of the roads the team cannot bring sufficient ore down to make expenses, and for that reasou aloue it has been stopped; but I hope in the course of, say two or three weeks, the roads will be in better condition, when we shall again resume hauling. Total weight of ore now on our mill dump, 146½ tons.

NEW GOLD HILL (Feb. 2)—On Jan. 31 I measured up the underground work for the month. The 435-ft. level south-west of Barnhardt shaft was driven during the month 35 ft. by six men; here we have considerable vein matter all along, and the grouud has changed and is looking much more favourable in the present end. I am expecting we shall soon cut the shoot of ore coming down that we have in the 160-ft. level west of the Barnhardt shaft. The 435-ft. level east was driven during the month 30 ft. 4 ins. by six men. The vein is somewhat scattered, aud the ground hard in the end. The 160-ft. level east of the Barnhardt shaft has not improved; we are in 20 ft. from the end of the stope. In the 160 west I have four men stoping in the backs; we have gone up in the shoot 10 ft. and 20 ft. in length; the vein will average 2 ft. wide, and is turning out a good lot of ore for the mill, and I cannot see auy reason why this shoot of ore will not extend up to the surface above, and also go down through to the 435-ft. level and below it as other shoots have done heretofore. I have commenced to drive the 300-ft. level west, and have made preparations for stulling the slate *débris* by putting in stulls in the 380 ft. We have a large open space to fill in, that will hold hundreds of tons of stuff, and save a lot of cost in hoisting it to surface, and also will be a benefit to the mine in securiug it. In the Miller shaft the drift towards the Barnhardt has been advanced during the month 9 ft.; the vein continues to follow the iron rock, but has narrowed down a good deal, and I have had some stoping done in the back of the level, and am putting the ore through the stamp mill to test it. In the Martin shaft we are sinking and stopiug; the vein is showing well, but is still small, only about 5 ins. wide; the shoot is 15 ft. long on the west side of the iron dyke, and the vein is larger on the east of the dyke, but we have to sink some distance before we can drive through under the Reservoir shaft. Everything is working well.—F. H. MAUNEY.

NEW GOLD HILL (Feb. 12).—The work is going on very well at the mine. In the 435-ft. level west the vein is still split up, and does not show gold in panning. In the 300-ft. level there are some small veins of ore coming in, and it is lookiug favourable. In the 160-ft. west we are still stoping in the backs, but it is not looking quite so well. The Martin shaft is looking just the same, except that we are getting into water, but I hope it will not be sufficient to give us much trouble. The stamp mill is ruuning on some of the ore from the 160-ft. shoot, which is not showing as well as I expected, but the shoot being short we have to take away a good deal of stuff outside of it, in back stoping, which decreases the yield of the ore very much.—F. H. MAUNEY.

NEW VIOLA (Feb. 4).—A letter has been received from the manager of the mine, under date of Feb. 4: The work done on

your property during the past month is shown in red on the enclosed tracing. The workings are then minutely described, and the manager says: From developments both north and south of the face of the tunnel it is pretty clearly demonstrated that the line shown on the map, and marked "line of gulch," follows the line of fault. The drift in Q. 59, 60 was started on the honeycombed iron, and, after passing through some 20 ft., encountered horns of different-coloured limes, with streaks of iron, talc, &c., from 1 ft. to 2 ft. bedded between; so far none of this material has assayed anything. I will continue the drift for the present, hoping that one of these streaks will prove to be mineralised. The other points of the report are not of general importauce.

NEW VISO (Feb. 16).—Our mining operations in general are going on actively. Iu our deep adit levels we are still cross-cutting the lodes by full pares of men, and as yet there are no indications of being near the country work. In our progress we often come across considerable quantities of arsenical pyrites and a little tin ore, but we have not yet found sufficient of the latter to merit attention. The S. Antonio adit continues to yield very fine stones of tin, on the whole it nearly pays the cost of driving, and looks very kindly. There is no other change worthy of remark.—R. S. NANCARROW.

NORTH MEXICAN MILLING (Jan. 30).—You can never expect a mill to work to its best and full capacity right in the beginning. It takes several weeks to regulate everything not only the mechanical but the chemical part too, especially the roasting. I have to experiment to get the best result at the least expense. This takes a little time, especially as I cannot be night and day in the mill, and my men, being green hands, are yet awkward in handling the furnaces and maintaining the proper temperature. I have also to experiment roasting the best mixture of the different classes of ore. I have found a way of roasting the Cusi ore which reduces the consumption of wood enormously, and does not require skilled labour. I save 18 hours' firing for each furnace, and at the same time I am enabled to roast at the lowest possible heat, and have only a nominal loss by volatilisation. At present the per cent. of chlorination is uot quite as high as I wish to get it, ranging from 79 to 87 per cent., but by further experiments and proper mixture of different ores I hope to improve these chlorinations. When roasting in the ordinary way, some charges treated give such low results as 9 and 11 per cent. This illustrates that the same ore in different furnaces requires different treatment. So far I have not encountered any serious difficulty. In the Gloria I am taking every week a few tons of shipping ore out. I have another lot ready, but could not get teams this week to send it down to Chihuahua. It will assay about 100 ozs. per ton.—HOFMANN.

— A cablegram has been received as follows:—"Inclusive this week, produced $12,700, cost $6,000.

NUNDYDROOG (Feb. 4).—The 450 north, winze in bottom: Distance sunk, 35 ft., by two Englishmen with a rock-drill; the lode is a strong one, being 3 ft. in width, and the quartz is of good quality, assaying 2¾ ozs. per ton. The 450 north, rise in back: Rose for the month 11 ft. 6 ins., and stoped 4 fms., by two natives with a rock-drill. We holed this rise to the winze from the bottom of the 370 north, aud have now a good section of ground available for stoping; the lode is very wide here, averaging 5½ ft., and the value of the quartz is 1 oz. 18 dwts. per ton. The 450 south, winze and stope in bottom: Ground stoped 25 fms., by one Englishman with a rock-drill. The quartz is of very good quality, being worth by assay over 3½ ozs. per ton, and the lode is fully 3 ft. wide. The 370 south, stope in bottom: Ground stoped 15 fms., by one Italian with a rock-drill; the lode looks well, being 4 ft. in width, and assaying 2 ozs. 9 dwts. per ton. The 370 north: Distance driven 22 ft. 6 ins., by two Italians with a rock-drill; total distance, 390 ft. 6 ins. As the end was not looking very promising, this drive was suspended in the middle of the month, and the men put to cross-cut west. The 370 north, cross-cut west: Distance driven 20 ft., by two Italians with a rock-drill. There are a few strings of good-looking quartz in the end, but nothing of value at present. The 370 north stope in back: Ground stoped 2 fms. 1 ft. by 12 coolies, at Rs 16 per ft. The lode is 2 ft. wide, and worth nearly 3 ozs. per ton. The 300 north, stope in back: Ground stoped, 6 fms. 3 ft., by two natives with a rock-drill; the lode is smaller here, being 1 ft. in width, and worth 1½ ozs. per ton. Taylor's shaft: Very good work has been done here, 28 ft. 6 ins. being suuk by three Italians with a rock-drill. We are now down to the 520 level, and after cutting ground for cistern plat, &c., shall start to drive to the lode. North shaft, north drive, winze in bottom: This winze was sunk 27 ft., by one Italian with a rock-drill; total depth below the level, 88 ft.; the lode is about the same size as when last reported, and is worth 1 oz. 3 dwts. per ton. We have commenced to cross-cut to Keunedy's. The mill: We cleaned up on Saturday last, and yesterday I wired you the result, 1,471 ozs. from 830 tons. We should have crushed more quartz had it not been for a scarcity of labour owing to the cholera. We started the stamps again on Monday, and they are doing good duty. Health: I am glad to inform you that during the last four days there have been no fresh cases of cholera either in our lines or in the quarantine huts. I am in hopes, therefore, that we are now free from it. One Italian is off duty; all the other Europeans at work. Mill samples: Rough quartz (through stonebreaker), 3 ozs. 10 dwts. 6 grs.; smalls, 2 ozs. 11 dwts.—F. W. GREY.

OOREGUM (Feb. 4).—Superintendent's report for fortnight.—I am pleased to inform you that the camp is now free from cholera, and that the medical officer has given us permission to get back the Moplahs. We, therefore, sent instructions yesterday to the respective contractors to collect their meu and return as soon as possible, and by Monday next we hope to have them here and ready for work. As mentioned in my last report, we had to suspend most points of development. and put the machines to stope to keep the mill supplied. In this we succeeded, and, as the result, we crushed during the month 1,353 tons of quartz, and obtained 2,890 ozs. of gold. Immediately the Moplahs return we shall put the machines back in their former workings and measure up the stopes, and report in the next. We have only three workings to report to-day, viz.:—Wallroth's shaft: Sunk 3 ft. 9 ins.; total below 280-ft. level, 47 ft. 2 ins.; lode 1 ft. 6 ins. wide; value, 5 ozs. 8 dwts. 21 grs. per ton. Low's shaft: The 350-ft. level north advanced 12 ft. 7 ins.; total, 35 ft. 3 ins.; lode 2 ft. wide, assaying 4 ozs. 5 dwts. 8 grs. per ton. The 350-ft. level south commenced and driven 27 ft. 4 ins.; lode 9 ins. wide; value, 4 ozs. 14 dwts. 5 grs. per ton. We expected this pinch in the lode at this point from what we passed through above, but there is another shoot ahead, which ought to come in about 40 ft. from present end, which was both large and rich in the 270-ft. level above. The lode in the stopes maintains its size and value throughout. Our surface work in connection with the tailings machinery is at a standstill for the want of coolies, who left when the cholera broke out, but now that the camp is free from epidemic we expect them back very soon.

ORITA (Jan. 18).—Deep cut: We continue excavating for getting in sluice here; the rock is hard, and we have a great amount of it to move. I hope to be able to lay from 250 to 300 ft. of sluice here, and this will bring the head right up to the front of my house. Channels I expect we will be able to run here for some time after we get in the above sluice, but while we have the present amount of sandstone and pipeclay to clear out constant washing is not to be expected at this point. Branch sluice: We have been washing here as much time as the pipeclay will allow us. The gravel is not so hard where we are washing as it is at other points of the same face. Mondeco: We put in over 100 ft. of sluice here, and are now making a cut with the water to change the pipe-line. The gravel showing up in the face now, I am glad to say, looks better than what we have had from the start here; I will be able to prospect it soon. At once as the gravel changed 6 ft. of pipeclay (soft) appeared in the face. Owing to feast we have had very few men, but have managed to keep the water in use here.—H. J. PRENDER.

RUBY.—Report for week ending Jan. 31:—Dunderberg: We have seven men on day's pay, and 10 tributers at work here. There is no particular change to note either in the Home Ticket or the upraise in the 700-ft. level. The incline shaft has been sunk 10 ft., making a total of 96 ft. In about 25 ft. more we will start a drift under the old ore chambers; no change in the ground. Lord Byron: We have two men on day's pay and 13 tributers at work here, all of whom are extracting ore. Contract drift advanced 10 ft. We have been extracting considerable second-class ore, the better class ore having made a turn off to the north, and I have no doubt but that this ore will connect with the cave where we started to sink on this ore, in which case it might make a good body of ore. Bullwhacker: We have six men at work here extracting about the usual amount of ore.

RUBY.—Report for the week ending Feb. 7.—Dunderberg: We have 12 tributers and six men on day's pay at work here. The ore in the Home Ticket not showing any improvement. I have put one of the men to work on a small seam of ore about 300 ft. back in the drift of the 500-ft. level. The man I had working in the 700 ft. upraise quits, and nothing has been done there. The 700 ft. incline has been sunk 10 ft. during the past week; total, 106 ft. We have been doing some prospecting work above a large chamber and cave on the 230-ft. level, and we will try and follow the cave up to see if it will not lead to something. Lord Byron: We have two men on day's pay and 13 tributers at work here. Contract drift advanced 8 ft.; total, 18 ft. We have now about 10 tons of about $40 ore on the dump. Bullwhacker: We have six men at work here extractiug the usual amount of ore.

SOUTH-EAST MYSORE (Jan. 28)—Fortnightly report:—I was underground yesterday at this mine, and fiud that the 500-ft. level north is extended over 200 ft. from the shaft; the lode in the present end is piuched, but I think it will open out again in a blast or two. Stoping is commenced in the back of this level in order to get about 50 tons of the quartz recently driven on to put through the mill as a test. I washed a sample of the quartz they are breaking, which I estimated to be worth from 7 to 8 dwts. of gold to the ton. The 500-ft. level south is advanced a little over 50 ft. from shaft; the rock is still exceedingly hard, but I am hoping that we shall shortly see a change for the better. Small branches and stringers of quartz are uow appearing in the end; this undoubtedly will lead to the lode.—M. SCANTLEBURY.

SOUTH-EAST MYSORE (Feb. 4).—Fortnightly report of the superintendent.—The following progress has been made during the fortnight ending Jan. 31:—The 500 level north of maiu shaft: 29 ft. have been driven in this drift, making a total of 147 ft. 6 ins. from the cross-cut east, and a total of 214 ft. from the main shaft, from which point the measurements of this drift will in future be recorded. The end is at present looking poor, but we expect to get into quartz again in a few blasts. No assay taken. The 500 level south of main shaft has been advanced 8 ft., making a total of 57 ft.; the ground is still very close and hard, and we have not yet met with the shoots of ore that should come in from the south. Health: I am glad to say that our camp has not suffered during the late epidemic of cholera, and the work has therefore been uninterrupted. The machinery continues to work well.

VISHNU (Feb. 8).—Since writing you last week work has been discontinued in No. 1 raise near the main cross-cut for the present. We are still raising in No. 2, and expect to strike another chimney of ore further east. Work on the cross-cut driving north from the 430 east drift is being pushed; 35 ft. was made the past week; total distance now in from drift 240 ft. For the past few days the cross-cut has been passing through a vein formation, with stringers of quartz coming in occasionally. We have also encountered a heavy flow of water. We will continue the cross-cut some distance further, or until we are quite certain we have passed through the vein. This vein is like the 430, standing almost perpendicular. If we strike nothing better during the next few days we will raise on what is in sight. The quartz found in these stringers mentioned looks very nice. We will have some assayed this week. The leasers are getting a little ore in the old mine; also some on the surface, near the north side line of the Vishnu on the top of the mountain.—G. MCCORNICK.

YURUARI.—The secretary advises receipt of mail from the mines dated Feb. 6. Mr. Pryor states: I note your order to sink the water shaft, and meanwhile have made all preparations by repairing the boiler at water shaft, overhauling the pit-work, diverting the surface water towards Cenicero, and draining the shaft to the accumulated débris, which I am now in process of hoisting to the surface. As far as I can judge, I have but 2 or 3 ft. more of this to get out, and shall then be in a position to commence sinking. As the mine will not be in a position to contribute towards expenses until the work detailed in my last letter is completed, I have further reduced expenses. In the agent's letter, dated Trinidad, Feb. 12, they state that they have a letter from Mr. Pryor (presumably of later date), in which he informs them that he has now commenced sinking the water shaft, and hopes to be in a position to commence crushiug good quartz at a comparatively early date.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

Investors in all classes of Stocks and Shares should read Mr. Thos. Thompson's Mining and Investment Circular, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

Lester and Hook are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

Lester and Hook advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

Telegraphic Address: — "LONGEVOUS, LONDON."

MEMBERS OF THE MINING EXCHANGE.

BURRELL, BRADDOCK & CO.,

Stock and Share Brokers, Mining and Financial Agents,

STOCK EXCHANGE BUILDINGS,

90, QUEEN STREET, MELBOURNE,

Undertake Agencies for Investments in AUSTRALIA, and negociate the purchase of Mining Properties.

Personal inspection by a member of the firm of all properties under negociation, thus ensuring the safest guarantee of the *bonâ fides* of mines, &c.

REFERENCES.—MESSRS. BURRELL & COMPANY, 117 and 118, Leadenhall Street, London, E.C.

Bankers THE COMMERCIAL BANK OF AUSTRALIA.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

Board.

Sir CHARLES METCALFE, Bart., Chairman.
B. B. TRENCH, Esq., Deputy-Chairman.
L. Balfour Burns, Esq. | Major J. W. M. Cotton.
Sir Stuart S. Hogg. | Richard Smith, Esq.
Edward Dicey, Esq., C.B.

Head Office.—19, ST. SWITHIN'S LANE, LONDON, E.C.

South African Office.
NATAL CHAMBERS, JOHANNESBURG.

General Managers in South Africa.
W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

Bankers.—THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.
THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular contaiuing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

RECOMMENDATIONS FOR CURRENT ACCOUNT:—

INDIAN CONSOLIDATED,
MYSORE REEFS,
NINE REEFS,
MYSORE WEST,
MYSORE WYNAAD.
DEVALA MOYAR.

All recommendations this month have, up to the present, been correct, and large profits to our followers the result.

We make Mines a special study, and invite correspondence, whether business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly, irrespective of account day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. Clients may rely on fair treatment at our hands. We are members of the Mining Exchange, and subject to the rules and regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Q. X. L.—No. 1. On account of the price of lead, and the general indisposition to invest in home mines. No. 2. Cannot prophesy. You can judge by the report of the last meeting. Did you see it? If not, let us know. No. 4. It has splendid prospects. Buy rather than sell. No. 5. Good for a market rise. No. 6. Has fair chances, and is thought well of on the market.

Norwood.—No. 1. Should be held. The general condition of most of the Indian companies is improving. As regards dividends, we fear the company will do little good, and hence the shares should be only held for a substantial market rise. No. 2. See "Mining Market" this week for position of this company. The shares should be held for much better prices.

Albertine.—Yes. They are now fully paid.

Bankrupt.—About the 5th or 6th of next month, we are informed.

Hopeful.—Why not take the profit on, say half your holding, although they may go better.

Unlucky.—Cannot recommend them. The parties named are rather shady.
R. A. Wilkins.—Sell your shares at once.
Companion.—The rise is not due to any news received officially. Do not touch them now.
S. S. Hall.—Market rather shaky at present, but cannot advise you to sell.
Julian.—Your only chance is by averaging the cost and purchase while they are so low, as we consider a rise imminent.
A. Murray (Carnarvon).—Advise your friend to realise on Nos. 3 and 5, and pay the calls on others named. They are likely to improve.
Plunger.—Rather dangerous, in our opinion. We have considered all points, and advise you to keep out of it.
Jane Shore.—Buy them for a substantial rise.
M. Stanley.—Yes. Will go lower, and are really worthless in our estimation.
Querist.—It is not your broker's fault. About three weeks is the usual time. He will, no doubt, see the matter righted.
Allenby (Cardiff.)—They certainly did not maintain the rise, as there was really nothing to warrant it.
Micklejohn.—Fell on the rumour of a call, which is now made. They should, however, go better.
Oldham Reader.—The matter should be thoroughly sifted. There is certainly a screw loose somewhere.
Colonel.—Average your holding.
M. Kennedy (Liverpool.)—The proceedings passed off well, and there is no reason why the shares should not rise much higher.

The Mining World.

LONDON: SATURDAY, FEBRUARY 28, 1891.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

THE MYSORE PURCHASE AGREED TO.

IN our report of yesterday's Mysore meeting, occupying eight columns of our present issue, the shareholders absent from the meeting, and those present, who may desire to refresh their memories, and to keep a record of what took place, may fairly be said to have before them in black and white all the facts for and against the Goldfields purchase. The arguments both ways we endeavoured in our leader columns a week ago succinctly to set forth. Yesterday those in favour of the purchase were admirably expressed by the chairman and Mr. Taylor, whilst the views of Mr. Carter on the other side were also ably expounded. The latter gentleman, indeed, obtained a very sympathetic hearing from a meeting pre-determined to vote against his amendment down to the point when he referred to the alleged clashing of interests between the directors in their dual capacity as members of the boards of the buying and selling companies and the chairman and Lord Ribblesdale in their family relationshi ps. From that point Mr. Carter obviously lost the sympathy of the meeting, and did not subsequently regain it. Perhaps the best speech of the day from the shareholders' side was that which fell from Major Cotton, who spoke with great force, not against the suggested sale, but in deprecation of the manner in which it was proposed to be carried out. He thought the shares should have been issued to the Mysore shareholders, and that the Goldfields Company should have been paid for their land in cash. With that view many present, who could not support the negative of Mr. Carter, heartily agreed. Expressing our own opinion, we think that the little friction which occurred in the meeting would have been absolutely avoided had some such proposal beeu submitted. However, the reply to that was given by the chairman when he said that he had considered this plan and that its adoption was deemed inadvisable. We attach no importance (in this connection at least) to his remark that he would not do anything to damage his interest as the largest Mysore shareholder, for our opinion of Sir Charles Tennant is so high that we believe whatever might be his holding in any company which possessed him as a director, he would do only that which he felt to be clearly in the best interests of his shareholders.

There has beeu on Mysore affairs much ink shed, and not a few good pens spoiled, by anonymous scribblers in the Press whose audacity in expressiug their views has been in inverse ratio to their courage in affixing their names to what they have written. When Mr. John Taylor began to address the meeting theory gave place to fact, aud random assertion ceased to slap precise information in the face. He showed the Mysore shareholders that if they did not buy the proposed acreage, there were those who would. The lode will dip (according to its present angle) into Goldfields land in about 940 ft. from the lowest point in Rowse's shaft that the Mysore workings have reached, and this event will probably happen in less than 2½ years Mr. Taylor showed that if the Mysore Company is to get the land at what Sir Charles Tenuant described "a moderate price," it must come to terms with its sellers at once, for the value is rising day by day. Lord Ribblesdale told the meeting that, as the Goldfields Chairman, he had had an offer for it, and though there was a good deal in the "if" of which Major Cotton spoke, yet we do not think the offer in question would have been so frequently alluded to had it not been of a firmer character than those with which second-rate companies have ordinarily to deal. There was another important point in Mr. Taylor's speech, that the new purchase can be controlled by the present staff, a fact which constitutes the difference between the purchase agreed to yesterday aud the sale made to the Champion Reef Co. some 18 months ago. Incidentally Mr. Taylor mentioned some striking facts, that out of one pay shoot 640,000*l.* worth of gold has already been taken, of which 367,000*l.* has been paid in dividends; that 38,000 tons of quartz was dealt with last year, or 3,000 cubic fms. of rock, and that 30 more heads of stamps will be shortly erected, bringing the crushing up to nearly 60,000 tons a year.

The general remarks of Mr. Rowse, the esteemed secretary of the company, who has just returned from a prolonged, and we have reason to know, most useful visit to the mines, were greatly appreciated by the meeting. From what he said we gather that throughout this visit, Mr. Rowse was a shrewd observer, both of miuing, managerial and general details. His originally formed expectations of what was to be seen on the spot were greatly exceeded, and he was able to report that never were the Indian mines in general, and the Mysore property in particular, in so satisfactory a condition as they are at the present time. Reverting to the question immediately before the meeting, it is no doubt a stiff price that the Mysore shareholders are paying for their new property, but all the evidence goes to show that the bargain is one they will have no reason to regret as the years go by.

A BARBERTON REVIVAL.

READERS of the MINING WORLD are aware that we have consistently expressed the opinion that the De Kaap, or Barberton, district would ultimately give a good account of itself. For a time it has been more or less under a cloud. The leading properties have encountered considerable difficulties, both of a physical and of a financial character; and the brilliant reports that reached this country from the Randt district two or three years ago had the effect of diverting capital which would otherwise in all probability have gone towards the development of the Barberton properties. The Randt also attracted a great deal of the native labour, and made the demands of the Kaffir miners more and more extravagant. But difficulties of these kinds have proved to be only temporary; and there is now every reason to hope and believe that the De Kaap district will produce results that will compare favourably with those obtained in any other goldfield in the world. The Sheba Co. is now in a thoroughly sound position. It is well supplied with the sinews of war, and it has a mine and mill probably second to none in South Africa. The telegram received this week conveys to the shareholders the satisfactory information that crushing will be commenced on Monday next, and that the ore in the wiuze is improving. Those who are interested in the company will not have long to wait for taugible results. The Oriental and Sheba Valley Co., the next-door neighbour to Sheba, has also had its share, or rather, we should say, a great deal more than its share, of the difficulties which are so frequently experienced iu new mining areas; and even last month, after a fair start had beeu made with crushing operations, the mill was thrown out of order and damaged by the heavy floods which visited the Transvaal. The damage caused has now been repaired, however, and on Wednesday a fresh start was made with 30 heads of stamps, and by the time that these remarks are before our readers the number will in all probability have been increased to 60 stamps. The mine has been vigorously developed, and those who know the property will speak of its prospects in the highest terms. We also hear good accounts of Moodies and Edwin Bray, though neither of those mines have been quite so fully developed as the Sheba and the Oriental. Speaking generally, therefore, the Barberton district, in which we may for practical purpose include that portion of Swazieland iin which the Pigg's Peak property is situated, is looking up, and we cannot but think that those who have been quietly buying shares in these companies lately have done wisely. Each of the undertakings to which we have referred has an English constitutiou and an Euglish board of directors; and we entirely concur in the opinion expressed by the *Financial News*, that these are advantages which investors in this country are not likely to underrate, especially those who have suffered from the gross mismanagement of many of the Randt properties by local boards and local manipulators.

JOURNALISTIC PIRACY.

THE editor of a recently issued publication called *Scrutiny* does not yet appear to have seated himself firmly in the editorial chair, but he has evidently taken the precaution to arm himself with an unusually full paste pot, and an uncommonly sharp pair of scissors. At the same time, whilst wielding these implements of his handicraft with a skill worthy of all recognition, he cannot be congratulated upon the method he has adopted to keep his readers well informed on the subject of mining investments. We ought to feel flattered at the notice he has taken of the MINING WORLD, but the blush of modesty does not suffuse our cheek—in fact, we are disposed to thiuk that the "cheek" is monopolized by the editor of *Scrutiny* himself. In his issue of Feb. 18, the whole of the article, which appeared in ours of Feb. 14, on the Froutiuo and Bolivia Miues is reproduced without one word of acknowledgment or the slightest indication as to the source from whence he stole his thunder. Not only the article but also its accompanying statistics (which took us a considerable time to preparc) were also appropriated, for,

to do the editor of *Scrutiny* common justice, he has evidently been so profoundly impressed with the value of that article that he has not curtailed it by a single word. *Scrutiny* may offer an apology on the ground of youth and inexperience, seeing that it has ouly reached the unripe number of 32 ; still, if the editor will promise in future when he takes articles from the Mining World to quote the source from whence they come, we will forgive him for the sins he has committed in his issue of Feb. 18. In his notes and comments of the same date, the editor, not without a touch of sarcasm, says, "We" (referring to the Mining World article) "deal with Frontino and Bolivia in another part of the paper." We had almost finished these observations when our attention was accidentaily called to another article, entitled "Hopeful Outlook for Mining Shares." This identical leader appeared in our issue of Feb. 7. Is it necessary to say that the editor of *Scrutiny* is again equal to the occasion? He inserts the article in full, but fails to own that he "scissored and pasted" it from the Mining World.

Wonderful to relate, our discoveries of the journalistic piracy of *Scrutiny* have not yet ceased. The greater portion of our "Mining Market" so struck the editor, that he has appropriated it to himself. Really we feel more than complimented, but somehow there is a rankling feeling that less than justice has been done us. In one part of his issue the editor exclaims, "I leave moralising." Of this we have no doubt, but he adds, "short sermons are the best." The *Scrutiny* editor, however, evidently believes in long quotations —without acknowledgment of course, and from the Mining World for choice.

We have only to add that the issue of *Scrutiny*, dated Feb. 25, has been shown to us, and the following are its unacknowledged "cribbings" from the Mining World of Saturday last :—

1. Part of the article entitled "Randt Gold Output."
2. Copious selections from our "Mining Market."
3. Nearly the whole of our article on the Mysore purchase—the latter being made the principal feature of its "bill of coutents."

THE QUADRUPLE DELIVERY MACHINE CO., LIMITED.

It is well known that the profits made from ingenious toys sold in the streets at the popular price of one penny are enormous. At the commencement of the new year the inventor of a toy of this description sold in Paris for 10 centimes made his fortune in a few days, and the deviser of "pigs iu clover" could also a tale unfold of the wonderful results of that ingenious and amusing plaything. But besides providing for the popular coin that which will amuse, the Quadruple Delivery Machine Co., Limited, aims at something more practical, and in this repect shows a shrewd knowledge of the English character. It proposes to give in one and the same operation a 25*l.* insurance against general accidents on date of issue, if terminating fatally on that date or within 21 days thereafter, purchaser's weight with date automatically printed on a card, a packet of chocolate, sweets, or matches, and a portrait of some public character —all four for one penny. This is a bait that few can resist, and the only questions remaining to be considered are, from the shareholders' point of view—can the company give all this profitably, and is the machine suited for its work?

The invention is that of Mr. Ernst Gustav Hoffmann, and may claim to be more attractive in design and elegant in appearance than any of those the public are in the habit of seeing. Intending investors are invited to view it at the Offices, No. 3, Creed Lane. Those who have availed themselves of this invitation are loud in its praises. It works admirably and with a certainty that seems assured. As an advertising medium the machine may be expected to draw a large income, and the directors are seemingly fully determined to take advantage of the approaching summer season, when, naturally, the business to be done will be larger than during such times as those through which we have lately passed. It is their intention to commence with 1,000 machines in the first instance. The takings of each, it is estimated, will be 1*l.* per week, and with the advertising receipts the total income is estimated to be 1,358*l.* 5s., but, deducting expenditure, the estimated net profit will be 591*l.*, or on 1,000 machines, 30,771*l.* This profit, which the directors do not anticipate will be limited to the figure named, will be sufficient to pay 16 per cent. on the ordinary shares, and 40 per cent. on the founders' shares. Similar companies, with machines less attractive and less efficient than this, and with inducements falling far short of those which the present company offers to the public, have been very successful. The novelties can be changed at pleasure, and thus each passing whim of the public made to serve the advantage of the shareholders. Every precaution has been taken to protect shareholders in the matter of patents. The capital of the company is 120,000*l.*, divided into 100,000 ordinary shares of 1*l.* each, and 10,000*l.* founders' shares of 2*l.* each. The ordinary shares receive a cumulative preference dividend out of profits at the rate of 8 per cent. per annum, and an equal moiety with the founders' shares of any surplus profits. The founders' shares will receive an equal moiety of the surplus profits with the ordinary shares, after paying the cumulative preference dividend of 8 per cent. on the ordinary shares. Each subscriber at the time of making application for ordinary shares can apply for and will be allotted one founders' share for every 10 ordinary shares allotted. The purchase price is 95,000*l.* The board is composed of practical men, and they have retained as their consulting engineer Mr. Hoffmann, the inventor of the machine. There is no reason why this company, if the management be good, should not achieve the full measure of success predicted for it in the prospectus.

THE PAHANG CORPORATION.

One of the most striking movements in the Stock Exchange during the past week has been the sudden recovery in the price of Pahaug shares. At the close of last week the price was 15s. a share, and the speculators who had sold for the fall expressed themselves confident that the quotation had not touched bottom. In this case the wish was assuredly father to the thought; and the "bears" have since had reason to regret that they did not close their operations when they could have done so at a substantial profit, for this week the shares have been up to over 1¼. The Pahang Corporation, we may remind our readers, was formed in Dec., 1887, and acquired the mining and planting rights over certain districts in the State of Pehang, situated on the eastern side of the Malay Peninsula, and covering an area of about 2,000 square miles. It will readily be understood that the mere prospecting of such a vast territory would occupy some years ; and yet, because the Corporation has not yet commenced to make regular shipments, many of the shareholders have been foolish enough to put their shares on to the market at whatever price dealers chose to offer for them. It is very probable that the height to which the shares were lifted a couple of years ago or less, was wholly unwarranted, but there is a wide difference between 7*l.* or 8*l.*, and from 10s. to 15s., aud if we assume that the recovery which has now commenced carries the quotation up to about one-half the highest figure touched, we do not think we should be lover-stating the real value of the property. That it is very rich in minerals, especially in tin, is beyond dispute, and it is equally indisputable that the quality of the tin is well up to the Straits average. In the past the local management has not been of the best, but we are informed by a correspondent at Singapore that in the present manager, Mr. Neil, the Corporation has secured the services of an able administrator, with a special aptitude for the duties which he is called upon to perform. We are also informed on reliable authority that the raisiugs of tin are iucreasing at a very gratifying rate, and that regular monthly shipments will be made henceforward. There is every prospect, we think, that the Pahang Corporation will justify the expectations which have been formed of it by the many men of experience who are closely connected with it, and we should advise shareholders to disregard the *canards* which are constantly being put about by Stock Exchange "bears." And if we might offer a word of advice to the prophets of evil it would be this—that they should learn experience from the events of the past few days, and resolve, like Falstaff, to "live cleanly" for the rest of their days.

AFFAIRS IN SOUTH AFRICA.

Kimberley, Jan. 26, 1891.

A New Diamond Mine.

In previous letters I have from time to time pointed out that no one is in a position to say how far diamondiferous soil extends in this locality. Prospecting has never been carried out in a thorough and practical manner, and although it is known that even in this immediate neighbourhood "blue" ground crops up everywhere, no attempt has been made to carry out anything like prospecting. This is chiefly to be accounted for because the great De Beers Company discountenance anything in the shape of opening up a new mine. The consequence is that no syndicate has been formed to take up such an enterprise, aud, of course, for private individuals to do so would be out of the question on account of the expense. Nevertheless, there are many people outside the great company who are always on the look-out for surface indications, and I have now to report that a new diamond mine has just been discovered at a place called Wesselton, within 3 miles of the Kimberley Mine, and within a mile of the celebrated Dutoitspan Mine. The property is held by a Mr. Henry Ward, under a lease from Mr. Wessel, an old Dutch farmer, and the work is at present carried on by a Mr. Fabricius, and his partner, Mr. Nott, under an agreement with Mr. Ward. It appears that Mr. Fabricius, in riding over the veldt, observed something glittering in the sand, and, dismounting from his horse, he picked up a handful of the soil containing the shining particle. On reaching home he carefully washed up the soil, and was surprised not only at finding a small diamond, but still more at the large amount of carbon and garnets (a sure sign of the presence of diamonds) in so small a quantity of ground. Further prospecting led to the almost certain indications of a diamond mine, and after negotiating with Mr. Ward, Mr. Fabricius was allowed to test the ground by sinking and washing. A very thick layer of lime covers the upper yellow ground, and what is significant is that experts say that diamonds have never been found in this chalk layer before. However that may be, the nature of the true diamondiferous ground below the chalk is highly promising, and the amount of "deposit" (a technical term for the diamond matrix) from the soil, not deeper than 16 ft. or 18 ft. from the surface is simply astounding. I hear that up to the present the ground has yielded a fair average of half a carat to the load, the diamonds found

having been duly and legally declared, and work on an extensive scale is to be commenced in earnest forthwith. What effect this important discovery will have on the directors of the De Beers Company it is impossible to say. As everyone knows, their object is to have a finger in every diamondiferous pie so as to control the price and output. It is a fact that they have large interests in the Koffyfontein Mine (about 40 miles from here), and I believe in the Jagersfontein Mine, still further away, but as they cannot possibly put a veto on further discoveries it remains to be seen whether the great octupus will buy up every new discovery as it is brought to light. Where Messrs. Fabricius and Nott have such an advantage is that the indications are so near the surface, so that if they have hit upon a real treasure they will have ample opportunity of making their pile before the necessity arrives for putting up a large and expensive plant. I have not yet heard whether they intend to throw the mine open to individual diggers; should they do so, there will be plenty of work for the large number of unemployed on the diamond fields.

MORE AMALGAMATION.

Before this reaches you our Premier (Mr. C. J. Rhodes) and Governor Loch will have reached home. It is public property that they have been sent for by Lord Salisbury, for the purpose of conferring with him on the delicate political questions pending between the Portuguese Government and the British South Africa Company. I refer to the fact for the purpose of informing you that with them also went Mr. J. B. Currey, the manager of the London and South African Exploration Company, and it is currently reported here that Mr. Rhodes will return with the title deeds of Mr. Currey's company in his pocket. This is indeed a big order, but there are not wanting indications of the possibility of such a stupendous arrangement. As in previous letters, I have referred to the fact that the London and South African Exploration Company are the ground landlords of nearly the whole of Kimberley and Beaconsfield, and further, you will remember that some time ago I informed you that this company was known to possess a probable diamond mine behind the present Kimberley hospital. For some time past the two companies have been exercising towards each other what I may term a sort of armed neutrality. It is generally believed that the London and South African Company have held this probable mine over the De Beers Company *in terrorem*, but there have recently been whispers that the two companies have come to a mutual understanding, and that Mr. Currey has gone home to confer with his directors, with the view of negotiating a transfer of property. Taking into consideration the vast interests at stake, it is difficult to believe that such an important arrangement is actually contemplated; at the same time we here have good reason to know that if Mr. Rhodes has made up his mind to attain a certain object, he sticks at nothing to bring about its accomplishment. Whether such an amalgamation will be to the advantage of Kimberley, time alone will prove. There is a growing feeling here that Mr. Rhodes is not so anxious to further the interests of Kimberley as he used to be.

THE MAITLAND MINE.

I think it was in my last that I gave you some account of the Maitland Silver Mine, near Port Elizabeth. Since then Mr. Cadwell, the manager, has been prosecuting his researches with considerable advantage to the company. Since sending in his last report he has discovered a new lode on the top of the hill on which his house is situated, and being struck with its compactness he at once commenced operations on it. Although the lode was only about ½ in. thick at the surface, by the time he got down 15 ft. it had widened out to 3 ins. He has continued the shaft until it is now about 50 ft. in depth, the lode being from 4 to 8 ins. wide, and he has sent up here for inspection some beautiful specimens of pure galena taken from that depth. Mr. Cadwell says he is tunnelling from the bottom of the hill for the purpose of cutting the lode, which, if it widens in proportion to depth, he calculates upon hitting a marvellously rich find. Here is another incident of the vicissitudes of mining in South Africa. Years ago, when this mine was first discovered, and when, as I remarked in my last, we were so utterly ignorant of mineralogy that no one knew whether the supposed mine contained gold, silver, copper, iron, or lead, such a discovery as Mr. Cadwell has made would have sent the whole colony into a state of feverish excitement. Now-a-days, so marked is the depression caused by so many mining failures, that even at Port Elizabeth Mr. Cadwell is looked upon as an enthusiast, and only those immediately connected with the enterprise have the slightest belief in his discovery. It is scarcely necessary to add that should the venture turn out to be a real success, the value of the mine will be considerably enhanced by reason of its immediate proximity to the sea coast.

Kimberley, Feb. 2, 1891.

THE NEW DIAMOND MINE.

THIS mine, to which I alluded in my last, has, during the past week, created considerable excitement in Kimberley, and I am now enabled to send you some additional particulars. It is situated about 4 miles from Kimberley Market Square, and about 2 miles from the Bultfontein Mine. The farm on which it has been discovered belongs to a Mr. Wessels, who leased it 18 months ago to a Mr. Ward for a period of two years, with the right to prospect for diamonds, and to purchase at any period during that time for the sum of 150,000*l*. As I informed you in my last it is only within the last few days that diamonds have really been found, and within the last week operations have been carried on with such vigour that diamonds are now being found every day. I have not yet visited the farm, but intend doing so very shortly. On Friday last a beautiful stone of 6½ carats was found, and this set everybody all agog. Now comes the very serious and important question—What will be done with this new discovery? Of course, the directors of De Beers Company have interested themselves in the matter, and negotiations have been going on between them and Mr. Ward. It is almost impossible to obtain any reliable information, but I will give you current reports. Ten days ago it was reported that they had offered Mr. Ward 200,000*l*. to take the lease off his hands. This Mr. Ward considered to be an absurd offer. He had not only himself to consider, but there were Messrs. Armstrong, Fabricius, Nott, and three or four other prospectors to be considered also, and 50,000*l*. to be divided amongst so many was out of the question. As diamonds were discovered day by day the directors are said to have advanced their offer to 300,000*l*., then to 400,000*l*., and yesterday it was the talk of the town that they had gone as far as half a million sterling. It is obvious that the directors are striving their utmost to get the mine into their own hands, and if they succeed it is well known that they will shut it up. On the other hand, Mr. Ward and Mr. Wessels are anxious to throw it open to the public; in fact, it is already announced that Mr. Ward is desirous of letting out the 800 claims on condition that the claim-holders live on the spot, in which case his object is to form a township on the farm. With regard to the De Beers Co., they are manifestly in a very serious position. What will the shareholders say to the expenditure of such an enormous sum? Are they prepared to buy up every diamond mine that may be discovered from time to time? Drawing a line on the map from Jagersfontein to Hopetown, and from Hopetown to Barkly West, and back to Jagersfontein, we have a triangle, the three sides of which are about 60 miles long, and no one can tell where the next diamond mine will be found in the large tract of diamondiferous soil represented by that triangle. I think you will agree with me that if they spend half a million in the purchase of this farm, the price of their shares will be depreciated. Then, again, it is asserted that the directors have warned Mr. Ward that if he refuses their offer, and throws the mine open, they will flood the market with diamonds, so that it would not pay the public to work the claims. Altogether there are considerations of importance involved, and up to the present all is uncertainty. To-morrow Mr. Marais (Mr. Wessels' son-in-law) and Mr. Ward go to Cape Town to consult with Mr. Wessels, who is lying there very ill, and when they return we shall know more about what is going to be done.

A NEW GOLD EXTRACTING PROCESS.

On Wednesday afternoon I went out with a large number of gentlemen to the floors of the De Beers Co. at Bultfontein, for the purpose of witnessing an exhibition of a new gold extracting process by chlorination, which has recently been patented by Messrs. Lowndes and Koller, of Beaconsfield. About 700 lbs. of pyritic ore from the May Deep Level Gold Mining Co. was operated upon, and the greater part of the day was spent in the process, those present taking a great interest in the proceedings. The patentees have carried on the work on behalf of a syndicate of local gentlemen. During the afternoon Mr. Koller addressed the company, describing the process, and the following is the substance of his remarks:—

The patentees contend that there are several reasons why a loss of gold occurs and is daily being found in the tailings of various companies now at work, particularly in South Africa. 1st. Water is known to contain a varying percentage of impurities, the carbonic acid gas of which renders the ordinary amalgamated copper plates useless by forming a slimy coating of carbonate of copper over the surface, and prevents all the gold from adhering to the mercury. 2nd. The plates being flat, and on an incline, the least excess or rush of water washes away all lighter particles, or float gold. 3rd. What little gold that chances to remain in the plates is too exposed and easily removed by pilferers; losses of amalgam occurring daily to the companies in this way.

The advantages of the Lowndes-Koller extracting process are set forth by the patentees as follows:—1st. Previous roasting of any ore is *not* required. 2nd. No amalgamated copper plates are used. 3rd. By this process the gold is rendered purer and of greater commercial value. 4th. Any water can be used without having a deleterious effect on any part of the machine. 5. The collection and amalgamation of the gold or silver is conducted within a revolving cylinder, the exit holes of which are locked, and it is impossible for any one to have access to the amalgam without authority to do so. 6th. The cost of treatment is about 5s. per ton, thus taking about 1½ dwts. of gold to cover working expenses, which is far less than any other process now in vogue. 7th. The machine extracts 98 per cent. of gold from refractory ore, and wins every grain of free or float gold as well. 8th. Each machine of five stamp capacity is capable of treating 10 tons of ore per day. 9th. The machine, working automatically, both fills and empties itself without any special attention. One white man and one Kafir can easily attend a set of three machines of five stamp capacity each=15 stamps. 10th. The working parts of the machine being made of the very best material, are most durable

and not easily put out of order. 11th. As electricity is largely used in this process, electric lamps can be used without much extra cost for night working, thus providing a strong and brilliant light.

The following is a

DESCRIPTION OF THE MACHINE.

The machine consists esseutially of four parts, each of which can be replaced separately at a minimum cost. 1st. The apparatus consisting of specially designed electro-magnets for removing particles of metallic iron (from the stamps) from the ore before being treated. If this iron is not removed it uses up the chemicals, and is also liable to go into the amalgam. 2nd. The automatic chlorinating cylinder, in which the ore is chemically treated under pressure, and continuously. 3rd. The diffusion box, in which the excess of chlorine gas is got rid of in order that a loss of quicksilver may not be occasioned thereby. 4th. The revolving electric amalgamator, where the gold is amalgamated by mercury in bulk.

The process may briefly be described as follows:—The crushed ore direct from the stamps passes over the magnets to get rid of the iron, and thence into two hoppers fixed on cylinders. At the end of the chlorinator plungers of steel force the mixture of ore, water, and chemical into the chlorinator under considerable pressure, where a powerful, but harmless, current of electricity produces a supply of chlorine gas, which attacks the pyrites, and sets free the gold or silver. After being thoroughly chlorinated, the ore passes through an exit valve into the diffusion box, where it meets a stream of air which carried away all excess of chlorine gas. The ore being free from chlorine then flows direct into the amalgamator, where in its sinuous course through the mass of quicksilver all the precious metals are extracted and obtained by retorting in the usual manner. It is impossible for float gold to pass through the amalgamator; it must be taken up by the quicksilver and retained. The patentees specially recommend the electric amalgamator and the magnets to those companies possessing free ores rather difficult of amalgamation. The magnets remove all the metallic iron from the ore, which otherwise would go into the amalgam and render the gold of less value. The great advantage of the electric amalgamator is that it can be easily attached to any stamp battery, and will itself, without plates being used, collect all free and float gold from the ore, at the same time rendering the amalgam perfectly secure against theft, as it is placed under lock aud key, and access can only be had to it in the presence of two authorised persons possessiug a different key.

The patentees estimate the approximate cost of working per month with one set of three machines, 15 stamps capacity, all told, as follows:—Steam power, chemicals, labour, depreciation of machinery, and incidental expenses, 180*l*. They then gave me the following estimate:—Assay value of ore equally 1 oz. per ton; quantity of ore treated, 720 tons; cost of treatment, 5s. per ton.

	£	s.	d.
Quantity of gold extracted by the Lowndes-Koller process, beiug 98 per cent.=705 ozs.			
Bank value 3*l*. 10s. per oz.	2,467	10	0
Less working expenses	180	0	0
	2,287	10	0
Mining and crushing 720 tons, at 15s. per ton ...	540	0	0
	1,747	10	0
Quantity of gold extracted by ordinary amalgamation, being 55 per cent. = 396 ozs. Bank value, 3*l*. 10s. per oz.	1,386	0	0
Less working expenses	150	0	0
	1,236	0	0
Miuing and crushing 720 tons, at 15s. per ton ...	540	0	0
	696	0	0

Thus showing a balance in favour of the Lowndes-Koller process of 1,051*l*. 10s. per month.

Immediately after Mr. Koller's address the engine was stopped, the amalgamator unlocked, the amalgam taken out and retorted, with the result that a bead of gold was produced, weighing 16 dwts. 6 grs. This result is considered highly satisfactory. The process is to be known in future as "The Reliance Gold Extractor." It has been patented all over South Africa and in England.

TRANSVAAL GOLD CO.

On another page will be found a full report of the meeting of the Transvaal Gold Exploration and Land Co., which was held on Thursday, and the report is one that will well repay perusal. The meeting was unquestionably the most satisfactory that the company has ever held; the amount of gold obtained during the year up to the end of September was larger than in any previous year, and since then the progress has been remarkable. During Oct. the yield was 464 ozs., in Nov. it was 1,150 ozs., in Dec. the same, and in Jan. 1,300 ozs. In Dec. 30 tons of rich ore gave a yield equal to very nearly 16½ ozs. to the ton. And then, when we turn to the financial position of the company, we find that whereas in 1885, when the company was re-constructed, there was a debenture debt of 26,750*l*., and a floating debt of 7,400*l*., the company has now no floating liabilities; its debenture debt has been reduced to 9,400*l*., and against this there is cash in London 5,000*l*., at the mines and in transit 4,700*l*., and between 7,000*l*. and 8,000*l*. in ore on hand. It will therefore be seen that allowing for the balance of the debentures, which will probably be paid off during the current year, the company has a balance on the right side, irrespective of the 7,000*l*. or 8,000*l*. worth of ore in hand. This is a record which is certainly highly creditable to the directors, for when they succeeded to office four years ago, the outlook of the company was about as dark as it could well be. The company possesses a very large area, and, although it is at present only working a very small portion of it, it will, in the future, be able either to extend its operations or to dispose of portions of its property to subsidiary undertakings. In either event the shareholders will reap the benefit.

PROPOSED RE-CONSTRUCTION OF PERSEVERANCE GOLD CO.

The shareholders of this company wisely decided last Thursday to re-construct the company under circumstances set forth in our report of the meeting. Two or three years ago such a proposal would not have been received with the favour it was on this occasion, but within the last few months quite a new complexion has been put upon mining affairs in the Wyuaad. The Indian Gold Mines Co. of Glasgow is meeting with considerable success, and in the most recent report assays are given of over 5 ozs. and over 4 ozs. from distinct parts of the reef. The Devala-Moyar Co. has recently re-constructed under circumstances of considerable promise, aud the facts in connection with Perseveraunce itself would justly entitle the shareholders to be charged with mining cowardice if they did not, ou the faith of them, subscribe the 2s. per share that will be asked for by the proposed reconstruction. The arrangement with the Mammoth Co. is a good one, and will tend to the prosperity of both companies. Meanwhile the Perseverance directors have justified in their own persons the name they have chosen for the venture by sticking to it with a dogged obstinacy and with a courage truly characteristic of the race. Though they have always had the entire confidence, they have uot as invariably met with the sympathy of their shareholders who have rather been disposed to regard the company as a forlorn hope, but the self-denying character of the Board's labours has never been doubted, seeing that their pockets have long been iunocent of anything in the way of fees. They have fought an uphill fight with cultivation, in which the fates have so willed it that their success should not be conspicuous, and they now see no other means of financial salvation save by way of gold. This is the path they mean to pursue. Experience has taught them that, as the loose outside ground is passed through, the reef becomes more settled and the ground more valuable. The speeches of the chairman, of his colleague Mr. White, and Mr. Powell, the solicitor, not to speak of the reports from the experts that had been previously published, were full of encouragement, and the only antagonism their views met with was from a shareholder, who said he would prefer going into a new company, with a liability of 1*l*., rather than continue in one like the Perseverance with a fresh liability of 2s. We are unable to follow his reasoning. In the former case, everything would probably have to be done *de novo;* in the latter everything practically has been done, and the shareholders, iu a word, seemingly have only to go in and win. It is quite upon the cards that there may be a boom in Wynaad mining. Perseverance shareholders are wise in taking up their shares, for if they fail in this respect others will be found to do it for them.

KNYSNA RE-CONSTRUCTION.

The Knysna scheme of re-construction is already out; so that the committee have shown due diligence in its preparation. It will be submitted to the shareholders next Thursday. The new company will be called the Peterson Reef (South Africa) Gold Mining Co., Limited — a title that might still further be improved by abridgement. The capital is to be 60,000*l*. in 240,000 of 5s. each. Arrangements are made by which the privileges of existing shareholders are carefully guarded, and also for providing the requisite capital to work the mine on the basis laid down in Mr. Edgar Taylor's report as furnished to the meeting, and Mr. Robert Taylor's statement in explanatiou thereof.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

THE Money Market has been materially firmer, and owing to the increasing stringency much of the demand has gone to the Bank, where bills, having only a short time to run, have been discounted at 3 per cent., and seven day loans granted at 3½ per cent. Market rates have moved up to 2⅞, 3 per cent. for discount, and 3, 3½ per cent. for money, partly due to the settlement, and partly to the scarcity of money, bankers' available resources being required for the railway dividends due at the end of the week. The Bank return shows that the Revenue collections have been heavy, the public deposits having increased 1,437,000*l*., but the accommodation enquiry at the Bank has also been heavy, the private securities having increased 1,160,000*l*., but that this has been partly precautionary is shown by the addition of over 300,000*l*. to the private deposits. Although 114,000*l*. was on balance, taken for exports, the reflux of notes and coin from circulation has increased the reserve by 528,000*l*. to 16,148,000*l*., against 16,816,000*l*. at this time last year, but the proportion is rather less at 38¾ per cent. The higher rates for discount have improved the exchanges, which have turned in our favour; still there is some enquiry for gold for Germany, and it is rumoured that next week gold will be taken for Russia. It is important to note, amongst other conversions, that Messrs. Martin and Co.'s private bank, the oldest in London, is now "Martin's Bank, Limited," with a nominal capital of 2,000,000*l*., which must accelerate the movement amongst the remaining private banks.

Business at the Stock Exchange in the past week has been in a stagnant state, partly due to the arrangement of the fortnightly settlement, and partly due to the absence of the public owing to the severe fogs. Under these circumstances the wonder is that prices are so well sustained at the present levels. The rates charged for "carrying over" speculative bargains until the next account ranged from 2 to 4 per cent. on Foreign Government bonds, and from 3½ to 4½ per cent. on American Railroad securities. Political affairs at home have been quiet, and more encouraging news was received from the South American Republics. The Funds show a slight reduction, and Colonial Inscribed stocks are about 5s. cheaper than last week. Foreign Goverment bonds have been very firm at times in sympathy with the better tendency on the bourses, but subsequent advices have changed the course of the market, and prices are mostly ¼ to ½ lower, South American loans being similarly affected. Revenue statement, poor traffic returns, and anticipations of reduced dividend announcements by the Scotch companies have more or less affected Home Railway securities, the heavy lines and South-Eastern "A," however, have been well maintained. The final variations in the American Railroad market have disclosed but trifling alterations from those prices current last week, while Canada Pacific were very strong on the satisfactory traffic return, and Ohio and Mississippi on the official contradiction that the line was about to pass into the hands of a receiver. Grand Trunk stocks have remained steady, while Mexican have improved. Cable stocks were lower, and a sharp fall occurred in Hotchkiss Ordnance, and Hansard's Union have again been exceptionally weak.

Discount terms remain at 2⅞ to 3 per cent. for the choicest three months bills, and to-day, as on other occasions lately, the market took short drafts to the Bank, besides increasing their borrowing from that institution. Loans outside were fully 2½, 3. Bar silver declined to 44½, and Rupee Loans appear flat.

At the Bank of England to-day, 504,000*l*. was received from South America, whilst 400,000*l*. was taken for Russia, and 10,000*l*. for Brazil.

A much better tendency has prevailed throughout the Stock Market to-day, and although business continued quiet, prices closed almost at their best, and with a general advance. The arrangement of the Consol settlement, commenced this morning, and the rate charged for continuations, ranged from 3½ to 4 per cent. An almost general improvement was noticeable throughout the Foreign Government department. Further purchases were made of Argentine stocks, which rose ½ to 1, and Buenos Ayres Cedulas improved ½. The premium on gold has declined to 248 per cent. Home Railways opened firm, and some extensive purchases of the Deferred stocks of the Southern companies soon caused an advance of ¼ to ½ per cent. Metropolitan also rose ½, while Great Western and North Western closed ⅜ down. A better tone has also prevailed in the American Railroad market, prices leaving off ⅛ to ⅜ above yesterday's, closing with exceptional movements in Milwaukee and Atlantic Firsts of 1, and in Canada Pacific shares of ⅜. Grand Trunk stocks were a trifle higher, and Mexican improved ¼ to 1 per cent. in the preferential issues. Nitrates were steady, but lower than yesterday; while electric light shares met with some enquiry. Land companies shares displayed some irregularity; but Salt Union and Bryant and May shares were dull.

Annexed are the final quotations to-day:—Consols Account, 96⅜, 97; Egyptian Preference, 94⅛, 94⅜; Egyptian Unified, 98⅛, 98⅜; French Four-and-Half per Cents., 103¾, 104¼; Italian, 94 1/16, 94 3/16; Mexican Scrip, 91¼, 91¾; Peru Corporation, 10⅜, 11; Ditto Preferred, 30⅛, 30¾; Russian, 1873, 99¼, 99⅜; Portuguese, 56½, 56⅝; Spanish, 77⅛, 77¼; Turkish, 1871, 98⅜, 99¼; Turkish Defence, 102½, 103; Caledonian Railway, 116½, 116¾; Great Eastern, 92¾, 93; Great Western, 161⅛, 161⅜xd.; Brighton "A," 154⅜, 154⅞; North Western, 174⅝, 174⅞xd.; Metropolitan, 78, 78½; Metropolitan District, 30¼, 30¾; Midland, 148½, 148¾xd.; North British Deferred, 48½, 48¾; North Eastern, 163½, 163¾; South Eastern "A," 95½, 95⅝; Mexican Railway Ordinary, 44, 44¼; Grand Trunk 9⅜, 9½; Grand Trunk First Preference, 62⅜, 62⅝; Grand Trunk Second, 41⅜, 41⅝; Grand Trunk Third, 22⅜, 22⅝; Canadian Pacific, 79, 79¼; Denver Preference, 61½, 61¾; Erie, 20, 20½; Milwaukee, 57½, 57¾; Lake Shore, 114, 114½; Louisville, 77¼, 77½; Atlantic First, 32¾, 33; Ontario, 17⅜, 17⅝; Ohio, 17¼, 17¾; Norfolk and Western, 56⅜, 56⅞; Reading, 16⅜, 16⅝; Reading Income Bonds, 55, 56; Union Pacific, 46¾, 47; Wabash Preference, 18¾, 19¼; Ottoman Bank, 15, 15⅛; Anglo-Telegraph, 47¼, 47⅞ National Telephone, 4¾, 5; Hudson's Bay, 18½, 19; Suez Canal, 96¾, 97¼; Guinness Ordinary, 312, 315xd.; Allsopp's, 34, 36; Bryant and May, 13½, 14; Hansard's Union, 1½, 2; Bell's Asbestos, 12⅜, 12⅝ xd.

THE GOLD MINES OF VICTORIA.—No. 2.

THE total quantity of quartz crushed during the year, as reported to the mining registrars, was 732,461 tons 10 cwt., the yield of gold from which amounted to 358,893 ozs. 3 dwts. 4 grs., averaging 9 dwts. 19.19 grs. per ton. The highest average, 2 ozs. 11 dwts. 4 grs., was obtained in the Mitchell River division, where 20 tons only of quartz were crushed; the next highest, namely, 1 oz. 18 dwts. 4 grs., was obtained from a crushing of 1,052 tons, in the Dark River division. The Hercules and Energetic Company, at Sandhurst, crushed the richest parcel of quartz during the year—46 tons of stone yielding 2,044 ozs. of gold. From 1864 to 1889, particulars have been received showing the aggregate amount of quartz crushed to be 24,853,710 tons 12 cwt., which yielded 12,950,885 ozs. 6 dwts. 6 grs., giving an average of 10 dwts. 10.12 grs. per ton. Up to the end of 1889 the number of quartz reefs discovered in the colony, and which had been proved to be auriferous, was estimated at 3,848—Beechworth having 1,143, Maryborough, 650; Sandhurst, 636; Gippsland, 574; Castlemaine, 413; Ballarat, 348; and Ararat, 84. The estimated area of ground worked upon in connection with alluvial and quartz mining at the close of the year was about 326¾ square miles, being 1¼ square miles more than that mined upon during the preceding year.

Returns received by the mining registrars during the year show that 5,279 tons 5 cwt. of pyrites and blanketings were treated, for a yield of 13,596 ozs. 1 dwt. 8 grs., or an average of 2 ozs. 11 dwts. 12 grs. per ton. Castlemaine had the highest average, namely, 3 ozs. 16 dwts. 10 grs., whilst the smallest (1 oz. 18 dwts. 16 grs.) was obtained in the Ararat district. On the 31st December, 1889, the number of pyrites works in Victoria was 20, in which 111 men were employed, the value of machinery used being estimated at 23,500*l*. At the same date there were also four smelting works in the colony, employing 49 men. The alluvial mines contributed 229,855 ozs. 5 dwts. 11 grs. of the total yield during the year, thus showing a decrease of 8,778 ozs. 12 dwts. 5 grs. as compared with the yield for 1888. The Ballarat and Maryborough districts show an increase, whilst the other districts have a decrease. From the foregoing it will be seen that the falling off in the yield of gold for the year is mainly attributable to the decreased yields from alluvial workings. The mining registrars obtained particulars during the year of 836,353 tons of washdirt having been treated, for a yield of 82,994 ozs. 12 dwts. 19 grs. Information was also received of 23,872 tons of cement being crushed, for a yield of 5,565 ozs. 5 dwts. 1 gr. The average yields per ton obtained from washdirt and cement were 1 dwt. 23 grs. and 4 dwts. 15 grs. respectively.

The number of gold mining leases issued by the Department during the year was 461, covering an area of 10,767 acres. Most of these leases were taken up in the Gippsland District. The total number of gold mining leases granted since the commencement of mining in the colony is 16,703, extending over an area of 321,167 acres. Of this number 1,561 were in force on the 31st December last, comprising an area of 34,692 acres. Statements Nos. 32 and 33 show the mining districts in which the leased lands are situated, together with the number of leases and the extent of ground held.

At the close of the year the estimated value of the whole of the machinery used in connection with alluvial and quartz mining was 1,825,862*l*.—alluvial, 261,562*l*.; quartz, 1,584,300*l*.—which was 7,739*l*. more than the amount recorded for the year 1888. In quartz mining 926 steam-engines are employed, and 197 in alluvial, making a total of 1,123 engines, whose aggregate horse-power amounts to 26,680.

FRONTINO AND BOLIVIA GOLD MINING CO., LIMITED.

DEC. PROFIT, 3,501*l*.

THE directors have received advices from the mines, dated Dec. 23, 1890, and Jan. 7, 1891. Also a letter from Messrs. Restrepo dated Dec. 12. The statement for the month of Dec. is as follows:—1,003 tons of ore produced—bar gold, 2,497 ozs.; tributers' gold produced, bar gold, 728 ozs.; Bar gold, 3,225 ozs. Also 2,880 lbs. of sulphurets containing 239 ozs. of bullion. Estimated value of the gold and sulphurets, 8,257*l*. 6s.; cost at the mines, Medellin, and in London, and paid for gold bought of tributers, 4,755*l*. 7s. 5d. Estimated excess of returns, 3,501*l*. 18s. 7d. The advices now received may be said to afford a probable explanation of the very large returns for January, advised by cablegram, a copy of which was posted to the shareholders on Feb. 11. Mr. Eustice, in his letter dated Jan. 7, states that as Silencio Mine is being opened up rapidly, and a large amount of ground is being laid open, he was in want of more milling capacity, and accordingly had arranged with the tributers of the Silencio sands that they should suspend their operations on sands and give him possession of the No. 1 Silencio mill, let to them, and to retain such possession until the new Californian mill shall be completed. This, Mr. Eustice says, would enable him to crush about three-fourths more ore than previously, and so doubtless the increased returns in January have been largely attributable to the crushing of rich Silencio ore in the extra mill.—J. J. TRURAN, Secretary.

MR. W. H. ROWSE AND THE COLAR MINES.

DINNER TO THE SUPERINTENDENTS AND OTHER OFFICERS.

(From the *Bangalore Spectator* of Jan. 13.)

AN account of this entertainment, given by Mr. W. H. Rowse, Special Commissioner from the London directors of the various companies working on the field, to the officers of the several companies, will be read with interest, especially when it is remembered that several of the greatest authorities on the subject of gold mining in India were present, who, in many able speeches, referred to the past results and future prospects of the mines. It will not be out of place to explain Mr. Rowse's connection with the mining industry of Colar. This gentleman, who

HAS BEEN CONNECTED WITH MINING OPERATIONS FOR 30 YEARS

in different parts of the world, and who is the London secretary for the Mysore and several other companies, has been specially deputed by the boards of directors of the different mines to come to India for the purpose of inspectiug and reporting on the workings, to make arrangements as to the future management and conduct of the mines, and to enter into such negotiations with the Government as might seem necessary for the benefit of the various properties. Mr. Rowse, accompanied by Mrs. Rowse, arrived at the mines early in Oct. last, and being now about to depart for England invited the officers to meet them as stated above.

The dinner itself was

A GREAT SUCCESS,

graced as it was by the presence of Mrs. Rowse, Mrs. Collins, Mrs. O'Donnell, Mrs. Grey, Mrs. Mudge, Mrs. Pryor, and Mrs. Matthews. The principal guests were the Superintendents, Engineers, Medical Officers, Reductiou Officers, and other Officials.

Mr. W. H. Rowse, who presided, in his capacity of host, proposed the most important toast, "Success to the Mines on the Colar Field." In a very succinct speech Mr. Rowse referred to the past history of the field, placiug before his guests an array of facts and figures, showing the value of the gold extracted from the mines, the amount of expeuditure and the profits realised, giving the percentage upon the capital employed, showing that a fair return has been obtained upon the same. Taking the individual case of the Mysore Company he showed that the total amount of the capital has been twice returned in dividends to the shareholders, and that duriug the past two years a return of 75 per cent. per annum had been paid on the capital of the company. He expressed the opinion that the field is in its infancy, and that the future of the whole of the miues might be looked upon as most encouraging. He paid a high tribute to the energy, zeal, and intelligence of the superintendents and officers.

GOOD FEELING ALL ROUND.

Capt. Gilbert, the Superintendent of the Mysore Mines—the largest and most successful on the field—replied, confirming the observation made by the chairman, and referred to the *bon accord* existing amongst the officers of the various companies.

Mr. Oakley, Superintendent of the Balaghat and other mines, and President of the Mining Board, in a short speech, corroborated Capt. Gilbert, and stated that the success of the mining enterprise was, in a great measure, due to the indomitable energy and perseverance of Capt. Plummer, the late Superintendent of the Mysore Mines. He also expressed the opinion that directors and shareholders do not always realise the difficulties which have to be conteuded with, and hoped that during the present year many of the mines would enter upon an era of prosperity.

Mr. Grey, the Superiutendent of the Nundydroog Mines, spoke to the same effect.

Mr. Collins, Superintendent of the Ooregum Mincs, next proposed "The Health of the Directors of the various Companies" in a humourous speech, which was replied to by the Chairman, who pointed out some of the difficulties and anxieties experienced by these gentlemen, especially in times of adversity.

"The

HEALTH OF THE MANAGERS,

Messrs. John Taylor and Sons," was proposed in a eulogistic speech by Dr. O'Donnell, the Chief Medical Officer of the field.

The Chairman, in a few well-chosen words, gave a *résumé* of the history of the celebrated mining firm of John Taylor and Sons, who, he said, stood head and shoulders above every other mining firm in the world. In their name he thanked the company for responding so cordially to the toast proposed by Dr. O'Dounell.

Other toasts were proposed and replied to by Messrs. Hodgson, Jones, Mudge, Scantlebury, Chancy, Hambley and Capt. Gilbert; but space permits of reference to two only—

THE HEALTH OF MR. AND MRS. ROWSE,

proposed by Capt. Gilbert. This gentleman surpassed himself in this toast. His speech was from his heart and was with much feeling. He expressed the sentiments of every one present when he said that Mr. Rowse had endeared himself to all on the field, and that his visit would be remembered for many years to come—the only regret was that he could not remain amongst them; their fervent hope was that he would return again. All on the field recognised the great services which Mr. Rowse had rendered to the various companies. He would return to England with the uuique advantage of possessing a more thorough acquaintance with the field than perhaps any other man. As for Mrs. Rowse, in a quaint yet earnest way, the speaker said that the purest expression of respect and the highest tribute that can be paid to a lady is to say she is a good woman; "now, Mrs. Rowse is a good woman, and her greatest delight is to make other people happy." He went on to say that since she had been ou the field he had felt as if he had a home again, and that Mr. Rowse—good as he was—would be much less so without Mrs. Rowse. This toast was drunk in a manner which testified to the high regard and esteem in which Mr. and Mrs. Rowse are held. It was replied to in graceful and feeling terms by Mr. Rowse, who next proposed

THE HEALTH OF CAPT. PLUMMER,

and in doing so alluded to the great services rendered to the Mysore and other companies, culminating in their success.

Capt. Plummer, in replying, stated that the property of the Mysore Co. had been almost lost for want of capital, and that when the directors had almost determined to give up further effort, he had begged them to give him one chance more. By hard work and perseverance, assisted by conscientious officers, he was proud to have been of service, and although he had now retired from active work, still he retained great interest in the industry, and stated that he had recently inspected some auriferous lands on the other side of Mysore, and prophesied that great prosperity awaited the province in its gold-producing capacity.

It will be gathered from the above that the Mysore Government has a valuable property in the Gold Fields. We learn that the royalty paid to it now amounts to over two lakhs per annum, and that the large sum of twenty lakhs is paid in wages, &c., every year. It is to be hoped that the Government of H.H. The Maharajah will do all in its power to encourage and assist such a valuable enterprise.

We learn that on the evening following the above

ALL THE ENGLISH EMPLOYÉS AT THE MYSORE MINES WERE ENTERTAINED

at dinner by Mr. and Mrs. Rowse, and that a happy and enjoyable evening was spent.

THE COLAR GOLDFIELD.

A RAILWAY AT THE MINES.

(From the *Bangalore Spectator*, Jan. 5.)

YESTERDAY witnessed one of the most important ceremonies that have ever taken place on the Goldfields of Colar, viz., the cutting of the first sod of a railway on the Mysore Mine, and the laying of the foundation stone of new offices. The works of the Mysore Co., increasing from year to year, have assumed such vast proportions that for some time it has been considered necessary for the proper development of the property to lay down a line of railway for locomotive traction. On the arrival of Mr. W. H. Rowse, the Special Commissioner to the Goldfield, this matter was among the first to receive his attention, with the result that this very important work is at last commenced—to be carried through with the vigour and energy which have hitherto characterised the operations of this company.

The same reasons which justified the construction of the railway, and the steadily increasing number of officers required in superintending the various departments of the company's works, also suggested to Mr. Rowse the desirability of providing suitable offices for the heads of departments, where, instead of being scattered as at present, they might be uuder one roof and in the heart of the works. The building designed for this purpose, and of which the foundation stone was laid yesterday, covers an area of 12,000 sq. ft., and will be surmounted by a clock tower nearly 50 ft. high.

The scene on the mine yesterday was a gay one. From early morning flags were flying on the site of the building and on the line of the proposed railway. From 11 a.m. visitors were coming in from the neighbouring mines and from Bangalore, until at 1 p.m. a very large party had assembled to witness the ceremony of cutting the sod, to be performed by Mrs. W. H. Rowse. On arriving at the scene of action the lady was presented by Capt. Gilbert, the Superintendent, with a very haudsome silver spade, suitably engraved. The ceremony having been performed by Mrs. Rowse in a skilful and highly artistic mauner, and the sod having becn wheeled away by Mr. Mudge, the executive engineer, in a manner almost equally artistic, the line was christened "Tennant's Railway," in honour of Sir Charles Tennant, the worthy chairman of the company. After a little speech-making and much cheering, the party proceeded to the site of the new offices, where Mrs. Rowse was presented by Mr. Hajee Ismail Sait with a silver trowel, very handsomely engraved. With this instrument the lady prepared the bed for the stone, and having seen it "well and truly laid," was greeted with prolonged cheers, followed by cheers for Mr. Rowse, Capt. Gilbert, and Mr. Mudge. Speeches were short and to the point. That of Mr. Sait, mounted on the stone, "Tiffin awaits you in the Mysore Hall," being as pithy and as well received as ever was Mr. Gladstone's most brilliant peroration. But the good things said of Mr. Sait then were as naught compared with the good things said of him when the matter of the tiffin had been more thoroughly *gone into*. As sole contractor for the works mentioned, Mr. Sait had provided a *menu* worthy of royalty. The profusion of dishes, the sparkle of extra sec, the beauty of the ladies, the *bon accord* of the men, the wit of the chairman, the *grave* speech of the mauager, and the temerity of the doctor—so recently a bachelor—were things to be remembered with pleasure for many a future day.

A word for the wheelbarrow which carried the sod from the railway. In itself a work of art, after the ceremony it was bequeathed to the first son and heir born to any officer of the company. It was not destined long to remain in chancery. At 5 p.m. a claimant appeared. And the happy father (?) see "Domestic Announcements."

Mysore, Jan. 3, 1891.

INDIAN GOLD (GLASGOW) (Feb. 3).—No. 11 north tunnel: 5 ft. driven; total, 43 ft. 6 ins. from cross-cut. Improving much more pyrites. Assay, 4 ozs. 16 dwts. 9 grs. No. 11 south tunnal: 4 ft. driven, totalling from cross-cut 48 ft. 6 ins.; also greatly improved. Assay, 5 ozs. 2 dwts. 22 grs. Assay of washed stuff or semi-concentrates, 13 ozs. 4 dwts. 14 grs. Milling procceding constantly; plenty of water power and labour.—PHILLIPS.

WE are pleased to note the sign of prosperity iu our contemporary *The Financial and Mining Record*, of New York, which is shown by an increase in size to 32 pages, and its handsome and ueat appearance in new type. This is a weekly publicatiou which claims to give more complete, aud tersely arranged reports of the production, consumption, and commercial movement of the money metals thau any other periodical at home or abroad. It contains articles of exceptional value for reference and of pertinent interest on all iudustrial matters, including mining, pertaining to the development and growth of the country.

REPORTS OF MEETINGS.

THE MYSORE GOLD MINING CO., LIMITED.

PROPOSALS OF THE BOARD, AFTER A LONG DISCUSSION, CARRIED WITH PRACTICAL UNANIMITY—MR. JOHN TAYLOR DESCRIBES THE IMPORTANCE OF THE NEW PURCHASE, AND MR. W. H. ROWSE GIVES THE GENERAL IMPRESSIONS PRODUCED BY HIS INDIAN VISIT.

AN extraordinary general meeting was held at the Cannon Street Hotel, yesterday, when the following resolution was proposed :—

1. "That this meeting hereby approves the purchase by this company from the Goldfields of Mysore, Limited, of the exclusive mining and other rights possessed by the selling company in and over a certain block of land comprising about 268 acres on the western boundary of this company's property, extending for the entire length of the sett and for 1,500 ft. wide, for 25,000 fully-paid shares of this company, and that the directors be and they are hereby authorised and empowered to carry out and complete the said purchase accordingly."

In the event of the above being passed, notice was also given that the following resolution would be proposed :—

2. "That the capital of this company he and the same is hereby increased to 225,000*l.* by the creation and issue of 25,000 ordinary shares of 1*l.* each."

Resolution No. 2, if passed by the requisite majority, is to be submitted for confirmation at a meeting to be subsequently convened so as to constitute the same a special resolution in accordance with the Companies Act, 1862.

Sir Charles Tennant, Bart. (chairman of the company) presided over a crowded meeting.

W. H. ROWSE, Esq. (secretary), read the notice of meeting.

VIEWS OF SIR CHARLES TENNANT.

The CHAIRMAN : Gentlemen, this meeting is called for the purpose of submitting to you certain resolutions authorising an increase in the capital of the company, by the issue of 25,000 ordinary shares of 1*l.* each. These shares to form the consideration, which it is proposed to pay to the Goldfields Co., for a block of land situated to the west of our present boundary, comprising about 268 acres. This block of land extending for the entire length of the set, about 7,000 ft., and for 1,500 ft. in width, being about three times the length of the neighbouring mines. The reasons for acquiring this property were set forth in a circular which was sent out to you on the 18 inst. Before, however, enlarging upon these, I may say that your directors have always had before their minds the fact that at some period it would be necessary that they should acquire this property, but very recently circumstances have arisen which make it absolutely incumbent upon us, in the shareholders' interest, that the acquisition of this land should not be longer delayed. One is that the lode has lately taken a flatter inclination, and will therefore more quickly dip out of our property. All this will be explained to you by Mr. Taylor before the resolutions are submitted to you, and as he will do so with much more effectiveness than I can, I will leave the matter in his hands, and will refer to the second reason, to which I have already alluded. It is only within the past few weeks that an offer was made to the Goldfields Co. for the purchase of this land, the terms of which were such that the directors of that company were bound to give to them their serious consideration. They felt, however, that before negotiating with outside offers it was their duty to put themselves in communication with the board of this company. This came before us somewhat as a surprise, and we were rather taken aback at the large price which was at first talked of. Of course, we cannot shut our eyes to the fact that the Goldfields Co. possess in this block of land a very valuable property, adjoining as it does our own mines, which are yielding a profit of about 150,000*l.* a year, and from the fact that the lode from which most of these profits are realised will within a measurable distance of time, in all probability, enter their property ; the Goldfields Co., naturally, therefore, set a high value upon their land. The following letter was then read :—

A LETTER.

75, Cornhill, London, E.C., Feb. 25, 1891.

Sir,—As a shareholder in the Mysore Co., I take the liberty of giving you the most successful instance within my knowledge of the results obtained from a vertical shaft sunk in order to strike a lode which had been worked successfully on a neighbouring mine. It is that of the Tamarack Mining Co., of Michigan, which owned the land adjoining the well known Calumet and Hecla Mine, and the vertical shaft (20 by 7) was sunk 2,270 ft. in three years and four months with a view to strike the conglomerate lode of the Calumet Co. ; this was finished in June, 1885, and within a short time the Tamarack became next to the Calumet itself, the largest copper mine in Michigan.

The profits expected from this mine were $10,000,000, and the shares of $25 each are now selling at $145.

In Aug., 1885, Mr. John Daniell, the superintendent of the Tamarack, wrote to me : "The English people seem to think that Tamarack was a very speculative affair. It was backed by the most conservative Englishmen in Lake Superior, and the most conservative Americans in Boston.

Yours faithfully,
R. MEIKLE.

Sir Charles Tennant, Bart.,
Chairman of the Mysore Gold Mining Co., London.

THE BEST TERMS THAT COULD BE MADE.

After lengthened negotiations, the best terms which we were able to make are those which we ask you now to adopt. It is a question for the shareholders to decide. The board are unanimous in advising that this company should acquire the property in question, and although the price may appear to us, as buyers, high, yet under existing circumstances it would, in our opinion, be exceedingly unwise to allow this property to pass into other hands. I have no hesitation in saying that had we done so we should have deserved your censure. We should have cast a dark shadow over the future of this great property, and, in fact, we should have seriously prejudiced the permanent value of your mine. As it is, an addition of 25,000*l.* to your capital will not reduce your dividend, and it will not injure the value of your stock. I will not anticipate what we shall have the pleasure of bringing before you at our general meetiug in March. I may, however, venture to assure you that your prospects are extremely good, and that the results of 1891 will, in all probability, compare favourably with those of any previous year. Before moving the resolutions, I may state that shareholders representing about one-half of the capital of the company have expressed their approval of your directors' proposals.

THE MANAGER GIVES THE TECHNICAL FACTS.

Mr. JOHN TAYLOR (who was loudly cheered on rising) said : Gentlemen, it will be clear to you all that in order to consider fairly the very important question we have under discussion to-day we should approach it with the actual facts of the case before us, and not with such views as have been recently suggested in various quarters, and notably in the newspapers, by writers who have evidently either not studied the matter at all, or have not had it placed before them in such a manner as to enable them properly to understand it. Now, I desire to make the facts perfectly clear to you to-day, and for that purpose I had prepared the diagram on the wall, which I hope may assist me in my task. I could only wish that *all* the shareholders were here, instead of only the very considerable number I have the pleasure of seeing before me, because gentlemen write from the country on this subject who evidently have but the foggiest ideas of the real position of matters. The diagram I have here is what is technically called "a transverse section." I have shown you often at former meetings a longtitudinal section—that is, a section showing the whole of the mine, and the different workings looking at them sideways. This, however, is a transverse section, that is to say, looking northwards at the shaft along the line of the reef—the reef being at right angles to the paper. Rowse's shaft, which is the only one we need deal with to-day (because it is the deepest), is aloue shown, and the diagram gives a clear indication of what has taken place in other parts of the Field, not only on our mine but on others working near us. Rowse's shaft is indicated by the pink line, and was sunk 160 ft. perpendicularly from the surface, and was afterwards carried down about 620 ft. further upon the dip, the inclination, or the underlie, of the Champion Reef, and has now reached a depth of 780 ft. The line at the top of the drawing shows the surface, although there are slight undulations which are not worthy of notice in the present discussion. At 1,270 ft. to the west of Rowse's shaft we come to the western boundary.

HOW THE QUESTION OF PURCHASE ARISES.

You will notice from the diagram that the lode becomes flatter as it gets deeper, and taking this inclination of the deeper part of the workings, it would dip out in a further sinking of somewhat less than 1,000 ft. (about 940 ft. is, I believe, the exact measurement), and, therefore, comes the question whether it is not necessary to purchase this adjoining property. One writer tells us that he does not favour this purchase because he does not believe the boundary will be reached at 1,700 ft. Now, gentlemen, I ask you, is that a business-like way of approaching the subject ? Are we to hug ourselves with the idea that some very unlikely thing will happen just at the very time we wish it to happen. (Cheers.) This suggestion is that the veiu will take a different dip altogether, and will not go out of our property. It appears to me that that will hardly be a business way of approaching the question. (Hear, hear.) I think we must take the question as it faces us on this drawing.

CRITICS ANSWERED.

Another writer says, "past experience has shown it will take 10 years at least before the boundary will be reached." Now we all know that 10 years or 5 years ago, the rate of siuking shafts on the Colar Goldfields was lamentably slow—there is no doubt about it ; but the improved native labour and the splendid rock-drilliug and air-compressing machinery that we have, has entirely altered that state of things, so that now the rate of sinking has been fairly rapid—as rapid in fact as is carried on in any part of Europe, or anywhere else. (Cheers.) It seems to me that in looking at this question, it is not for us to take as our standard what was done 10 years ago, but what has been done within the last few months. (Cheers.) At that rate, at least, I think we shall continue to go in future months, and hence we should not speak of what obtained 10 years ago, which is altogether beside the present question. Rowse's shaft has been sunk from the surface to its present depth of 780 ft. in two years and three months. It was not commenced till Dec., 1889, and now it is down over 780 ft. The last month of which we have particulars (the reports have been published in the newspapers) is the month of Dec., and during that period

THE SHAFT WAS ACTUALLY SUNK 35 FT. 3 INS.,

or at a rate of considerably more than 400 ft. a year. At this rate the boundary (the calculation is simple) would be reached in somethiug less than 2½ years. I do not for a moment mean to imply that it will be either necessary or desirable that we should so work this portion of our Mysore property as to force down the shaft so as to reach the boundary iu 2½ years, but it is most probable and clear to us that should the veiu continue as at present, within certainly four years, or probably within 3½ years, we should reach it in the ordinary course of our operations. Therefore the gentleman who speaks of 10 years is entirely wrong in his view. (Cheers.) Auother writer is of

opinion that no independent person would purchase the property to the west, because he would have to sink a shaft 1,700 ft. to cut the vein. (Cheers.)

POSITION OF AN OUTSIDER.

Now, gentlemen, here we have a very sad misconception of the facts of the case. It is quite true that the shafts of the Mysore Company sunk upon the inclination of the reef would pass down for a distance of 1,700 ft. before reaching the boundary, but if you glance at the diagram it will show you that anyone going outside the boundary to sink a perpendicular shaft would not have to sink 1,700 ft. The boundary is here, and the measurement is less than 1,000 ft. Hence that is a wrong assumption once more, and I should like that to be clearly understood. Taking the view of the "independent person" spoken of in the circular that has been sent out, there is clearly no difficulty in the way of an "independent person," nor would it be a serious matter for him to sink this shaft 1,000 ft. He would have numbers of examples before him of mines where shafts have been carried down in this country, on the continent, in Australia and in the Northern States of America—mines that are successfully worked at double that depth, or more than 2,000 ft., and the chairman has read you a most interesting letter showing how enterprising people went outside the boundary of a rich copper mine in Lake Superior, and sank a perpendicular shaft more than 2,000 ft., to cut a vein, and are making, as he said, enormous profits by that operation. (Cheers.) The "independent person" approaching this question would also have this fact to encourage him—what we have been doing ourselves.

STRIKING FACTS.

We have taken out of one pay-shoot at Taylor's, Rowse's, and Plummer's shafts—I say we have taken out of one pay-shoot of only 500 ft. or 600 ft. long (barely 600 ft. in its longest place at the bottom) about 610,000*l.* worth of gold, and we have put in our pockets 367,000*l.* in dividends. (Loud cheers.) That would be a very encouraging statement for a promoter of an independent company to make with regard to this outside property if we do not buy it. (Hear, hear.) I mention this, because we must take such a possibility seriously into our consideration. (Hear, hear.) There are the directors of the Goldfields Co., and we must not assume that if we do not purchase this land now it is at all likely that it will lie fallow for a considerable period of years waiting our pleasure. Another question has been asked, which is perhaps a little beside the mark now, is, why is it required to buy property now, you having recently sold a large portion of your estate to the Champion Reef Co.? (Cheers.) The answer to that is very simple. In the latter case it was a question of land a mile or two away requiring a large amount of fresh capital to sink the new shafts, to put up machinery, to lay out an entirely new concern, and at a distance away, that it would render it altogether beyond the control of your officials. You would want fresh agents, and, in fact, everything *de novo*. In the case of this land to the west, however, there is no fresh operation required. The lode will be reached in the ordinary course of working your mines, in sinking the shafts and the winzes, all which matters we have now actually in hand. We have the machinery, the rock-drills, the air compressors, the mills, and all that is required upon the existing property, and, moreover, the property we acquire is entirely and easily

UNDER THE CONTROL OF THE EXISTING STAFF.

(Hear, hear.) I think, gentlemen, it must therefore be clear that it is desirable to acquire this property. Of that there can be no question, and it is equally clear that it is worth a large sum of money. The question of the actual figure it is worth has been a difficult one to arrive at, but, in the natural order of things, it has a value which is day by day increasing. We cannot get away from that fact. We are day by day cutting sticks to beat our own backs. Not only Mysore Co., but all the others along the same line are proving this fact day by day, that the Champion Reef is becoming better and better the more closely it approaches this boundary. For the last 250 ft. the shaft has been sunk for nearly the whole distance in a fine productive lode. At present the bottom of the shaft, and also the 780 ft. (the deepest level) are in a band of trap rock which is seen at the surface and known to exist. It goes parallel to the vein, and passes through it a little further to the north. It is expected that this will soon be passed through and a good lode met with on the other side. These traps dykes frequently have that effect. You have to go through them, whilst in them there is no gold. They frequently have

THE EFFECT OF ENRICHING THE LODE,

and that has been the case in our experience. The Champion Reef (Mr. Rowse has himself seen it, and I only wish I could say the same) is very rich down to the east side of the trap dyke, and Capt. Gilbert says, in his report or letter, of the 780-ft. level north, that "the character of the rock is already changing for the better," and his expectation is to find the lode on the other side rich. That is what he expects from seeing it rich on the east side. The deepest level driven upon (the 700-ft. level) has developed a rich pay-shoot upwards of 400 ft. in length. You will, of course, understand, gentlemen, that I am simply dealing with the bottom of the mine, and notably at Rowse's shaft, because that is germane to the present question, but I shall have the pleasure of telling you about the mine as a whole at the forthcoming annual meeting. The level has been driven at the 700, in a lode worth 1½ ozs., nearly over 200 ft., and is from 2 to 4 ft. wide, and worth from 1 to 3 ozs. The last week's report gives an exceedingly good statement, that there is a lode 3 ft. wide, of considerable value, and it says, "this level is continuing to open up a valuable lode showing a marked improvement over the level above." That is the condition of the bottom of the mine at the present time, and that is what we have to go down on. Another point to mention is, I think, the immense quantities of stuff we are dealing with, and the necessity we have before us to prepare for the exigencies of the large property we have to manage. I believe some statement has been published to the effect that

WE DEALT WITH UPWARDS OF 38,000 TONS OF QUARTZ LAST YEAR,

or over 3,200 tons a month, which means having taken away the enormous mass of upwards of 3,000 cubic fms. of rock. I see some gentlemen here who will be able to realise what that means, but it is an enormous body of stuff. (Hear, hear.) What are we doing? We have ordered, and are going to put up

30 HEAD MORE OF STAMPS.

Those stamps will bring the stamping capacity up to closely approaching 60,000 tons a year—55,000 to 60,000 to be certain. To keep pace with this greatly increased production, it should be perfectly clear to you that our mine must be worked faster, and that we shall have correspondingly larger profits, provided always the value of the ground continues equal to what it is, as appears most probable. (Cheers.) It is in view of this point that I feel strongly the desirability of acquiring this property, which we are approaching so rapidly. There can be no doubt about its increasing value, if this matter were deferred to another time, because it is not only we who are working and carrying down these shafts to the west, but there are other mines that are doing the same. The reports of the Ooregum Mine cannot have escaped your attention, and they will have shown you how exceedingly rich that mine is looking; and Nundydroog, you will know, is sinking in the same direction. The purchase is, of course, as the chairman said, a matter for the shareholders to decide, but, personally, I should be extremely sorry (having a considerable interest) to see it pass into the hands of other people. I have mentioned various opinions which have been expressed, and I couclude, gentlemen, by quoting what one shareholder says in a letter: "I shall support the directors who have done so well for the shareholders in the past." (Cheers.) I trust you will all feel that we have done our best to guide you aright in the past. We have taken infinite trouble in the conduct of the affairs of the company, and I think you will all freely admit that we have done our best, and I do trust that we are advising you in the same way on this occasion in a matter which I feel to be very important indeed. I beg to second the resolution. (Loud cheers.)

The CHAIRMAN: Before putting the resolution, Mr. Taylor has alluded to the returu of our friend and secretary, Mr. Rowse, and perhaps you would like to hear from him some impressions he gathered on his visit to the mine. (Hear, hear, and cheers.)

MR. ROWSE GIVES THE IMPRESSIONS PRODUCED BY HIS VISIT TO INDIA.

Mr. W. H. ROWSE (who experienced a gratifying reception) said: Mr. Chairman and gentlemeu, I am very glad indeed to respond to the request of the chairman, and to your apparent wish also, that I should make some observations upon our great mining industry iu India. My remarks will necessarily be of a general character, for I think you will agree with me that it would be unfair that I should, anticipate that which will be said with much more effectiveness by Sir Charles Tennant and Mr. Taylor at the general meeting, which will be held within the course of the next few weeks. My first words to you to-day will be those of congratulation. I congratulate you most heartily in possessing, as I believe, a mining property of immense value—of a value which at this present moment far exceeds any which could have been placed upon it at any time in the previous history of this company. Before I left London I had conceived the notion that I had a tolerably clear idea of the magnitude of your property and of its operations, but I am free to confess to you to-day, gentlemen, that the vastness of the establishment, the extent of our operatious, and the value of our property,

INFINITELY EXCEEDED MY UTMOST ANTICIPATIONS.

(Cheers.) From one end to the other the scene preseuted by your works is one of life and activity. From Schaw's shaft in the south, coming up to the tailings work, with its 18 or 20 pans struggling to deal with only about half of the tailings coming from our mill, 18 more pans completed and almost ready to go to work; from thence to your two mills, where 60 heads of stamps are pounding into powder from 130 to 140 tons of hard quartz per day; passing by your air compressing machinery which supplies the compressed air for working 20 rock-drills, now in operation in various parts of the mine; then on to Plummer's, Taylor's and Rowse's shafts all equipped, with powerful and effective pumping and winding engines (from this and the other two shafts in the mine we are extracting the quartz to which Mr. Taylor has alluded, including 300 tons of material a day) —from this point going 1,000 ft. north to Glen shaft, upon which has been erected the first Cornish pumpiug engine on the field, aud perhaps in India,; from there going to what I call the gem of the property, which has been named after your esteemed chairman, and thence 900 ft. further north, where, just before I left the mines, we fixed the site of another shaft yet to be named—in all these great operations, extending over the whole leugth of the property, we have at present employed nearly 3,000 hands, an industry of the most important and valuable character. (Cheers.) Your agents are provided with comfortable and roomy bungalows. The 120 English and Italiau miners are housed in terraces and provided with pleasant and cheerful rooms. Your 2,000 natives are located in lines of huts at a reasonable distauce from the scene of operations. So much for the surface.

NOW WITH REGARD TO THE MINES.

from which your wealth is drawn. After spending many days underground, and, carefully studying all the conditions of the workings, I repeat what I said before, that in my opinion the mines have never been in such a satisfactory condition as they are in to-day. (Loud cheers.) For the reasons already given I refrain from making any observations upon, or giving any description of the works for that will be done by Mr. Taylor, at the general meeting. I might speak to you on the interesting questiou of uative labour, of the good done by the establishment of the hospital and the Mysore Hall, upon our sanitary arrangements and the medical staff, upon the benefits which we have conferred upon the district, and I may say upon the Empire of India, but time will not permit. I cannot, however, sit down without making au allusion to the excellent work which is being done by the

MINING BOARD ESTABLISHED BY LORD RIBBLESDALE

some three or four years ago. The scope of its influence is extending

day by day, and I have no doubt it will eventually develop into an important institution, and be of the greatest benefit to all the mines working upon the field. I should like also to take this opportunity of repeating what I have said in public on several occasions in India, that the success of our company, is due in a great measure to the pluck, perseverance, and intelligence of

OUR LATE SUPERINTENDENT CAPT. PLUMMER

under the direction of the managers. (Loud cheers.) Gentlemen, you know that to follow a successful man is a difficult task. That task has been undertaken by Capt. Gilbert, and I am glad to be able to assure you that after being upon the mine for several weeks, my opinion is that he will prove fully equal to the occasion. (Cheers.)

CAPT. GILBERT.

He is a man of great honesty of purpose, full of integrity, energy and zeal, and possesses high mining knowledge and experience. As you know he was selected for this post by our managers, Messrs. John Taylor and Sons, in whose employ he had been for many years, and I have no doubt that Capt. John Gilbert, in the position in which he is now placed, will do credit to the selection which has been made. (Cheers.) I am glad to be able to assure you that he is loyally supported by Mr. Mudge, who is the chief engineer of the company, and by all the other officials. They are working in accord and have your deepest interests at heart. All that men can do will be done by them to continue and to augment the success of this property. (Cheers.) As I began so I close these short observations by saying that I congratulate you on being in possession of a property which I believe stands second to the greatest gold mining property in the world. (Loud cheers.)

MR. ROWSE CONGRATULATED.

Mr. WALTER JAMES: I congratulate Mr. Rowse upon his able speech, and upon the fitting tribute he has paid to Capt. Plummer. It will shorten the proceedings of this meeting if the chairman will tell us whether or not he intends to use his proxies representing 90,000 shares. It would be rather futile to discuss the matter if the conclusion be foregone. I saw in one paper that the board had such a voting power that they would gain "a triumphant victory." It struck me that there should be no triumphing, but that all should be on the same basis. (Hear, hear.)

A SHAREHOLDER SPEAKS "AFTER SEVEN YEARS OF PLENTY."

Mr. JOHN HARVEY: Gentlemen, I claim your indulgence whilst I make a few remarks in support of the resolution. I do so the more readily because I am not in the habit of occupying the time of Mysore shareholders by making frequent speeches. It is now seven years since I last addressed this meeting. You were then assembled not in this hall, but in a small room in the upper part of this building, to consider a suggestion about to be made by the directors. It was the turning point of our history. The directors stated that they had full confidence in the mine, but did not consider themselves justified in proceeding with the operations without the consent of the shareholders at large. I was one of those who recommended that the suggestions made by the board should be followed. Those suggestions were adopted by the meeting, and the result is to-day—the Mysore Mine, a mine which for the past year has declared a dividend of 75 per cent. (Cheers.) I have, and no doubt you have all seen the anonymous letters which have appeared in the papers against the proposals made by the board. (Laughter.) What do anonymous letters convey? What effect have they generally upon those who receive them? (Hear, hear.) Who is "Mysorean" that he should come forward and make suggestions in a *nom de plume*? "Mysorean" may be a "bull" or a "bear"—probably sometimes the one and sometimes the other. But one thing is certain, that he has not the courage of his convictions but is ashamed of them, for he does not put his name to his letter. Are these the men whom we should follow on an occasion of this kind, or are we not bound to follow the advice given by the directors and the managers who recommend us not to look to the immediate present, but to the future of this property? It will take a great deal of persuasion, I am satisfied, for "Mysorean" or any other anonymous writers, to get up and suggest the proposal made by the board should not be followed, and induce the meeting to accept what they say. I see at the board not altogether the same faces that I saw seven years ago when I last spoke. Some have died, but the majority have lived, and have conducted the operations of this mine with credit and success, and I see there also Mr. Bell Davies, on whose report this mine was originally brought to the public, and introduced to them as likely to be a permanent goldfield. With all this force of scientific advice, are we to be guided by some anonymous shareholder, who has no scientific opinion to bring forward except his own, and the value of which we do not know, because the person from whom it emanates does not choose to affix his name to it? (Hear, hear.) I have much pleasure in advising the shareholders strongly to follow the advice of the board. (Cheers.)

Genl. PHELPS: I think there is very little doubt we shall have to acquire this property; but why should not cash take the place of shares?

THE "LEADER OF THE OPPOSITION."

Mr. CARTER: With every respect for what has been said, I beg to move the rejection of the proposition, and will state my reasons as succinctly as possible. The first is, were the proposition merely to pay 25,000 shares, representing 1*l*. each, I should consider it inadvisable to trouble the company with any observations, but as 25,000 shares at the present price represent 150,000*l*., and that 150,000*l*. is immediately to rank for dividends with the 200,000*l*. belonging to the Mysore Co., I do think

THE AMOUNT OFFERED IS TOO MUCH.

(Cheers.) The 25,000 shares now proposed to be given to the Goldfields Co. would represent one-ninth part of the then capital of the company: that is, the capital would be 225,000*l*. instead of 200,000*l*., and we are going to give not only this 150,000*l*. down, but leave the Goldfields shareholders to do what they please with it. I trust to the judgment and integrity of the directors, but what I do object to is their allowing this fresh capital immediately to rank with us for dividend. The chairman says that the net profit now is about 150,000*l*. One-ninth of that which will be immediately given to the new shareholders for this purchase will represent 16,666*l*. a year. Now, gentlemen, that will be given to these shareholders of the Goldfields Co. for a property that is "believed" to possess gold. I say "believed" for not one of the directors will say more than that "it is believed." (Cheers.) We have to take all the risk, the Goldfields take all the profit. Mr. Taylor has told us (and I am very pleased to hear it for I did not know it before) that an outside company taking this piece of ground would have to go down 1,000 ft. before it could expect to strike the vein, and he said we have gone down as much as 400 ft. in a year. I think you will hardly imagine that a new company immediately setting to work would go down 400 ft. a year. But, assuming that they did, the 1,000 ft. sinking would take them two and a half years. Now we are going to pay this company from whom we are purchasing 32,000*l*. and 8,000*l*. every half-year, that is 40,000*l*. out of our mine before we reach this very piece of ground that we are about to purchase. (Cheers.) When I say that, in the best belief of the directors, it is only problematical how far that reef may carry in this piece of ground, it is for that reason I say also that the purchase price is far too much.

I CAST NO REFLECTION.

There is no reason why I should. I have the utmost confidence in our directors, but I cannot shut my eyes to the fact that the vendor is really the purchaser, and the purchaser is really the vendor. (Cheers.) The chairman of the Goldfields Co. (Lord Ribblesdale), as everyone knows, is a director, and sits at our board here to-day. A director of the Mysore Goldfields is Sir Charles Tennant, who sits at our board as our chairman, and our very worthy and respected chairman too. (Hear, hear.) As business men we cannot shut our eyes to the fact I have stated, so that it partakes to me (as I fancy it must do to most of you) that this is

RATHER IN THE NATURE OF A FRIENDLY DEAL

than a matter of business.

Mr. ROBERTSON: In whose interest?

Mr. CARTER: That I leave to you. Another fact that also weighs with me is this, and it ought to be stated. I do not use it in the slightest degree offensively, for I think our case is strong enough without using anything in the nature of an offensive remark, but everyone knows the relationships subsisting between the chairman of the one company and the chairman of the other. As well as being co-directors they are relations. (Oh, oh, and hisses.) I am quite willing to leave that out if you disapprove. I have said, I do not mention it offensively but simply for this reason, that everyone of us knows that we often do towards relatives what we do not do towards outsiders. (Laughter.) The result of this proposition upon our shares has been this, that whereas they were standing only before this proposition was made at 6*l*. 2s. 6d., they are now quoted ex-dividend at 5*l*. 10s. to 5*l*. 12s. 6d. Allowing for the dividend of 6s., our shares ought to stand now at a little over, or a very little under, 6*l*. Therefore, the difference between the little under 6*l*. and the 5*l*. 10s. quoted to-day I take it is the result of this proposition. If I look at Goldfields history I find it was floated on July 23, 1886, and, quoting from the Stock Exchange Year Book, up to the present time it has paid no dividend. At the meeting held the other day the chairman told the Goldfields shareholders what a very good bargain this was for them, and I quite agree with him. (Laughter.) He proposed, or said, that there should be distributed amongst them 22,000 out of these 25,000 shares, which would be equal to 12s. a share upon their then shares. For people who hold Goldfields shares it is indeed a good bargain, considering that they have had their money lying out without dividends since 1886. My principal reason why I think the price proposed to be paid is too much is, in a large degree, based on the way in which it is proposed to be paid. The chairman said he had 90,000 proxies. I believe that is enough to swamp us here, but I have so great a belief that this is a wrong proposition, wrong in the interests of shareholders, that, assuming there are sufficient willing to support me,

I SHALL DEMAND A POLL.

(Cheers.) I shall ask the chairman to request the solicitor to state whether it is legal for those proxies to be used. I had myself taken opinion, and am told that directors have gone beyond their powers in sending out stamped proxies. They have a right (I am instructed) to send out proxies, but they have no right to send them out stamped. I am strengthened in this legal opinion by a fact within my own knowledge. I, myself, have been for a series of years in a company that did in times past send out proxies stamped. That was rebelled against by the shareholders and after the matter had been thrashed out, those proxies were withdrawn, and are now sent out each time unstamped. If the chairman says that his course is right I shall be prepared to contest it.

PROXIES.

Mr. COLLINS: I second the rejection of the board's proposal, and am exceedingly sorry that after having been such a happy family for so many years, that this "block" should have been such a "stumbling block." (Laughter.) A large insurance company the other day in making an alteration in regard to the bonuses, asked its policy holders in general meeting to say yes or no to the proposed change, and the majority were against the change. The directors, like wise men, decided to leave the matter alone. Why cannot the directors of this company adopt the same course, which is a much fairer practice than that of sending out for proxies, which proxies are asked to be given to the directors of the company. I think that proxies are bad in principle, and that matters should be decided by shareholders in general meeting. I think it is unenglish to outvote a meeting in that way, and should prefer to see the system abolished. I only wish that some of the newspapers would enter upon a crusade against proxies.

Mr. PROBYN: The gentleman who moved this amendment seemed to think it utterly impossible that a gentleman could serve on both boards with honesty and efficiency. (No, and uproar.) Then I will say with "efficiency." (Hear, hear.) I cannot subscribe to such an opinion. You must remember the circumstances under which the Goldfields was floated. It was in 1886, and was an open secret that it would not have been floated but for the strong financial position held by the directors in the Mysore Mine. It was but natural that those gentlemen should be requested to join the board. If they had not agreed to do so I think they would have failed in a legitimate duty I am sure that no one will dispute that the directors have done their utmost, and have served their shareholders most faithfully.

PASSAGE OF ARMS BETWEEN SHAREHOLDERS.

Mr. ROBERTSON: Nobody denies it—sit down. (Laughter.)

Mr. PROBYN: Will the gentleman who says "sit down," stand up and ask me to do so. (Cheers.)

Mr. ROBERTSON (standing up): Yes, I will stand up. (Laughter.) You are going away from the amendment.

Mr. PROBYN (indignantly): If the chairman orders me to sit down, or if the majority of shareholders wish me to sit down, I will do so, but I will not do so at the instance of this gentleman (Mr. Robertson). My chief object was to say what I honestly believe about the board, and to urge you to support the resolution. (Cheers.)

VIEWS OF THE GOLDFIELDS' CHAIRMAN.

Lord RIBBLESDALE (director): There is an old distich by one of the early English poets, "Forgiveness to the injured does belong." As far as I am concerned any reflections that have been made pass lightly by me, when I am reminded that I am the son-in-law of the chairman. (Cheers.) I have nothing whatever to say about that, and I am not prepared to bandy subtleties with the mover of this amendment as to what is in the nature of a reflection, and what is in the nature of being offensive. Those things must be matters of personal opinion, but the distich of which I gave you the first line, has this for its second: "He ne'er pardons who has done the wrong." If that gentleman said anything hurtful to my feelings (which I am bound to say, comiug from such a source, he did not)—(laughter)—I hope he will forgive me as the iujured party if I say that I dissent altogether to every word which fell from his lips. I have been at some little trouble to have a comparative register prepared showing the stake held at present prices by your directors in this company as compared with what they hold in the Goldfields Co. The stake of the Mysore directors, who are also directors of the other company, is 91,000*l.* odd as against 37,000*l.* odd.

Major COTTON: Is that par value?

Lord RIBBLESDALE: It is 5¾—that is the market value.

A VOICE: Take it in shares.

Lord RIBBLESDALE: Not at all. I will take it in value.

Major COTTON: Give the number of shares.

Lord RIBBLESDALE: It might be done, but it would not suit my argument. (Laughter.) Holding that relative interest. we should naturally be exceedingly jealous to do ought that would lower the value of this company's shares. Of all people, we, who hold upwards of 91,000*l.* hard money, which we believe is money, which will be increased by the proposition now before you—I say we, of all others should be very sorry to sacrifice a stiver of that value by any proposition we might advise.

THAT JUMPS TO ANYBODY'S EYES

and intelligence I should have thought. There was a point about which Mr. Carter said was the fair value of this block, and he talked about the "belif" that there was gold and that you were only proposing to sell the block because we "believe" there is gold. The best answer to that is that we had an offer before we were approached by the Mysore board—(name.) I shall be perfectly prepared to give the name, but I will not give it here. You must take the statement from me as a man of honour. (Cheers.) We had an offer which menaced your position very much as owners of a very great property in the Mysore. The offer reached the sum which I, as the Goldfields chairman, at once said—If the Mysore Co. do not make up their minds, I will deal with these people. It is exceedingly necessary that you should clear your ideas on that point. It is not a proposition which concerns merely the shareholders of to-day or to-morrow; you have to take a long sight forward, and consider the future. You have heard from Mr. Rowse what his view of the property is, and he has just seen it, and if it goes on as we believe it will, and if its success is followed up by that of other properties, there is good reason to believe that it will work to some extent in the direction of solving the silver difficulty. You must not be guided by anonymous letters or by the opinions of persons who, apparently from their arguments, are quite incapable of taking a long view forward.

Mr. JEPPS: Mr. Carter said that 25,000 Goldfield shares were worth 150,000*l.* at the present market price. Now, it seems to me, that if it had not been for the prudence and courage of the directors those 25,000 shares would scarcely have been worth 25,000 shillings. Fortunately, or unfortunately, I am not a miner, but I know this, that whereas Mysore shares, a few years ago, could be bought for shillings, accordiug to the gentleman's own statements, he must pay now 5*l.* 10s. to get them; and there has been a dividend of 75 per cent. last year. I think all the facts justify us in giving our confidence to the board and passing this resolution unanimously.

BOARD ASKED TO ALTER THEIR PLAN.

Major COTTON: I have been asked to attend here and represent holders of a large number of shares. The whole matter lies in a very small compass. I think that the way the Mysore directors have brought this company to such a successful issue entitles them to our support in this scheme, but the only weak point seems to be as regards the price and the manner of paying it. (Cheers.) The people who ought to benefit by any issue of shares are the Mysore shareholders, and if any way could be found by which the fresh issue could be made to us at, say, 4*l.* or 5*l.* and we could pay cash to the Goldfield shareholders, it would be a much more desirable way of carrying the proposal through. (Cheers.) There is no doubt the price proposed to be paid is very large, valuing our shares at 6*l.*, and the way the market looks upon it, is that our shares have gone down, and the Goldfield shares have risen in consequence of this offer. (Cheers.) Of course, we have every confidence in the board, but still

THEY ARE HERE IN A DUAL CAPACITY,

they are both buyers and sellers, and the judges in our courts refuse always to adjudicate upon any matter in which they have any interest, and I think that is right. (Cheers.) I think if the board should see their way to meet the shareholders they would be unanimous. I most cordially support them with my vote, and the shareholders will do the same if they can see any way of making a cash payment which would be far preferable. It would be desirable if Lord Ribblesdale had informed us of the amount of the offer and the conditions.

IT IS SO.

In my experience people are very glib in offering large sums for properties, but there is generally some, *if* in the matter. (Hear, hear.) I hope, I repeat, that they will see their way to meet us in this matter, and let us have a unanimous vote.

Mr. ALFRED ROTHWELL: The first thing we have to consider is the assumption that in buying the property the reef goes into it. If that assumption be granted we have on our property 1,700 ft. of it. (Laughter.) We have worked on it 800 ft.—377 down to the end of 1889. (Laughter.) We began at the 173 ft. and at the 550 ft. had in reserve above that level 51,111 tons, and have taken out 74,968 tons. We have since worked 38,000 tons, and there remains above the 550-ft. level about 13,000 tons. If that reef continues to be equally productive for the remaining 1,700 ft. we have 493,500 tons, which at the rate we are working will carry us on for more than 10 years.

The CHAIRMAN: Are you an engineer?

Mr. ROTHWELL: I am not. But I hope I know something about it.

The CHAIRMAN: You have had the opinion of our technical advisers?

Mr. ROTHWELL: The only people who can successfully work that property are the Mysore shareholders—if the lode exist in it. Our workings are approaching it, and ventilation will be provided. An outsider must sink a shaft 1,000 ft. Mr. Rowse let fall an observation which confirms my views. He says

AT 750 FT. DEEP IT IS VERY HOT,

and lower still your temperature will be more like 100 degrees than anything else. Therefore, if you get the property it will be very difficult to work. If you let other people work it they will drain your mine. which will be a very good thing.

Mr. JOHN TAYLOR: How can we work our mills without water. (Cheers.)

Mr. ROTHWELL: There will be water somewhere else. (Laughter and great uproar, in the midst of which the speaker sat down.)

Mr. JOHN TAYLOR: It is a curious thing that the last speaker has used the

STRONGEST ARGUMENT IN FAVOUR OF THIS PURCHASE

that has been employed to-day. It is not for me to put forward arguments. I have simply had to deal with the facts. The last speaker has, however, raised a point which is very serious. Suppose what he has iudicated should occur, and that somebody else should buy this property and drain it, and take the water from under your feet. Why, the result would be that you could not work a single stamp. (Hear, hear.)

Mr. COLLINS: It is not the purchase of the property we object to, but the way you propose to pay for it.

A SHAREHOLDER: I think the sense of the meeting is entirely in favour of the purchase, though the remarks of Major Cotton are deserving of consideration as to whether the present shareholders should not themselves raise the money by an allotment of the shares at the high premium named. I think those shares will be readily taken, and I would move the adjournment of the meeting until another day.

CHAIRMAN'S REPLY.

The CHAIRMAN: Perhaps you will allow me to answer Major Cotton. We took the opinion of some of the largest shareholders in connection with that matter, and they all agreed that on the whole it would be unwise to issue shares at 5*l.* or 4*l.*, which is the lowest price at which we could have issued them to carry out our arrangement with the Goldfields. If we had doue so we should have tended to reduce materially the value of the shares iu the market, whereas by giving shares to the Goldfields Company that difficulty does not arise. I also consulted a large share broker, aud he said, "If you issue shares at 5*l.* premium the tendency will be to lower the market to that price, whereas if you issue them as you propose that tendency will not exist;" and neither do I think it will. Even according to the arguments used the shares have only fallen 3s. 6d. to 4s. If you throw out this proposition that fall is more likely to be 2*l.* I believe I am the largest shareholder, and am a larger one to-day than ever. I believe you will prejudice permaneutly the value of this property if you reject our proposal. As to the price, I say it is moderate, and am very glad that Goldfields shareholders should get the benefit, more especially because many of you are shareholders in that company. We got the original property from them on very moderate terms. and I do not see why we should not pay them properly for the property they are now going to sell.

A REPUDIATION.

I must demur to the statement, that because we are directors of both companies we cannot deal fairly. I repudiate that with all the energy with which I am capable. (Cheers.) We have acted in a thoroughly straightforward, honourable, and gentlemanly manner in every way iu conducting these negotiations. (Cheers.) I think Major Cottou's idea worth considering, but we did consider it, and the result has beeu the proposal we now submit. If anyone suffers by the issue of these shares I shall suffer more than anyone present. As to proxies, the cost of them has been debited to my account, so that will relieve Mr. Carter's mind to that extent. As to Mr. James's statement, that the directors have boasted that they would gain a "triumphant victory——"

Mr. JAMES: I said it was the statement of a newspaper.

The CHAIRMAN: We repudiate any such idea, as we want to do the best for all, but we do not think it fair that absent shareholders should not have an opportunity of expressing their opinions as well as those present, and the only way in which that can be done is by the issue of proxies which is usual on all such occasions. The number sending proxies that have expressed an adverse view is infinitesimal. We have 2,000 shareholders and have endeavoured fairly and accurately to gain their views.

AMENDMENT REJECTED AND RESOLUTION CARRIED ALL BUT UNANIMOUSLY.

I will now put the amendment; those in favour—those against; it is lost by a large majority.

The CHAIRMAN: Those iu favour of the board's proposition—those against; carried by so large a majority that I cannot count the hands. (Loud cheers.) About half a dozen hands are raised against it.

The resolution was then put as a substantive motion, and was declared carried.

Capt. MCTAGGART: I now move the second resolution. (See above.)

Lord RIBBLESDALE seconded the motion, which was carried.

Mr. CARTER: I believe I have a right to demand a poll?

The CHAIRMAN: You cannot do it.

Mr. ARCHIBALD SMYTH: I beg to propose a cordial vote of thanks to the chairman and directors.

Mr. H. O. WHITE: I second the motion.

Carried unanimously.

The meeting then closed.

LATEST REPORT.

Feb. 4.—Mining operations for the month ending Jan. 31:—The progress during the month with the rock-drills in the various bargains has been very satisfactory. We have commenced to sink Rowse's shaft below the 780 level. The 780 north of Rowse's shaft has been driven 49 ft. 9 ins. This level is still in the trap dyke, but I think it will soon meet with quartz, as the character of the rock is changing for the better. The 700 north of Rowse's shaft has been driven 51 ft. 5 ins.; total distance, 245 ft. 9 ins.; the lode is 3 ft. wide, and assaying 3 ozs. 5 dwts. 8 grs. The 620 north of Rowse's shaft has been driven 3 ft. 6 ins.; total distance, 275 ft. This level is in unproductive schist, and has been suspended. The 550 south of incline shaft has been driven on the west lode; the lode is 2 ft. wide, and estimated to be worth 10 dwts. The 466 cross-cut north-west of Rowse's shaft has been driven 60 ft.; total distance, 369 ft. The rock is letting out a little water, and is more favourable for driving. The 236 north of Rowse's shaft has been driven 5 ft. 9 ins. on No. 3 fold; total distance, 28 ft.; the lode is 3 ft. wide, and assaying 1 dwt. Glen's shaft: The 250 north of shaft has been driven 42 ft. The lode is yielding occasional stones of quartz, but very undefined in appearance. After this level is advanced about 20 ft. further, if there is no improvement in the lode, I think it will be better to cross-cut east a little way to see if it is on the main part of the lode. Schaw's shaft: The 450 north of shaft has been driven 12 ft. 3 ins.; total distance, 122 ft. 6 ins.; the lode is 9 ins. wide, and yielding a little quartz, but not sufficient to value. A cross-cut has also been driven east from this end 55 ft. 3 ins., but without discovering anything to notice. The 450 south of shaft has been driven 7 ft. 9 ins.; total distance, 54 ft.; the lode is 1 ft. wide, and assaying 1 dwt. The 320 north of shaft has been driven 11 ft.; total distance, 137 ft. 9 ins.; the lode is 1 ft. wide, and assaying 2 dwts. The 320 south of shaft has been driven 11 ft. 6 ins.; total distance, 178 ft.; the lode is 6 ins. wide, and assaying 3 dwts. 6 grs. Tennant's shaft: The 360 north of shaft has been driven 63 ft. 9 ins.; total distance, 249 ft.; the lode is very small, but carrying a very regular footwall. Judging from the level above a good lode of quartz should be met with in this level very soon. The 290 south of shaft has been driven 62 ft.; total distance, 200 ft. 6 ins.; the lode altogether is about 1 ft. 6 ins. wide, composed of schist and small branches of quartz. The 290 north of shaft has been driven 70 ft. 6 ins.; total distance, 533 ft.; the lode is 1 ft. 6 ins. wide, and assaying 15 dwts. 12 grs.; the lode is pinched up a little, but I think it is only temporary. The 180 north of Tennant's has been driven 63 ft. 6 ins.; total distance, 687 ft. 6 ins.; the lode is ft. wide, carrying good walls and looking promising for an early improvement. Stopes: The lode in stope in back of the 770 north of incline shaft is 2 ft. wide, and assaying 2 ozs. 5 dwts. 17 grs. The lode in stope in back of the 700 south of Rowse's shaft is 2 ft. wide, and assaying 13 dwts. 1 gr. The lode in stope in back of the 700 south of incline shaft on the wide lode is 5 ft. wide, and assaying 2 ozs. 0 dwts. 1 gr. The lode in stope in back of the 700 north of Rowse's shaft on the fold is 3 ft. wide, and assaying 1 oz. 8 dwts. 1 gr. The lode in No. 1 stope in back of the 620 south of cross-cut from incline shaft is 3 ft. wide, and assaying 1 oz. 6 dwts. 3 grs. The lode in No. 1 stope in back of the 620 north of Rowse's shaft is 1 ft. 3 ins. wide, and estimated to be worth 1 oz. The lode in No. 2 stope in back of this level north of shaft is 1 ft. 6 ins. wide, and assaying 3 ozs. 5 dwts. 1 gr. The lode in stope in back of the 600 south of Rowse's shaft is 4 ft. wide, and estimated to be worth 1 oz. 10 dwts. The lode in stope in back of the 550 north of Rowse's is 5 ft. wide, and assaying 1 oz. 7 dwts. 2 grs. The lode in stope in bottom of this level is 1 ft. wide, and assaying 2 ozs. 7 dwts. 19 grs. The lode in stope in back of the 550 south of Rowse's shaft and north of winze is 3 ft. wide, and estimated to be worth 1 oz. The lode in stope in bottom of the 550 on wide lode is 3½ ft. wide, and assaying 13 dwts. 1 gr. The lode in stope in back of the 550 north of cross-cut from incline shaft is 2 ft. 6 ins. wide, and assaying 1 oz. 5 dwts. 14 grs. The lode in stope in bottom of the 466 ft. north of Rowse's shaft is 3 ft. wide, and estimated to be worth 2 ozs. The lode in stope in back of the 400 north of Rowse's shaft is 3 ft. wide, and assaying 1 oz. 19 dwts. 11 grs. The lode in stope in back of the 400 south of Taylor's shaft is 4 ft. wide, and estimated to be worth 5 dwts. The lode in stope in back of the 400 south of Plummer's is 3 ft. wide, and estimated to be worth 8 dwts. The lode in back of the 296 north of Plummer's is 1 ft. 6 ins. wide, and assaying 1 oz. 19 dwts. 4 grs. Rising: The rise in back of the 700 north of Rowse's has been put up 35 ft.; total distance 62 ft., and communicated with the 620 level. There was a very good lode in the rise for all the distance. The rise in back of the 620 north of shaft has been put up 25 ft. 6 ins.; the lode is 3 ft. wide, and assaying 1 oz. 8 dwts. The rise in back of the 290 north of Tennant's shaft has been put up 24 ft.; the lode is 4 ft. wide, and assaying 1 oz. 0 dwts. 10 grs. No. 1 rise in back of the 180 north of shaft has been put up 16 ft. 8 ins.; the lode is 4 ft. wide, and assaying 2 ozs. 5 dwts. 6 grs. No. 2 rise in back of this level has been put up 10 ft. 10 ins.; the lode is 3 ft. wide, and assaying 1 oz. 16 dwts. 11 grs. Sinking: Glen's shaft has been sunk 5 ft. 7 ins.; total distance, 255 ft. 8 ins. We have suspended sinking for a little while, and are now driving the 250 north of shaft to try to intersect the run of the quartz discovered in the 150 cross-cut east of this shaft. The winze in the bottom of the 236 south of Plummer's shaft has been sunk 12 ft. 1 in.; the lode is poor and disordered. The winze in the bottom of the 320 south of Schaw's shaft has been sunk 9 ft. 3 ins.; the lode is 9 ins. wide, yielding a little quartz, but not enough to value. Mill samples. New mill, 2 ozs. 12 dwts. 6 grs. Old mill, 1 oz. 5 dwts. 2 grs.—J. GILBERT.

PAHANG EXPLORATION AND DEVELOPMENT CO., LIMITED.

AFTER A LONG DELAY BUSINESS HAS BEGUN — EXTENSIVE ORDERS FOR TIMBER SAID TO BE COMING IN—A BOUNDARY DISPUTE.

THE annual general meeting of the shareholders in the above-named company was held at the City Terminus Hotel yesterday.

Edward Hart, Esq. (chairman of the company) presided.

Mr. W. G. E. HERVEY (secretary) read the notice convening the meeting, and the report was taken as read.

THE COMPANY'S PROPERTY.

The CHAIRMAN: Gentlemen, you have had the report before you for some time, together with the accounts, and I think it right to remind you that the company was registered in Feb. 1889, and that your first (statutory) meeting was held in June of that year; also that the property which belongs to you is represented by the contents of three concessions, one dealing particularly with timber in the Pahang Peninsula, the other two being concessions of tin, silver, gold, and other materials. These concessions were assigned to the company on June 14, 1889, and until that date we had no opportunity of developing or dealing with the property in any shape or way. We made an arrangement with Mr. Knight, the largest shareholder in the company at the present time, holding between 20,000 and 30,000 shares, to act as our managing director, it being through him that the property was introduced to London. Mr. Knight pressed very strongly upon us that he should be employed to manage the affairs of the company. We made an agreement with him for a term of two years which expires on the 31st March next.

SHARES LARGELY OVER-SUBSCRIBED.

We received subscriptions for over 50 per cent. more shares than we had to allot, but we came to the conclusion, looking at the vast interests which this company represented in the East, that it would be wise not to allot the whole of those shares. We therefore kept back 17,000 shares unallotted. We have found up to the present time the capital allotted sufficient for all our purposes. You may recollect that we had to pay under the terms of the sale, with reference to which you had full particulars in the original prospectus, a sum of 130,000*l.* for the purchase of the three concessions. We have received altogether, after allotting to the vendor 50,000 shares, part of the arrangement with him, and paying him 80,000*l.*, the sum of 73,000*l.* odd, which we have to account to you for. The expenditure on capital account, independent of the profit on trading, has been 11,000*l.*; preliminary expenses, 1,077*l.*; prospecting, 2,293*l.*; balance of receipts and expenditure, 6,300*l.*; and commission on timber, 15,000*l.* The amount unexpended up to Oct. 31 last was 62,000*l.*, and that consisted of debtors, 3,000*l.*; investments in East India Three per Cent. and Consols, 29,700*l.*; cash at bankers and in hand, 6,800*l.*; stock of timber and stores, 2,000*l.*; buildings, plants and machinery, 19,700*l.*; and the cost of office furniture. We were urged in our very early days to employ at considerable expense experts of great experience to deal with the question of minerals, but I am glad to say we determined to go cautiously to work, and we confined ourselves principally at first to the erection of suitable plant and machinery to enable us to deal with the timber which occupies territory covering over

THREE MILLION ACRES OF LAND.

Over the greater portion of that land we had the monopoly. In a circular sent you some time ago, it was stated emphatically that a large quantity of timber had been cut and brought down to the mills ready to be dealt with. The mills were erected in April, 1890, and we hoped that we would have been able soon after that to convert that timber into a fit condition for the London market, but we have been disappointed in this from a variety of causes. When we had the mills erected it was found necessary that we should saw and utilise hundreds of tons of timber for building houses and huts for the staff and we have used in that way over 2,000 tons. There is another point upon which experience has corrected us. The amount of hard timber fit for market contained in the logs is only about 30 or 40 per cent.; so that supposing you had 3,000 logs of timber lying there to be converted, the net result would be about 1,000 logs of wood suitable for furniture or shipbuilding purposes. Then as soon as the mills were erected a large local demand for timber set in, which could be supplied at a much greater profit to the company, there being no freight to pay. At the statutory meeting we told you we had orders in London amounting to about 30,000*l.*; subsequently we informed you that we had orders in hand amounting to 70,000*l.*; and at the present moment the orders we have in England amount to between 180,000*l.* and 200,000*l.* The whole of the timber sent to this country has turned out satisfactorily, which augurs well for our future trade. The accounts in your hands show a

PROFIT UPON TIMBER OF 1,600*l.*

Of that the amount in Singapore and Pahang was 1,100*l.* When you recollect that the mills were erected in April and the accounts closed, as far as Singapore and Qualla are concerned, in Sept., you will see that the period was not long enough to enable us to receive shipments in this country. We have, however, since then, principally in Jan. and Feb. of this year, received many shipments of timber, which have realised a profit to the company of just upon 2,000*l.* The business may now be considered well established and developing satisfactorily, and in the directors' opinion it is likely to bring about at the termination of the next financial year a very satisfactory result. The Government have now taken up seriously the question of railway communication, and will assist in any reasonable way those who are willing to develope the country in that respect. It is only the want of a large reveuue which stops the Government itself from doing the work, but whenever it comes about it will increase very considerably the value of your property. The agreement we entered into with contractors here applying for concessions has fallen through by lapse of time; therefore you have saved your 20,000*l.*, and a few years hence you will probably have the advantage of the railway without paying anything towards its construction.

MINERALS.

We obtained the services of Mr. de la Croix, a gentleman well experienced in prospecting and exploring, at a cost to the company of 1,000*l.*, to examine and ascertain whether our property was really valuable in minerals, because then we could take steps to float sub-companies to work it. I should tell you that Pahang, unlike many places near home, has very rough boundaries, and difficulties frequently arise from this cause. A neighbouring State claimed a right over Pasoh, which, according to our concession, granted by the Sultan of Pahaug, belonged to this company. The matter was referred to arbitration and decided adversely to ourselves. We thereupon made a claim upon the Government for compensation, and being informed by Mr. de la Croix that gold existed there, and learning from other reliable sources that it was one of the most valuable gold districts of the Malay Peninsula, we negotiated with the view of repurchasing it. A few days ago we heard that the purchase had been effected, but the position is that it has cost you 2,000*l.* As regards our claim for compensation—we are promised a free grant of land, provided we place a certain number of steamers upon the river. The river forms at present the only means of communication.

PROSPECTING.

We have erected some very large "go-downs," store-houses, &c., and we are carrying on a trade with the natives, from which we expect considerable profit in the coming year. We have bought two steam launches—a small and a large one; and we have eight large river boats attending all our stations. We have also built a pier 250 ft. long, capable of accommodating two large steamers at the same time. We are considering the question of planting, but in this matter we are going carefully to work. Sir Frederick Weld is going over there, and will enquire as to the suitability of certain soils for the growth of certain things. For various reasons we became dissatisfied with Mr. Knight's management. I believe, however, that he did what he thought best, but we came to the conclusion that the timber had not been looked after in the way it should have been. We have asked Sir F. Weld when there to go into every detail connected with the property, and he has full powers to take such steps as he may think necessary in the interests of the company with regard to the management. The chairman concluded by moving the adoptiou of the report and accounts.

Mr. SIMS (director) seconded the motiou.

CRITICISM.

Mr. WILKINSON said that the shareholders had various opinions as to the past management, and he did not wish to hear anything more about it; but as regarded the future, he was glad to hear that the property was proved to contain timber of good quality, and that there was a market for it. He objected to the item in the accounts of 6,029*l.* for salaries, directors' and committee's fees, and thought the amounts should be given separately.

The CHAIRMAN said the directors' fees were 3,380*l.*, but the item would be split up in future.

After some further discussion, the report and accounts were adopted.

The retiring directors, Messrs. Edward Hart and Sir F. Weld, were re-elected, and Mr. Geo. T. Inman elected to a seat on the board.

Upon the question of appointing an auditor some objection was taken to Mr. W. Oscar Tibbetts, on the ground of his being the chairman's partner, but he was ultimately re-appointed at a remuneration of 50 guineas.

A vote of thanks to the chairman concluded the proceedings.

THE MIDLAND COAL, COKE AND IRON CO., LIMITED.

THE EXPLORATION WORKS OF THE COMPANY HAVE RESULTED IN FURTHER DISCOVERIES OF IRONSTONE.

THE ordinary general meeting of this company was held at Winchester House, Old Broad Street, E.C., on Thursday, Feb. 19, 1891, to receive the report of the directors, to authorise the payment of a dividend, to elect auditors, and for other business.

Mr. J. T. Smith presided.

Mr. CYRIL ROSE (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN reviewed the condition of the iron trade in the past year, and explained that the directors' anticipations from profit in that direction had been disappointed. As he explained at the statutory meeting of the company, they entered upon the Apedale Colliery under some considerable difficulty, and he regretted that those remarks had been

MISCONSTRUED IN STAFFORDSHIRE,

and he assured those gentlemen who had felt hurt in the matter that he had no such intention, and he apologised if what he had said had had the effect of annoying them. At this colliery there had been a considerable expenditure in its opening up, which had been pursued in the most vigorous manner. They wanted to raise enough from this colliery to pay the debenture interest, and leave a balance for the ordinary shareholders. The work at the Podmore Colliery had also been pushed forward without cessation. They had improved the ventilation of the colliery, and had erected a very large fan, which they had only got into active operation within the past two or three months. There was no better ventilated colliery in the world. Prior to the new ventilation plant the collieries were so hot that they found difficulty in getting an adequate number of men, but now the pits were cool and healthy they had become more popular, aud they could get all the men they required.

FRESH EXPLORATIONS

had discovered two new seams of ironstone, good in quantity and quality, which they would be able to get out at a cheap rate, and which would prove very valuable. They were also developing the iron mines on the Chesteron Estate. The plant was in a good condition. In the past year they had raised 602,000 tons of coal and 30,000 tons of ironstone. They had made 11,490 tons of pig iron, and they had opened out a very large quantity of fresh coal. The prospects were encouraging. He moved the adoption of the report, which was seconded by Mr. CRAIG, and carried, and a divideud at the rate of 5 per cent. per annum declared.

The other formal business having been transacted a vote of thanks to the chairman closed the meeting.

THE LORD MAYOR AND THE CITY OF LONDON ELECTRIC LIGHTING CO.—"A Friend in the City" wrote to the *Pall Mall Gazette* on Monday thus—"The Lord Mayor made a mistake when he replied in unnecessarily harsh terms to General Booth. But that was only a question of taste which reflected upon himself personally. The same, however, cannot be said of "the Right Honourable Joseph Savory, Lord Mayor," appearing as chairman of the City of Londou Electric Lighting Co. now advertised and recommeuded to the public ou the ground that it will secure the electric lighting for the whole of the City. The contract is made with the Commissioners of Sewers, who represent the ratepayers. The Lord Mayor is chairman of this body also. Now, I should like to know whether, in the event of any difficulties arising, he will hold by his public trust or by the company in which he has a money risk. It was thought that the late Lord Mayor, Sir Henry Isaacs, had too much to do with companies; but no one can justly say that there was in his year any impropriety half so glaring as this. Knowing the unblemished reputation of Lord Mayor Savory, I venture to suggest that he should at once withdraw from a position which he has accepted apparently without realising that his private interests would probably clash with his public duty. When a member of Parliament accepts a Government contract, he, *ipso facto*, vacates his office. Let the Lord Mayor ponder this high priuciple. Let him also remember his promise to the Livery on the day of his election that he would have nothing to do with companies during his mayoralty."—[Special attention was devoted to this subject in our issue of Feb. 7.—ED. *M. W.*]

SUPPLEMENT.

The Mining World AND ENGINEERING RECORD.

ESTABLISHED 1871.] SATURDAY, FEBRUARY 28, 1891. [ESTABLISHED 1871.

REPORTS OF MEETINGS.

THE PERSEVERANCE GOLD MINING COMPANY, LIMITED.

A COMPANY THAT INTENDS TO JUSTIFY ITS NAME BY ANOTHER RE-CONSTRUCTION — IT STARTS WITH EXCELLENT PROSPECTS AND EVERY INDICATION OF SUCCESS—SHAREHOLDERS PRACTICALLY UNANIMOUS.

THE third ordinary general meeting was held at the Cannon Street Hotel, on Thursday, "to receive the report and accounts of the directors, and to elect a director and auditors."

Notice was also given as follows, that "at the close of the ordinary meeting an extraordinary general meeting of the company will be held at the same place, for the purpose of considering, and, if thought proper, resolving on the re-construction of the company under section 161 of the Companies Acts, 1862, by sale of the company's undertaking and property for which purpose the subjoined resolutions will be proposed. The terms to be embodied in the agreement for sale to the new company, are the transfer to such new company of the property of the present company of every kind; the adoption by the new company of all the present company's debts and liabilities; the payment by the new company of all the expenses connected with the winding up and transfer, and the allotment to the shareholders in the present company of a 1*l.* share in the new company for every 1*l.* share held in the present company, such shares to be credited as paid to the extent of 18s. per share. The agreement will also contain the necessary details on these matters and to satisfy the requirements of the Act. The name of the new company is to be the Perseverance Gold Co., Limited."

Mr. H. Lamb (chairman of the company) presided.

Mr. G. P. PULLING (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, as you have received as read the directors' report, and as an extraordinary special meeting is to follow to discuss the present position of the company with regard to re-construction or liquidation, I think the wisest course to pursue is to defer any remarks I have to make till then, when we can fully discuss the proposed scheme of re-construction, but any question not connected with re-construction I shall be pleased to answer now. I rise now to propose, "That the report and accounts, as circulated, be received and passed."

CROPS.

A SHAREHOLDER: Has anything been done with regard to the cinchona?

The CHAIRMAN: We have not yet received the accounts from the estates, but there is very little hope of profit. The coffee has died out, and we want as much as possible to concentrate our money and attention upon mining.

A SHAREHOLDER: In the last annual report the directors stated: "the coffee and cinchona now under hand when sold will more than cover the cost of upkeeping." Has that prediction been realised? I should think not, seeing that the sale of crops has yielded 110*l.* and the upkeep costs 242*l.*

The SECRETARY: May I say that, as a matter of account, a portion of the manager's salary and the rent of the estate is placed to the debit of these crops. The actual cost of the upkeep did not amount to the sum realised for it. The auditors want us to divide management expenses, and that is what is being done in reference to this expenditure. If you come to the office I can show you the actual amount spent on both coffee and cinchona.

The CHAIRMAN: Coffee has become quite subsidiary owing to its failure; and owing to the low price of cinchona, a similar remark applies to that. In fact we are about to uproot it, because it is not remunerative, and it occupies the manager's attention too much. There is also canker on the estates in the Wynaad, which we are fearful may attack our trees, so we propose realising their value as they stand. The all-important point, however, is mining, and to that we had better direct our attention.

A SHAREHOLDER: The last report said that if uprooted, even at the present low quotations, the trees were worth 5,000*l.*

The CHAIRMAN: We think they will realise that after all expenses of uprooting and shipping home have been paid, but then we raised the debentures on that security.

Mr. JAMES: I have always looked upon cultivation as a bagatelle, and have advised its abandonment. We must depend for our financial salvation upon gold.

The report was unanimously adopted.

A FRIEND IN NEED.

The CHAIRMAN: I propose the re-election of Capt. Lemmon, my zealous colleague, who joined me at a time when the other directors dropped out, and when it was very difficult to get anyone to act with me.

Mr. JAMES seconded the motion, and expressed his sympathy with the directors in the arduous and invidious task they had had, and also on the fact that their services were wholly unpaid. (Hear, hear.)

The motion was carried unanimously, and Capt. LEMMON promised to do his best to forward the interests of the company in the future as he had done in the past.

Mr. POWELL proposed the re-election of the auditors, Messrs. Monkhouse, Goddard and Co., at the same remuneration as they had formerly received, namely, 10 guineas.

Col. FITZGERALD seconded the motion, which was carried, and this concluded the business of the ordinary meeting.

EXTRAORDINARY SPECIAL MEETING.

The SECRETARY read the notice of the statutory meeting as above.

NEED OF RE-CONSTRUCTION.

The CHAIRMAN said: Gentlemen, at the general meeting, in June last year, the shareholders were informed that further funds would be needed for continuing mining operations, if the board should consider that the mine prospects justified them in recommending the raising of fresh funds by re-constructing the company. We have now arrived at the end of the resources placed at our disposal, and as the advice received from our manager, and from mining experts, who have reported on the mine, give grounds for the expectation that by further tunnelling at our present lowest level into the Shulla Malli Mountain (on which our property is situated), we shall before long intersect a lode of a permanent and paying character, and taking also into consideration the fact that great success has attended persistence in driving levels on adjoining mining properties through and beyond the broken ground which overlies the solid country rock on the hill sides of the Wynaad, your directors now submit resolutions for the raising of further capital by a re-construction of the present company, should sufficient new capital be subscribed to enable the board to take advantage of the opportunity which now offers for acquiring a joint interest in the Mammoth portion of the Skull reef, which is now yielding such rich ore, as is described in recent reports from the adjacent Alpha Mine, the latest of which reports was published in yesterday's *Financier*. The board propose to enter into an agreement with the Mammoth Syndicate Company, the outline of which the secretary will read to you, under which agreement Perseverance will acquire a half interest in a rich reef, which it is believed strikes through more than a mile of the Mammoth land, and which can be attacked at about 1,100 ft. below the Alpha level, which is now being worked by the Indian Gold Mine Company, with such hopeful results as to richness and permanency.

WHERE THE REEF MAY BECOME VALUABLE.

I may here tell you that the latest news we have received is that when the broken or disturbed surface ground is passed through in the Wynaad the solid country rock and reefs very much resemble the Mysore settled country and the quartz found in depth there. The Skull reef can be easily worked on the Mammoth estate, and a careful survey shows that ample water power for working at least 80 stamps throughout the year, and many more during the south-west monsoon, or rainy season. There is also an unlimited supply of wood for timbering on the estate. It will be evident to shareholders that the proposed conditions of agreement for working what promises to be a very extensive and valuable mine are most favourable to this company. They are based on the facts that (1st) The two properties are adjacent, the Mammoth properties bounding our estate on three lodes. (2nd) Access to Mammoth is by the roadways through Perseverance. (3rd) In consequence of a loan of 10,000*l.* some years ago (since repaid) this company was to have the refusal of purchasing the Mammoth property. Having now given you, gentlemen, the fullest particulars as to the board's proposals, we shall be glad to hear and to reply to any questions or suggestions you may have to offer. He concluded by proposing the three resolutions as follows:—(1.) "That the Perseverance Gold Mining Co., Limited, be wound up voluntarily, and that Mr. Henry Lamb and Mr. George Perriam Pulling be and they are hereby appointed liquidators for the purposes of such winding up." (2.) "That the draft agreement submitted to this meeting, and expressed to be made between the Perseverance Gold Mining Co., Limited, and its liquidators of the one part, and the Perseverance Gold Co., Limited, of the other part, be and the same is hereby approved; and that the said liquidators be and they are hereby authorised to enter into an agreement with the said Perseverance Gold Co., Limited, in the terms of the said draft with any modifications they may deem expedient, and to carry the same into effect." (3.) "That in the event of the re-construction not being carried into effect as above, the winding-up of the Perseverance Gold Mining Co., Limited, be carried on in the ordinary course." (Cheers.)

Capt. LEMMON seconded the motion.

POSITION FURTHER EXPLAINED.

Mr. POWELL (solicitor): You are asked in these resolutions to approve of an agreement which you have not seen, but it is practically

the usual agreement adopted on re-construction. It is an arrangement whereby the original company sells to the new company, and the consideration is one share in the new company for every share in the old company, such new share to be credited with 18s. paid. It will be necessary that 6d. per share be paid, for which shareholders will be liable on application and allotment. As regards the other 1s. 6d., the directors have not made any definite arrangement, but it is their wish to make the calls as easy as possible, and not more than 6d. at a time. (Hear, hear.) I have also taken powers in the agreement by which, if the directors are of opinion that an insufficient number of shareholders come into the new company, they will be able to receive this agreement, and to fall back upon winding up in the usual way, so as not to come again to you and incur fresh expense. You have two strings to your bow and nobody can possibly be injured by passing these resolutions. The directors will certainly not carry out the scheme of re-construction unless they have every idea that it will be successful, and the means to do it, which will be soon ascertained when the answers to their circular are received. If they feel there is no probability of success, they will revert to winding up in the usual way.

REASONS WHY SHAREHOLDERS SHOULD JOIN THE NEW COMPANY.

Supposing a shareholder should say—Why should I subscribe? the answer is, You have first of all the chance of making a great success in the new company if funds are subscribed; but, on the other hand, if you decline, nothing will probably be realised from the winding up. You have conscientious directors, against whom I do not know that anything can be said—(cheers)—who are determined not to risk more money unless there is the strongest probability of success. The uprooting of the cinchona has commenced, and will pay the debentures and the liquidation expenses. From the few meetings of the board I have attended, I have been led to form a high opinion of

THE ABLE MANAGER, MR. ADAMS,

who gives a good deal of time and labour to his work, and I feel sure there is a great probability of success, supposing the necessary funds are forthcoming. We do not require much, but I would remind you that we have never had any fresh funds in this company, as the re-construction three years ago did not put one 6d. into our coffers. It was simply to get us out of what the Almada decision about issuing shares at a discount had made a very awkward position, and so as to prevent any possibility of the shareholders being called upon for a balance of 15s. a share. The only money the company has raised has been this sum of debentures, but now the directors clearly tell you that it is either a question of liquidation or re-construction. I am ready to read the whole of the agreement, but have given you its main features. I am a very large shareholder, and feel intensely anxious about this business. If the directors wanted a spoke in their wheels—unless I thought this would yet be a successful company, I should drag as heavy weight upon them as possible. (Cheers.)

A SHAREHOLDER WHO DOES NOT UNDERSTAND THE ACCOUNTS.

A SHAREHOLDER: The company has been working at a loss of 3,000*l.* a year, and there is a debit of 6,500*l.* You expect to get 16,000*l.*, and, therefore, 6,000*l.* will go against its debit balance.

The SECRETARY: You misapprehend the balance-sheet altogether. That 6,000*l.* is not money owing, but money expended on capital account in opening up the mine.

The SHAREHOLDER: Is there anything owing by the company?

The SECRETARY: Only the debentures, which we believe will be covered by the value of the cinchona.

The SHAREHOLDER: I would rather put my money into a new concern with 1*l.* shares than into this one with 2s. shares. I must propose an amendment for re-construction. We have tried hard to make this a success, and the next best thing to winding-up would be to sell it to a neighbouring company. (No, no.)

Mr. URWICK: What are the terms with the Mammoth Co.?

AGREEMENT EXPLAINED.

Mr. H. O. WHITE (director): We give it 500*l.* in 12 months. The debt owing to us by that company is looked upon as written off. Apart from that, all expenditure on work done in the Mammoth will be a first charge on the gold obtained, and for the payment of expenses in a proper proportion for management charges on both sides. Then the profits from the yield of gold will be equally divided between the two companies. It is estimated that the driving of the lode will take about 18 months or two years. The agreement is subject to alteration by the Perseverance Company alone every three years, and they also alone have the option of terminating it after three years.

Mr. URWICK: I should like to reply to the shareholder, who said he would prefer a share of 1*l.* in a new company, with all its troubles to come, than a share of 2s. in this company, which has seen and surmounted (let us hope) the most of them. I would rather go into a new company with 18s. credited as paid and 2s. to pay than into a company with 20s. to pay, and with all its development work before it. I would draw attention to what the Glasgow company has done in your immediate district. Its managers are John Taylor and Sons, who are probably the leading mining engineers of the world, and upon whose word you can rely. (Hear, hear.) For a long time in that company they have been struggling with pennyweights, but can now talk of assays running up to 5 ozs. If you believe in the assays of the Mysore Mine you must believe in the others, for they are arrived at in the same way. The Messrs. Taylor have been most successful, and their experience with the Glasgow company should give us every encouragement here. The mine we are to work lies to the north-east. Now, the Glasgow company is driving to the south, on a reef running into our property. After receiving a circular of the directors, I received one from the Mysore, and what are they doing? They are buying a portion of property into which one of their reefs runs, and which will take them 1,700 ft. to get to. Why? Because they believe in its permanency. There is not an engineer breathing who has yet got to the bottom of a true fissure vein. Mysore has given a sum equal to 150,000*l.* for this adjoining property. Of course that is in the Mysore, and we are in the Wynaad, but the argument holds equally good. I think a great deal of time has been frittered away in following leaders instead of driving on the lode, and if we had gone direct to the reef, we should have met with success long since. Can you tell me what will be the cost of the tunnel, and I hope you will be sure to employ air compressors and drills. If you go to work in a miner like way Perseverance will justify its name, and reward us with success. (Cheers.) I cannot help thinking that when you get into settled country your prospects will improve.

Col. FITZGERALD: Mr. Ross told me that if we went straight on the reefs we would not be disappointed.

The CHAIRMAN: That is what we have been doing ever since, and the gold he has taken from the side workings has been for the purpose of helping to pay our expenses, and it has done so to the extent of about one-half. We expect it will cost about 2,000*l.* for the Perseverance to provide drilling plant, and about the same amount for the Mammoth. That will be about 4,000*l.* for new plant before the necessity arises for increasing the milling power. We could drive the distance by native labour in two or three years, but with drilling power we shall make much greater progress once we get into the hard rock.

The SECRETARY: The Mammoth property, I should explain, is in the hands of 22 gentlemen, who guaranteed 10,000*l.* some 10 years ago, and they would like the Perseverance to have the first offer of their property, as they are also interested largely in this company. If this agreement falls through it is probable the Glasgow company will make an arrangement with them.

THE CHAIRMAN HAS SEEN THE PROPERTY.

The CHAIRMAN: The Devala-Moyar is working on the same reef in the northerly direction, and is getting into the blue quartz which yields such rich results in the Mysore district. I would not ask you to continue the company if I did not think (and I have been out there) that the result would be successful. I believe that we shall get into a reef similar to the Skull reef. We have a settled agreement with the Mammoth, which the directors of both companies have the power to make, and have made, if the re-construction be carried out. We propose to continue the lower levels of the Perseverance until we prove or disprove whether we have a permanent reef or not.

Mr. POWELL: I am sure you will now be anxious to put the resolution, as several of the shareholders are obliged to go, but the shareholders should understand that Mr. Lamb is also a director of the Mammoth Co., and knows all about it. I think the reports of Mr. Adams and Mr. Fry give us

EVERY ENCOURAGEMENT TO PROCEED,

and if we do not proceed the result will almost inevitably be the loss of every farthing we have in this concern. It seems to me, therefore, that re-construction is highly desirable, and I hope we shall be unanimous in passing the resolutions.

Col. FITZGERALD: I, as a large shareholder, support them most heartily.

The resolutions were carried with one dissentient.

THANKS TO UNPAID DIRECTORS.

Mr. URWICK: I beg to propose a cordial vote of thanks to Mr. Lamb and his colleagues for the way in which they have gone about this re-construction, which we all hope will be successful. I implore them to work in a workmanlike manner, and on the lines laid down by Mr. Adams in his report.

The motion was carried by acclamation, and

The CHAIRMAN, in replying, said that no one had the interests of the shareholders more at heart than the directors, who would not go on with it unless they believed that it would have a brighter history in the future than it had had in the past.

The re-construction meeting was fixed for that day three weeks at the offices of the company.

MID-DEVON COPPER MINING CO., LIMITED.

DEVELOPMENT WORK STEADILY PROCEEDING — PROMISING APPEARANCE OF STRATA AT CERTAIN POINTS.

THE ordinary general meeting of the shareholders of this company was held at the Offices, No. 72, Finsbury Pavement, London, E.C., on Wednesday.

Thomas Nicolls Roberts, Esq., presided.

The notice convening the meeting was read.

PRESENT WORKINGS.

The CHAIRMAN: It will have been seen by the report, which has been sent to the shareholders, that we have not been successful in making any substantial discoveries of ore since our last half-yearly meeting, still the No. 3 stope at the 50-fm. level is sufficiently productive to pay for the cost of raising and sending the ore to market, and if we had a similar course of ore at half-a-dozen different points, we should be able to meet costs. At the ticketing on Thursday last, 19 inst., the parcel we sent forward realised 4s. per ton more than the average from all the mines that were represented at the sale, and it was by no means up to the mark of what we usually send, having been raised from smaller deposits with which a greater proportion of waste is inevitably intermixed than where the deposits are more compact.

A CROSS-CUT IN FAVOURABLE STRATA.

You will have seen in the report that we are driving "a cross-cut south, from the 60-fm. level, at a point just under the winze, from the 50-fm. to the 60-fm. level," and we add that it was "in a very favourable strata," and so it was at the time the report was written, but since the ground has become harder and the yield has fallen off, and in a letter from Capt. Neill of the 23rd inst., he says "unless a marked change occurs in appearance of strata or yield of ore in the few remaining feet to be driven, I cannot advise its further extension, as it will then be approaching the south wall of the lode, as 5 fms. will be driven south and 9 fms. north, making 14 fms. of the lode cut through at this point, leaving only about 2½ fms. to reach the south wall of lode." This is the fourth cross-cut that has been made on the 60 drivage, and though all have been more or less mineralised throughout, they have not led to any substantial discoveries, such as you see on the plan showing the deposits that have been stoped away in the upper levels, but especially in the 50, and with reference to this latter, where we say in the report

that "it has yielded on an average 3 tons of copper ore per cubic fm., but at present is only 2¾ tons per cubic fm.," Capt. Neill says, in the letter already referred to. "the 50 No. 3 stope is very promising, and I am still led to believe it will improve in the yield of ore."

THE 60-FM. LEVEL.

Now, with reference to the 60-fm. level, it is very disappointing—looking at the considerable deposit of ore at the 50 as shown on the plan, and, in fact, proved by the fact that since then 1,200 tons of ore have been raised and sold from that deposit alone—that the cross-cuts which have been put out have led to no payable ground, and that we have extended the main drivage 40 fms. beyond the point at which the natural dip of the ore was expected to have been cut through. Capt. Neill says in the same letter :—"With refereuce to the 60 east, seeing that the lode is nearly cut through from wall to wall just under the winze, and is cut through from wall to wall about 15 fms. to the east of winze, which has shown no payable stoping ground, I firmly believe the deposit of ore traced to the 50 has been carried east faster than we anticipated, and is still in advance of the 60 east ;" and looking at the sudden dip eastwards from the deposit at the 45 to that at the 50 he is likely to be right, and we shall have to drive still further east at the 60 before we reach the ore ground. We shall therefore probably have to resume that drivage very shortly, but I am

GOING TO THE MINE

next week, and shall then meet a gentleman whose experience of mining is unrivalled in the practical working of mines, and who will go into the matter exhaustively with Capt. Neill and myself, and we shall, no doubt, be mainly guided by his views on the matter. He has already expressed an opinion that if the character of the strata is unchanged to what it has shown itself in the 50-fm. level, he cannot conceive that the ore has been suddenly cut off at the large deposit at the 50, as shown on the plan, and which is still yielding, as stated in the report, 2¾ tons per cubic fm. If his reasoning be correct, and with his large and long experience he ought to know, we shall probably come upon a much larger deposit than we have had at the 50. I now beg to move that the report, statement of accounts, aud balance-sheet be received and adopted.

Mr. JOHN WYLDE seconded the motion, which was carried unanimously.

Mr. CHARLTON proposed the re-election, as a director, of Mr. Wm. Hall.

Mr. W. H. RICHARDS seconded the motion, which was carried.

Mr. WYLDE moved the re-election of Mr. Thomas Nicolls Roberts as a director.

Mr. CHARLTON seconded, and the motion was carried.

The auditor was then reappointed, and with a vote of thanks to the chairman the proceedings terminated.

LATEST REPORT.

Report for week ending Feb. 21.—Surface : Four revolutions of wheel per minute copes with influx of water into shaft. A shaft : Water kept drained to the 80. C shaft : The cross-cut south from under winze at the 60 extended by six men 1 fm. 1 ft. ; total distance from level 3 fms. 5 ft. 6 ins. ; the strata is still favourable, its chief constituents being garnet, quartz, axinite, hornstone, and a little chlorite. The last advance we made shows the strata a little harder, having more hornstone intermixed, and less copper ore ; the present yield is 7 cwt. per lineal fm., made up from small deposits scattered sparsely over the whole area of drivage.—J. NEILL.

THE TRANSVAAL GOLD EXPLORATION AND LAND CO., LIMITED.

THE SATISFACTORY POSITION OF THE COMPANY—50 PER CENT. OF THE DEBENTURE DEBT PAID DURING THE YEAR, AND £15,000 IN GOLD OBTAINED SINCE THE DATE OF THE REPORT.

THE fifth ordinary general meeting of the shareholders of this company, was held at the Cannon Street Hotel, on Thursday, Feb. 26, at 12 o'clock noon, to receive the directors' report and statement of accounts to Sept. 30.

Mr. William M. Farmer presided.

Mr. C. E. WELLS (the secretary) read the notice calliug the meeting.

The CHAIRMAN : I have pleasure in again meeting the company's shareholders, and congratulate them on the improved position of the company, and attribute this to the unremitting attention of the board, and the perseverance of the general manager and his staff. In speaking, gentlemen, of the board, I must not lay any credit to myself, as, through one unfortunate thing and another, I was absent most of last year, and any kudos that is due I most gladly pass on to my worthy colleagues. Throughout the chairman's address last July a hopeful tone was evident, and you will find this has been justified by events. The report enters so fully into all details as to the working of the company during the past financial year, that there is nothing left for me to say or dilate upon. You will see around you a few photographs of the property, mill, river aqueduct, &c., and a plan of Theta Mine, which will take a deal of study, repay inspection, and afford much interest to anyone acquainted with mining. I will now just make a few remarks on the accounts. On debtor side—capital account is as usual ; the debenture debt has, since Sept. 30 last, been reduced by half, the balance will be payable on Jan. 1 uext. It is, however, the desire of my colleagues to get this out of our accounts before we meet again, and if our crushings continue satisfactory this will no doubt be accomplished, and the bondholders will be pleased to see back the capital advanced eight years ago. Sundry creditors : Unpaid mining expenses and labour, due on Sept. 30. The profit and loss account, I presume, needs no explanation, but commands some recognition. On the credit side the items, farms purchase account and buildings, works, and machinery, &c., are inheritances, with all faults, &c., from the parent company, under the agreement by which re-construction occurred, and includes loss on working prior to our advent, and carried to capital account by the old company, and also some 6,000*l.* taken out of revenue since. The items of 5,911*l.* 18s. 3d. is made up from inventories of stores, &c., on hand, and the 60*l.* 4s. 4d. is the nucleus of a large work in tree planting. Stocks of ore and gold on hand, 7,805*l.* 11s. 9d., you will see explained in the revenue account, and the estimate is one that I feel sure will be exceeded when the ore is crushed ; and cash, 12,290*l.* 1s. 8d., shows our true position. You will find particulars in detail in the revenue and expenditure account of the (1889-1890) expenses of your company (amounting to 14,504*l.* 6s. 9d.), and you may, perhaps, consider some of the charges high ; but we are still feeling the effects of the difficulty of transport (though at present we are better off than in July). If it is not want of grass, it is that there is too much, or else lung sickness, or red-water, or floods, or some excuse or other,

BY WHICH THE EBON ARISTOCRACY OF THE COUNTRY MAY BASK IN THE SUN AND TAKE THEIR EASE.

It requires an experience in this sunny south for one to get used to and appreciate all the varying and constantly recurring incidents of worry and trials of patience in life and labour in those Eldorados. The cost of milling compares very favourably with any of the Randt companies. Owing to the peculiar nature of the ground, and position of the deposits as found on your property, regular mining, with shafts and tuunels, &c., cannot with profit be undertaken, and the removal of superincumbent earth and open cutting work is rather costly. Every mine has some peculiarity, and until we are fortunate in hitting on the true mother vein, we must be thankful for the deposits we have found, and continue fossicking about for further rich deposits, which, we feel sure, are awaiting patient and continued prospecting. Everything depends on permanency of reefs. Legal expenses include some old account arising during re-construction. Gold won during the 12 months is more than during any previous similar period, and the returns since Sept. 30 lead us to believe that we shall have a still better result to lay before you in 1892. The particulars of crushiugs since the date of the report have been duly notified in the Press, as received ; but to make matters clear I give an epitome of the last four mouths, viz. : Oct., 464 ozs. ; Nov., 1,150 ozs. ; Dec., 1,150 ozs. ; Jan., 1,300 ozs. ; total, 4,060 ozs. The following shows the results of material treated :—

Battery.

	Tons crushed.	Material treated.	Yield. ozs.	dwts.	Per ton. ozs.	dwts.	grs.
Oct. ...	224½ ...	Theta ore ...	461	10	= 2	1	9
Nov. ...	460 ...	Theta and Beta ore ...	851	10	= 1	17	0
Dec. ...	686 ...	Nu ore ...	597	4	= 0	17	10

Pans.

	Tons treated.	Material.	Yielding. ozs.	dwts.	Yield per ton ozs.	dwts.	grs.
Nov. ...	79 ...	mixed blanketings ...	301	15	= 3	16	6
Dec. ...	123½ ...	„ tailings ...	61	17	= 0	10	12
„	30½ ...	„ rich Nu ore ...	498	2	=16	9	21

A careful study of the above will give you au explanation of the difference in values in the monthly returns.

THE QUESTION OF TRANSPORT AGAIN OBTRUDES ITSELF AND GOVERNS OUR CRUSHINGS.

The desirability of other means of conveyance has been a source of considerable thought and discussion, and if Theta was a vertical 6 ft. vein or reef the expenditure for an aerial tramway would be justified, but under present appearances we do not think a wire tramway would pay. From the satisfactory results of dry crushing in the pans (83.683 per cent. and 69.022 per cent. of rich Nu ore), we are now arranging for further means for extending the dry process, and our manager is devoting much care and study to this important point, aud we hope in the end that our united efforts will result in success. Our experience with the hydrogen-amalgam process, and its working at the mines leads us, perhaps, to err a little on the side of caution before adapting any of the many gold extracting processes that are now before the public. The veins (or deposits) are of a greater extent than before ; the richness of the pockets increasing, and we hope their number will do so also ; and the whole outlook from our standpoint to-day is, we consider, very promising. Looking back to 1885, when the company was re-constructed, we find that we started with liabilities of 26,750*l.* debentures and 7,400*l.* floating, with assets in land and machinery, and liberty to call 1s. per share, which gave us about 12,000*l.* To-day, after five years' work, we find that after liquidating floating liabilities and reduciug our debenture debt, paying in milling, mining, prospecting charges, London expenses, a sum of 55,000*l.* paid out of earnings, we have 5,000*l.* cash in London, 2,000*l.* at mines, 2,700*l.* in transit, and between 7,000*l.* and 8,000*l.* in ore on hand, and only a debt of 9,400*l.* balance of debentures to pay. With a good look-out for at least 12 months ahead of untouched deposits in sight,

WE HAVE GREAT PLEASURE IN CONGRATULATING YOU ON THE PRESENT POSITION OF THE COMPANY.

Prospecting : We are still prospecting over our property, but the results have not been such as to justify the erection of works on any other portion of the property, but, as on our home farms we are only now finding these Theta Mu and Nu deposits after five years search, so we may any day come across veins that will surpass those we are now earning gold from, and, like Pigg's Peak, may strike a deposit that may have the same effect on this company as their find had on them. Mr. Nicol Brown will be happy to address you, and give particulars on the technical workings of the mine, and if any shareholder would like to inspect a model of the mine there is one in the office made by Mr. Brown. From recent developments at the eastern workings on the deposits known by the name of Nu vein, it would appear to be one of the most important discoveries yet made on the company's farms. This place was opened out last December, but owing to the inaccessible character of the ground, only a small quantity of the rich ore has yet been brought to the battery. A parcel of 30 tons of fine sieved ore treated in the pans in Dec. yielded nearly 500 ozs. of gold. The quantity treated in Jan. is not yet known, but it was less than the Dec. parcel, owing to the unpropitious state of the weather, which stopped all transport for a time. The rough ore from this place, which will be crushed in the battery, also assays very highly. The tailings from these rich ores are of considerable value, and are saved for future treatment. With even small parcels of this rich ore available, the manager sees no reason to expect otherwise than that the returns of gold will be good for some time to come. At latest date the ore body was showing 6 ft. thick in the working face, all of rich light coloured

orc. The following is the ore extracted since Sept. 30, 1890:—In Oct., 701 tons, average assay, 1 oz. 10 dwts. per ton; in Nov., 385 tons, average assay, 2 ozs. 4 dwts. per ton; in Dec., 230 tons, average assay, 7 ozs. 3 dwts. per ton; and in Jan., 375 tons, assay not yet known; making a total of 1,691 tons, amounting to about 15,000*l.* in gold since the date of the report. The followiug are extracts from the general manager's advices (for two weeks) up to Jan. 26, 1891; those previous to these have been published in the papers:—

"Mines—Ophir Hill, Theta vein: Ore extracted, 15 tons; assay value, 5 ozs. 19 dwts. gold per ton. The extraction of ore is at present much retarded by the heavy and continuous rains which bring dowu great falls of earth from the side-walls of the workings. Ophir Hill, Pi vein: Ore extracted, 24 tons; assay value, 2 ozs. 13 dwts. per ton. This deposit is about 250 yds. south-east of Theta. At present it is 2 ft. to 3 ft. thick, aud looks as if we were likely to get some quantity of orc from it. Brown's Hill—Nu vein, main working: Ore extracted, 15 tons; assay value 1 oz. 14 dwts. per ton. Stripping work is proceeding. Nu vein, eastern extension: Ore extracted at No. 1,207, 16 tons, assay value, 5 ozs. 12 dwts. per ton. In this working the vein is 3 ft. thick, and is very bard and solid. Ore extracted at No. 1,209, 70 tons, assay value, 7 ozs. 10 dwts. per ton; 32 tons, assay value, 13 ozs. 14 dwts. per ton; and 8 tons, assay value, *50 ozs. gold per ton.* Here the vein looks exeeedingly well, and still appears to improve as we get further into the hill.

I AM EVERY WEEK MORE HOPEFUL OF THIS DEPOSIT CONTINUING FOR SOME TIME TO COME.

Mill: The battery and pans are doing steady work. The ore reserve at the mill is considerable, and will be augmented as soon as the state of the weather admits of a general resumption of transport work."

If any gentleman has any questions to ask I shall be pleased to answer them, and if anyone would like to see the model of the mine, Mr. Brown will explain it at the office as it was too cumbersome to bring here. I think Mr. Brown deserves your hearty thanks, as it is through his energy and attention we are able to show sueh satisfactory results. I move now "That the report aud accounts up to Sept. 30, 1890, now submitted to the meeting, be received and adopted."

Mr. Nicol Brown (director) seconded the motion, and said: Gentlemen, so far as our observations have gone on Brown's Hill, which we now know more about in detail than any other part of the property, we find that the whole hill is made up of stratified rocks, through which are thrust intrusions of diorite dykes. The diorite dykes have been frequently assayed for gold, but uo gold has been found iu them, although pieces of the gold-bearing rock have been apparently enfolded in theu. In the uppermost beds on

OPHIR HILL

there is a stratified formation of 30 or 40 ft. of quartzite; and although the higher beds of this quartzite do not contain auy payable gold, the lower beds contain patches of gold-bearing stuff. It is these patches which are described in our reports as the veius which are worked by us. They sometimes attain a thickness of 6 ft., but they are uot eoutinuous, as their coutinuity is often brokeu by the intrusiou of the diorite dykes. Under ordinary circumstances these deposits could be mined by headiugs and drifts in the same way as it is usual to work such flat stratified deposits; but the ground is exceedingly loosc, and in our endeavours to work Theta deposit as an underground mine, we were baffled by the eontinual fall of the reef, frightening the Kaffirs out of their wits, and as our manager depends so entirely on Kaffir labour, he resolved to strip the Theta vein rather than to mine it. It is likely when this is done, and when the face of the hill (which has become crumbled and wasted by atmospheric agencies) has been taken away, he may come to a more solid face of rock, which will be capable of mining by the usual underground methods It is because of this stratification to which I have referred that some people are incliued to think that Theta vein and Nu vein have a connection with each other. The former is ou one side of the hill, and the latter on the other side. You are aware that we leave a good deal of gold in the tailiugs. This is oue of the greatest drawbacks in gold mining, and the attention of many people throughout the world has been turned to the difficulty in eonnectiou with the extraction of the gold from the tailings. There have been so many processes proposed during the last 10 years, and so few of them have obtained a permanent suecess, that your directors are unwilling to run the risk of again experimenting for other people in this respect, and prefer to wait for any process which has obtained a real and proved success in gold saving. They are quite open to consider any process which may be brought before them in the same way as they havc considered many other like processes in the past, but it must be on the basis of the work having been done satisfactorily over a long period and iu large quantities, and not a mere experiment of one or two hundred tons. It is important, however, that you should know our

OWN EXPERIENCE IN THIS MATTER.

Some years back we did not get more than 30 per eent. out of the gold conteuts of our ore. You were told at our last year's summer meeting we were getting about 50 per cent., but during the last six months we have been getting eousiderably over 50 per cent. of the total gold conteuts of the ore. The gold from the different deposits requires to be treated in different ways, and the average figure of the work for the year only gives a general idea of our progress. As some of our ores yield much higher precentages of gold than others—and curiously the poor ores have hitherto given comparatively better results than the rich ores—it must be apparent to you that if we submit some of the rich orcs to the experimental treatment of a gold extraction process, and such a process were extracting from them 60 or 70 per cent. of gold, it would look as if such a process were a success. Supposiug, then that we arrange to erect plant for such a process on the mine at a great eost, and the supply of ore which had given such a result should fail us,

YOU SEE WHAT AN AWKWARD POSITION WE SHOULD BE IN

by crecting a plant for extracting gold from some variety of orc of which we had only a limited supply. Here, again, you see the question of the permanency of our reefs governs all questions of the process for extracting the gold, as well as for the tramways, extra mills, extra water-raees and turbines. We, however, endeavour to do the best we ean with the ores which we find on our property, and when I tell you that quite recently our manager has been able to extract more than 70 per cent. out of some of the richer orcs which he has been working separately, you will see that decided progress is being made by us with the appliances which we have ready to our hand. The gold which the new extraction companies profess to practieally extract from gold ore is only from 80 to 90 per cent. of the whole contents, so you will see we are not so far behind the highest mark which is said to be obtained by some of the great new extraction processes.

THE AMOUNT OF ORE IN SIGHT.

our earlier prospecting opcrations were scattered over a large area of ground, but the results of this experimental prospecting enabled us to locate the neighbourhood of Ophir Hill and Brown's Hill, as being the most promising part of our property as being the part from which the earliest returns could be got. It is on these hills we have found the best reefs which we have discovered lately, viz., Zeta, Theta, Nu and Pi. Thesc are all within a mile or two of the mill at Brown's Hill, and in the meantime there will be sufficient ore to keep Brown's Hill mill going for some time to eome; I think we may safely say for about 18 months. This is a great improvement on the condition of affairs reported even in June last, when the manager said he thought there would be a supply of ore for 12 months to come. This means that the supply of ore is sufficient to keep our present mill going for 18 months. When it becomes necessary to ereet another set of stamps or mills of some kind, this could not be done at Brown's Hill, because we have not water power for mueh more than will do the work of the 10 stamps and four pans we have going there uow. This matter, however, has the careful attention of your directors, and whenever it becomes apparent that we ean get sufficient ore to keep two mills going, we shall not be slow in providing more crushing power. In the meantime the questiou of a site for another mill to which water power could be brought is engaging our attention, so that as soon as the question arises we will be prepared to act, not precipitately, but deliberately and judiciously. The same applies to the method of bringing the ore from the mines to the mill. The present method of bringing the ore down by bullock waggons, as you will see from one of the photographs shown in this room, is very expensive and troublesome; but if we had sufficient encouragement to build a system of tramways to convey the ore to the mill a great saving in the working expenses would be effected. The scattered positions in which we found our former reefs, which were located all over the farms, put the possibility of a tramway entirely out of the question, but the discovery of so many deposits on Brown's Hill and Ophir Hill brings it withiu the bounds of possibility to eonstruet a system of tramways to the Brown's Hill mill, which would be fed from all the recfs in that locality. (Applause.)

Mr. Draper said that he had heard with great satisfaction the speeches of the chairman and Mr. Nicol Brown, and he thought that the policy of the board was highly encouraging. The fact that they had got 15,000*l.* worth of gold out siuce their report was published was also a very pleasing feature. He thought that the directors were to be congratulated upon having taken Mr. Nicol Brown over from the old company, and he thought all the shareholders ought to express their hearty thanks to the debenturc holders for the eonsiderate manner in which they had behaved.

Mr. Goodsall said that he thought the manner in which their property had been worked was very good, but there was one thing that the directors had not managed to do for them, and that was to give them a dividend. He was sorry that the board were not able to tell them that, besides the gold being found, it was over here. He wanted to know why the debentures had been paid off, and he thought it would have been better if, instead of paying them off, the shareholders had received a share in the

WONDERFUL ELDORADO.

He hoped they would soon reeeive an *interim* dividend.

Mr. Ewer said that he thought the shareholders might congratulate themselves on the preseut condition of the company, and he judged from the report of their mining manager that their property was beeoming very valuable. He had one remark to make as regarded their mode of working. The method of stripping was very good when the deposits were near the surface, but when they had to go down 70 ft. or 80 ft. it would be a very eostly operation, and when it came to working at that depth it would be cheaper to work underground. Turning to the report he had one fault to find, and that was that the eharges in London and at the mine should be given in greater detail. He also noticed that there was an amount on both the credit and debit side of the aeeounts connected with the purchase and sale of 13 ozs. of gold; he had no doubt that it was perfectly satisfactory, but he would like to know, out of curiosity, what was the reason of it. He had rather a serious remark to make with regard to a discrepancy on the credit side of accounts. Taking into consideration the amount of gold which they had at the eud of last year, and making the deductions of what they had treated and milled, he found that there was a deficit of 20 tons, and that, taken at the average amount of gold obtained per ton, showed a difference of about 100*l.* He would like to have that accounted for, as he saw from the odd amount mentioned it was not the estimated quantities of ore that were given but the actual amouuts.

IT HAD BEEN IN THE POWER OF THE DIRECTORS TO DECLARE A DIVIDEND OF 5 PER CENT.,

and to carry forward 2,000*l.* He was sure that there was nothing more pleasing to the board than to be able to come before the shareholders with a dividend, but he was glad to see that they had preferred to pass it, and pay off some of the debenture debt.

Mr. Evans said that there was one point to which he would call the attention of the shareholders, and that was that although the board had a large sum in hand, and the company had had a satisfactory year, the directors had not proposed to raise their fees, which was frequently the case. He did not think that the shareholders realised the extent of their property, but he might explain to them that two parallel lines, a mile apart, from London to Folkestone, would about cover the same area which was covered by their property. They had, he thought, the Mysore of the Transvaal, and he thought the present encouraging state of the company was due to the prudence with which the manager had conducted the affairs. The reports which had appeared week after week in the papers had been fair reports, and not ones to lead them to

indulge in undue anticipations. With regard to the value of their shares on the Stock Exchange, he thought it would strengthen the position of the company if the shareholders made up their mind not to part with a single share. He had held 2,700 shares for four years which had cost him 8s. 4½d. per share on an average, and he had had plenty of chances of realising at a profit, but he did not intend to part with one, and he advised all the shareholders of the company to stick to theirs, as he believed they would soon be worth 3*l*. or 4*l*. each.

Mr. MALLETT asked if the 1,000*l*. was an annual payment to the Transvaal Government?

The CHAIRMAN in reply said he had to thank the shareholders for the way in which they had received the report, and he trusted the directors would continue to deserve their good opinion. There was one little item which he had forgotten to mention, and that was that there were 9,000 tons of tailings which had not been included in the report, and from which, therefore, there would be a further amount to be credited to the accounts. With regard to the debt he did not think that Mr. Goodsall exactly understood the position. They took over a debebnture debt of 26,000*l*. from the old company bearing at that time interest at the rate of 8 per cent. per annum. The board met the debenture-holders on several occasions, and as the company was in a very depressed state, they consented to

WAIVE THEIR INTEREST ALTOGETHER FOR TWO YEARS

—(applause)—and later on, when the shares of the company only stood at 3s. or 4s., the debenture holders reduced the debt from 26,000*l*. to 18,000*l*., taking in exchange shares of the company. He thought it was therefore due to the debenture-holders that the directors should do all in their power to reduce that debt. They had also a self-interest in the matter, as when they were paying a dividend of 5 per cent., the interest on those debentures would advance to 6 per cent. per annum. The method of working the mine other than stripping was under the consideration of their manager. He then went fully into the various items in the London and general charges, and said that the only reason they were not given *in extenso* was because of the space which would be taken up by them. The 13 ozs. of gold on both sides of the account was owing to their having bought that amount from certain diggers on their property; who paid royalty to them, and they bought it from them for their convenience. They would have to pay the 1,000*l*. royalty annually to the Transvaal Government, until such a time as 2½ per cent. of the gold extracted amounted to over that sum. The difference of 20 tons in the accounts arose from their having taken that amount from stock for treatment in the pans direct. It would have been better that it should have appeared in the accounts, but it had been omitted, and would, of course, appear on some future occasion with the tailings. Mr. Evans had asked the board to conduct some "pooling" operations, but he did not think they could very well do so. (Laughter.)

Mr. EVANS said that if the shareholders would only buy and stick to their shares it would soon send the price up.

The resolution for the adoption of the report was then put and carried unanimously.

The retiring auditor, Mr. Charles Lee Nichols, F.C.A., was re-elected.

Mr. S. JAMES proposed a vote of thanks to the chairman, which was seconded by Mr. EVANS, and carried with acclamation.

The proceedings then terminated.

EAST BLUE HILLS MINE.

CALL OF 1s. A SHARE.

A GENERAL MEETING of the shareholders in the East Blue Hills Mine was held at the Offices, Gracechurch Buildings, Gracechurch Street, E.C., on Thursday, Feb. 26.

Capt. W. Nance presided.

Mr. C. B. PARRY (secretary) read the notice convening the meeting, and the minutes of the last meeting were read and confirmed.

The accounts showed a balance of liabilities over assets amounting to 655*l*. 5s. 8d.; the labour costs for the 16 weeks amounted to 666*l*. 9s.; and the merchants' bills for the same period amounted to 217*l*. 14s. 2d.; while the sales of tin realised 422*l*. 5s. 2d.

AGENT'S REPORT.

The CHAIRMAN then read the agent's report as follows:—

— Feb. 23.—During the past four months the 30-fm. level has been extended on the course of the new lode 15 fms., which has varied in value from 3*l*. to 20*l*. per fm., and the present end is now worth 5*l*. per fm. The cross-cut at the 40-fm. level being driven to intersect this lode has been extended 8 fms., but has not yet reached the lode, but some indication of being near it is shown by the ground being more mineralised. The stopes and pitches have yielded about 8 tons of tin during the four months, and the yield in the stoue during the past month is 2 tons 15 cwt., which is not sufficient to pay the cost, and without a rectification of the boundary I do not see how our returns can be maintained, unless a great improvement takes place. I had hoped the new lode would have held on at 20*l*. per fm., which would have enabled us to increase the returns, but in this we have been disappointed so far. Without sinking the shaft, the little tin we have will soon be exhausted.—W. NANCE.

The CHAIRMAN: Well, gentlemen, although the lode has fallen off from 20*l*. to 5*l*. a fathom, I hope in a day or two it will be of the same value again and possibly better. Of course, the lode has been variable all the way through, and I think it is a

VERY PROMISING PROSPECT

to continue driving the 30-fm. level. We have just sampled a parcel of ore from there of 5 tons, which yielded 60 lbs. to the ton. If we get anything like that, it would be very well indeed. I think your prospects are good in the western part of the mine, though I do not know it would be prudent at the moment to go into details. We have some prospects in the western part of the mine, which I think will give a little encouragement to the shareholders.

Mr. WAGSTAFF: With regard to this said shaft, will you use this winze that is already sunk as a continuation of the engine shaft?

The CHAIRMAN: Yes; we will connect it on to the shaft.

Mr. WAGSTAFF: How long do you think it would take to utilise it?

The CHAIRMAN: I think we could get the shaft sunk down to the 60-fm. level in four months.

Mr. WAGSTAFF: What will it cost?

The CHAIRMAN: The cost of sinking the shaft, independent of the pumping charges, will be 60*l*. a month.

Mr. WAGSTAFF: Have you ever seen the bottom of that?

The CHAIRMAN: I have very nearly been to the bottom.

Mr. WAGSTAFF: Is there any defined lode?

The CHAIRMAN: Yes; the lode is from 2½ ft. to 3 ft. wide, and a well-defined lode. It is a kindly lode, and I think if we drive away to the cross-courses east and west we will get good tin ground.

Mr. WAGSTAFF: This will all cost money, and my idea is to let it remain in abeyance.

The CHAIRMAN: I approve of that.

Mr. ROBERTS proposed the adoption of the accounts.

Mr. WAGSTAFF seconded the motion, which was carried.

The CHAIRMAN then proposed a call of 1s. a share.

Mr. SIMMONDS seconded the motion, which was carried.

The proceedings closed with a vote of thanks to the chairman.

THE ELMORE GOLD CO., LIMITED.

RESOLUTIONS CONFIRMED—A QUESTION AS TO THE TITLE—LIQUIDATOR APPOINTED.

AN extraordinary general meeting was held at Winchester House on Thursday, for the purpose of considering, and, if thought, expedient, confirming the resolutions, passed at an extraordinary general meeting held on Tuesday, Feb. 10, which appeared in the MINING WORLD of Feb. 14.

Thomas Henry Leak, Esq. (a director), presided.

Mr. C. HARRISON SMITH (secretary), read the notice of meeting, and the resolutions embodying the scheme of re-construction were taken as read.

The CHAIRMAN: You know the reason we have met to-day is to confirm or reject the resolutions for re-construction which were passed at the last meeting when the subject was thrashed out. I, therefore, need only move, "That the resolutions, passed at the extraordinary general meeting, held on Feb. 10, be, and the same hereby confirmed."

THE COMPANY'S TITLE.

Mr. BROTHERTON: There have been rumours started round the market respecting the title to this property. This is not a new thing—it has been done before, and I hold in my hand a circular which was issued by the directors of the old Alturas Co., dated Nov. 25, 1887, in which we were assured by telegrams from the solicitors on the other side that the title was in perfect order. Without going through the whole matter, which is made as clear as noon-day by the telegrams to anyone that there is not the slightest danger in respect to the title to our property, there is a telegram dated Nov. 5, 1887, which comes from Messrs. Bradley and Barlow, our solicitors out there, to the solicitors (at that time) here, of the old Alturas Co., in which they say—"Cable received; on receipt of registrar's certificate will forward the same to you." I should like to ask if that certificate is in the possession of the Alturas Co., the liquidator of that company, or of the present Elmore Co.? If it there is no question whatever about our title, but if it is not then it is a question as to whether it is wise for us to confirm the resolutions until such time as the directors can get a telegram from the Recorder of Idaho, stating the position as to the holding of the title. I prefer to have information from the Recorder of the State than from anybody else. I remember the question of title was raised in Alturas with some show of reason, because the company did not have a title, as there was a paramount vendor, and it was only after a hard fight with Mr. Thompson, whom I represented, that I was able to put the vendors into direct communication with this company. It was on these negotiations that the various telegrams in Nov., 1887, were sent.

WHY?

Why should this question be raised again in the streets and on the market as it has been? If there is no truth in it, it should be set at rest at once, and it can be by a direct answer to my question.

Mr. VERDEN (Kerly, Son, and Verden, solicitors): I must say that I think it most inconvenient to have a question of this kind put in a meeting of this character. I fancy that the sting of the question lies in the latter part of Mr. Brotherton's speech. He wants delay in confirming the resolutions, and that is the explanation of the question. Who is it that has been offering this suggestion about the City? Certainly not persons who are much interested in the success of the company. If anyone had wished to know the position of the title, private enquiries might have been made, and satisfactory answers given. (Cheers.) I believe the deeds in question are in possession of Messrs. Bradley and Barlow, who are well known, and eminent lawyers in New York. They hold them on behalf of Alturas Co., the liquidator of that company, and on behalf of this company. They have been allowed to remain in their possession because the transfer was not taken out in consequence of the alien law. That state of things will not apply to the new company, and the idea is at once to

TAKE THE TITLE INTO THE NAME OF THE NEW COMPANY,

and that will be done through Messrs. Bradley and Barlow, of New York, with whom we have been in correspondence on this subject. I think you may leave this question in the hands of the directors, who will take care that the title to the new company is in its possession before any serious sum is expended. The very fact that the company now about to be wound up has held possession of the property and worked it all along without hindrance ought to be satisfactory to most people as to the question of title, and I think delay will be disadvantageous to all present to day, with the exception of Mr. Brotherton. (Laughter.)

After further discussion, the resolution was carried unanimously.

LIQUIDATOR APPOINTED.

Mr. C. HARRISON SMITH, the present secretary of the company, was unanimously appointed liquidator.

Mr. Verden read the contract and agreement between the old and new company. The latter will be called "Elmore Gold, Limited." He also submitted the memorandum and articles of association which were approved.

A vote of thanks to Mr. Leak for the ability with which he had presided terminated the proceedings.

THE RIPANJI QUICKSILVER AND SILVER MINES CO., LIMITED.

DIRECTORS SEEK TO RAISE MONEY BY PREFERENCE SHARES, BUT FAIL—A COMMITTEE OF CONSULTATION APPOINTED—A "RIG" IN THE SHARES—THE CHAIRMAN SELLS, BUT COL. NORTH HOLDS HIS SHARES.

A special meeting of the shareholders was held on Tuesday, at Winchester House, in accordance with a circular, signed by Mr. M. Atherton, the secretary, which stated that "as the shareholders have not applied for the requisite number of the 20 per cent. preference shares, in accordance with the prospectus, dated Jan. 15, I am directed to inform you that the directors consider it important that an extraordinary general meeting of the shareholders should be held."

Mr. Clifton Shield (chairman of the company) presided.

FAILURE OF THE PREFERENCE SCHEME.

The Chairman: Gentlemen, the result of the meeting held in Liverpool on Friday, Nov. 21, when these resolutions were passed, has become inoperative, inasmuch as I deplore having to say there has been no response on the part of the shareholders to the shares then offered. The board agreed to take up a portion of them, but were trusting, in some measure, to a response on the part of the shareholders, which I regret has not been forthcoming. Before proposing any resolution I should like to go back to the original formation of this company, as I have seen so many wrong reports and false statements with regard to it, no doubt made inadvertently. Here is the original prospectus (holding it up) showing that the vendor company, which was merely a prospecting company, sold to this company their property *en bloc* for shares only. No money was paid. They represented the business as "a speculative mining undertaking." It was not sufficiently explored at that date to pronounce any decided opinion on its merits, and they took so many shares for their property, and asked this compauy to subscribe for so many more to provide working capital for further development, and to see what the property was worth. There have been all sorts of statements made in the Press, inadvertently no doubt, with regard to the amount of money spent upon the mines, but the actual amount (which will, no doubt, come as a surprise to you) from start to finish was 25,000*l*., and that on a mining enterprise is not considered a very large sum. What did we do? We took great care from the start to have, what we considered, the best mining opinions we could possibly secure, because, I am sorry to say, no member of the board is sufficiently versed in mining matters to pose as a mining authority, or recommend anything of the kind on his own responsibility.

MANY EXPERTS SPEAK WELL OF RIPANJI.

Therefore, we took pains to have the best opinions we could possibly get. You have seen the long list of mining experts that we have employed, at no inconsiderable expense, to report on this property. We were invariably buoyed up with great hopes, and I must confess that, in a sort of ignorant way as regards mining, I shared the opinion that we had something very important indeed. I went there and saw great lodes of quicksilver running for some 3 miles over the property which could be traced, and thought that this at any rate must prove something very important in course of time. I saw lodes of silver-lead, rich in silver, which I also thought, as the property became developed, would prove of extreme value. In my little knowledge of quicksilver properties I was aware that a quicksilver lode was apt to be misleading. Mining experts, whose names I could give you, have been deceived thereby over and over again. But we hoped on, and particularly so because similar lodes had been developed in the adjoining property, that good results would ensue. With great economy we carried on our explorations for a long time. The board were anxious not to waste the company's money, but to feel their way. I told you that we (the original company)

SOLD OUR PROPERTY FOR SHARES ONLY,

and not only that, but I, personally, having a great interest in the concern, took pains to acquire other property for the company, also for nothing. This was thrown in, and we have done our best as a board (though that best may be criticised) to bring the company to a proper result. As far as dividends are concerned, we must all admit we have not done much up to the present time. You will remember, some time ago, that when our funds were exhausted we made an issue of 5,000 new shares, for which I personally subscribed to the extent of half, in order to carry on a further development of the mines.

USEFUL OUTLAY.

I am glad to tell you that that 5,000*l*. has resulted in something. It has proved the existence of the mass of ore at the Pretchitza Mine, which we have never proved before, and which the manager will tell you can be worked to a profit. Unfortunately it cannot be shipped. The ore is not sufficiently rich to do so from Servia to this country without treatment, and it was after having seriously considered everything in connection with this business that we proposed to issue a certain number of preference shares, to enable us to raise money to treat the ores on the spot, and ultimately to lead to the declaration of a dividend on the whole of the capital. The appeal to the shareholders has not been responded to, and

I AM NOT SURPRISED AT IT.

In the first place the times were bad. Then we have had reports repeatedly from mining experts of distinction, but have never produced results. Hence the appeal to the shareholders, when made, was not responded to, and the result was not a surprise. Nevertheless, it appears, as far as I can judge, that there is a certainty in the operations we now propose—as great a certainty as mining can offer—and what I want to do at this meeting is to get the opinion of the shareholders upon the project submitted to them. We cannot guarantee anything that is impossible, but I think any fair-minded shareholder who comes to this question without bias will be of the opinion of the board, that there is a profit to be earned, and we wish to try the experiment. We do not ask for a large sum to work on a big scale, without having absolutely proved that we can make money on a small scale, and in this respect we are following the course we have always adopted, fearing to launch out in a speculative property until something tangible is obtained. I am going to propose the appointment of

A COMMITTEE OF SHAREHOLDERS TO CONFER WITH THE BOARD,

as to the proposals now submitted, and to consider whether they offer fair chances of success. If they do, it would be a thousand pities to allow the property to pass from you at the moment when it appears to be a tangible and profitable one, and though I personally invested largely in the last issue, I am quite prepared to take a full share of the present issue, and my colleagues will do the same, only we must have some support from the shareholders, because it is a considerable sum we are asking—8,000*l*. It would be strange if the investment of this amount did not prove profitable. If not, I shall disbelieve in mines for the remainder of my life. (Laughter.) We laid before you at the last meeting a full report as to the present position of the company and the proposed operations. That report I have with me, but cannot add to it, because I think it is complete. It shows you where the profits were to be derived from, how they were to be obtained, and the amount necessary to be spent to secure them. The board have asked Mr. Finney, the manager, in whose capacity and judgment they have confidence, to be present at this meeting, and he is here ready to make a statement, and afterwards to answer questions you may put to him. He is satisfied he can make you a respectable dividend on the new capital. If he succeeds in making this profit (which he is competent and confident about), then I think there will be very little difficulty in greatly extending the operations, and thus reaping for the company at large the benefit of all the experimental works now proposed. Those works are simply the ordinary ones of concentrating a low class of ore, and by that you must not understand that the quantity of silver contained in this silver-lead is large, but there is also a mixture which has to be extracted from it before the ore is fit for shipment.

THE PREMIUM TO WHICH THE SHARES WENT.

There would be nothing in this particular company which would call for particular remark if it had not been that at one period of time the shares stood at a large premium. (Loud cries of "Hear, hear;" and several Voices: They did.) How they came to stand at that large premium I am at a loss to know. (Loud laughter.) I was thousands of miles away when the rise occurred, and I knew nothing about it. (Laughter.)

PLAIN SPEAKING TO THE CHAIRMAN.

A Voice: You took advantage of it. (Uproar.)

The Chairman: Nothing that has emanted from the board justified that rise, which was purely speculative. Nothing on the property at the time warranted anything like the premium which then ranged. How it was got up I cannot tell you. (Loud laughter.)

A Shareholder: Really, Mr. Chairman, you must excuse me smiling. (Cheers and laughter.)

The Chairman: I never bought a share, not I——

A Voice: Except at a discount. (Laughter.)

A Shareholder: You may not have bought, but you sold.

AN ADMISSION.

The Chairman: Yes, I sold. (Laughter and uproar.)

The Shareholder: Were you thousands of miles away then (Laughter.)

The Chairman: Yes, I was when I sold. (Oh!)

The Shareholder: Then you did it by telegram, and your absence did not much matter.

The Chairman: I have to admit that I sold shares, and I think I was justified in doing so. (Cries of "Oh," and a Voice: You, the chairman of the company!)

The Chairman: I think everybody is justified in selling if the Stock Exchange likes to make a price, which is altogether unwarrantable, and which you have not done anything to create. I did not do anything to create it in any shape or form.

"SINCERE" GRIEF.

On the contrary, I always deplored the rise, though I may have profited by it. (Loud laughter.) I repeatedly said that the rise in the shares was not warranted until further developments had taken place, and there are many stockbrokers who will bear me out. They could never get a word out of me about the property which could induce a market rise. (Hear, hear.) If they did it themselves they must answer for it, but who did it I cannot tell you. I had absolutely nothing to do with it. That is really the only point on which the slightest criticism can be offered as regards this property. (Laughter.) It has always been put forward as speculative, and had it not been for the unfortunate action of some persons—(outsiders)—(laughter)—seizing upon this particular property to put it upon the Stock Exchange, I do not think there would be a word said with regard to it. At any rate, energy, though perhaps always not intelligent, has been expended upon it, and we have done our best. I have spent a tremendous time out there, and have secured for nothing additional property to what we possessed. For this I never sought a profit. (Hear, hear.) We now

DISTINCTLY SEE OUR WAY TO MAKE RETURNS,

and ask you to subscribe money in order that that may be done. I have already told you about the proposed committee, but would add that I should like the very best men you can find, and some experts as well—men who have a knowledge of mining matters, and if this committee would confer with us, and report to you as to the probability or otherwise of the contemplated operations, by that report we are quite prepared to stand or fall. We feel satisfied that the report will tell you there is every chance of a very respectable profit being made out of the company, notwithstanding the inflation of the shares, which I regret. This is a representative meeting, and

a strong committee can be selected from it. Mr. Finney will presently address you as to the results likely to be obtained from the operations we suggest.

A DIRECTOR WHO DOES *NOT* SELL.

Col. NORTH (director): Gentlemen, this is a business that I do not feel very pleased about, and I have not done so since the shares were sold under the circumstances Mr. Shield has described. I held 5,000 odd shares, and now I hold 4,270 shares. (Cheers.) The shares I let go were for a few friends of mine who asked me for them. (Cheers.) I was consulted, when Mr. Shield was away, by *our broker, who sold also*, to see if I would not sell my shares, "for," he said,

"MR. SHIELD HAS SOLD HIS, OR PART OF THEM."

I replied, "I cannot sell my shares. I never sold a share, and I shall keep mine." (Loud cheers.) I have them now. I wanted you to be consulted. It was all right to have meetings in Liverpool, but

I SAID, "COME TO LONDON—

the business centre of the kingdom, where the shares are actually held." (Loud cheers.) I have this large interest in the company, and, more than that, I say myself, as an engineer, that I think this a first-class property, and I have seen it. I held that opinion so strongly that I would not sell when tempted to do so. (Cheers.) We have had half-a-dozen experts, all of whom have reported favourably, describing the property as some miles long, and Mr. Finney says that the ore in sight justifies a trial. But I decliued myself to subscribe any more money. I have said, "You who have sold the shares and made a profit—subscribe." (Loud cheers.) I will say this, that

MR. SHIELD DID SUBSCRIBE VERY HANDSOMELY.

He paid 500*l*. out of his profit towards sending a man out to look at the property, and since then we have had Mr. Finney, who will tell you something more. The property is not as bad as people make out, because there are bankers in Buda-Pesth who wish to rent it from us, and will pay us for our stocks, and 10 to 20 per cent. royalty. It is a question whether you will think it worth while to subscribe the money yourself or to rent it to these people. This is what you have to decide to-day. Mr. Harvey proposes sending auother practical man out at a cost of about 200*l*., and I agree with him. We should be ashamed to let it slip through our hands without doing so. Before anything is subscribed we ought to wait until you appoint amongst yourselves a committee to meet the board in conference, and decide what is best to be done. Let us know whether we are justified in spending more money, or whether we had better let it to these bankers. I have only just seen Mr. Finney and read his report, and am more favourably impressed with the property than I have been for some time.

VIEWS OF THE MANAGER.

Mr. FINNEY: When I made the acquaintance of Mr. Shield, in 1838, I was in Servia executing a geological aud mineral survey for a syndicate in London, during which survey I had considerable opportunity of judging of Servia's mineral resources. He asked me to give my opinion of your property, which I did. I then said that, though there had been a considerable amouut of work executed, as these mines had already been worked from a remote date by the Romans and others, he would find that the bulk of the mineral would be exhausted down to the water level. I, therefore, advised him to commence a new series of works by sinking below that level so as to come in contact with the virgin lode. Since I took charge that is what I have done, and with considerable success. In the quicksilver mine of Ripa we have sunk a shaft 75 metres, and during the whole of that time have been in contact with cinnabar. During the last few metres we have come across rich pockets of mineral. but must have meaus of treating it on the spot, as it will not pay for excessive carriage. The charge for reducing cinnabar in England is about 10*l*. a ton. In driving on the other mine (Pretchitza) on the main cross-cut adit we came in contact with the old lode. and struck new pockets of entirely fresh ore. This extends 60 to 80 metres in length, and probably the same in depth—in fact, we have proved it by works already executed. The lodes vary in thickness from 4 ins. to 5 ins. up to 5 ft. The mineral itself is too poor to ship in its present state, and unless you do the necessary work for concentrating ore, I fear it will be useless to you to continue; but if you decide to create these works, and have a distilling plant for the quicksilver, I am quite ready to guarantee the figures I gave in my report, so far as profits are concerned. Servia is rather a difficult country to work in, because of want of free communication, and because of impediments occasionally thrown in your way; but I am certain that the Government authorities are now quite convinced of the value of your property.

POINTED QUESTIONS.

Col. NORTH: How much ore have you in sight?

Mr. FINNEY: Actually ready and proved by works executed, 6,000 tons.

Col. NORTH: Worth what?

Mr. FINNEY: One of your mines is flooded, but can easily be drained, and the mineral there is worth about 8*l*. per ton. It gives 35 per cent. of galena, and 48 ozs. of silver to the ton of mineral. The ore at Pretchitza is not worth more than 2*l*. 15s. or 3*l*. 5s. a ton, and the freight to England would absorb your profit, so that you must concentrate it on the spot. I have the plans here of the different works. The quicksilver is found in different lodes. The cinnabar reef is quartzite, and of a kind not often found in Servia. The silver-lead is found in pockets. We have sunk a shaft 75 metres, and are always in the lode, which varies in thickness from 6 to 9 metres, but the cinnabar is disseminated in the quartzite in pockets.

A SHAREHOLDER: What is the largest pocket found?

Mr. FINNEY: It was the last, and was found in sinking the shaft. We had got into 4 metres, and found it varied in thickness from 18 to 22 ins., and I was proving it further when orders came to shut down.

A SHAREHOLDER: Is not a neighbouring property being worked?

Mr. FINNEY: Yes, but the two mines are 3 miles apart. I have traced the quartzite reef for nearly 36 miles—a portion of it sterile and a portion containing mineral. In regard to the coal property at Kopoanck, I have advised the company not to work it.

A SHAREHOLDER: What will be the cost of shipping the concentrated ore to England?

Mr. FINNEY: About 2*l*. 5s. per ton of concentrated ore, from 5 tons; that is, taking the poor ore as it stands at present it would cost 11*l*. 10s. to ship 5 tons, but by concentrating it to one-fifth you could send the 5 tons for 2*l*. 5s., and the difference in the transport will to a great extent be your profit.

RE-CONSTRUCTION IN THE AIR.

Mr. READ: I think the report went fully into these matters, and that we had better address ourselves to the question of finance. I am not surprised that the preference share scheme failed, because, as put before us, it was decidedly too good, and that was the view I took of it. If the property was the one it was represented to be, the preference shares were too good to offer, and it was like discounting the report. I said to myself, when I received the proposal, "We have a rich board, and if it is not good enough for

THOSE WHO ARE *IN THE KNOW*

to take up these shares, it is not good enough for me who am not in the know to do so. I have heard from independent authority that the property is valuable, and presents chances of success, so that although only a small shareholder, I am quite willing to find my share of any capital that may be wanted, but think that it should be raised by a general assessment—(cheers)—in other words by re-construction. That, based upon a 2s. 6d. liability, would give you about 10,000*l*.—more than the amount you require. I think it only fair that everybody should find his proportion, and if the shareholders fail to take up all their holdings, I should be prepared to take more than mine. (Hear, hear.) I think it a mistake to appoint a committee, for generally it casts a slur on the management. Let us decide the whole matter here to-day. (Hear, hear.)

Col. NORTH: I, as a director, do not at all think it will be a slur, and am very anxious to have a committee. From this meeting a strong one can be appointed.

The CHAIRMAN: The purport of Mr. Read's remarks is re-construction, and that is my idea. Half a crown, as he says, will give all that is required, but Col. North wants yet another opinion from a practical man whom he knows. I think it is re-construction the committee will come to ultimately.

Col. NORTH: I think we know a very good man whose opinion we should like to have.

The CHAIRMAN: The resolution is "That a committee consisting of (names to be proposed) be appointed to confer with the board on the position of the compauy's affairs, and to report on the expediency of raising additional capital for the development of the mines."

AN EXPERT'S VIEWS.

Mr. CANDELAR: I endorse the sound common-seuse views of Col. North. (Hear, hear.) I bought nearly 200 shares at 7*l*.—almost the highest price they reached. We have got the shares, and I suppose will have to keep them, but my experience is that your 8,000*l*. would be required, and more, for putting up a concentrating plant alone. I think you should have some better estimate of the costs than you appear now to possess.

The CHAIRMAN: We have a letter from a distinguished expert, I must not name, saying:—"I think you should be able to erect a sufficient quantity of machinery of a substantial kind, and to lay out a floor, for from 700*l*. to 1,000*l*." The mine is developed, and it is only the machinery we want to treat the ore.

A SHAREHOLDER: I do not think you want another expert's opinion. I doubled my shares on private advices received.

Mr. GEORGE SMITH: I second the resolution. A committee will report to us upon the position of affairs generally.

A COMMITTEE FORMED.

The motion was carried, with two dissentients, and it was arranged that the committee should meet in London, and not in Liverpool, where the offices are.

The following gentlemen were then severally proposed and agreed to as a committee:—Mr. Candelar, Mr. Read, Mr. Clipperton (chairman of the Eberhardt Co.), whose services the meeting in particular gladly hailed, and whose uomination was cordially proposed by Col. North, Mr. G. L. Barrett, and Mr. George Smith, with power to add to their number. Their principal duty will be "to report on the expediency of raising additional capital for the development of the company's mines."

The CHAIRMAN closed the meeting after expressing his earnest desire that the committee should commence their duties at once in order that they might have the advantage of the manager's presence.

THE BRITON FERRY CHEMICAL AND MANURE CO., LIMITED.

27½ PER CENT.—CAPITAL RETURNED IN FOUR YEARS—VALUABLE REVERSION TO CAPE COPPER SHAREHOLDERS—LIGHT THROWN ON VARIOUS CHEMICAL TRADES — PROSPECTS OF ANOTHER SUCCESSFUL YEAR.

THE fifth ordinary general meeting was held at the Offices, 9, Queen Street Place, on Wednesday.

Edmund A. Poutifex, Esq. (chairman of the company), presided.

J. C. LEAVER, Esq. (secretary), read the notice of meeting.

RESULTS OF THE FIRE.

The CHAIRMAN: Gentlemen, I think you will be of opinion that the accounts, as presented to you, exhibit a very satisfactory state of things for the past year. They show a profit of 10,631*l*. 3s. 5d., and but for the disastrous fire which occurred last Dec. that amount would have beeu very considerably increased. The fire not only caused us a loss of some 1,500*l*. in the re-construction of the works (inasmuch as we could not recover the whole amount from the iusurance company), but it also entailed a loss of 2,500*l*. approximately, in the profit we should have made if those chambers then consumed had been at work during the four months it took to re-construct them. The loss of profit, and the loss due to the extra cost of re-construction (4,000*l*.) amounts to an extra 2s. 6d. per share, or 12½ per cent., which we should have been able to pay in addition to the divideuds we have already declared. We have already declared dividends for the past year amounting to

15 per cent., and you are now recommended to declare a further 12½ per cent.,

MAKING 27½ PER CENT. FOR THE YEAR.

(Cheers.) Had we made the further 12½ per cent. that would have made 40 per cent., which I think you will feel to be very satisfactory indeed. Moreover, in the future we shall have the advantage of another set of chambers, which was completed just at the end of the year, which will add considerably to that amount of profit. I would remind you that the profit will within a very short period not be entirely divisible amongst the present shareholders, but the Cape Copper Co., who supply all the gas out of which we make our acid, will come into participation in those profits. They have not up to the present time charged anything whatever for the gas. Therefore, if we have luck, and may reckon on 50 per cent. per annum upon our capital, you will have to be content with the modcrate dividend of 25 per cent., which in these bad times is not to be despised. (Hear, hear.) The work we have to perform is of such a simple character that it does not admit of very lengthened comments from me, and the only other matter I think I need allude to is that of the

MANUFACTURE OF SULPHATE OF COPPER.

We had expected to have derived a considerable additional amount of profit from that manufacture, but up to the present time have been somewhat disappointed. The fact was that the manufacture was so exceedingly profitable that everybody rushed in at the same moment. The manufacture is so easy, the plant so simple and comparatively inexpensive, and requires such a very little skill in manipulation, that everybody could compete with us who had ready supplies of copper, or of sulphuric acid, and the competition, as usual in such cases, very much diminished the price. It has been very low, but I think is rising now, and we may fairly hope for a successful year from that branch of our manufactures also. At all events we shall make no loss by it, and it is a ready means of getting rid of our sulphuric acid, even if we had any difficulty (which we have not at present) in otherwise disposing of it. The tinplate trade is very busy, and it is to these consumers we look to take our acid. I do not know how far the altered tariff of the United States may affect that trade eventually. Up to the present it has had a beneficial effect rather than otherwise in stimulating the manufacture, so as to get the tinplates off before the new tariff comes into operation. I am told by those interested in the trade that they do not anticipate any very evil effects from it, but we cannot predicate what the effects will be, only we hope they will not be very disastrous. At present we have no difficulty in selling the whole of our make; neither shall we have any difficulty in getting rid of the extra make we shall be able to deal with henceforward—due to the completion of the fifth set of chambers. I move the adoption of the report and accounts. (Hear, hear.)

Mr. E. Galsworthy (director): I second the motion.

A Shareholder: I do not see anything in the accounts respecting insurance of the property that was burned.

The Chairman: I just mentioned that the extra cost beyond what we received amounted to 1,500*l*. We recovered 8,750*l*. from the companies. They endeavoured to make the claim less, but that was what they ultimately paid.

OUTLOOK FOR THE TINPLATE TRADE.

Mr. Dahne: I have read this report with pleasure. It is a very good one. The dividends you have been able to pay are very satisfactory, but I do not exactly share your views as regards sulphate of copper. I do not think your company will be able to do much more in that direction. There is a great production, and you have been part and parcel in bringing it about. Very likely you will be one of the first to draw back, but I hope that your view is the correct one, and that I am wrong. As to the tinplate trade, I live in the district, and believe that all the tinplates which will be required in the States this year will be made by June, and will, in fact, be bundled off by that time, and I have a presentiment that from June to the end of the year there will be very little done in the tinplate trade. Now, why not fall back upon the original intention of this company, that the acid should be run into raw products of manure. Were the directors now to re-consider their original intention we should have an outlet in case of emergency caused by the tinplate trade. I know it is a difficult trade to go into, and find an outlet for. It takes years, but I think it will be possible, if there was a plant laid on, that some of these larger makers would get the raw products from South America and the Indies, and that they would in transit take the acid into their raw products and shift it on to their works, just as their requirements may lead them to. I would suggest that the directors should consider this matter, so that they may be armed against any emergency that may come. The shareholders ought to be highly satisfied with the report.

A Shareholder: If we make 50 per cent., are we only to get 25 per cent.?

The Chairman: The Cape Copper Co. comes in participation when we repay all our first capital.

SUGGESTIONS.

Mr. Wilde: Have you opened communication with the gas companies? They use a great quantity of sulphuric acid to make sulphate of ammonia. It seems to me possible that you could do a business with them, and save the profit of the middleman.

The Chairman: We have not overlooked the means of getting rid of our acid by making it iuto manure. The title of the company will show the original idea. We have been so fortunate, however, beyond our expectations that we have been able to get rid of all the acid in a much more profitable way, namely, by selling it to the tinplate makers, who are at our doors. If that trade fails we should fall back on the original idea, but the manure trade is the reverse of lucrative, and as long as we can get rid of the acid, as at present, without outlay for extra machinery, we shall of course defer that means of business. Then, in regard to the gas companies, we might do a business with them if they were near us, but the cost of freightage to where they are would be extremely heavy as the acid is very dangerous.

CAPE COPPER REVERSION.

Mr. Wilde: Do we get repaid for the further amount of capital we raised before the Cape Copper Co. share our profits?

The Chairman: Only the original capital of 25,000*l*. has to be repaid—of that we have already paid in dividends 18,906*l*., and the present dividend, amounting to 3,906*l*., will make the total distribution 22,812*l*., which will have been repaid to the shareholders in the four years we have been at work. That leaves 287*l*. 10s. to be repaid, after which the Cape Copper will come into participation of profits.

Mr. Hawkins: Tinplates are largely used in making cans for preserved fruits, and their use in that respect is increasing year by year. I thiuk you have very little to fear from the side of the tinplate trade.

The Chairman: The American market is the largest of any, though Canada takes a good deal, and is likely to take more. The tinplate makers seem to be of Mr. Hawkins' opinion, for they are extending their works.

The report was unanimously adopted.

Mr. Galsworthy proposed the re-election of the retiring directors whose names, he said, it was only necessary to mention—the chairman and Mr. Barclay—to secure a unanimous resolution.

The motion was seconded, and carried unanimously.

THE COMPANY A TWO-FOLD BLESSING.

The Chairman expressed the thanks of himself and Mr. Barclay, and said: It is a great pleasure to be associated with a company that has been so prosperous as this, and particularly which earns its profits out of what hitherto had not only been a waste product.

Mr. Hawkins: Are you utilising most of the gases that formerly escaped?

The Chairman: About half of them, and the other is still escaping. A good deal of the escape is inevitable in the manufacture.

A motion to elect Mr. William D. Peat auditor, in the place of Mr. Roderick McKay (deceased), was unanimously agreed to.

The Chairman proposed "That a dividend of 2s. 6d., free of income tax, being equal to 12½ per cent. on the capital, be, and is hereby, declared, payable on Mar. 14 next, and that the transfer books be closed on Mar. 7."

Mr. Hawkins proposed a vote of thanks to the directors for their services, and this, on being seconded by Mr. Wilde, was carried unanimousiy.

Mr. Galsworthy returned thanks for his colleagues and for himself.

THE NEW PIERREFITTE MINING CO., LIMITED.

60 PER CENT. FOR THE YEAR—ONE MINE OUT OF 47 ONLY BEING WORKED—A MARKET WANTED FOR THE SHARES.

The fourth general meeting was held at 154 and 155, Palmerston Buildiugs, on Wednesday.

Mr. W. Grover Ashby (chairman of the company) presided.

The Secretary (Mr. J. R. Coombs) read the notice of meeting.

A SUCCESSFUL YEAR.

The Chairman: Gentlemen, I have always noticed in public companies that when there is a small attendance of shareholders it is generally a sign that they are very well satisfied with the result of the past year's working, and with the dividends to be declared at the meeting. (Hear, hear.) There can be no question that during the past year our work has been eminently satisfactory, and from the report of our manager you must have very good hopes that it will still continue to be so. Of course, you are all aware that mining is rather precarious, and, therefore, while we feel that hope, we must always be ready to meet any reverse, although I have no reason to express the slightest fear of any such event happening in our case. The extra capital which was voted at the last meeting to be called up has been all paid. This capital remains perfectly intact. You will see by our report that every payment for improvements, and everything else has been discharged out of revenue, and I sincerely trust the shareholders will support us in that course—at any rate, as long as we are able to pay such dividends as we are now doing. Should adverse times come, or any large amount be required for development, this amount of money will be most valuable, and for that reason I trust we shall continue to pursue the course hitherto followed.

ST. PÉ CONCESSION,

which was begun to be worked before our last meeting, not turning out so satisfactorily as we hoped, it was thought expedient by our manager to open another one, the Estaing, on which we are now at work, and by our latest reports the manager expresses good hope of permanent results, but that is a work of time. The rock-drills, which were to be introduced, have not been at work, and that is why no mention has been made of them. I see at our last meeting I stated that the rock-drills were not in use, but they had proved of the greatest service, or rather the air compressor and turbine had done so. In fact, had it not been for the air compressor, worked by the turbine as it is, we should not have been able to carry on the mining operations as we have done in consequence of want of air. The turbine also has been made auxiliary to our crushing machinery. The reason our manager gives for the non-use of the rock-drills is that the ground through which he has worked is very soft in places. Directly that happens the drills shoot ahead and frequently smash the whole of the instrument.

LATEST NEWS.

It will not be inopportune for me to read an extract from a letter received from him this morning:—

"The lode in the winze below the No. 4 level north mine is turning out magnificent ore, and the stope above the level is quite as good as last week. The blende lode also is the same. We are stoping and rising on the back of the No. 2 level west (old lode) north mine close to the end, and are finding some very good ore."

Our latest intelligence, therefore, is of a very gratifying nature. I am sure you will all be sorry to hear that our manager has been very seriously ill, and at one time his life was despaired of. Thank God he has now recovered, but it was fortunate his illness happened during the long frost during which all operations had to cease, and therefore his loss at the time was not felt so much as it would otherwise have been. One of our directors, Mr. Shillitoe, visited the mine, in the autumn, and is ready to answer any questions you would like to ask him respecting its workings. The report is so explicit that it spares the trouble of talking here, and I therefore move, "That the

directors' report and balance-sheet and accounts for the year ending Dec. 31, 1890, be and are hereby received and adopted."

Mr. SHILLITOE (director) : I second the motion.

A SHAREHOLDER : Mr. Jeffree says it will take him eight months to get through the north mine, so that I presume he has got there quicker than he expected.

Mr. SHILLITOE : He is simply sinking.

A SHAREHOLDER : I thought we had already reached some of the richer ore.

Mr. NORTH : He is going down from the No. 4 to the No. 5 level, and that is where the rich ore is expected to be in the north mine. He is driving No. 5 level, and the rich ore he is finding is between that and No. 4.

The CHAIRMAN : He is showing that the lower we get the richer the ore becomes.

Mr. SHILLITOE : When I was there last summer it was evident what we should come to, because we had taken so large a portion of the rich ore from the level, and the lower part was the richest for a considerable distance. I went along with one of the miners with a pick for a considerable distance, and was quite satisfied that the rich ore was at the lowest part of the mine. Then another level was put in, the No. 5, of which mention is made now, and it has gone to a certain point. They are sinking from the floor of the No. 4 in this rich ore, which the report refers to to-day. We hope at the fifth, or lowest, level to meet this rich ore where it will go through from the 4 to the 5, as every present indication shows that it will.

WHAT THE MINE HAS DONE.

Mr. BULLIVANT (who holds upwards of one-fifth of the shares in the mine) said: There is a table in the report which shows the splendid work we have been doing during the last four years. The table shows that the dividends we have been paying from time to time have been in addition to the expenditure on the mine itself for a vast number of items, which in ordinary mining accounts would be charged to capital and not to revenue as we have done. During the four years we have paid as much as 13,000*l.* out of profits for the erection of buildings, for development, machinery and other things. In the ordinary way of mining a good portion of such outlay is often carried to capital account, because it really represents buildings standing on the place, and fresh machinery expected to last for years, and hence the outlay is carried over for several years. In our case we have paid for it out of profits and at once. That shows that during this time we might have paid more than another 50 per cent. in the four years. We might this year alone have paid almost 10 per cent. more out of profits. Another very important item is this, that year after year

OUR ORES ARE GETTING RICHER.

If we take 1887, the lead ore gave 61 per cent. ; in 1888, 64 per cent. ; in 1889, 64 per cent. ; and this year, 65 per cent. If you take the silver—which is most important—in 1887, the ore contained 31 ozs. per ton ; in 1888, 35 ozs. ; in 1889, 39 ozs. ; and this year 41, or practically 42 ozs. (Hear, hear.) As we go on and get ore in greater depth, the percentage increases. Speaking about the lode, we hope to cut in the No. 5 level, and which we have cut into the No. 4—it gives 68 per cent. of lead and 69 ozs. of silver. We know we have that lead, and have worked a considerable portion of it ; and when we are working it in the No. 4 we know it is richer, because our prices have been better. We were obliged to stop working this point from having to sink, or else we should have had to contend with water. In the No. 5 level we let the water drain itself. We have no pumping charges in this mine. There is not such a thing as a pump in the place, and there are no winzes from which to raise the ore. We bring it out on the level, so that altogether we have a cheap mode of working. The whole expense of mining, extracting, tramming, dressing, and conveying the ore to the railway station is under 4*l.* per ton. When you see the prices we are giving for the ore you can calculate the profits we are realising. You will also notice the ore we have been raising from year to year. In 1887 we only raised 10,000*l.* worth ; in 1888, 19,000*l.* ; in 1889, 31,700*l.* ; and this year 40,600*l.* ; so that we are progressing from year to year. We have many different parts of the property opened, all with rich ore, and I have no doubt we shall send home very much larger quantities this year, and make a better result, if we continue to have present prices. When we are talking of this New Pierrefitte we are only speaking of the mine upon a concession we held from the French Government, which

COMPRISES 47 MINING SETTS

altogether. This is the only one that we have really worked. Last year it was decided that we should subscribe for fresh shares to put into our coffers 10,000*l.* or 11,000*l.*, with the object of developing our mines further, to open out some of them, and determine whether they were worth working or not. When we know that we have 46 other mining setts upon our concession, I think it is most important that we should lay out some considerable sums of money in seeing what they are worth. We had a right to assume that if in the first mine we had worked we found one that would pay us 80 per cent. upon our working capital, some of the other 46 would do the same. It is a great pity that we should leave them idle, and that the money we subscribed should be lying at the bank at ordinary deposit rates of interest. I do not think that is the way to work such a property as we have. I should like to have the opinion of the shareholders about that, but in any case I say

DO NOT LET THE MINES LIE IDLE,

but let us see if we cannot find somebody else who will develop them if we do not. It is a thousand pities to adopt "The rest and be thankful policy." We ought to try and develop the property to such an extent that we may really know what our concession is worth. The money we have laid out on St. Pé is about 300*l.* this year.

POLICY OF THE BOARD.

The CHAIRMAN : I omitted to say that the directors have decided to find and send out a competent man to visit the whole of the concessions, and to prove them, so far as he can, at no very great outlay. That is our first step before we embark on any large expenditure. Until we get this report I do not think blame can be attached to us for not expending money on properties about which we knew nothing. If this expert gives a satisfactory report, I am sure there is not a member of the board but who will be as anxious as Mr. Bullivant to have the property developed, for until we have that knowledge it would not be good policy to spend any of the shareholders' money.

Mr. BULLIVANT : I am glad of the determination you have come to, but I do not think you will find it on your minutes.

The CHAIRMAN : Here are the minutes (handing them in).

Dr. RUTTER (director) : I hope the shareholders will not think that this matter has not been discussed by the board.

MR. BULLIVANT MISREPRESENTS US ALTOGETHER

when he states we are lukewarm about it, for we are nothing of the kind. We have not yet discovered any lode except at Estaing. We tried St. Pé which is sufficiently accessible in itself, and also in regard to water to make it worth while to work upon it. We had two explorers there last summer, and our own manager is fairly well acquainted with the country. Another of our head miners gave us a great deal of information, but we have not hitherto found anything that we would consider to pay to work, and we are not at all justified in wasting your money upon it at present.

Mr. NORTH : Two years ago we decided that St. Pé should be worked as the most likely place to pay. Mr. Shillitoe visited it and also Estaing, and decided that the most likely place was the former. It was within 2 miles of a station, and had all the advantages of Pierrefitte, and if we could put down ore dressing plant there, that was felt to be the most paying place. We did not find what we expected, though I am not prepared to say it was a failure. Therefore, we thought it best to try Estaing (originally called Castillon), and we are trying that now. I do not think it will be advisable to spend any large sum in any less accessible place than those two. Let us try and walk before we run. (Hear, hear.)

A MARKET WANTED.

Mr. BULLIVANT : I applaud the directors' determination to send out an expert. Although we have such a good property, we have no market for our shares. We all say we do not want to sell, and I certainly do not ; but we ought to put our shares into a marketable form. If my estate had to be realised, I should not get anything like the value of my shares unless they were marketable. I look upon that value as 6*l.* each, 1*l.* share, and what I would propose to do would be to issue six shares for every 1*l.* share now held as many other companies have done, and then there would be a market for them. It is the opinion of my solicitor that it could be done, and of a leading stockbroker that it would make them marketable. It should be our policy to make ourselves known as much as possible.

Mr. WALKER : I agree with the board in the cautious view they hold with regard to the developing of other mines. The Stock Exchange will not give a quotation to a company with a capital of less than 35,000*l.* And if none of us care to sell, as Mr. Bullivant says, I do not see how it matters. On the other hand, if the shares were reduced as he proposes they would become the toy of speculators. Altogether a matter of this kind should emanate from the board rather than from the shareholders.

Mr. NORTH : I have gone carefully into this matter, and have come to the conclusion that as the company becomes known, and particularly the dividends it pays, the 1*l.* share is likely to be worth quite as much as if it were proportionately split up into six.

The report was then unanimously adopted.

BUSINESS.

Mr. BULLIVANT proposed "That the interim dividends of 10 per cent. paid on Mar. 31, 20 per cent. paid on July 31, and 15 per cent. paid on Sept. 30, together 45 per cent., for the nine months, upon the capital of the company, be, and are hereby, confirmed."

Dr. RUTTER seconded the motion, which was carried.

The CHAIRMAN proposed "That out of the profits standing to the credit of profit and loss account a dividend at the rate of 15 per cent., free of income tax, be, and is hereby, declared on the capital of the company, payable forthwith."

Mr. WALKER proposed the re-election of the retiring director, Dr. Rutter.

Dr. WILLIAMS seconded the motion, which was carried unanimously.

Dr. WILLIAMS proposed the re-election of the auditors, Messrs. Turquand, Youngs, Weise, Bishop, and Clarke.

Mr. NASH seconded the motion, which was carried.

Mr. WALKER proposed, and Mr. NASH seconded, a vote of thanks to the chairman, which, on being suitably acknowledged, terminated the meeting.

THE CENTRAL BORNEO CO., LIMITED.

25,000 SHARES TO BE ISSUED, AT A PREMIUM OF £1 PER SHARE, TO PURCHASE PLANT AND MACHINERY FOR THE COLLIERY—ESTIMATED YIELD WILL BE 300 TONS PER DAY—A RAILWAY FROM THE PROPERTY TO PORT VICTORIA TO BE BUILT.

THE third ordinary annual general meeting of this company was held on Monday, Feb. 23, 1891, at Winchester House, Old Broad Street, London, E.C., for the transaction of the ordinary business of the company, and to consider and, if approved, pass the following resolution :—

"That 25,000 of the unissued shares be issued at the discretion of the directors, at such times, to such persons, in such amounts, and on such terms and conditions as the directors may from time to time determine."

The Hon. Evelyn Ashley presided.

Mr. A. W. FLORANCE (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN, in moving the adoption of the report, said that his remarks on that occasion would not be very lengthy, as the directors had given a great amount of detail in the report. If the working of the company had in any way been disappointing, it was, in the opinion of the board, only disappointing in the matter of time. In all the incidentals which had been laid before the board they had not been able to act with such rapidity as they had anticipated they would be able to act. He could only say that anything he had stated at the previous meeting as to the question of time had been taken *verbatim* from the report of their manager over there. They were working in a new country, with new agents, and they had not had

very much time to become acquainted with those agents as they expected to become later. It was, therefore, only owing to the time which had elapsed that the report was in any way disappointing. With reference to having put the amounts received as premiums to the writing down of capital expenditure, some remarks had been made, but he considered that it was the best plan to write off the capital expenditure and then any money they might receive from the sale of a part of their property could be put part to reserve and part to profit and loss. Under the head of concessions the paragraph in the report fully explained their position, with the exception of the Brunei territory, in which a change in the Government had been made, which would put them in a better position, as their concession would be equally recognised by the Sultan of Brunei, and his authority was undoubtedly more to be trusted.

AS REGARDED THE COLLIERY, WHICH WAS AN IMPORTANT PART OF THEIR ENTERPRISE,

at present they had been actively engaged on the railway at Victoria, and anticipating what they would require in the future. They had secured the necessary town lots and room for a wharf for the railway, with a frontage of 1,000 linear ft. That wharf was to be arranged for a hydraulic crane, to put the coal on board the ships. It was the intention of the board to commence with one hydraulic crane, although they would want more in future. One of those cranes could put on board a vessel 100 tons every hour with the employment of 10 men. At Coal Point, where they had been working, they could not put more than 150 tons on board a vessel per day, and to do that it was necessary to have 100 men instead of 10, which, he thought, showed the saving they would be able to make when all arrangements were completed. They would also have to erect buildings and machinery for working the cranes. The directors felt that it would be waste of time to only make arrangements and works for one or two weeks ahead; they wanted to have everything ready to deal with a large output in the future. They would therefore want large sheds at the colliery and at Victoria for the coal, to stand until it was required. The rains in that country were exceedingly heavy, and if the coals were left uncovered they would deteriorate. An extensive preliminary survey of the line had been made, and the result had been that they had decided upon a line 2 miles shorter than any other proposed line, and if that line was adopted the expenses for levelling works would be very much diminished. The sleepers for the line had been contracted for, all the rails were in the country, and the railway for 2 or 3 miles had been levelled. He did not like to form any too sanguinary anticipations, but it was the unanimous opinion of the board that the line would be completed in Sept. next. The present stock of waggons for coal was very small, which would cause great delay in loading when they commenced running. They had only 45 1-ton waggons at the present time, and they would shortly have to have at least 200, and ultimately 500, 5-ton waggons. They were in no way disappointed with the quality of their coal. It had been tested by impartial analysis, and had been proved to be very little inferior to Cardiff. Turning to petroleum, he had nothing much to inform them. They knew the petroleum was there, but they did not know the actual line of the strata, and it was very important economical pumping should be made, and the actual position ascertained before they went to any further expense. The board had sent out Mr. Lloyd Owen, who was an experienced coal mining and general engineer, who had been instructed to look into the whole of the matter and give his opinion to them on the coal, petroleum, and general prospects over there.

THEY HAD NO REASON TO COMPLAIN OF THE WAY IN WHICH THE AFFAIRS OF THE COMPANY HAD BEEN CONDUCTED OVER THERE,

but the board thought a little more experience was wanted, so they had sent out Mr. Lloyd Owen. He had nothing to add to the paragraph concerning the launches. The Libelle had been employed in carrying the coal, and had saved the freight duties by carrying back things which were required at the works. The next paragraph was with reference to the Baram River district property, where they had started exploring for quicksilver and antimony, and he was happy to be able to inform the shareholders that antimony had been discovered. although he could not say what value the discovery would be to them. They had had two samples of it analysed, one of which contained 80 per cent. of sulphate of antimony, and the other 68.57 of metallic antimony. Those were most wonderful results, which represented an enormous valuable property, and such antimony as they had discovered would be worth from 25*l*. to 30*l*. per ton. He now came to the matter of the increase of the capital, and he thought that a word as to the past history of the company would not be out of place. The board had already obtained the consent of the shareholders to the increasing of the capital by 250,000 shares. Since that time they had been in the position of being able to issue those shares, or a part of them, whenever they pleased, but out of deference to certain representations which were made, they agreed not to issue more than 50,000 shares without obtaining the consent of the shareholders. At the present time the directors asked for power to issue 50,000 of those shares. It was absurd to suppose that a company such as theirs could be conducted as it should be without the sinews of war, and those shares were to be issued to meet the expenses upon them. No doubt many of the shareholders would call his attention to the fact that

THERE WAS A BALANCE OF 56,000*l*. IN THE ACCOUNTS

at the time of their closing, but he would tell them that since then a considerable amount had been spent. The money had been spent on the town wharf, two engines, 45 1-ton waggons; they had fitted up the launch, bought buildings, stores, tools, and movable plant, and the 56,000*l*. had been reduced to 36,000*l*., at which figure it stood at the present time. They were, therefore, in absolute need of more money, and he would tell them how it would be spent. They wanted more waggons; they could not work the mine without a large number of waggons, and they would have to buy 160 waggons and 250 tubs to bring the coal from the mine. Those would cost 12,000*l*. They also wanted two more engines which would cost about 1,750*l*.—1,000*l*. for the large and 750*l*. for the small. They wanted the hydraulic crane machinery, which would cost 10,000*l*., and

10,000*l*. WOULD COMPLETE THE RAILWAY.

The sum expended on the line up to the present date had been 16,000*l*. or 17,000*l*., and they wanted that amount to complete it, and for sheds and other works another 5,000*l*. As to their exploration and prospection works, they had come to the conclusion that the best way to deal with that would be to have a smaller establishment and a manager on the spot—say another 5,000*l*., which made a total of 43,750*l*. To preserve the credit of the company it was necessary to have a balance in hand of 30,000*l*. or 40,000*l*., and he thought that the present issue of capital would pay those expenses, and give them a satisfactory balance to carry on their business. The shares would be issued *pro ratâ* in accordance with their holdings, at a premium of 1*l*. per share. The board were in no way connected with the Stock Exchange, and everything they did was for the interests of the company. They had no interests whatever in the price of the shares, but they considered it best for the interests of the company that they should be issued at 2*l*. each. He concluded by moving the adoption of the report and statement of accounts.

Mr. Hughes: Do you propose to give the shareholders a fair chance of taking up the new shares?

The Chairman: We shall let them have notices and give them about a month or six weeks, I should think.

Mr. Hughes: Thank you. I am ready to support the resolution, as I think it will give those shareholders who bought the shares at a high premium a chance of adding to their number at the low premium the directors propose. I shall be pleased to second the resolution.

Mr. Clark drew the attention of the board to the paradoxical state of the report, which stated that the policy of the directors was to keep the share capital of the company within the narrowest possible limits; and further on the directors believed it to be of importance, however, that, in view of possible contingencies and further developments, the financial position of the company should be kept unusually strong, and suggested that the board should wait until the shareholders were receiving a dividend before issuing fresh capital. They were promised, he said, a large revenue in a very short time from the coal, and if they waited until they were obtaining a fair result from the coal,

THEY MIGHT RAISE THE MONEY ON DEBENTURES,

get a loan from their bankers, or wait until the ordinary shareholders were getting a dividend, and make some arrangements for issuing preference shares. He thought that if the shares were issued at the present time at 2*l*. it might be the cause of making the old shares decline, and the directors might have to offer the new shares at 30*s*., which would have the effect of spoiling the credit of the company.

Mr. Collings said that in the report it stated that "at the south end of the railway the necessary land and wharf frontage had been obtained for the construction of a substantial coaling wharf to permit of large screw colliers and other vessels coming alongside, in deep water." He would like to know what depth that was, and also what price they might expect to get for their coal.

Several other Shareholders having spoken on the resolution,

The Chairman said that one very important point was being overlooked, and that was that they could not get any advantage from their coal until the railway was constructed to take it down to the port. It was not any use their extracting 300 tons or three million tons a day if they could not make any use of it, which they could not do until the line was constructed, and they had, therefore, given instructions to stop working until that time. It was no use taking it out and letting it lie in heaps to deteriorate. If they spent the 36,000*l*. they had in hand, and then borrowed 10,000*l*. from their bankers, they would be absolutely penniless until they commenced earning a revenue on the coal.

THEY WERE GOING TO GET THE LARGE SHIPOWNERS TO TRY THEIR COAL

as soon as they could get a sufficient quantity down. The price of Cardiff coal ranged from 38*s*. to 30*s*. per ton, and their coal was very little inferior to that. He moved the adoption of the report and accounts, as he would have to put the resolution separately afterwards.

The report was adopted.

The Chairman then moved the resolution for the issue of 25,000 shares.

A Shareholder said he would have to oppose the resolution on the ground that the conditions of the issue were not stated.

The Chairman, in reply, said they would have to pass the formal resolution, as the meeting had been called for that purpose, but he had given his word that they should be issued to the existing shareholders at a premium of 1*l*. per share, which he thought ought to be sufficient for them.

The resolution was seconded and put to the meeting, and carried unanimously.

The Hon. Evelyn Ashley and Mr. Robert Milburn were re-elected directors of the company, and the retiring auditors, Messrs. Welton, Jones and Co., having been re-elected, the proceedings terminated with a vote of thanks to the chairman.

HARMONY GOLDFIELDS.

THE MANAGER GIVES A DESCRIPTION OF THE PROPERTIES.

A joint meeting of the shareholders in the Harmony Goldfields, Potsdam Reefs and Sutherland Reef Cos. was held at Winchester House on Wednesday, Feb. 25, for the purpose of hearing a statement from Mr. Henry Mockford, who has lately returned from the properties.

Commander De Lousada, R.N., presided, and in introducing Mr. Mockford, said: Gentlemen, we have invited you here to-day to meet Mr. Henry Mockford, who is manager of the Goldfields and of the Sutherland Reefs, and, although not the manager of the Potsdam Reefs, he knows all about that property, as it adjoins with the property of the Sutherland Reefs Co. I have asked Mr. Mockford to be kind enough to give you all the details he can about our properties—the Sutherland Reef, Potsdam, and the Goldfields. I have asked him to be perfectly candid, and tell you all he knows, which he has promised me he will do. I personally have great respect and regard for Mr. Mockford, and my co-directors share in that opinion. He has worked most energetically out there, and we have had reports from the Transvaal, both as regards himself and his brother, which have

impressed us considerably, and I think you may rely on everything Mr. Henry Mockford tells you.

THE HARMONY PROPERTY.

Mr. HENRY MOCKFORD, who, by the aid of a plan, pointed out the extent of the properties and the different reefs running through them, said they started working in the middle of May last, principally on the farm Berlyn. The Harmony Block interseeted the Murchison Range. On the west they had the proclaimed goldfields of the Thabina, and on the east they had the Silati Goldfields. The gold formation went right across the Harmony Goldfields from the east to the west. The greatest amount of work done on the property had been done on this farm. On the Linches reef they had put down a 30 ft. shaft, and had driven to the north and cut through the reef, which averaged about 1½ ozs. Then there was Delace's reef and the Mint reef. They had put down a shaft on Delace's reef about 5 ft., carrying gold, assaying ¾ oz., and on the Mint about 2 ft., also carrying ¾ oz. of gold. The Emin Pacha reef had also been proved—in fact, all these reefs had been developed, and averaged about 1 oz., taking them right through. The extent of this farm was 6,000 acres, and it contained

HUNDREDS OF REEFS.

They had payable gold in 8 or 10 reefs, and next winter they would prospect further. The Jacobson's reef was the last piece of work done. They had put down a 30 ft. shaft, carrying about ¾ oz. to the ton. They had a plentiful supply of water on this farm, and it was very healthy. Most of the reefs were within a mile of water, and some of them cut through water. There were several old workings on the farm. They had proved that the farm did contain payable gold in several places, and the question now was whether they would pass it on to others or work it themselves. On the Keulen farm they had done very little, but on the Coblentz farm they had done a good amount of work, and though at present they had not found any payable gold the prospects of getting it in depth were exceedingly good. On the Dusseldorf farm he believed if they put down 100-ft. shaft and drove across the formation they would get payable gold. On the farm Sedan they had found gold in a reef 16 ft. wide. There were several parts of the reef carrying payable gold, and the average came out at about 10 dwts. On the Fountain reef, which was on the Potsdam farm, they had got a 50-ft. shaft, carrying 3 ozs. to the ton. On the Luxemberg and Munchen farms they had not done any work, but on the farm Aken they had done a large amount of work, and had discovered and developed the Riverside reefs and proved them to be payable, and the time had now come when they would have to decide whether to work it themselves or pass it on to another company.

LABOUR.

Last winter they employed about 30 white men and from 200 to 300 Kaffirs. They knew of gold on every farm, but they had not had time to work them all. Mr. Mockford then referred to the Swiss reef, and said when it was first discovered it was about ½ mile from their property, but it had been traced now to about 300 yds. from the property. They had not yet taken any steps to trace the reef on their own property, but were waiting the results of the operations of the Ocean Co,, and would then follow it up.

SUTHERLAND REEF.

With regard to the Sutherland Reef, he was manager of that property. At the 50-ft. level they had driven east 120 ft., and had the reef most of the way. The ore ran about 2 ozs. to the ton. They had to take the ore at present about 2 miles to be treated, and he thought they would have to bring water on to the property. It was always cheaper to bring water to a mine than to carry ore to the water. In a few months they would be ready for the mill. There were several other reefs on that property, but they had not yet been proved.

POTSDAM REEFS.

On the Potsdam property they had got a shaft put down to 105 ft., and had cross-cut the formation south for about 120 ft. and north for about 280 ft., making altogether about 404 ft. driven north and south. They had put down a shaft on the Sutherland reef with the idea of testing it at 50 ft., but had not, at that depth, discovered the reef. They had, however, found a blind reef, which they had called the Saturday reef, and as they continued driving south they would no doubt discover the Sutherland reef. He thought the time was near at hand when they would send home some gold from the Murchison Range. The railway would be carried up through Murchison Range to Matabeleland, and would make a great difference in carriage of goods.

Mr. EDWARD L. MOCATTA said he understood from Mr. Mockford that on the Harmony property there were two farms that had proved to be payable, and that the question for them to decide was whether they should work them themselves or hand them over to another company. He also understood Mr. Mockford to say there were eight or 10 reefs proved to be payable—were they on the two farms or on other parts of the property?

Mr. MOCKFORD: All of them are on the farm, Berlyn. That farm is better situated than the others.

Mr. MOCATTA: I see in the prospectus of the Sutherland Reef Co. that the estimated cost of the ore per ton bringing it to grass is from 10s. to 12s. I should like to know if that has proved to be correct, and, if not, what Mr. Mockford estimates it at now.

Mr. MOCKFORD: I cannot say. We have been really only developing the mine. I think 12s. is rather a low estimate, but it is difficult to say just now.

Mr. MOCATTA: I am sure the shareholders will be very glad to know what it will cost when Mr. Mockford ascertains it. The next thing is the Harmony battery. I understood at the last meeting that the Harmony Co. had a battery. I should like to know if that is really the case.

THE BATTERY.

The CHAIRMAN: We have a 3-stamp, that is the Sutherland Reef, but we have no other. It has crushed 50 tons of quartz for the Sutherland Reef. It cost a good deal too much for a small battery, and so we hired it out to another company, who crushed 30 tons, and it is now doing nothing.

Mr. MOCATTA: I think then it will take about six months to get it erected.

Mr. MOCKFORD: Yes, quite six months.

LABOUR.

Mr. MOCATTA: Is labour cheap? Mr. Mockford said he had only a certain amount of labour. I should like to know if he has been restricted by the directors.

Mr. MOCKFORD: There is plenty of labour if you like to pay for it, but we did all we could with the funds we had at hand.

The CHAIRMAN: We must restrict in some measure. We have only got a certain amount of working capital, and we do not want to spend it all in a few months, but to spread it over a certain period of time. We want to find something good, and when we have got it we want to sell it. That is the object of the Harmony Goldfields Co. It would never do to spend all our money in one year in prospecting, especially in these times when it is perfectly impossible to float the best mine in the world.

Mr. MOCATTA asked whether the railway would come on to the property, and when it would be completed.

Mr. MOCKFORD said the line would go over the property, and he believed a station would be made within 2 miles.

Mr. MOCATTA asked what amount of working capital was still in hand belonging to the Harmony Co. He supposed this company, the Potsdam Reef and the Sutherland Reef Cos. would amalgamate and buy a battery; if so, would they have enough money?

Mr. ROBARTS (chairman of the Sutherland Reef Co.) said that was a question which had not been considered by the three companies. The water concession belonged to the Harmony Co. They understood the Harmony Proprietary Co. intended to erect a battery, but they were advised now they were not going to erect a battery.

Mr. MOCATTA wished to know why there had been no yearly meeting of the Potsdam Co. They had no idea of the balance in hand, or anything else.

The CHAIRMAN said there would be a meeting this year, probably in the autumn. The shareholders had been informed from time to time as to what was doing. They had also been told that a shaft had been put down and a tunnel driven 400 ft. By a telegram published in the papers they had been informed that a reef had been struck, and this had been confirmed by a letter received on Monday. He thought it advisable to let them work on for a few months before calling the meeting, as at present there was absolutely nothing to tell the shareholders. With regard to the capital, they had

15,000*l.* LEFT

out of 25,000*l.*

Mr. BENINGFIELD asked how much ore was treated in order to get the value?

Mr. MOCKFORD: About 50 lbs.

Mr. BENINGFIELD said they had received reports when things were rosy, which spoke of 50 or 60 ozs. to the ton, and on those reports bought his shares.

Mr. MOCKFORD said there was stone which would assay over 100 ozs. to the ton, but he preferred to take the average, and he thought it would mill from 1½ to 2 ozs. to the ton right through. The mine was worth a good deal more now than at the time the reports were made.

A SHAREHOLDER asked whether the formation was very hard.

Mr. MOCKFORD said the formation round about the reef was soft. The veins were mostly contained in slate, and the slate got harder as they went down, but not too hard to work.

The meeting closed with a vote of thanks to the chairman and Mr Mockford.

EXTRACTS FROM

THE FORTY-SECOND ANNUAL REPORT,

FOR THE YEAR ENDING DECEMBER 31, 1890.

ORDINARY BRANCH.

The number of Policies issued during the year was **55,846**, assuring the sum of **£5,615,676**, and producing a New Annual Premium Income of **£340,699**.

The Premiums received during the year were **£1,162,649**, being an increase of **£257,734** over the year 1889. The increase in the Premium receipts for the years 1887-90 was **£765,709**, giving an average increase for the first four years of the Quinquennium of **£191,427** per annum.

The Claims of the year amounted to **£308,076**. The number of Policies in force was **220,545**.

INDUSTRIAL BRANCH.

The Premiums received during the year were **£3,517,925**, being an increase of **£181,183**. The increase in the Premium receipts for the years 1887-90 was **£606,630**, giving an average increase for the first four years of the Quinquennium of **£151,657** per annum.

The Claims of the year amounted to **£1,489,204**. The number of Deaths was **169,890**.

The number of Policies in force was **9,099,204**; the average duration continues to increase and now exceeds six and a half years.

The total Assets of the Company have been raised during the year from **£10,946,156** to **£12,579,870** being an increase of **£1,633,714**.

The Balance Sheet has been again submitted to the independent professional audit of Messrs. Deloitte, Dever, Griffiths & Co.

SECRETARIES.
W. D. MASSY.
A. VIAN.

REPORT.

The directors beg to lay before the proprietors the following report of the transactions of the Company during the year ending December 31, 1890, together with a statement of accounts.

The total income for the year was £252,733 5s. 2d., of which £239,972 12s. was for premiums of insurance, and £12,764 13s. 2d. for interest on investments. In the previous year the income was £251,066 6s., the premium income being £237,815 12s. 1d., interest £11,659 16s. 8d., and £1,590 17s. 3d. profit on sale of securities.

The number of new general accident policies issued was 7,528, the premiums on which amounted to £22,031 7s. 3d. In the previous year the new policies were 7,749, and the premiums thereon £22,651 5s. 3d.

A statement of the number of policies in force and tickets issued during the last two years is appended :—

GENERAL ACCIDENT POLICIES.

1889	... ...		75,596
1890	New policies	7,523	
	Renewals	68,119	

RAILWAY ACCIDENT POLICIES AND TICKETS.

Time Policies.

1889	... ...	4,159
1890	... ...	4,304

	Single Journey Tickets.			Double Journey Tickets.		
	1st Class.	2nd Class.	3rd Class.	1st Class.	2nd Class.	3rd Class.
1889	23,586	15,403	372,237	20,464	11,426	198,708
1890	27,814	13,790	333,114	20,239	12,193	181,999

EMPLOYERS' LIABILITY AND COLLECTIVE WORKMEN'S POLICIES.

1889	... ...	1,669
1890	... ...	1,827

The claims in 1890 have been more numerous than in 1889, but the total amount of compensation paid is less, showing £136,740 7s. 7d. against £141,612 18s. 5d., a proportion of 56.98 on the premiums received, against 59.54. The compensation has been distributed as follows :—

		£	s.	d.
54	Fatal claims	27,592	18	0
10	For loss of eye or limb	2,696	0	0
7,981	For non-fatal injuries	106,451	9	7
8,045		£136,740	7	7

The bonus allowed to policyholders of five years standing amounted to the large sum of £15,225 9s. 5d., and after the payment of this amount and of all charges and claims accrued during the year there remains a balance of £120,558 14s. From this amount provision has to be made to meet the risks on current policies, and in view of the large number of claims occasioned by the protracted frost of this winter it has been considered advisable to set aside a sum of £5,000 over and above the amount reserved for such risks. The surplus will admit of a dividend at the rate of 5s. a share, which the directors propose should be paid, making, with the interim dividend paid in September, 8s., free of income tax, for the year.

It will be in the recollection of the shareholders that at the last meeting the chairman mentioned that the directors had under consideration the propriety of extending the powers possessed by the Company under their present Acts of Parliament and deed of settlement. A Bill is in course of preparation, and due notice will be given of the extraordinary general meeting which will be necessary to sanction such a measure.

The directors sincerely regret to have to report the death of their late secretary, Mr. W. J. Vian, which occurred shortly after the last annual general meeting. Mr. Vian had nearly completed 40 years of faithful service in the company. The directors have appointed in his stead Mr. W. D. Massy and Mr. A. Vian, who have long been on the staff.

The directors who retire at this meeting are the Hon. Evelyn Ashley, Alfred Farquhar, Esq., the Hon C. W. Mills, M.P., and the Hon. Sir Spencer Ponsonby-Fane, K.C.B., all of whom being eligible, offer themselves for re-election.

The auditors, T. C. Bates, R. Dickinson, and R. Yeats, Esquires, also retire and offer themselves for re-election.

By order of the Board,
W. D. MASSY,
A. VIAN, } Secretaries.

Telegraphic Address—

QUINLAND—LONDON.

MINING MARKET.

City, Friday Evening.

BROKERS PUZZLED — AN ACTIVE WEEK — INDIAN CRUSHINGS—FOREIGN SHARES THAT OUGHT TO RISE —ELKHORN—DEPRESSED STATE OF CORNISH SHARES.

The activity which has characterised the market during the past week has been extremely welcome, following, as it has done, about two weeks of almost enforced idleness. When in a state of somnolence it is very difficult for brokers to reply to the letters of their clients who wish to either buy or sell. They see prices quoted in the lists, and think it is as easy to deal at them as it is to put them in print. It is not so. Quoted prices in a broker's list is one thing, but realising those prices in actual dealing is quite another. Many clients cannot understand why prices cannot be realised as quoted. Sometimes there are neither buyers nor sellers, but for that reason shares cannot be left without any quotation at all, and hence the last price is allowed to remain until some activity raises or depresses it. When there is no market it does not always mean that there is no value, but that, at the moment, to put it colloquially, "the shutters are up" for that particular share. The shutters were up for most mining shares a fortnight ago, but they have been taken down during the present week, and there is a fair amount of business proceeding.

The chief attention has again been given to the Indian market. The returns for February are to hand, and show but little variation as compared with those of the previous two months. The following list is given for the purposes of comparison.

	February.		January.		December.	
	Ozs.	Tons.	Ozs.	Tons.	Ozs.	Tons.
Mysore Gold ...	5,452	3,031	5,360	3,350	5,316	3,250
Mysore Reefs ...	42	415	83	589	103	600
Balaghat	307	190	465	350	486	330
Nundydroog ...	1,449	810	1,471	830	1,406	975
Ooregum	2,913	1,197	2,890	1,353	2,847	1,313

The feature of the week was Goldfields of Mysore, which were freely dealt in up to $2\frac{3}{16}$ths, but close $\frac{1}{16}$th lower, as compared with last week. This has surprised the market, which had been led to think prices would harden considerably in consequence of projected sales, and that by this time they had been reduced to parchment form. Mysores, which were expected to go back, and at one time of the week did so, have advanced, some strong buyers putting in an appearance and this sustained prices. Ooregums are also better, but in other directions shares are down. To-night Nundydroog announces a dividend of 1s. a share.

Next to the Indian market, general foreign shares have received attention. The hydraulic market has been particularly strong. Lomas have changed hands by the thousand, and prices, to some extent, have revived, in spite of busybodies (believed to be short of the shares) circulating rumours that the directors would promptly make a call. We have the best authority for stating that no such action on the part of the board is contemplated. Colombian Hydraulics have been dealt in, but curiously enough have fallen exactly the shilling dividend declared.

Generally speaking, foreign shares suffer on a comparison with prices last week, but in one or two cases they should certainly have improved if the market were always guided by the facts of the case, which, we are sorry to say, it is not. Montanas, for example, should have risen on the statement of the directors, that at the forthcoming meeting Mr. R. T. Bayliss would be present to give an account of his stewardship, and we believe that account will be of a much more cheering character than the recent returns from the mine seem to warrant. Then, Palmarejos should also have risen on the postcard of the secretary announcing that the whole of its required capital had been provided by the Mexican Association. Pahang Corporations are also down, but probably that is to be accounted for by the rapid rise that took place a week ago. Most surprising of all is it to see Golden Gate and Golden Feather shares slightly receding. Let our readers peruse the reports of Col. McLaughlin and judge from the standard of common sense whether these shares should not have advanced. So earnest is the gallant colonel in his work that he has positively established a *cordon* of prohibition in his district, and the workpeople are, for the time at least, teetotalers—he, himself, setting them the example of abstinence. His works have stood the recent storms, and the result of his operations during the next few months will be watched with almost feverish anxiety by the shareholders and the public. A big rise for both Golden Gate and Feather shares may, with almost certainty, be predicted between now and July.

The remarkable returns published by the Elkhorn Mining Co., Limited, deserve more than the passing notice they receive as periodically announced. The company commenced operations Mar. 1, 1890, and dividends were estimated in prospectus at 20 per cent. The dividends actually declared have been as follows :—

Quarter ending May 31 at the rate of 20 per cent.
" Aug. 31 " 30 "
" Nov. 30 " 40 "

On Nov. 30 the balance carried forward was stated as 8,500*l.*, and the cabled profits since then have been :—

Dec. about 5,760*l.*
Jan. " 6,470*l.*

The result for month of Feb. and the dividend for last quarter will be probably declared next week. The paid-up capital is 175,000*l.*, and we need only add that the company was brought out by the Mining and Financial Trust Syndicate, Limited, which this week announces the advent of the De Lamar Mining Co., Limited, that appears to have equal prospects of success.

There has been a fall in Flagstaffs not justified by the facts, but Emmas have remained stationary. It should be remembered with reference to these two companies' mines that the season is now approaching when they can be worked with efficiency, and the reported reserves of ore sent to market. Almadas have also receded on realisations, and El Callaos are down again. Potosi is to be reconstructed principally to find capital to provide the mill as recommended by Capt Pryor. Hitherto the company has been using the Yuruari mill. The dividend of one shilling declared by Frontino and Bolivia directors

is only what was expected after the brilliant returns recently published. We do not think that even present prices represent the proper value of this improving property.

The shares of Russell Gold Co. at the present low price are undoubtedly cheap. The directors have, within the last few days, received a telegram to the effect that the furnace, to adopt the process of the Gold Ores Reduction Co., has been finished. This must have a most beneficial result on the returns in the future, because it will be remembered that 5 tons of the Russell ore were treated by the Gold Ores Co. some time since, when the excellent result of 87 per cent. of the assay value of the precious metal was extracted from the quartz. It would not be surprising, therefore, to see a substantial advance in the price of Russell shares. The closing price this evening was 1s. 6d. to 1s. 9d.

An effort to obtain a professional liquidator for the purpose of conducting the winding-up of United States Placers, Gold Queen and Goulding, Limited, has been successful, and the committee in a circular to the shareholders congratulate them on this result. A meeting of the first-named company is to be held next week to remove, for reasons alleged, the present liquidator from office and to appoint Mr. Henry Naidley in his stead.

In the South African gold market the chief dealings have been in Pigg's Peak, Ordinary and Preference, which fell heavily on the receipt of adverse news. In fact gold shares generally are down, the only instances of firmness being exemplified by City and Suburban, Jubilee, and Wemmer.

The serious drop in De Beers has justified our prognostications of a week ago, and also the repeated articles we have published calling attention to the inflated quotations for these shares. This afternoon it was rumoured in the House, and after hours it was emphasised in the street, that Mr. Cecil Rhodes had resigned the chairmanship. New Jagersfontein is also down, and the diamond outlook is gloomy to a degree.

Equally so is the outlook for land shares. Without an exception they have marked a decline. The 6d. or 1s. rise of Silati a week ago finds its complement in the 2s. fall we chronicle this week, and the parent company has gone down 10s., other shares falling in sympathy.

Australians, with the solitary exception of Mosman, are all down, and a similar decline has occurred in Copper shares.

We have to call attention to the serious fall in West Kittys of nearly 3*l*. a share. Again and again we have warned our readers who held these shares to sell them without delay, and those who were on the point of buying, to pause and think. It seems obvious that there are some big sellers about, and equally does it seem apparent that they are wiser than the buyers. It is with great regret we continue to report the decline of prices in Cornish mines What things are coming to one can only pause in wonder to consider. Week after week the best of these mines have been falling by pounds at a time, and yesterday, in meeting assembled the shareholders of West Seton, an old favourite Cornish mine decided to suspend operations in the face of a dreadful loss on the four months of 5,000*l*. Flesh and blood, as it is constituted in Cornwall, cannot stand the frightful calls that are being made at almost every meeting. News has been received that West Frances, which has been a dividend-paying mine for some time past, is now about to lapse into the call-making list. Altogether, the position of affairs is very serious—very regrettable, and its gloom is scarcely relieved by the solitary rise of 1*l*. that has taken place in Carn Brea shares.

There has been some activity in Great Laxeys, which are up 10s. on the week, but the counterpoise is provided by Leadhills, which are down 7s.

South Darren will undergo another re-construction, and the liability this time is 2s. 6d.; 16,256 shares were subscribed for, and the balauce to 20,000 was made up in the room. Subscribers have the right to the call of the remaining capital for six months from last Wednesday.

The directors of Drake Walls have made a call of 6d. per share (the last call having been made May 16, 1889), to enable them to pay off liabilities; sink the shaft a further 15 fms.; which, upon enquiry, they find can be done with the present engine; complete the jigging machinery now in course of erection; and pay for the new calciner put to work since the last meeting of shareholders. The mine continues to look well.

The directors of West Wheal Grenville regret that they are still unable to report the intersection of the Great Flat lode, to which object the energies of the agents have been continuously directed throughout the year. The different points have gradually improved during the last few weeks, and the concensus of opinion of the several mining experts who have surveyed and reported on the mine is that the present system is the most advisable course to adopt to achieve the desired result. The board hold nearly 16,000 shares, or about one-third of the entire capital of the company. The directors are still very hopeful that by persevering with the operations now in progress success will be met with, and that it may come at any moment.

The outlook for Indian and General Foreign shares, particularly those to which we have called special attention, appears on the whole encouraging.

Kaffirs.

The wires from Pigg's Peak yesterday caused a panic in this market, and at one time this morning the shares were offered at 10s. but quickly recovered to $\frac{5}{8}$, $\frac{11}{16}$, at which price they close, while the Preference also showed a loss to the extent of 22s. 6d. There has not been much business in other descriptions, except in Ferreira, Roodeport, Jumpers, Robinson, Simmer and Jack, and Stanhope, which all show a loss on the week.

Business.—The undermentioned have fallen:—Pigg's Peak, 13s.; ditto Preference, 1$\frac{1}{8}$; Sheba, $\frac{1}{8}$; Aurora, $\frac{1}{8}$; Bantjes, $\frac{1}{16}$; Bothas Reef 6d.; Central Langlaagte, 1s.; Crœsus, 1s. 6d.; Durban Roodepoort, $\frac{1}{8}$; Ferreira, $\frac{1}{4}$; Geldenhuis, $\frac{1}{16}$; Johannesburg Waterworks, $\frac{1}{16}$; Jumpers, $\frac{1}{8}$; Kimberley Roodepoort, $\frac{1}{8}$; Main Reef, 6d.; Modderfontein, 3d.; Moss Rose, 6d.; Nabob, 1s. 6d.; Robinsons, $\frac{1}{8}$; Salisbury, 1s.; Simmer and Jack, $\frac{1}{8}$; Spes Bona, $\frac{1}{8}$; Stanhope, $\frac{1}{8}$; and Vogelstruis, 1s. 6d.

The only upward move is in City and Suburban of $\frac{1}{8}$; Jubilee, $\frac{1}{8}$; and Wemmer, $\frac{1}{4}$.

Diamonds.

There appears to have been quite a rush to get out of De Beers at one time, and some of the smartest jobbers were found selling so

much, that shares were even offered at 14½, but close higher, although showing a final drop of 1 1/16. It seems now to be generally recognised that the directors do not agree, and it is rumoured the chairman (Mr. Cecil Rhodes) will resign.

Business :—Those showing a fall are Bultfontein, 6d. ; De Beers, 1 1/16 ; Gordon, 6d. ; New Jagersfontein, ⅛ ; and North-Eastern Bultfontein, ¾. There is no rise to record.

SOUTH AFRICAN LANDS.

A dull market has been experienced in this class, and in several cases shares have been freely offered. Exploring and London and South Africans show the heavy drop of 20s., while Oceanas come next, with Goldfields of South Africa following close behind it.

Business.—The following have declined :—Bechuanaland, ⅛ ; British South Africa Chartered, ⅛ ; Exploring, 1 ; Exploration, 1/16; Goldfields of South Africa, ¼ ; Johannesburg Estates, 1/16 ; London and South African, 1; Moodies, 1/16 ; Oceana, ½ ; Ophir, 6d. ; Silati, 2s. ; and Transvaal Gold, 1s. There is not a single rise to record on the week.

INDIANS.

There has again been active dealings in Goldfields of Mysore, and at one time on Tuesday shares changed hands freely at 43s 9d., but show a fall of 1/16 on the week. The cause of the drop, so far as we can ascertain, has been due to holders taking profits. On the other hand Mysores and Ooregums are both higher and close strong.

A large business has been done in Nine Reefs, bnt although prices have experienced a drop of 9d., yet there appears a disposition to purchase at rnling figures.

Business :—The rises are in Mysore Gold and Ooregum Preference of ⅛ each, whilst the falls are as under : Balaghat, 6d. ; Champion Reef, 1s. 6d. ; Colar Central, 6d. ; Goldfields of Mysore, 1/16 ; Mysore Reefs, 6d. ; Nine Reefs, 9d. ; and South-East Mysore, 3d.

AUSTRALIANS.

There has been a fairly good demand for Australian Broken Hill, and Mosmans, although at the close neither description showed at best. Kangarilla have been offered somewhat freely, and show a fall. The Rosewarne report is not generally viewed with much favour.

Business :—There is a fall to be noted in Australian Broken Hill 1s. ; Bonnie Dundee, 9d. ; Cumberland, 3d. ; Etheridge, 3d. ; Gympie Golden Crown, 3d. ; Gympie Great Eastern, 3d. ; Kangarilla, 1/16 ; New Queen, 3d. ; and Scottish Australian, ¼.

The only rise is in Mosman of 6d., others remaining as previously qnoted.

COPPER.

There has not been very mnch business in copper shares during the last day or so, although the market opened strong at the commencement of the week.

A fall is to be noted in Namaqua, Panulcillo, Quebrada, and Rio Tinto of ⅛ each, whilst others are unchanged on the week.

GENERAL FOREIGN SHARES.

The chief dealings on the week have been in Lomas, many thousands of shares changing hands, and on the result of the meeting becoming known holders hastened to average. This seems a very wise proceeding, for the prospects are unusually hopeful. New Gustons are rising, and should go still higher. Pahang Corporations have slightly fallen in consequence of recent holders taking profits. Golden Gates, Palmarejo, Russells, and Yankee Girl have also been freely dealt in, although in some cases prices are a shade lower.

Business.—Those quoted lower on the week are as under :—Almada, 6d. ; Balkis, 6d. ; Callao Bis, 3d. ; Colombian Hydraulic, 1s. ; El Callao, ⅛ ; Flagstaff, 9d. ; Golden Feather Channel, 2s. ; Golden Gate, ⅛ ; Graskop, 3d. ; Idaho, 3d. ; Montana, 1s. ; New Gold Hill, 3d ; Pahang Corporation, 3/16 ; Palmarejo, 1s. ; Pestarena, 3d. ; Potosi, 6d. ; Victory, 3d. ; and Yankee Girl, 6d.

The rises are in Loma, 3d. ; New Guston, ¼ ; and Plumas Eureka, 1/16.

The following list shows the principal changes which have taken place :—

LATEST FROM THE MINES.

Indian Mines.

Balaghat Mysore.—A telegram, dated March 5, gives last month's return of gold as follows: "190 tons of quartz produced 307 ozs. of gold; unable hoist breakage shaft."

Indian (Glasgow). — The following information has been received from the mines, viz. :—Feb.—Koorumber: Total amount crushed is 630 tons, yielding 71 ozs. No. 11: Total amount crushed is 220 tons, yielding 9 ozs. free gold.

Mysore.—A telegram, dated Mar. 5, gives last month's return of gold as follows: "3,031 tons of quartz produced 5,056 ozs. of gold, also 396 ozs. obtained from tailings, making together 5,452 ozs. of gold." The eleventh ordinary general meeting will be held at the Cannon Street Hotel on Mar. 19, at noon, and immediately after the conclnsion of this meeting an extraordinary general meeting will be held for the purpose of confirming the resolution which was passed at the extraordinary general meeting held on Feb. 27, that the capital of the company be increased to 225,000*l.* by the crcation and issue of 25,000 ordinary shares at 1*l.* each.

Mysore Reefs.—A telegram, dated Mar. 6, gives last month's return of gold as follows:—"415 tons of quartz produced 42 ozs. of gold."

Mysore-Wynaad Consolidated.—The meeting of this company, called for Tuesday, is to reduce the fees of the directors from 1,000*l.* to 800*l.*, and the number of directors to a maximum of five and a minimum of three.

Nundydroog.—A telegram, dated March 5, gives last month's return of gold as follows: "810 tons of quartz produced 1,449 ozs. of gold." The company announces a balance dividend for the year 1890 of 1s. per share, free of income-tax, payable 26th inst.

Ooregum.—A telegram, dated Mar. 4, gives last month's return of gold as follows:—"1,197 tons of quartz produced 2,913 ozs. of gold."

Colonial Mines.

Blue Spur and Gabriel's Gully Consolidated. — The manager cables the result of working, since the new arrangement, completed on Dec. 25 last, by which the company was extricated from its financial difficulties—"Jan., 167 ozs.; Feb., 267 ozs."

Broken Hill Proprietary.—The usual monthly dividend of 2s. per share, amounting to 96,000*l.* for the month of Mar., has been declared on the 960,000 shares and will be paid on Mar. 18. The company also report that during the week ending Thursday, Feb. 26, there were 4,662 tons of ore treated, yielding 886 tons of lead, containing 177,156 ozs. silver, and that the surplus on hand amounts to 70,099 ozs. silver. The company has received a cablegram from Melbourne, dated Feb. 28, giving the price of their shares as 10*l.* 16s. For the week ending Mar. 5, 5,066 tons of ore were treated, yielding 963 tous of lead, containing 177,310 ozs. of silver.

Day Dawn P.C.—A cable just received gives the result of this company's crushing for the fortnight ending Feb. 28: "1,180 tons, 959 ozs." (Estimated value 3,260*l.*)

Etheridge United.—A telegram, dated Mar. 4, advises the return for Feb. as "100 tons crushed, 46 ozs. of gold produced."

Midas.—"Nearly dead work fortnight; yield for week ending Feb. 28, 34 ozs."

Mount Albion.—A telegram shows work done during four weeks ending Feb. 21: "505 tons ore raised, containing 16,000 ozs. silver; 625 tons ore smelted, containing 19,000 ozs. silver; producing 81 tons silver-lead bullion, containing 16,000 ozs. silver. Shipped per Jumna 9 tons silver-lead bullion, containing 2,000 ozs. silver. 30 tons short shipped. Promising discovery in West Albion tunnel.

Mount Morgan.—Messrs. Laughland, Mackay, and Baker have received the following telegram:—"We pay 37,500*l.* to-day, being dividend of 9d. per share (free of dividend tax) for the month of February."

New Queen.—A cablegram gives the result of the crushing for the past fortnight:—"280 tons (yielding) 325 ozs. (gold)."

Sunburst.—A cablegram from Charters Towers, Feb. 28, reports the result of the preceding fortnight's crushing, 250 tons, yielding 1,030 ozs. gold; value, 3,700*l.* Another interim dividend of 1s. per share is declared.

Foreign Mines.

Colombian Hydraulic. — The directors have declared a fourteenth dividend of 1s. per share, free of income tax, payable on Mar. 25, on the shares as they stand on the register of members on Mar. 14.

Elkhorn.—Cable from .Capt. Plummer: "Bullion shipped for week ending Feb. 28 was $9,000 (ninc thousand dollars)."

Esmeralda.—Cablegram, received Mar. 6, reports as follows:—"Havc connected with the Durand south winze, and will commence taking out ore to-day."

Frontino and Bolivia.—At a meeting of the directors held Mar. 6 the following resolution was passed, viz.:—Resolved: "That an interim dividend of 1s. per share, free of income tax, be this day declared, payable on and after Mar. 12, 1891, to the shareholders on the register of the company on that day, and that the transfer books of the company be closed from Mar. 7 to Mar. 12, both days inclusive."

New Russell.—Telegram from the manager:—"Mill started 10-stamp Feb. 23; furnace finished."

Pahang Corporation.—Advices of further shipments of black tin from their mines, amounting to about 26 tons, have been received.

Pinos Altos.—The out-turn for the week ended 14th inst. was $10,000; the out-turn for the week ended 21 ult. was $8,340.

Pittsburgh Consolidated.—A cable from the superintendent shows the results for the month of Feb.:—"Production, $8,700; total expenses, $6,000; tons crushed, 650."

Red Mountain.—The following cable has been received from the foreman at the mines:—"We have struck a reef of quartz and iron pyrites in new tunnel, Pickwick claim."

Rio Tinto.—The company publish the numbers of their 5 per cent. mortgage bonds (1880), drawn for payment at par on the 1st prox.

Zaruma.—The bullion for the month of Dec. has been sold, and realised 775*l.* 7s. 4d. nett.

Home Mines.

Levant.—A 16 weeks' meeting of shareholders in Levant was held on Tuesday on the mine. The loss on the working period was 92*l.*, but no call was made. An encouraging report was presented. The new calciner will be at work in the course of a fortnight.

Wheal Agar is evidently improving again. The agents have very great hopes of some profitable results.

West Seton.—The mine is to be closed. The debit balance on the four months was 4,237*l.* and the total deficiency 4,997*l.* A call of 1*l.* was made.

West Wheal Frances.—We hear that notice for a call in the above mine has been made for the meeting on Mar. 12.

Ticketing for Tin Ores.

A tin ticketing took place at Redruth on Tuesday last, when 283¼ tons were offered, with the following results:—

Value of Ores Sold from Each Mine.

	Tons.	Cwts.		Per ton. £ s. d.		Value. £ s. d.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

Witwatersrandt (Knight's).—The company advises the receipt, ex Roslin Castle, of 118 ozs. 5 dwts. of gold.

Ferreira.—Crushings for last month: 1,011 tons main reef; 3,900 tons south reef; yielding 4,698 ozs.

May Consolidated.—The yield of gold during the past month (Feb.) was 2,399 ozs.

Simmer and Jack.—Obtained 3,040 ozs. gold during month of Feb. This is the largest monthly output yet obtained.

Barret.—The mine manager reports a yield of 200 ozs. gold for Jan. and (by cable) 240 ozs. for Feb.

New Primrose.—1,223 ozs., 2,340 tons; 30 stamps running 25 days for Feb.

Oriental and Sheba Valley.—The mill (50 stamps) has run 16 days and crushed 870 tons; the yield is 309 ozs. gold. The new mill (60 stamps) is now working all right.

Forbes Reef.—A telegram reports the results for the month of Feb. as follows:—"Crushed 1,100 tons of quartz, casing and surface soil, obtained 356 ozs. of gold."

Transvaal Gold Exploration.—A shipment of four bars melted gold, weighing 431 ozs. 4 dwts., value, 1,620*l.* (part of January produce), was forwarded, through the Standard Bank, on Jan. 29.

Jubilee.—Result of last mouth's crushing is 938 ozs. of gold Have declared a dividend of 5 per cent., payable on Apl. 12, to all shareholders registered on Mar. 5.

Edwin Bray.—A cable from the managing directors at Barberton notifies that 775 tons of ore have been crushed during the month of February, producing 500 ozs. of gold.

Glencairn Main Reef.—The new 20 stamps, which complete the battery of 50 head, have been added to the 30, which have been running off and on for the last few months, and the whole 50 started runniug on Feb. 7.

Transvaal Gold Exploration.—A cable from the manager to-day states :—"During Feb. we mined 500 tons; battery working 21 days, double shifts, crushed 650 tons (Nu ore), yielding 900 ozs.; pans, 600 ozs.; total, 1,500 ozs."

George Goch.—The company advises the receipt, ex Roslin Castle, of the following consignments of gold: 335 ozs. 1 dwt., 199 ozs. 8 dwts., 179 ozs. 10 dwts. The company also has intimation of the result of the crushing for month of Jan. as follows :—1,878 tons of ore crushed; time run, 23½ days; return, 962 ozs. of gold."

Geldenhuis Main Reef.—The company has received, through the Standard Bank of South Africa, Limited, 427 ozs. 5 dwts. of retorted gold, being the proceeds of the Jan. crushing of 880 tons. The London secretary has received a cable from the head office of the company, stating that during Feb. the company crushed 700 tons, producing 360 ozs. of retorted gold.

Thomas Reef.—An extraordinary general meeting will be held at the office in Port Elizabeth on Apl. 17, for the purpose of receiving a statement of the affairs of the company made up to Dec. 31, 1890; but more particularly to take into consideration the advisability of either placiug the company iu liquidation, or otherwise re-constructing the same upon such terms as shall be agreed upon.

Geldenhuis Estate.—The crushing of the ore at grass by the Jumpers Battery is now completed, the yield for last month being 3,793 ozs. from 3,574 tons; the battery during Jan. ran 16 days, three hours, 53 minutes, crushing 3,449 tons, which yielded 5,069 ozs. of smelted gold, equal to 1 oz. 9 dwts. 10 grs. per ton. The nett profit for last month was 13,500*l*. The directors were so satisfied with the results of the crushing, that they at once proceeded to take energetic steps to erect their own battery. The ore milled was taken from the shafts and drives, and was mixed with sandstone. When the last mail left it was expected that if the Feb. crushing reached 3,500 ozs. there would be a cash balance of 19,000*l*. after paying all debts.

Cerro de Pasco (Feb. 2.)—The mine captain writes :—The 500-ft. level drive (middle reef), working 13 days, daytime only, has been driven 15 ft., making total distauce 414 ft.; average width of reef, 5 ft.; quartz extracted, about 30 tons. The main shaft on block adjoining bullion ground was commenced Jan. 5, and is now sunk 40 ft.; five sets of timber and 32 sheets of corrugated iron, 8 ft. each, has been put in to secure collar; also four wall plates and 10 sheets of corrugated iron, 8 ft. each, have been put in to secure east side of shaft, which was unsafe. One European and three natives have been employed repairing building and doing necessary work. Mr. Hawse, the manager, writes :—The new main shaft (10 ft. by 6 ft.) is passing through strata of quartzites and talcose clay, dipping west at about 70 degs., but within the last foot or two the underlie is rather greater. Still I do not anticipate cutting the first or most westerly reef much before attaining a depth of 100 ft. The expense of timbering has been kept down by utilisiug old material lying about the mill.

Pigg's Peak.—Cable received Mar. 5 :—"Mill returns show 380 ozs. 280 tons, crushing 220 hours. Rich leaders pinched out; quality ore failed quite unexpected." Mr. Murray's report week ending Jan. 31 :—Devil's reef: Drive from No. 1 cross-cut north-east running parallel with main drive has advanced slowly; total length, 11 ft. No. 2 north-east advanced 24 ft., giviug total length 69 ft., showing pleuty iron stone. Have put in a cutting 50 ft. long. 6 ft. deep, connecting at the shaft in No. 1 cutting, and will connect with No. 2 cutting; the first 10 ft. from shaft at bottom of cutting shows gold in panning about a 2-oz. prospect. Also starting to put in a cutting under the road and between main works and the 93 ft. cutting; good prospects in panning. Peak: Cross-cut has advanced 5 ft. for the week; panniug shows a 2-dwt. prospect. I have put in a cutting to join Nos. 1 and 2 cutting, starting from the shaft at No. 1, and at a depth of 6 ft. found a rich leader, very narrow, carrying visible gold. This is opened up for a length of 10 ft., so that at this point I have ore uncovered 5 ft. wide, 10 ft. long, and 9 ft. deep that will run about 2 ozs. per ton without assorting. The gold bearing reef, near the Pirate Reef, has had no work performed on it, owing to scarcity of labour. The reef shows strong on the outcrop, and prospects from 2 to 6 dwts. free gold. The reef near the boundary is a very promising one. It was found by one of the prospectors, and is only lying idle for the same reason as the other one. Labour: Labour has been very scarce. I have, however, just secured another gang of 25 boys, which will enable me to carry on more work.

Henderson and Forbes.—Report for Jan. :—East Camp, New shaft, cross-cut tunnel on Black Reef: The cross-cut South has been driven 22 ft., and passing through a body of quartz and hornblende fully 16 ft. wide, and striking soap stone on the footwall side of the reef. This is evidently a portion of the reef which had separated from the main quartz body, numerous pannings taken as the cross-cut advanced all showed gold, varying from a few colours up to an estimate of 3 dwts. per ton of rock. Driving is being continued on the hanging side, at about 30 ft. in advance of present end. I propose to cross-cut again both north and south. No. 10 tunnel drive west on No. 15 reef has advanced during the month 18 ft., making a total distance driving from the cross-cut tunnel 137 ft. Finding no change nor improvement from the clay matter it was suspended and the men set to resume driving west on the No. 12 reef. Where driving was commenced the vein only averaged a few inches in thickness, but it has since widened, and is now fully 18 ins. wide, and of very fair value. 14 ft. has been driven on this reef during the month. North-west portion of the concession: The cross-cut drive has been extended a further distance of 61 ft., making a total from the entrance of 166 ft., and passing through several quartz leaders, which are apparently off shoots from the main reef, which is still in advance. To expediate the work here, a tram road has been laid down, and better progress should now be made. Northern Range: In the drive east from the cross-cut 14 ft. has been driven on the reef, no improvement taking place in the nature of the quartz, it was suspended, and the men were set to continue the main cross-cut further iuto the hillside with the hope of meeting with something more permanent in appearance. It has advanced during the month 5 ft. 9 ins., making a total measurement of 70 ft. 3 ins. from the entrance. Prospecting of the northern hills: Three Europeans, with a gang of native Kaffirs, are employed on this work, and several reefs are being opened on by means of cuttings and small drives, trial shafts, &c. One shaft has reached a depth of 20 ft., and has passed through numerous veins of quartz, in places showing a few colours of gold. It is my intention, when the shaft has reached a further depth of say 20 ft., to cross-cut south from the bottom of it, as I am of opinion that the main part of the reef lays in that direction. Other places have an encouraging appearance, but until more extensive work has been carried out on the reefs already discovered a full report on each of these points would be misleading, as we frequently have to abandon points and take up others.—W. Roberts.

Sheba.—Manager's report for Jan.—Mine :—Quarry: We have again been compelled to remove a lot of top soil, over burden, from the east end of quarry, as it was becoming dangerous. We are still stoping good ore from the east end. No. 1 level: We have commenced an underhand stope from this level at the mouth of No. 10 winze, breaking into the east stope on No. 2 level. No. 2 level: The intermediate drive from No. 6 winze to connect with the east stope on No. 3 level has been driven 22 ft., and is in rich ore; average assay of drillings for the week, 13 ozs. per ton. No. 3 level: We are still carrying a breast stope of 50 ft. on this level on the south side of the level, opposite the east stope, but have not yet found the hanging-wall. The shoot ore seems to be combing into the bar. We have now stoped in full 6 ft. for a length of 100 ft. at this place without finding the wall, though the level was supposed to have been driven on the wall. No. 4 level: Nothing doing on this level. No. 5 level: We are now cutting out a chamber on this level, opposite the west loading station, in good ore, for the purpose of putting in a horse-whim for hoisting from No. 15 winze. No. 6 level: During the month we cross-cut south 3 ft. to locate the hanging-wall, and though not finding a clean division, still we struck the quartzite bar of which the wall is formed. In cutting through the ore was of low grade. Not having found the shoot on No. 6 level just where the winze was sunk, we started a cross-cut 12 ft. from the line of winze to cut in north to determine whether we had passed the shoot in sinking, which proved to be the case, as the second shot exposed free gold in the ore, showing that the shoot had straightened up 5 ft. before we reached the level (80 ft. below No. 5), and was back of us. We have driven north 12 ft. in good milling ore, but have been compelled to stop the drive for fear of getting too much water, which would interfere with our sinking. The above work on No. 6 level proves the quarry shoot to be at least 12 ft. wide at that depth, but how much wider and the length of it we cannot now determine. No. 15 winze: This has been sunk 20 ft. during the month, and is now down 115 ft. below No. 5 level. The quartz in the sink being of better character than for the past month. We shall not be surprised at any time to see the shoot come in again. Construction: We have just passed through the severest rainy season old citizens remember. The race has been somewhat damaged by the caving in of the sides, and also a part of the tunnel, comprising the tail race, has suffered severely—this we have had to timber. The repairs are now nearly complete, and we are awaiting the completion of the aerial train, which we fully expect will be in running order before the end of the month, and I confidently expect that my next report will tell you that we have at last started our new mill. The turbines have been run upon two different days, and are in perfect order. The dam has stood the severest floods for many years, and is uninjured.

SHEBA GOLD MINING CO., LIMITED.

BOARD WILL PROTECT SHAREHOLDERS FROM ORIENTAL AND SHEBA CO.'S PROCEEDINGS.

In a circular to the shareholders the directors say :—It is cabled that the Oriental and Sheba Valley Tramway Co. are about to attempt to obtain an injunction to prevent the quartz of this company from being transported by their aerial ropeway, on the plea that this company is bound to send all their quartz by the Oriental and Sheba Valley Co.'s tramway. The board some time since took very careful advice, both in South Africa and in this country, and were advised that this company were quite entitled to send their quartz by the ropeway, and were not bound to forward it by the tramway. The board have taken the necessary steps to protect the company's interests against the threatened action on the part of the Oriental and Sheba Valley Co.; but they send this circular to put shareholders on their guard. The mill started crushing on the 4th inst.—J. E. Booth, Secretary.

WALKERS, PARKER AND CO., LIMITED.

REPORT OF THE DIRECTORS.

The second annual report of the directors regrets that, largely owing to the continued fall in the price of pig lead during 1890, the expectations held out in their last report of the prospects of the past year have not been realised. The company's property has beeu more than fully maintained and largely improved. 9,857*l*. 15s. 5d. has been expended out of income in maintenance, repairs, &c., and 4,602*l*. 3s. 11d. has been spent in maintaining and replacing utensils. The sum of 2,730*l*. has also been written off the book debts due to the company as estimated disconnt. The compauy has delivered, approximately, 3,000 tons of lead more than last year. The action against the partuers of the late firm, in which the company claimed, through Mr. E. J. Walker, large sums of money, has proceeded. The official referee has awarded the company three sums of 9,049*l*. 1s. 2d., 3,123*l*. 11s. 4d., and 13,730*l*. 7s. 0d., amounting in all to 25,902*l*. 19s. 6d. Of this 9,049*l*. 1s. 2d. has already been received out of Court. The balance is now awaiting the formal approval of the Court. This latter amount has been treated as reserve, and your directors do not propose to distribute it. The directors recommend the payment of a final dividend for the year at the rate of 6 per cent. per annum on the prefereuce shares, carrying forward 2,366*l*. 1s. 5d. Your directors do not consider the result of the year's trading satisfactory, and are now investigating, with a view to discover if any cause other than the continuous fall in the price of lead has contributed to this result.

BRITISH MINING INTELLIGENCE.

DRAKEWALLS (Mar. 5).—The cutting of the ground for top plat will be completed by the end of the present week. There is no change worthy of notice in the 160-fm. level driving east since last week ; the lode continues to produce 7 tons of mundic per fm., and saving work for tin. The lode in the 160 west is yielding 12 tons of mundic per fm., with rich stones of copper ore and saving work for tin ; the ground is easy for exploration. The stope in the back of the 160 west is producing 11 tons of mundic per fm., mixed with a little tin. The stope in the bottom of the 147 east will yield 8 tons of mundic per fm. The lode in the 147-fm. level driving east is producing 4 tons of mundic per fm., intermixed with a little tin and stones of copper ore. In the 147-fm. level driving west the lode continues to yield 4 tons of mundic per fm., with a small proportion of tin and copper ore. The lode in the stope in the bottom of 132 east is producing 5 tons of copper and mundic ores per fm., and the stope in the bottom of the 132 west of the cross-course 4 tons of copper and mundic ores per fm. The masons are making good progress with the buildings for the new jiggers, and all other surface work is progressing satisfactorily. We purpose turning the draught again on Saturday for another clean-out of soot.—H. Rodda.

EAST GRASSINGTON (Mar. 4).—Hammond's shaft : In the 47 west the lode is fully 2 ft. wide, the filling matter being limespar and barytes intermixed with good patches of lead ore, worth 20 cwt. per fm. A stope in back of level, in a lode 18 ins. wide, yields 12 cwt. of lead ore per fm. King's sump : Operations here temporarily suspended. No. 2 sump is down 10 fms. below the 47 level, and we have just commenced driving westwards, in a lode 20 ins. wide, carrying soft sugary spar, well mixed with good quality lead ore, yielding 10 cwt. per fm. Stope in intermediate level, in a lode 2 ft. wide, yields 12 cwt. of lead ore per fm. Stope in back of the 37 east, in a lode 2 ft. wide, yields 13 cwt. of lead ore per fm. Harris main engine shaft : In the 47 east the lode is 2 ft. wide, the filling matter being limespar, sulphate of barytes and gossan, intermixed with good patches of lead ore, worth 22 cwt. per fm. Stope in back of level yields 12 cwt. of lead ore per fm. In the 37 east we are within 2 ft. of No. 2 heave ; so soon as the main lode is reached we shall sink and rise by a full pare of men to communicate with the level below for the double purpose of ventilation and opening out a payable section of overhand stoping ground, and admit more rapidly developing the eastern ground, where our prospects are exceedingly encouraging. Stope in back of level yields 10 cwt. of lead ore per fm. Satisfactory progress is being made in opening out the water level east. Dressing and surface operations pushed forward as fast as the inclement weather will permit. Smelting in full swing, two hearths running daily by a full set of smelters.

LEADHILLS (Mar. 3).—Brown's vein : Seven men are set to drive the 145-fm. level, now 140 fms. 5 ft. north of Jeffrey's shaft, at 125s. per fm. ; vein above 4 ft. wide, charged with improving quartz and spots of ore, but not yet to value. It is now very damp, too. Five to stope above the 145 south of Jeffrey's shaft, at 42s. 6d. per fm. ; worth 25 cwt. of ore per fm. Eight to stope above the 145 south of Wilson's shaft, at 50s. per cubic fm. ; worth 20 cwt. of ore per fm. Four to stope above the 145 north of Wilson's shaft, at 40s. per fm. ; worth 30 cwt. of ore per fm. Twelve to No. 4 winze, now 5 fms. 3 ft. below the 130 north of Jeffrey's shaft, at 130s. per fm. ; strong kindly vein above 4 ft. wide, but only taking footwall side with us, leaving off by far the better portion, so as to get down as fast as possible to the 145. Five to No. 1 stope above the 140 north of Jeffrey's shaft, at 50s. per fm. ; worth 25 cwt. of ore per fm. Five to No. 2 stope, at 45s. per fm. ; worth 20 cwt. of ore per fm. Four to No. 3 stope, at 47s. 6d. per fm. ; worth 20 cwt. of ore per fm. Four to stope above the 130 south of Jeffrey's shaft, at 45s. per fm. ; worth 35 cwt. of ore per fm. Two to stope above the 130 north of Wilson's shaft, at 40s. per fm. ; worth 20 cwt. of ore per fm. Five to stope below the 115 uorth of Jeffrey's shaft, at 42s. 6d. per fm. ; worth 25 cwt. of ore per fm. Four to stope above the 115 north of Jeffrey's shaft, at 50s. per fm. ; worth 30 cwt. of ore per fm. Two to stope above the 115 south of Wilson's shaft, at 42s. 6d. per fm. ; worth 50 cwt. of ore per fm. Two to drive the 85-fm. level, now 208 fms. 4 ft. 6 ins. north of Jeffrey's shaft, at 125s. per fm. ; vein above 3 ft. wide, showing better quartz, with a little dampness, but no ore. Four to drive the 70-fm. level, now 53 fms. 0 ft. 3 ins. south of Wilson's shaft, at 90s. per fm. ; vein above 4 ft. wide, showing quartz joints of an improving nature, but no ore. Four to drive the 35-fm. level, now 72 fms. 0 ft. 6 ins. south of Flat Rod shaft, at 95s. per fm. ; vein 6 ft. wide, mixed with quartz and damp, and ore worth 25 cwt. per fm. Four to stope above the 35 south of Flad Rod shaft, at 32s. 6d. per fm. ; worth 40 cwt. of ore per fm. Sarrowcole vein : Seven to rise above Gripp's adid north of George's Roust vein, at 150s. per fm. ; worth 10 cwt. of ore per fm.—T. Newbigging.

MID-DEVON.—Report for week ending Feb. 28.—Surface : Four revolutions of wheel per minute copes with influx of water into shaft. A shaft : Water drained to bottom of the 80. C shaft : The cross-cut south from under winze at the 60 extended by six men 1 fm. 6 ins. The strata is unchanged in its composition, but does not contain so much copper ore ; in the present end it is scarcely sufficient to value. This drivage has been extended 5 fms. from main level, and is now approaching the south wall of lode ; therefore, it is suspended. —J. Neill.

PRINCE OF WALES (Mar. 4).—Since the shaftmen resumed sinking they have been going down by the side of what appears to be lode coming in on the footwall of the shaft. We have taken out some good stones of tin from it. We shall see more of it in a day or two when it is taken down, at present it looks very promising. We have suspended the drivage of the 166 west and put six men to stope the back of this end at 10s. in the £ tribute. We also put the men in the 166 east to stope the back on tribute. There is no change of any sort to notice in the cross-cut south towards the Goodluck lode since last reported.—S. Roberts, J. Prowse.

ROMAN GRAVELS (Mar. 5).—The 155 south is driven 5 fms. 4 ft., but there is no material change in the vein since the date of last week's report in which we stated that the drivage is going forward in the centre division of the vein, and that we expect to find productive ground when the junction of the three divisions is reached. The 140 north is driven 81 fms. 4 ft. 6 ins., and the winze in the 125 north is 10 fms. 5 ft. deep, the lode in the former being without change since last Thursday, and in the latter still worth 2½ tons per fm. The 140 south is driven 82 fms., lode in forebreast, about 2 ft. wide, producing stones of lead ore and blende. We are sinkiug a winze in the 125 south at a point, say, 98½ fms. from shaft, or 16 fms. in front of said forebreast. This winze is now 4 fms. 4 ft., and was started in the country rock on the hanging-wall side of the vein, but has not yet touched the lode, which we are somewhat surprised at. The underlie in the vein at this point must be very little, and it is possible, therefore, that the 140 south is at present in a minor division of the vein. This, however, will shortly be proved. The stopes and other points throughout the mine are just as reported to you on Thursday last. We have sampled 20 tons of blende for sale next week, and shall send out samples of a parcel of lead ore on the 12th inst.—A. Waters.

RUSSELL (Mar. 5).—I am very pleased to say the deep adit has been very satisfactorily communicated to the cistern of Hamilton's shaft. The men are now cutting a plat there, and preparing for landing the stuff to be taken back through the adit thence to the dressing floors. We are now enahled to take up a great deal of the surface water previously going to the bottom, and hope to get in fork to commence fixing bearers, &c., for the plunger-lift at the 80-fm. level at the commencement of auother week, for which every preparation has been made. We have arranged to sample the whits and send it for calcination on Monday next.—W. George.

SOUTH DARREN (Mar. 5).—The pitch in the bottom of the 142 level east continues to look well, worth about 1 ton of silver-lead ore per fm. Drawing and dressing is going on regularly. Sometimes we are rather short of water for dressing.—J. Mitchell.

WEARDALE.—Report for week euding Feb. 28 :—Ore raised for week, 70 tons ; ore dressed for week, 65 tons ; ore and slag smelted for week, 137 tons, producing 70 tons of pig lead.

WEST WHEAL GRENVILLE (Mar. 3).—The cross-cut driving towards the north part of the lode at the 130-fm. level is extended about 7 ft., in ground of mixed character, containing a little copper and mundic. The 120 cross-cut driving north is extended 91 fms. 2 ft. Since Saturday morning last water has been issuing freely from the bottom of forebreast in this drivage. The granite is changing to a darker colour, and spotted with arsenical mundic. The 120 driving east of cross-cut on No. 4 is extended 4 fms. 3 ft. The elvan in this drivage continues mineralised, carrying a little tin, and in the footwall side is showing more quartz and mundic. The 120 driving east of cross-cut on No. 2 is extended 13 fms. 5 ft. This vein is about 2 ft. wide, composed of peach, quartz, arsenical mundic, and carrying a little tin.—Capts. J. Skeat, N. Tenby.

WHEAL CREBOR (Mar. 3).—The points in operation at the mine are as under :—Six men driving the 156-fm. level east of the new shaft at 5*l*. per fm. ; the lode is 7 ft. wide, yielding a little mundic and copper ore. Six men siuking a winze below the 144 west of cross-cut east of new shaft at 8*l*. per fm. The part of the lode carried is 4 ft. wide, yielding 4 tons of mundic and copper ore per fm. Two men driving the 144 west of cross-cut at 5*l*. per fm. ; the lode is 1 ft. wide, yielding a ton of mundic and ore per fm. In this end we have just struck a crossing, but have uot yet cut through it. This we expect to do in the coming week, and hope the lode will be found of greater value on the other side. Six men stoping the back of the 144 west of cross-cut at 3*l*. per fm. ; lode worth 5 tons of copper ore and 5 tons of mundic per fm. In the upper levels there are 10 men working on tribute, varying from 10s. to 12s. in the £. We hope to hole the winze sinking below the 144 to the 156 very soon, and put on more stopes. There is about 8 ft. more to sink, and 6 ft. to drive the end to bring these two points together, which will take about a week or 10 days to do.—W. D. Holman.

WHEAL METAL AND FLOW (Mar. 4).—There is no material change to notice in the underground operations siuce my last report. The water is abating in the water stamps, and we are unable to work the full number of heads. We shall weigh off the tin that is ticketed to-morrow (Thursday). The steam stamps are producing a little more tin.—S. P. Curtis.

WHEAL UNY (Mar. 4).—The lode in Hind's shaft is unaltered since last week. The 230 end east : The grouud here is easier for driving, which indicates an early improvement. The 230 end west, with all other points, maintaius their last valuation.—J. White.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO.—Superintendent's report for the month of Jan. :—Mine—Exploration and development : The north end of the 24-fm. level on the 100 lode was driven 72 ft. with machine drill, the first 36 ft. on ore ground, and the balance on unproductive vein matter. The west cross-cut from main lode to effect communication with the above drift was advanced 28.8 ft. by haud-drillers ; the breast reached the eastern wall of the 100 lode, and further cross-cutting was discontinued, as it will be cheaper to accomplish the communication by the machine-drill on further driving on the course of the 100 lode. The west cross-cut at tunnel level above No. 4 winze was driven 24 ft., part on limestone, and part on black porphyry. The breast is showing evident signs of the proximity of the 100 lode, containing quartz fliers specked with mineral, the latter feature being considered as a favourable sign ; total drivage, 124.8 ft. Stoping : The ore ground taken away from the stopes is estimated at 69 cubic fms. The conditions of the stopes at the end of the month was as follows :—The main stope is still 180 ft. long, its back being 37 ft. above the 24 in its southern part, and 31 ft. in the northern end ; its width is much the same as before, but during the last week the northern half of the stope began to show signs of weakness, the ore becoming more scattered and specked with green stains. The 31 stope, north and south of No. 7 winze, is 14 ft. below the 24, about 10 ft. wide, and worth from 40 to 50 per cent. mineral. The stope in back of 24, between Nos. 4 and 5 winzes, has not been touched, and stands the same as beforc. Financial results : The amount realised for silver was $26,193 02, and for pig lead and litharge sold $409.72 ; total receipts, $26,602.74. The expenditure for the month was $20,253.59 ; excess of receipts over expenses, $6,349.15 ; our argentiferous stocks were increased in value by $2,990 ; consequently, the estimated uett profit for the month's working was $9,339.15, after charging to profit aud loss account $1,752.75, spent in underground explorations and developments.

ARGENTELLA (Feb. 24).—No. 2 Marine : Driven during the week about 9 ft. ; lode getting wider ; killas a little harder, spots of lead, a little more water ; the hanging-wall same as reported last week, with more carbonate of lime running through the lode. Quartz reef : Under cover 5 ft., but have not yet reached the harder portion of killas. Ogliastrone Valley is showing a very large lode of mineral.

What will be the exact width it is at present hard to say. I will put on two more men next week, as I consider this a very strong point in our mining operations. After a blast this morning I found tracings of silver-lead. No. 3 Rowe's workings: Driven since last report about 6 ft.; the ground is harder. To-day we have a string of iron pyrites running across the forebreast about 2 ins. wide. I have no other change to report. It would be difficult to say at present from which of our four points we can expect the best results. We are giving the property a very fair trial, and must ultimately be rewarded, or signs must be put aside hereafter if we are not.—J. B. ROBERTS.

AUSTRALIAN BROKEN HILL CONSOLS.—The mining manager reports for fortnight ending Jan. 22:—Engine shaft: Accumulated water, which rose to height of 100 ft., is being rapidly reduced, and when entirely drained a chamber for a new level will be started. 280 ft. level west, driven 14 ft., total 313 ft., seam of good galena showing in face. Rise from 280 level west: Got into solid portion of rich vein, and after breaking down some bags of sulphide of silver ore, chlorides and iodide of silver, found ore suddenly change to fahlerz and native silver. Have raised of these ores in one week 3 tons, containing 23.140 oz. of silver, and vein continues to look exceedingly well with native silver showing freely in face. Parcel of ores mentioned will be forwarded to London by mail steamer of 4th prox. Incline level from 280 level west, driven 12 ft., total 12 ft. Face is showing sulphide of silver chlorides and iodide of silver. During last few days some slugs of first mentioned ore have been broken down, followed by a piece of horn silver weighing 30 lbs. When we have driven a little further it is more than probable that we shall be on solid portion of rich vein worked in rise. 180 level west: Winze No. 3 sunk 9 ft., total 9 ft. Started on a very promising galena vein, from which good ore is being raised. 180 level, west stopes: Good galena is being broken. Block 95: Shaft, sunk 6 ft., total 89 ft. Favourable indications described in last report continue. North shaft, Block 97: Sunk 11 ft., total 21 ft. Bottom in very promising lode formation. Downpour of last week filled both dams.

BRATSBERG.—Mining report for week ending Feb. 21.—Hoffnung Mine: No 2 adit level is now yielding about ½ ton per fm., but both Nos. 1 and 2 rises in the back of this level are worth fully 1 ton per fm. No. 3 adit level is unchanged since last report, and No. 4 level is now producing 1½ ton per fm. The excavation at Ball's shaft is getting pretty well advanced, so that we shall be able to start sinking below No. 4 level early next month. Johannes Mine: At the present end of the cross-cut towards Johannes lode there are indications of our approaching the lode, as besides water percolating freely through, we have a change in the character of the strata which contains strings of quartz and occasionally in the quartz spots of ore. The level driving east on Howard lode for the present is yielding only saving stuff. Moberg Mine: The report of a special messenger just returned from here being that nothing approaching our expectations has yet been met with in the adit level, I intend to visit this mine to-morrow and dial up this work again, and as the prospects are not eucouraging, it becomes necessary to consider what shall be further done here. Surface work and remarks: The weather has been very much in our favour during the past week, both for the dressing machinery building, and the driving from Strengen. The roof of the crushing machinery department will be completed in the course of two or three days, when the remaining work will go on with good dispatch undeterred by snow or storm.—J. D. HOLMAN.

COLORADO.—The manager's report for fortnight ending Feb. 14 is just to hand. The mines are now being actively worked at 22 different points. With regard to the improvement in the western drifts of the Terrible Mine, the same has now assumed a definite and permanent character. The mineralised quartz is giving place to fair grade solid mineral. The 8th level west is being rapidly driven by night and day shifts, and arrangements have been made to commence driving the 9th level west. The sales of ore for which vouchers are sent amount to 74 tons. Terrible Mine, 15th level east: Lode 4 ft. wide; mineral vein 3 to 4 ins. Last sales gave 31-100th oz. gold, 109½ ozs. silver per ton, 23½ per cent. lead; 27-100th oz. gold, 73 ozs. silver per ton. The 8th level west advanced 476 ft. from main shaft. Brown lode, Mammoth tunnel level: Last sales gave 145½ ozs. silver per ton, 43½ per cent. lead; 77½ ozs. silver per ton, 16 per cent. lead; 57½ ozs. silver per ton, 10 per cent. lead. Coin lode: Brown adit level now in 505 ft.; lode 5 ft. wide. Brown tunnel level now in 237 ft. west from Burke cross-cut. North vein, Mammoth tunnel level: Lode 3 to 4 ft. Last sales: 313½ ozs. silver per ton; 296½ ozs. silver per ton; 118 ozs. silver per ton. Glasgow lode: Drift advanced 120 ft. from Mammoth tunnel level. Last sales: 318 ozs. silver per ton; 368 ozs. silver per ton. Gunboat lode, Silver Ore tunnel level: Last sale: 237 ozs. silver per ton, 34 per cent. lead.

COROMANDEL (Jan. 22).—The manager, referring to Blagroves, Freehold, says:—The No. 2 level has been timbered where required, and has been driven another 10 ft. on the reef, which is about 1 ft. in width. Good-lookiug seams of quartz are dropping into the reef from the hanging wall side, and fair prospects of gold have been obtained by washing in the dirt. On the whole, the reef and country look most promising, and should be further prospected. The machinery throughout the mine is in good conditiou.

CORTEZ (Feb. 14).—Work at the mines for the week has been as follows:—No. 1 east, south cross-cut: Advanced 3½ ft. North-east raise: Stoped 40 tons of ore. North-west raise: Stoped 75 tons of ore. Ore run into ore house, 100 tons. Ore trammed to mill, 111 tons. Ore worked at mill, 222 tons. Average assay for the week, 53 64-100 ozs. silver per ton. On Feb. 11 shipped 14 bars of bullion, lot 58, containing, as per our assay, 18,320 56-100 fine ozs. silver, and 14 17-100 ozs. gold.

DAY DAWN P.C.—Report of mining manager for fortnight ending Jan. 17:—The output of quartz is 1,105 trucks; to the Excelsior mill 1,104 tons. Your underlie shaft has been sunk a further depth of 15 ft., making a total depth of 60 ft. below the No. 12 plat; the formation is 6 ft. wide, carrying no stone at present. The number of trucks of quartz hauled from each level is as follows, viz.:—No. 12 level, 322 trucks; No. 11 level, 601 trucks; No. 10 level, 90 trucks; from No. 2 shaft, stopes uuder No. 6 level, 60 trucks; from No. 2 shaft, stopes over the No. 5 level, 32 trucks; total, 1,105 trucks. No. 2 underlie shaft: No. 6 level east has been extended a further distance of 6 ft.; the formation in this level has taken a sharp turn to the north of east, and run us up to the Mexican Gold Mining Co.'s boundary; consequently I have taken the men out of this level, and put them to drive the No. 5 level east, which has been extended a further distance of 28 ft., making a total distance of 230 ft. from the shaft; there is about 10 ft. of formation in the face, but no stone at present. The small block of stone under the No. 6 level west is still carrying about 1 ft. 6 ins. of stone of good quality. No. 5 level west: The winze in the end of this level has been sunk a further depth of 16 ft., making a total depth of 25 ft. This winze is carrying about 2 ft. of stone, of medium quality. The stope over this level going west from the No. 1 winze is just coming on to the shoot of stone. We have uow 3 ft. of fair looking stone in the stope. No. 4 level west: No. 2 winze on this level has been sunk a further depth of 21 ft., making a total depth of 60 ft. This wiuze is only carrying a few small leaders of quartz, but, as we are sinking on the footwall, there is every probability of the reef being between us and the hanging-wall yet. Lease 1,280.—No. 1 level has been extended a further distance of 3 ft., making a total distance of 105 ft.; there is no change to report. The No. 2 level has been extended a further distance of 18 ft., making the total length of same 28 ft. There is a nice formation here, about 2 ft. wide, carrying some likely-looking leaders.

DICKENS CUSTER (Feb. 4).—Mine report up to Jan. 31st.—Dickens Mine: Since my last report we have been concentrating our force of miners on the following parts of the mine, these parts holding out the best inducements to find good ore. No. 1 tunnel on little or south vein, stope, 30 ft. in tunnel, going east: Here we are still getting some pay ore. Yesterday, Feb. 3, we struck a small rich streak (running through the veiu, which is now about 25 ins. wide), that assayed $600 to the ton. I am hoping this small rich streak, which is about 1 in. thick, will continue, if so it will make the whole 25 in. vein all in good pay rock. No. 2 tunnel on little or south vein, winze No. 1, stope No. 2: From this stope we are obtaining ore that will pay. The vein has widened to about 6 ins. An assay taken yesterday went $45 to the ton. Winze No. 1, stope No. 1: Here the vein is about 4 ins. wide, and assayed, yesterday, $40 to the ton. (N.B. Both of these stopes are looking much better since my last report.) No. 3 tunnel, little or south vein—Underhand stope: Here we are still finding some first-class ore. An assay taken yesterday from a small streak about 2 ins. wide shows $112 to the ton. I intend pushing on with this work, following this small streak down, towards the big vein, on the No. 4 level, knowing that if the two veins should come together somewhere in that direction we must find a body of ore that would surprise us. Altogether the Dickens Mine has improved very much since my last report, and I have yet a good hope of making the Dickens a paying mine.—H. AXFORD.

DON PEDRO (Jan. 31).—I am glad to hear that the shareholders are responding to your appeals, but if they grasped the fact of what this mine really is at the bottom, they would really subscribe the whole capital again, and then, in my opinion, see a handsome return. There is fortunately no question of opinion upon one point, as we are not asked to judge by indications, but have the solid fact to go upon that gold exists in large quantities at the deepest point we can extract it from on account of water. Whether it extends a single foot further in depth no one can say, but that it has come down over 100 fms. from surface, and shows no sign of failing, rather the reverse, is simply stating our present condition. Forecasts are undesirable, as they may lead to undue expectation, and are liable to recoil on those who make them, besides, the date is not absolute; but with every caution I am inclined to think that the reserve above the 50-fm. horizon in "Canoa," and No. 8 and No. 6 lodes will prove paying, and leave a balance on the right side until arrangements are made to properly open out the mine. Gold cleaned up from 10 days' sampling a portion of the No. 8 lode, 869 oitavas.—E. M. TOUZEAU.

FLAGSTAFF (Feb. 14).—Since my last report I have made fair progress in the mine. Seventh level, cross-cut: This has beeu extended 14 ft.; total, 29 ft.; I was driving this drift to the north-west, but we came to a hard slip which is standing straight up and down. I think that it is the hanging-wall which is broken from its regular course. I have turned to the south-east, and am following up this slip. If it does not soon take its regular course, I will sink down beside it and see how far it will extend. The rock here is well mixed up with iron. Winze: This is now down 34 ft.; a slip came in and cut the ore out at that depth. I am now drifting to the south-east to see how far it goes down. The ore seems to be gradually extending down in this direction. The drift has been driven 4 ft. I will be able to know in a few days whether it will continue on down in this direction or not; if it does not, then I will drift to the north-west and see if it will go down on that side. At the top of the winze I have opened up the ore to 18 ft., and it still continues to widen. It is 4 ft. thick at the top, but gradually comes down to 1 ft. to where this slip cut it off. South drift: This has been extended 5 ft.; total, 20 ft. We have two pipes of ore here, but we are working only one at present. They are 4 ft. thick by 2 ft. wide, and it is all of the very finest kind. It is very nearly solid silver-lead. I have only one man at work here, which accounts for no more work being done. I have only four men at work on ore, so I cannot make as big returns as I have been doing. I put two men at work on sixth level to run a drift off from the new cross-cut. I am going to run it out north-west. I will call it the north-west drift. I think that we ought to find another shoot of ore in that direction as there was a big body of ore on fifth level, further west than we are now on sixth-level. Number of tons of ore mined the past week, 30; being 15 tons first-class, and 15 tons second-class.—A. L. SWOPE.

GOLDEN FEATHER CHANNEL.—The fine weather mentioned in my letter of Feb. 9 continued uninterruptedly until midnight, Feb. 13, when one of the severest storms that has visited California for many years set in, and lasted, without any intermission, until about midnight, Sunday, Feb. 15. Despite the fact that the storm came almost unheralded, it found us prepared for it, so that, beyond the delay caused by the stoppage of all work for some five days, we have suffered no loss or inconvenience whatever. The cement sheds were already to receive cement, which, on the first rainfall, was at once run in, stacked and covered with tarpaulins. All tools, &c., were turned in to, and receipted for, by the foreman, powder housed, boiler and drilling plant covered, lumber piles stayed down, and every other precaution against damage taken. The great rainfall flooded Morris Ravine, which, carrying the watershed of the Table Mountain, poured a river of water into the feather at the location of our lumber-yard, and adjoining the site of the head-dam. The wing-dam, built there in view of such a contingency, sufficed to turn this volume of water from the sheds, lumber, &c., and keep it out of the works and canal. The day the rain set in the bed of Morris Ravine was dry. The next afternoon, some 7,000 ins. of water was pouring

through it; I know nothing that describes the fury of the storm more than this fate, excepting that in some parts of the canal water ran 5 ft. deep. Work will be fully resumed by noon to-morrow, so that to date we have only lost 10 days' work this winter. I am pleased to report that all affairs are in first-class order.—F. MCLAUGHLIN.

— The following was received yesterday by cablegram from Col. Frank McLaughlin :—"Everything is going well. Weather very fine.—MCLAUGHLIN."

GOLDEN GATE ALLUVIAL SYNDICATE. — Col. Frank McLaughlin writes Feb. 18 :—In my letter of Feb. 8, I described the truly wonderful weather we were having, almost summer in fact but this was ended by a great storm, which commenced about midnight, Friday, Feb. 13, and extended all over the State. In addition to the vast rainfall in the valleys, rains extended far up into the mountains, where snow usually falls, and as a consequence the rivers increased in volume with astonishing rapidity. About noon on the 13th the river was flowing some 3 ft. above the dam. This great volume of water extended from bank to bank in an unbroken line some 500 ft., completely concealing the dam and the openings on each side of it under a vast and bluding cataract of water and spray. I send herewith three photographs, the two taken during the storm but poorly pourtray its fury. The storm ended midnight, Sunday, the 15th, and the weather commenced clearing away from that time on. When the river fell so that the dam could be reached, Monday noon, a most thorough examination was made, with the result that I had the very great pleasure of forwarding my cable of Feb. 17 :—"Greatest storm for many years. Commenced midnight Friday night, ended midnight Sunday night. River flowed 3 ft. over dam, which passed through ordeal triumphantly. Everything going well. —RAINBOW." After the water receded from below the dam I found that some 30 ft. of decking on the low buttress had been loosened and partly broken away. I judge this deck was cut loose from the timbers it was spiked to by the hurling down upon its front edge of some of the heavy drift logs which were carried down from the mountains by the floods and washed through the waste-gates. I am now having this part of the deck re-laid, and will bolt it to lower course of cribs with 3-ft. bolts. The cost of the total repairs for damage caused by the storm will not exceed $75. It is needless for me to assure our board that the result of the trial of the head-dam was as satisfactory to me as it must be to them. It is the first time in the history of river mining on the Feather river that a dam built for fluming purposes ever out-lasted the first rains, much less passed unharmed through a storm which proved to be the severest that has visited Californuia in many years.

GYMPIE GOLDEN CROWN.—Report of mining manager for fortnight ending Jan. 15 :—I have to report that during the past fortnight raising stone from the Crown and March reefs above the slate break at the 240-ft. level has been carried on as asual. We are now crushing with five head of stamps on stone from the Crown reef, of rather poor quality, but I believe payable. The stone being raised from the March reef continues to show good gold, and will yield about 1 oz. per ton. We shall have a rough washing up about the end of the month. Lease 777, Two Mile : The cross-cut being carried in east at the 210-ft. level (maiu shaft) has been advanced a total distance of 223 ft.; water is making iu the face, and there is every indication of being near the reef. On the Peter and Paul reef the drives north and south are being continued ; in the back of the south drive there is a splendid slate country. The reef that is stripped will be broken down during the comiug fortnight. At the eastern shaft the cross-cuts east and west at the 130-ft. level are being continued, and have been advanced a total distance of 42 ft. each way.

HARRIETVILLE (Jan. 23).—Fortnightly report.—Mons Meg Mine : A rise has been cut 7 ft. at the north end of the drive north of tunnel J on the new shoot, and the lode has been stoped to that height for 7 ft. in width, and over a length of 27 ft. The lode here is just as it was in the drive, showing a little gold throughout. A trial crushing of 100 tons from this point will be put through the mill so soon as we clean up at the end of the current four weeks. The south drive, 100 ft. above tunnel J, has advanced 9 ft., the total being 189 ft. We have here apparently reached the south end of the shoot, and the lode is small aud poor. The water in this mine having been drained by the deep level south of the tunnel D., we have been able to start sinking a shaft below tunnel J. on the main shoot where the lode is equally as rich as it was in the level. The stopes are supplying stone for 15 stamps. Guerdon Mine : Tunnel J has advanced 22 ft., making a total of 383 ft. from the Mons Meg main lode. We have passed through a bar of hard sandstone, but are now in slate, so that more headway should be made in future. South Mons Meg Mine : The drive north of the lower tunnel has been extended 36 ft.; total, 246 ft. The lode is now somewhat broken, and the ground very soft, so that timber will soon be required. Tiddledee Mine : The drive south of tunnel D towards the Mons Meg has advanced 23 ft.; total, 890 ft. Water continues to be copious, owing to the draining of the Mons Meg workings, and the lode, which extends from side to side of drive, is so soft as to necessitate immediate timbering. "Colours" of gold are still being met with, but as we are now under the shoot north of tunnel J I have deemed it advisable to cross-cut to the hauging-wallion the easteru side, especially as the water is coming from that direction. It is possible that we may be driving on a parallel, or even a branch lode to or from the Main Mons Meg. This is difficult to determine without cross-cutting in consequence of the continual variation of the trend, and of the many lodes in the viciuity, and the many faults with which we have met in driving. Our survey—taking the underlie into consideration—indicates that the main lode should be some 40 ft. to the east of the drive. We have, however, followed our present western wall throughout, in preference to a direct line across the strata, for the sake of speed, as well as on the chance of discovering fresh shoots. The drive south-east of tunnel D towards Tracy's old workings has advanced 4 ft. for the fortnight. The walls are well-defined, but the lode is small and the ground very hard. New lease : The drive south of tunnel D on the new shoot is suspended for a time, but the winze below this level is now 18 ft. deep, having been sunk a further distance of 6 ft.; the lode here is 4 ft. wide and shows free gold in the stone. The rise at the back of this level has communicated to the surface at a height of 67 ft. The stopes here are supplying stone for 10 stamps. The drive south-east of tunnel C towards new shoot has been extended 30 ft.; total, 62 ft. We are here following a small lode, which carries a fair amount of quartz, but is poor. The ground is soft. The drive south-east of tunnel B towards new shoot has advanced 28 ft.; total, 72 ft. The ground is fairly hard. Surface : Having driven through the lode met with in the surface tunnel north of tunnel D we have also driven 7 ft. south on the course of the lode, which, as yet, shows only colours of gold. Furnaces : The furnaces having been heated we shall drop our first charge of pyrites on Monday next, and commence amalgamating forthwith. Machinery : The whole of the company's machinery, both at the mill and at the miues, is working satisfactorily.—T. G. DAVEY.

KAPANGA (Jan. 22.)—I beg to hand you the following report of the work done in the mine for the four weeks ending Jan. 7 :—The drive going north on Scotty's reef at the 420-ft. level has been driven by six men during a part of the month a further distance of 16 ft. The reef in the face is small and very much disordered, owing to the broken character of the country. We had hoped for an improvement at this point, but have been disappointed. Probably there may be more lode standing in the hanging wall side of the level, therefore we intend to put in a small cross-cut to prove this. The level driving south on Scotty's Reef at the 420-ft. level has been extended by two men, 17 ft. The lode in the end is 6 ins. wide, but does not show any gold as yet, although at times the indications are very good. The stopes on Scotty's Reef, back of Blythe's level, have been worked by two men during the month. No. 4 stope is now completed to the bottom of the intermediate level. The reef has averaged for the month about 1 ft. wide, and the quartz extracted was good looking, but unfortunately contained but very little gold, in fact, nothing to place any valuc on. The intermediate level has becn driven by one man a distance of 10 ft. The reef during the month has been from 3 ft. to 4 ft. in width, composed chiefly of clay ; it appears now to be getting narrower, and quartz making again, showing a little arsenical pyrites, which is a good sign. The rising and stopiug on Scotty's Reef back of intermediate level have been carried out by four men. No. 3 stope north of rise is now 28 ft. high by 15 ft. long. No. 4 stope south of rise is 33 ft. high by 21 ft. long. The rise is also 33 ft. high. The lode in the stopes is about 1 ft.; wide, the quartz has a good appearance, but the gold has been very scarce this month ; but the reef, however, might make good at any moment, as there is an extensive block of ground standing intact to the 300-ft. level. This being under the No. 2 run of gold makes us believe that in all probability we shall come across patches of gold. The drive going north on Scotty's Reef at the 300-ft. level has been advanced by one man 8 ft., but there is nothing fresh to report. The winze sinking on Scotty's Reef below the 300-ft. level north of the main cross-cut has been sunk by two men 7 ft. The lode averages 1 ft. in width, and looks very promising. This winze is going down through a block of grouud under where good gold was got in the former working of the mine. The level driving south ou the Kapanga lode at the 300 has been extended by four men a further distance of 36 ft. The reef in the face is 1 ft. in width. During the month it has looked fairly well ; it is now improving, aud the quartz is of a most congenial nature. Judging from the present indications, we should strike gold shortly. I might mention, however, that we are not far enough south yet to get parallel to the shoot of gold had in Scotty's reef at this same level ; when this is reached we hope to get some good patches of the precious metal. The timbermen have fiuished repairing Osborne's winze, and also put the footway in good order, and are now fixiug some bad places in the 300-ft. level. Four of the shaftmen have also during a portion of the month been repairing the intermediate and Blythe's levels. The machinery throughout is in fairly good condition.—W. H. ARGALL.

KETCHAU (PAHANG).—Extract from a letter addressed to H. M. Becher, Esq., consulting engineer for the Ketchau (Pahang) Corporation, Limited, Pahang, by Mr. G. H. Hone, dated Ketchau, Jan. 7 : The lode is most admirably situated on the slope of the hill, and may be cross-cut at any point on the west side of the hill in a few yards driving. The kindly appearance of the reef all through is everything that could be desired. I have taken pannings from all parts of the mine, and invariably obtained good shows, these frequently being quite coarse gold. After making a thorough examination of the part of the reef where the gold was struck. I find a leader had joined the main lode at that point. Since the receipt of the advices, of which the above is a sketch, the directors have received telegraphic advice that the ten tons of the general reef stuff produced 1¼ ozs. of free gold per ton, and that 100 tons are now ready for crushing.

MYSORE REEFS (Feb. 11.)—Fortnightly report.—Harvey's shaft : The sinking of this shaft was resumed on the 3rd inst., since which 5 ft. 6 ins. have been sunk, making a depth of 12 ft. 2 ins. below the 460-ft. level ; the rock is very hard and spare for drilling, with small stringers of quartz crossing it. Winze below the 460-ft. level has been sunk by hand labour 2 ft. in one week ; now 8 ft. 6 ins. below the level ; small bars of black rock are running through the quartz, which makes it difficult for blasting. A sample of the quartz is worth, according to assay, 2 dwts. 12 grs. of gold to the ton. The 400-ft. level north : We commenced again the drivage of this level on the 3rd inst., since which 10 ft. 10 ins. have been driven, showing a distance of 133 ft. 7 ins. from shaft. We are now about 20 ft. beyond the shoot of quartz, in very hard trap rock, which, judging from surface indications, is a dyke. I have removed these men from here to sink a prospecting shaft at surface north of the supposed dyke to search for the lode. The 400-ft. level south : We resumed the driving of this end on the 7th inst., since which 3 ft. 3 ins. have been driven ; now 57 ft. 5 ins. from shaft ; the lode in the present end is 6 ius. wide, composed of quartz, and worth 3 dwts. of gold to the ton. Stope in back of 400-ft. level : The lode is 10 ft. wide, and worth, according to assay, 6 dwts. 12 grs. of gold to the ton. Stopes in bottom of 320-ft. level : The lode is 9 ft. wide, and worth, according to assay, 2 dwts. 12 grs. of gold to the ton. This is suspended.—M. SCANTLEBURY.

MYSORE-WYNAAD CONSOLIDATED.—Report for fortnight ending Feb. 11 : North shaft : This shaft has been sunk 6 ft. 3 ins., making a total depth of 106 ft. 9 ius. from surface. The cross-cut west at 105 ft. has been driven 12 ft. 6 ins.; we have stringers of quartz still in the end which show a little gold in the pan. The cross-cut east has been driven 12 ft.; at this point we intersected old workings and these have been cleared 5 ft. 6 ins. south and 7 ft. north of the cross-cut. The old works are about 2 ft. wide, and going down rather steeper than the shaft. Loose stones of quartz, and quartz left on the sides, have given good shows of gold in the pan. I have madc the following assays :—North shaft cross-cut west quartz, 2 dwts.; north shaft cross-cut east quartz from old works, 5 dwts. 4 grs.; north

shaft quartz from stringer in shaft, a trace. South shaft : This shaft has been sunk 6 ft. 9 ins. ; total depth from surface, 55 ft. 6 ins. The winding engine at this shaft is now ready, but there is still a good deal of work to do in casing the shaft and putting up the landing stage. All surface work is making satisfactory progress.—L. EVANS.

— The supervising representative of the company (Mr. H. P. Hodgson) reports by mail under date Feb. 11 :—North shaft : As reported in my last, we decided to cross-cut here east and west, and I am pleased to say that we have gained some valuable and encouraging information by so doing. The cross-cut east of the shaft cut old workings in 12 ft., and I examined them with Mr. Evans. They are still going down, and appear to be extending both north and south. We took a few stones of quartz out of the *débris* with which the old workings are filled in, and an assay of these gave 5 dwts. 4 grs. Of course, the good stuff has been taken out by the old workers. The fact that these workings are still going down on the lode may be regarded as encouraging, and I trust that when we next see the lode it may prove of value.

NEW CALIFORNIA.—Mine report for first half of Feb.—Shaft—Sinking below the 2,000-ft. level in 2,103 ft. : The lode in the shaft presents a very favourable appearance, and we feel very confident that the good indications we have had in this last sinking will lead to new and valuable ore ground ; the vein in the bottom is 2 ft. wide, yielding milling and smelting ore. A sample of the latter, of 60 lbs. weight, gave, on assay, 7½ ozs. gold, 15 ozs. silver per ton, which is as good as anything ever seen in the mine. We have a batch of ore at the mill, results from which will be ready for next report. The 2,000 ft. level—Drift west of shaft in 640 ft. : The drift has reached the point at which connection with winze 2 (1,900, 2,000) can be made, and a rise has been started to effect it, and it will be completed in the next two weeks. The 2,000-ft. level—Cross-cut south in level E of shaft : The rock has been very favourable, and good progress having been made we expect to cut the vein very soon. With the finding of the vein we are hopeful of having ore corresponding with that seen in the main shaft below this level. The 1,900-ft. level—Winze No. 2 (1,900, 2,000) west of shaft, down to 86 ft. ; the lode is 2½ ft. wide, yielding milling ore of fair grade. The 1,900-ft. level—Stopes east of No. 3 winze (1,800, 1,900) west of shaft : The stopes are in rich ore, and are yielding high-grade smelting ore and good milling ore. The last returns on 10 tons of smelting ore gave 6½ ozs. gold, 22 ozs. silver per ton, netting $130 per ton, and there is a good outlook for a continuance of these satisfactory results during this month. The 1,900-ft. level—Intermediate drift east of No. 2 winze (1,800, 1,900) : The object of this working is to explore a block of ground lying between the late stopes of No. 2 winze and the rise immediately east of them. The prospects are good for the discovery of pay, the lode being 2½ ft. wide, and of fair milling grade. The 1,800-ft. level—Stopes west of shaft : In prospecting in the backs of these workings we have come upon a bunch of good ore, which will be followed up with care, as it may lead to good paying ground. The 1,500-ft. level—Stopes on south vein, east of junction : There is not much to say regarding the stopes on the south vein further than to confirm previous advices to the effect that they are yielding their usual quota of milling ore to the general output of the mine.—RICKARD.

NEW DEVALA (Feb. 10).—The 116-ft. level, drive west : We have driven this point 5 ft. ; total distance, 126 ft. ; no change. We have finished the clean-up, and have obtained 88 ozs. of gold from 300 tons of quartz. Crushing has been resumed at the mill. We are opening out a fine piece of stone at the east end of the stope in the 116-ft. level, and it is from this point that we are getting our best stone. During the week we have raised 108 tons of quartz, which has gone to the mill. Everything is going on well. I have remitted you by this mail 158 ozs. 14 dwts. bar gold, the results of the Dec. and Jan. crushings.—R. B. JOHNSTON.

— The secretary is instructed to add that the produce of the Oct. and Nov. crushings (135 ozs.) has realised 477*l*.

NEW EBERHARDT.—The mine manager reports, under date Feb. 15, as follows :—Total amount of ore extracted and placed on the ore dump, 36 tons ; assay value of same, as per mine samples, $40 per ton. The general outlook of the mine has not changed since my last letter.

— The following official letter from Capt. Read, dated Feb. 3, has been received :—I have taken due notice of the request of our directors, namely, that I make my plans preparatory to moving to Eberhardt as soon as possible after receiving word to do so. Now, I beg to remind you that to resume operations at this season of the year will mean a terrible expenditure of money. To begin with, the mountains are covered with several feet of snow, and the roads around Eberhardt are impassable, from the fact of there being little, or no, travel over them. You are also aware that there are no supplies at Eberhardt, such as picks, drills, shovels, hammers, and, in fact, there are many things that it would be almost impossible to get. Charcoal, for instance, we have none. The wood has to be cut, and then burnt into coal, and I doubt very much if I could get anyone to take a coal contract at this season of the year. The track or T rails upon which our cars run some 1,000 ft, I have here at the mill ; these would have to be sent over to Eberhardt. It cannot, I assure you, be done now, and there are numerous other reasons why it will be impossible to resume work until the warm weather comes. I am pleased to be able to state that our mine prospects here at Taylor are at present quite favourable. Our weekly extractions are now 30 tons per week, and the average value per ton $42 to $47, with fair prospects for an increase in our weekly output quantity. While our present good and favorable prospects continue I do not think it would be for the best interests of the company to leave Taylor. From our present showing in the mine, I think I can safely say we shall have by the time we commence milling, 500 tons of ore. Should the ore continue to improve, as I hope it will, we may have more than 500 tons, and that will be about two months run for our little mill ; then in the meantime, whilst our mill is running on the ore, I could let coal contracts and get our T rails over from here to Eberhardt, and get supplies from San Francisco ; such would be, in my opinion, the very best way to get along, and it would, I know, be for the best interests of the company, for as long as our showing for ore is so good I do not think it would be advisable to close down at Taylor.

NEW GOLD HILL (Feb. 19).—Everything is working well at the mine. In the 300-ft. level west of Barnhardt shaft we are getting into more vein matter, which is looking favourable. In the 160-ft. level west of Barnhardt shaft the backs are looking well for ore, although there are heavy sulphurets intermixed, and they are not showing quite so well for gold. The prospects in the Martin shaft are very good, although the vein has not increased much in width as yet. The mill is running on the ore from the 160-ft. level west, and we have to work it slowly, on account of the sulphurets, to enable us to concentrate as much as possible.—F. H. MAUNEY.

NEW HOOVER HILL (Feb. 20).—Provost shaft : Driving south at the 50-ft. level we are cutting through a good deal of quartz that pans a little gold, but not in paying quantities. Sinking below this level we have cut into a good bunch of ore showing some gold in the rock ; there are several small veins of quartz running in different directions. We have completed the incline tramroad to hring up the ore from this place. The ore is turning out well in the mill, and our returns for this month will be much better than for some time past.

NEW VISO.—We have had two holidays this month (Feb.), which naturally checked our work ; with this exception our progress has been satisfactory, having driveu the different levels on the several lodes nearly 70 yds., besides a considerable amount of irregular trial work. The San Guillermo deep adit cross-cut has been driven through the lode, and has thus proved its full width in this place. The result shows a compact and very fine-looking lode for the production of tin, 12 yds. wide, and composed of several quartz veins with a mixture of mica, felspar, and other kindly matter interveuing. In the branches of quartz we find small patches of tin. I have consequently selected the best looking of these, and have commenced driving south on its course by a full set of men. In the Santa Cristina deep adit cross-cut we have recently passed through a very hard part of the lode, consequently the progress has been slow, but I am glad to say the present forebreast is more favourable in every respect ; it produces considerable quantities of arsenical pyrites, which is generally considered here to be a good indication of tin. At San Antonio new adit, during the past month, the lode has been very variable in its yield ; at times it produces splendid tinstuff, and looks most encouraging, aud at other times it has been quite barren ; at present it is unproductive and the lode is small. I think, however, it will be advisable to continue the driving a little further as this piece of ground is certainly worthy of a proper trial. We have several other points of operation, to which I need not refer in detail, but, looking at them generally, I may remark that they are looking better than they have heen for some time past, and if they continue as at present. I hope to be able to get a parcel of tin ready for next month. It may interest you to hear of a good discovery of tin recently made in this district in a property similar to ours, from which I have been informed they have taken out fully 30 tons of tin this mouth, and I hear it still looks well.—R. R. NANCARROW.

OSCAR (Feb. 23).—There is not much alteration to note. We have passed through the disturbance, dyke, &c., in the 200-ft. level by about 20 ft., hence I fancy we shall have plain sailing in the future. I have not cut through in the 80-ft. level yet, as I waited to see the result of our works in the bottom level. Generally speaking, taking the lode as a lode it looks better than I have ever seen it. We are breaking a lot of stuff rich in refractory ore, which, if saved, would, I firmly believe, pay all our expenses.—J. DAW, jun.

RUBY.—Report for week ending Feb. 14.—Dunderberg Mine : We have six men on day's pay and 12 tributers at work here. The ore in the Home Ticket shows considerable improvement and is apparently going down. The small streak mentioned in my last still continues. The 700-ft. incline has been sunk 12 ft. ; total, 118 ft. During next week we will run a drift under the ore bodies which were worked above and below the 700-ft. level. I put shots in the cave, referred to in my last, and find the cave still going up, and in the near future I think we ought to do some prospecting in this direction. Lord Byron : We have two men on day's pay and 13 tributers at work here. Contract drift advanced 10 ft. ; total, 28 ft. The day's pay men have been sinking to make connection with the 165-ft. level ; the ore is following down one end of the winze, which is now about 60 ft. deep from the 65-ft. level. Bullwhacker : We have six men at work here extracting the usual amount of ore. The ore is about 15 ins. thick and about 10 ft. long.

SAMBAS EXPLORATION.—The manager states : At Tai-King-Too, I came across, on Jan. 14, a huge outcrop of solid quartz, white, sugary quartz (pans gold and pyrites). It is about 60 ft. long, 13 ft. wide, and 12 ft. high. Its course is east, 20 degs. south, and if a reef, runs straight through the mountain.

WAIHI.—The directors report that since their circular of Feb. 5 last, the local board at Auckland have advised, and the London board have authorised, a further addition of 10 head of stamps to the plant previously authorised. The whole plant, when finished, will then consist of 60 head of stamps, with all the necessary pans, settlers, &c. A telegram was received last month, advising a further output of bullion of the value of 1,800*l*.

GOLDEN LEAF, LIMITED.

NEWS FROM EMPIRE MINE.

THE secretary of Golden Leaf, Limited, begs to announce the following telegram received from Mr. J. Henry Longmaid, the manager at the company's Empire property :—" During Feb. the mill worked 60 stamps for 26 days, crushed 3,500 tons, and the yield was as follows :—Bullion, $11,100 ; sundries, $300 ; total $11,400. The working expenses for the month were $7,300—$4,100." There was also expended on capital account $2,300. The manager adds :—" Outlook Empire, lowest level, very fair."

CERTIFICATES in the Mashonaland Agency, Limited, are now ready, and will be given up in exchange for banker's receipt.

THE Produce Brokers Co., Limited, have taken the newly erected and spacious premises, 18, Bishopsgate Street Within, opposite the Baltic.

THE directors of the Uranium Mines, Limited, have given notice of appeal against the judgment of Mr. Justice Romer in the recent action of Cronbach *v.* The Uranium Mines, Limited.

WE are informed that the Middlesborough Town Co. have now issued the 15,000 shares referred to in the recent report as being left in the treasury of the company, thus completing the entire issue of 40,000 new shares. Certificates for the new issue will be issued as soon as possible after the payment of the call due on Mar. 18.

The receiving of money ou deposit.

The purchase aud sale of properties, and all classes of South African securities or iuterests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information ean be obtained at the Head Office of the Company.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

RECOMMENDATIONS FOR CURRENT ACCOUNT:—

INDIAN CONSOLIDATED,
MYSORE REEFS,
NINE REEFS,
MYSORE WEST,
MYSORE WYNAAD.
DEVALA MOYAR.

All recommendations this month have, up to the present, been eorrect, and large profits to our followers the result.

We make Mines a special study, and invite correspondence, whether business results or not. We can always give reliable information.

We open any uumber of all classes of Mining Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly, irrespective of accouut day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. Clients may rely on fair treatment at our hands. We are members of the Miniug Exchange, and subject to the rules and regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, oue, two, or three months in Miniug, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Banner.—We consider the fall only temporary, By all means increase your holding.

Weekly Reader.—Sell the high-priced ones named. Others likely to yet show a profit if held.

Corker.—Nos. 1, 2, 3, 4, and 7 should be kept for an improvement in price. 5, 6 and 8 sell. Others mentioned are unmarketable.

Jumbo.—Yes. It is so. The two calls must be paid before transferring.

A. M. B.—The mine is showing good profits, and the shares should very soon go better. We consider them exceedingly cheap.

Original Holder.—The crushing just announced is considered bad. That is the only reason we know of for the fall in price.

Jehosaphat.—They simply want your money, but we feel sure you will never get the return promised.

R. M. D. (Chertsey).—The shares have still a liability of 3s., but no call is likely to be made for a considerable time. They appear to be cheap.
Rustic.—May go lower if what your friend says proves to be true. The London management is respectable, we know.
M. P. (Cornwall).—Would not realise anything like the amount named. It is only the nominal value.
B. A. Lincoln (Sunderland).—A very good lock up.
W. B. R.—There is a good chance in Mysore West, Wynaad, and Almada.
Concerned.—The shareholders now realise their position, and, we think, do well by holding on. Much better prices should be had by waiting in our opinion.
S. S. K.—Will not pay a dividend, under present management, is the opinion of those who should know.
Dicker.—The exchange would, no douht, he heneficial to you. By all means accept offer.
S. L. Bradbury No. 1.—Is not in the samc district as you are led to suppose, hut several hundred miles away. Nos. 2, 3, and 4 are not dealt in on the English market.
Bond Fide.—Sell them. We have no faith in their promises.

The Mining World.

LONDON: SATURDAY, MARCH, 7, 1891.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

DIAMOND SHARES.

READERS of the MINING WORLD will scarcely have been surprised at the decline which has lately taken place in diamond shares generally, and in the shares of the De Beers Co. in particular, for more than once when the quotation for De Beers varied from 20 to over 23, we pointed out that there was nothing either in the position of the company or in its prospects to warrant such prices. In speaking of diamond shares we may, for all practical purposes, confine our attention just now to those of the De Beers Co. It is true that the Jagersfontein Co. has at times given evidence of a considerable amount of vitality. The company produces diamonds of a distinctly superior quality to the Cape average; but the position of the shareholders in this company has been one of hope deferred, and in the absence of dividends the market value of the shares has dwindled to less than half the price quoted a year or two ago, while the value of such properties as North Eastern Bultfontein, Griqualand West, Gordon and St. Augustiue, is entirely prospective in its character. The position of the De Beers Co. is quite different. It has now held a virtual monopoly of the Cape Diamond Market for close upon three ycars, and its status is, for the time being at all events, practically unassailable. It would be absurd to underrate the strength of the De Beers Co., but, as we have previously pointed out, the great speculative element in the undertaking has given the shares a market value altogether beyond their intrinsic merits. For the first year after the fusion of the Kimberley and De Beers Cos. took place the latter company paid 15 per cent. on its ordinary shares; for the second year it paid 20 per cent., and for the current year it will pay at least 20 per cent., while many think that the distribution will be 22½ per cent. Now, there is an impression that mining shares, to be worth holding, should yield the investor at least 10 per cent. We need not stop here to discuss whether the impression is one that is worthy of general acceptance. Of course, very much depends upon the nature of the property and a variety of other circumstances. In such an undertaking as the De Beers Co., however, 10 per cent. is not too high a basis to aim at, because its produce depends for a market almost entirely upon the caprice of fashion. On the basis of last year's dividend, therefore, De Beers shares should not stand at more than 10. A few months ago the price stood at over 23; but on Wednesday, after the "House" closed, dealings took place as low as 14¾. There has since been a partial recovery, as a good deal of the selling of the early part of the week was by "bears," who, no doubt, showed their wisdom by re-purchasing on Thursday. The market for De Beers shares is a very free one, transactions being very largely on account of wealthy continental operators. We should, therefore, strongly advise our readers, who may think with us that De Beers shares are too dear, not to back their opinion by speculating for the fall. Our only object is to point out that a company which has a share capital of nearly 4,000,000*l.* and requires to earn about 280,000*l.* per annum to meet its fixed charges, is not worth investing in to yield much less than 10 per cent.

THE POSITION OF COPPER.

THERE is an old proverb which tells us that "It is an ill wind that blows nobody good," and the proverb has recently received a fresh exemplification in counection with the copper market. The present civil war in Chili has had the effect of stopping since the middle of January all the shipments of copper from that country, and the statistical position of the metal in the United Kingdom and in France has improved in consequence. Let us say at once, that although we welcomc the advantage which has been obtained by the copper trade by the circumstances just alluded to, we deplore exceedingly the cause that has produced this result. For many years past Chili stood out from the rest of the South American States as a country whose commerce and finance were alike sound, and whose people were happy and contented. It is sad to think that the unworthy ambition of one man has plunged such a country into the throes of an internal war. Our purpose, however, is to deal not with politics but with copper. According to the monthly statistics published this week by Messrs. Henry R. Merton and Co., the total fresh supplies of the metal in England and France last month amounted to 7,105 tons, while the deliveries were 8,670 tons. There was, therefore, a decrease in the stocks of 1,565 tons, leaving a total visible supply in both countries and advised thereto at 59,031 tons. A year previously the stocks amounted to 95,152 tons, and in Mar., 1889, when the French speculation in the metal was at its full height, the total visible supply was nearly 125,000 tons, or more than double the present amount. In the following table we show the supplies and deliveries in England and France for the last six months, with the stocks on hand at the end of each month specified :—

Month.	Supplies. Tons.	Deliveries. Tons.	Stocks. Tons.
Feb., 1891	7,105	8,670	59,031
Jan., 1891	7,494	12,264	60,596
Dec., 1890	11,807	11,881	65,366
Nov., 1890	8,445	11,230	65,440
Oct., 1890	8,525	10,205	68,225
Sept., 1890	10,107	10,240	69,906
12 months to Feb. 28, 1891	109,163	145,284	...
12 months to Feb. 28, 1890	110,965	133,953	...
12 months to Feb. 28, 1889	124,599	59,052	...

It will be seen from this that while the fresh supplies in the past twelve months were just about 1,800 tons less than in the preceding year the deliveries were more than 11,300 tons in excess: proving beyond dispute that the prices which have ruled during the last year, ranging from 47*l.* 12s. 6d. per ton to 60*l.* 5s. per ton, have encouraged consumption rather than dimiuishing it. With the metal at anything like the present price, say 52*l.* 5s. per ton, the prospect is that the statistical position will still further improve.

THE TRANSVAAL AND ITS GEOLOGICAL FEATURES.

THE discovery of gold in the Witwatersrandt unquestionably resulted in one of the greatest mining booms the world has ever known, and it is from the reflex action of that boom that we are, in a sense, suffering to-day. To describe the effect of this boom on prices, and also the reaction in the same connection, would be to go over ground that has been well trodden in these columns before; but not so well trodden has been that which refers to the geological features of the Transvaal as a whole, which Mr. Charles J. Alford, F.G.S., has compressed into a most interesting work of less than 70 pages.* It may be asked who is Mr. Charles J. Alford, and what authority has he to speak on such a subject as that with which his book deals? In reply, we would remind our readers, in the first place, that he is a partner of the well-known firm of Messrs. Bewick and Moreing, mining engineers, but his chief claim to recognition, and even to gratitude, upon the British public is this, that he had the courage of his opinions and wrote about the Silati property in a fearless and outspoken manner, showing how the miserable shareholders in that concern, who had trusted to dividends from mining, were relying on a broken reed, and one which would not sustain them much less than it would the enormous and, at the same time, ridiculous price they paid Oceana Co. for the property. It is quite true that as against Mr. Alford's report upon the facts of the case we have Mr. Conybeare's geological theories but the shareholders and, at all events, the public will have little hesitation in making their own selection between the two. Mr. Alford sees and reports; Mr. Conybeare declaims and theorises; and so far as experience has gone, and so far also as independent testimony, which we have since been at pains to collect from experts who have beeu on the ground, and who know what they are talking about, the sequel will not disprove all past experience that one ounce of fact, as proceeding from Mr. Alford, is worth a good many tons of theory as emanating from Mr. Conybeare. Mr. Alford is not the only author who has writteu on the subject of the geological features of the Transvaal, but has been preceded by Mr. E. J. Dunn, by Mr. T. D. Williams, whose carefully prepared plans are now in our possession, and by Mr. W. H. Penning and others, but he is possibly right in saying that hitherto no general description of the subject has been put before the public in a popular form. The present work is the outcome of the author's journeyings for three years past in the district north and east of the Vaal River, and though not by any means exhausting the subject, it may claim to form the basis for further enquiry and research. After two interesting chapters on the classification of rocks and structural geology, the author concentrates his attention on the Witwatersrandt, of which he furnishes a geological sketch map. The English meaning of Witwatersrandt is "White Waters Ridge," and the "ridge" comprises a range of low lying hills situated about 35 miles south of Pretoria, and is the site of Johannesburg, which is at present the centre of the mining and commercial industries of the country. The

* London: Edward Stanford, Cockspur Strect, Charing Cross.

elevation is about 6,000 ft. above the level of the sea, and the approaching country is flat and undulating. The climate is good all the year round, and the rainy season is from Oct. to Mar. The country is suitable for Europeans and also for manual labour. The defective means of communication are well known. The distance from Johannesburg to the Natal frontier is 160 miles, and the railway to this point will be shortly completed. Delagoa Bay is 250 miles in a direct line from Pretoria, but there are engineering difficulties in the way of the construction of the railway.

Mr. Alford describes the main reef of Johannesburg, with its attendant leaders and reefs, as "the upturned edges of certain conglomerate beds," which can be followed by their outcrops on the surface east and west of the town for many miles. The whole form a series varying from 10 to 200 ft. in thickness. The distance of the beds from each other, their number, thickness, depth from surface, and gold-bearing value, vary greatly in their lateral extent. The thickness of what is known as a south reef is from 6 ins. to 3 ft., and in some places is so rich as to assay 10 and 12 ozs. of gold to the ton. Then there is the middle reef, varying from a few inches to over 2 ft., also occasionally very rich in gold. Then there is the main reef leader, from which hitherto the greatest results on these fields have been obtained. It is usually found from 6 ins. to 2 ft. in thickness, carrying gold in places up to 6 or 8 ozs. per ton. The north reef has been but little explored, but its day is coming like that also of the main reef.

Do the reefs continue in depth? The seriousness of this question is realised by Mr. Alford, who suggests that in depth they will gradually decrease their angle of dip, and turn into the south, continue with their enclosing strata until their normal limits are reached, in which case the lines of unconformability above alluded to would be but a surface disturbance, and would disappear in depth.

Another possible case is that the break up of the strata has been more pronounced than the former would assume it to have been, and that in depth the line of fracture of the beds will be reached, in which case the continuance of the deposit must be looked for amongst the horizontal portions of the strata to the south of the present line.

The author next proceeds to deal with the De Kaap Valley, of which Barberton is the centre. It embraces some 30 miles in diameter, is almost circular in form, and surrounded on all sides by steep and rugged mountains. The climate is good from Apl. till Sept., but at other periods it is desirable as a habitation for neither man nor beast. There are no railways, and Barberton is 100 miles from the Delagoa Bay terminus. The geological features are complex, but the conglomerates are identical in their characteristics with those of the Witwatersrandt. The mining industry is, however, crippled, because of the great expense in carrying it on. This is chiefly owing to the want of communication, and also to the fact that the mills have to be erected at the river in order to obtain water power, and the river is far distant from the mines. Under existing circumstances only very rich ore can be profitably dealt with. The author has a good deal to say with respect to Zoutpansberg, and also of the coalfields on the Transvaal. He may fairly claim to have produced a most interesting work, which should be in the hands of all those who have followed with attention the gradual, not to say rapid, development of the mineral resources of the Transvaal.

ARE RE-CONSTRUCTIONS "HONEST?"

The committee appointed at the Knysna meeting a fortnight ago to consider what was described as a forced re-construction scheme, as opposed to the voluntary one of the board, have decided to adopt the latter, and the meeting on Thursday ratified that decision by a unanimous vote. It was, however, hinted that the committee were not unanimous on the subject, but though some of its members, with, if we may call him so, its leader, Mr. Kelly, were present, none of them raised the slightest objection to the resolutions as submitted from the chair. It remains to be seen whether, on the voluntary principle, the money can be raised. We sincerely hope it can, for the double reason that it will protect the rights and interests of all the shareholders alike, and further the development of a property which all are agreed in thinking (including tho Messrs. Taylor, who have reported upon it) of great prospective value.

The scheme was described by Mr. Lakeman as "the only fair one he had ever seen in a case of re-construction," whereupon the respected chairman blushed with that sort of blush which the poet describes as "the truest test of innocence." Later on, when the speaker pronounced it to be "honest," the chairman blushed again with a hue so deep that on the faces of his colleagues there could be seen the distinct reflectiou. Mr. Lakeman declared that in these days, and by re-construction schemes, shareholders are literally "robbed of their property," but he did not stop to think, much less to say, that a mining company without capital can no more carry on its business than a dog can wag its tail without having one. Suppose there is no re-construction, and that a company is destitute of money, with shareholders unwilling to provide it by the gentle pressure of the voluntary system—will Mr. Lakeman tell us the value of such a property of which shareholders are robbed? If he cannot tell us, we can tell him. Its value is as near the fine edge of nothing as anything can well be. We trust the Knysna scheme will be successful, and there is good reason to suppose that it will be, for the chairman, from the way in which he spoke, has, apparently, a reserve of strength behind him, but in the vast majority of cases, as applied to mining companies, the voluntary dose is too homœopathic to restore the financial equilibrium.

The voluntary system has, indeed, been weighed in the balances and found wanting. It has been tried through the familiar channels of preference shares and debentures, but the objection in both cases is that this form of security is unmarketable, and people do not like to buy that which they cannot sell. The voluntary system has, in fact, been tried by every conceivable means, and until the late Mr. Bladon hit upon the happy idea of what was properly called at the Knysna meeting "forced re-construction," many a good mining property, for the want of a little further cash, went the way of all impecunious things. Thanks, however, to re-construction, numerous companies have been able to bring profits and dividends to their shareholders, and the most recent instances that occur to us are those of Frontino and Bolivia and Antioquia. If there had been no re-construction in these cases and others that space would fail us to name, companies that are now dividend-paying, or shares that are marketable, would alike have been swept off the face of the mining share lists, and a further occasion would have been given to the enemies of mining to blaspheme.

It is quite true that the shareholder is deprived—let us even pass the word "robbed"—of his property by forced re-construction, but is he not deprived of other property also if he cannot pay his way? Has Mr. Lakeman never heard of brokers distraining and creditors suing? Happy Mr. Lakeman! If a householder cannot pay his rent, the brokers take his furniture, and if a shareholder cannot keep his mine out of debt, the creditors seize it. In each instance it is a case of poverty, which merits sympathy no doubt, but equally, of course, the penalty of impecuniosity has to be paid. Looked at from another point of view, will Mr. Lakeman tell us where the justice comes in when one class of shareholders find money to work a property at a time when the other class holds back. They "sit on the fence," and if the company does well, they profit by other people's money, and if that money be lost, they flatter themselves that it is not their own. That is one of the great objections to the voluntary system. Shareholders have so often made the remark, that it might be stereotyped, that "they do not see why they should provide extra capital for other shareholders who will not. and who will participate in a common benefit if that benefit be realised." If they do not subscribe, their remedy is to have their property assessed by the market price of the shares at the time the company went into liquidation, and pocket the proceeds—if there are any proceeds to pocket. We are as much enamoured of the voluntary system as Mr. Lakeman can be, for we prefer to lead people rather than to drive them, but, practically, reconstruction is the means by which a total loss is frequently transformed into a substantial profit.

PRUDENTIAL ASSURANCE CO., LIMITED.

The directors of this company on Thursday were prepared to offer to the annual meeting some very striking statistics. Accustomed as we are to the big cyphers of insurance companies, those of the Prudential may be described as "the fattest of them all." Fancy a net annual income of 5,000,000*l*.! The breath is taken away in contemplating such a vast sum. As we wrote a year ago, so we repeat the statement now, that the marvellous progress of this company knows no check, and the figures of each year come as a greater surprise than those of its predecessor. The number of policies issued in the Industrial Branch during the year was 55,846, assuring the sum of 5,615,676*l*., and producing a new annual premium income of 340,699*l*. The premiums received during the year were 1,162,649*l*., being an increase of 257,734*l*. over the year 1889. The increase in the premium receipts for the years 1887-90 was 765,709*l*., giving an average increase for the first four years of the Quinquennium of 191,427*l*. per annum. The number of policies in force is 220,545. The figures of the Industrial Branch are almost appalling by reason of their magnitude. The premiums received during the year were 3,517,925*l*., being an increase of 181,183*l*. The increase in the premium receipts for the years 1887-90 was 606,630*l*., giving an average increase for the first four years of the Quinquennium, of 151,657*l*. per annum. The claims of the year amounted to 1,489,204*l*. The number of deaths was 169,890. The number of policies in force is 9,099,204; the average duration continues to increase, and now exceeds six and a half years. The total assets of the company have been raised during the year from 10,946,156*l*. to 12,579,870*l*., being an increase of 1,633,714*l*. The balance sheet has been again submitted to the independent professional audit of Messrs. Deloitte, Dever, Griffiths and Co., whose certificate is appended to the accounts. Some of the incidents related by Mr. Horne, the chairman, were extremely interesting. For example, "A landslip lately occurred between Folkestone and Sandgate, with the romantic incident of a cottage being carried away across the road and down a steep bank while the family residing in it were fast asleep, and the eldest child, a boy of about 10, rescued his younger brother and sister, while the father and mother and youngest child were buried in the ruins

and suffocated. Well, the whole of that family were insured, and the relatives who had to support the three surviving children had the benefit of the insurance money paid in respect of those who lost their lives. I have put down those cases, and I find that they total up to 372 individuals who lost their lives. One-fourth of that number would be 93, but we have paid claims in the case of 104." The chairman was at pains to emphasise the exertions, most successful this year, to stop the lapse of policies. The costs are enormous, but so is the business. As is usual on these occasions, an interesting speech was delivered by Mr. Henry Harben, who has been the life and soul of the company from the start. He glories in the largeness of its industrial business, and that it has so well occupied the ground that other similar institutions tread but lightly on its toes in the way of competition. He told the meeting that vast as are the ramifications of the business, yet the whole of it is so organised that at any moment the line may be drawn, and the company's position ascertained.

ANOTHER CHANCE FOR SOUTH DARREN.

IT has been decided to re-construct and proceed with the working of South Darren. The number of shares announced as having been absolutely subscribed at the informal meeting on Wednesday was 16,256, and the shareholders in the room promptly made up the list to 20,000. 5,000 shares are reserved for applicants with whom the liquidator is at present in treaty, and of the remaining 20,000, the present subscribers have the call, share for share, for a period of six months. This option may prove of great value. Some regret was expressed that South Darren under its new organisation does not start with the patriarchal blessing of its late chairman. It would have been only in accordance with the dramatic fitness of things if Mr. John Schofield, in the character of the heavy father, had cried, "Bless you, my children." But the Schofield benediction is withheld, and the shareholders must do the best they can without it. Mr. Schofield, like a mining Pontius Pilate, appears to have washed his hands of South Darren and all its works, but, in common with the subscribers, he thoroughly believes in the promising character of the enterprise, and, if we mistake not, at one time thought of forming a syndicate to work it. As it is, the company will have to do without Mr. Schofield's help though it could do better with it. The shareholders know they cannot have his benediction, but they entreat him to spare them the withering misfortune of his curse. That would be a calamity too dreadful to contemplate. South Darren seems an uncommonly good speculation. It is certainly a very cheap speculation, for it yields the richest silver-lead in the country, and the present funds are to be applied to producing it in larger quantities.

AFFAIRS IN SOUTH AFRICA.

Kimberley, Feb. 9, 1891.

THE WESSELTON DIAMOND MINE.

MATTERS with regard to this new mine cannot be said to have moved a stage since I wrote last week, although a most determined effort has been made to bring about a crisis. You will remember that I informed you that Messrs. P. J. Marais and Ward had gone to Cape Town for the purpose of consulting with Mr. Wessels. In the meantime the finds turned out to be so good every day that the excitement by no means abated. To understand what follows you must know that the farm, which is known as Benaudheidfontein (literally, fear, or anxiety fountain), was granted under a Free State title, being situated within the Free State before the boundary line was altered, and the difference between Colonial law and Free State law is that whereas under Colonial law all minerals and precious stones are claimed by the Government, and can only be given out to prospectors by public proclamation, under Free State law they belong to the owner of the soil, and he has the right to turn his farm into a public diggings if he chooses to do so. Being situated so close to the township of Beaconsfield, the Beaconsfield people have naturally taken a great interest in the discovery, and as naturally are anxious that the mine should be opened as a public diamond mine. Now, you must know that within the last few weeks there has been in working order at Beaconsfield an institution called the "Labour Bureau," having for its object the providing of work for the large number of destitute and unemployed people in that township. During the past week the committee of this Bureau have had several private meetings, at which the subject of obtaining claims in this mine has been discussed. The result was that in consequence of what took place at one of these meetings on Wednesday last it was decided that the mine should be rushed. Every endeavour was made to keep the project as quiet as possible, but the affair got wind and reached Kimberley. The consequence was that on Thursday morning before daybreak some 300 or 400 people, of all sorts and conditions of men, from Kimberley and Beaconsfield, went out to the farm, and notwithstanding the protests of Messrs. Armstrong—who had been left in charge by Mr. Ward—proceeded to peg out claims, and before sundown no less than 700 claims were pegged out. It is fair to say that the utmost order and decorum prevailed, but the Messrs. Armstrong gave everyone to understand that anyone putting a pick or a shovel into the ground would be at once prosecuted for trespassing. Although I have made several enquiries, I have failed to ascertain how and in what way this most ill-judged and unwise proceeding was brought about. As for the pegging out, it is the greatest farce imaginable, and most of the peggers now begin to see it in that light. As they pegged without the slightest authority from anyone, it follows as a matter of course that no registry was made, and all there is to show that anything has been done is that the names of the respective peggers are written on the pegs, and a small subscription was collected to pay a body of men to look after them and see that they are not removed. It is almost needless to add that the owner of the farm, or the lessee, can remove them all to-morrow. It appears that these ill-advised people, having ascertained that the farm is under a Free State title, and having heard that both Mr. Wessels and Mr. Ward were anxious to throw the mine open to the public, took it into their heads that by adopting this expedient, possession would be nine points of the law. We shall probably learn what Mr. Ward has to say about the matter as soon as he returns. Meantime, it is rumoured that the owner, Mr. Wessels, and the lessee, Mr. Ward, have come to an agreement by which the lease is to be terminated and Mr. Ward is to become part proprietor of the farm. How far this is correct I cannot say, but it is to be noted that during the last three or four days nothing has been heard with regard to any negotiations which may have taken place between them and the directors of the De Beers Co. That very great pressure has been brought to bear on these two gentlemen there cannot be the slightest doubt, but their intimate friends are very strong on the point, and declare that they will resist the tempting offers made. They say they can do better from rents and royalties paid by the public, and such is the faith of many that this is a rich diamond mine, that the general opinion is that they will be the gainers by throwing the mine open to the public.

MILWAUKEE AND CHICAGO BREWERIES, LIMITED.

THIS company has been formed for the purpose of acquiring the shares of the capital stock of an American Corporation which will acquire the title to the property of the celebrated Valentin Blatz Brewery, of Milwaukee, together with five of the large breweries in the City of Chicago, and will carry on such businesses under one management. The properties to be thus acquired are as follows:—The Valentin Blatz Brewing Co., whose brewery is located near the centre of the City of Milwaukee, and appears to be doing an enormous business; the M. Brand Brewery, in the City of Chicago, which has an output of 115,000 barrels per annum; the Bartholomae and Leicht Brewery, also in Chicago, and having an output of over 65,000 barrels per annum; the Ernst Brothers Brewery, whose annual sales amount to over 70,000 barrels; the Bartholomae and Roesing Brewery, and the K. G. Schmidt Brewing Co. By the amalgamation of these concerns it is believed the business will be increased, and the general position strengthened. The capital of the company is 1,550,000*l.*, divided into 77,500 8 per cent. preference shares of 10*l.* each, and 77,500 ordinary shares of 10*l.* each. In addition to the above there will be an issue of $3,500,000 in 5 per cent. bonds of $1,000 each, which will be secured by a first mortgage on the properties. The subscription lists will close on Monday next. These breweries have been brought out under the same auspices as others which have been very successful, and the present are likely to be no exception to the rule.

THE LOMA MEETING.

WE should not be surprised very soon to see a considerable advance in Loma shares, and the reasons for the faith that is in us are to be found in the facts and figures, not to say the gold exhibited, at the meeting of this company, which we report verbatim in our present impression. Loma has been the child of many prophecies, and the subject of not a little criticism both harsh and kind. Urged to do so by the impatience born of human frailty the shareholders had begun to think that the directors were sleeping at their posts, and that matters were being allowed, in a sense, to drift, but the speech of Mr. Sankey, the chairman, disillusionized them completely, for he was able to show that their conduct had been characterized by a commendable degree of sagacity and energy. Like the village blacksmith they had "something attempted" and a great deal done. Mr. Sankey's remarks showed clearly the extensive nature of the operations already carried on and that whilst Colombian Hydraulic with 10 to 14 cents of gold a cubic yard, made a profit of 16,000*l.* per annum, or 20 per cent. on its capital of 75,000*l.*, Loma with (*vide* the reports of experts) 20 cents of gold per cubic yard might readily be expected to yield a profit of 30,000*l.* He showed the steps that are being taken to bring on to the mine 3,000 miners' inches of water, and that even on the present limited basis of working, primitive appliances and scarcely any water, a profit of 500*l.* a month is being realized. Seeing is believing and the gold from which this profit was obtained was produced at the meeting for the inspection of shareholders, and as the earnest of better things to come.

Other speeches were also delivered, and notably one by Mr. Thomas Thompson, who betrayed his perfect mastery of the subject, and evidenced the immense amount of time he must have given to its

study. He has been connected with the formation of the best Colombian mines of the day, and therefore his statement that Tablazo, the chief mine belonging to Loma has long enjoyed the reputation for richness throughout the district, will be received with the weight it deserves. Under the most difficult circumstances a considerable quantity of gold has already been extracted, and the directors are now proceeding to follow the example previously set them in a primitive fashion by a thorough and systematic working of the mines. This can only be done by bringing on a water supply to which we have referred, and to do this efficiently has constituted at once the difficulty and the expense of the company. The difficulty may be said to be overcome, and the funds are in hand for the work without the necessity of making another call upon the shareholders. Mr. Thompson, whilst feeling every confidence in the directors and their agents on the spot, thought it better to take advantage of an opportunity that presented itself of getting an independent report of his own, and the gist of this he read to the meeting. His report confirms all that the experts have written, and is a practical endorsement of the management down to the period at which it is dated. All that took place at Loma meeting only contributed to emphasise the opinion which Mr. Oakes, the superintendent of Colombian Hydraulic, has expressed, that "the mine has the reputation, and I believe justly, of being the richest in Colombia."

THE DE LAMAR MINING CO., LIMITED.

Two of the directors of this new enterprise occupy a similar position in connection with Elkhorn Co., the remarkable success of which we chronicle in statistical form in another column. What that mine has done is really surprising, but the figures may be left to tell their own tale. A company like the present, emanating mainly from the same source as Elkhorn, should, therefore, claim more than the usual amount of attention that is given to ordinary mining enterprises. Premising that the directorate is composed of gentlemen whose names will carry weight with the investing public, we may turn to the merits of the property itself, which is 250 acres in extent, and situated in Owyhee co., Idaho. Part of it is now being worked by Capt. J. R. De Lamar, who is to be one of the directors of the new concern, and whose interests are bound up in those of the shareholders. The property is a going concern, actually making large profits, and will be taken over at the date of the completion of the purchase. From this it will be seen that there is no long period of delay to be endured whilst the mines are undergoing that tedious, not to say, uncertain, process of development with which we are too familiar. The products of the mine are gold and silver, "the mill bullion containing from 55 to 60 per cent. in value of the former metal," and the ore is capable of the simplest treatment. The veins are described as rich and permanent, and capable of being worked to a depth of 800 ft. or 1,000 ft. by means of tunnels—the most inexpensive method of mining that is known. The progress of the mines from the time they were first taken in hand by Capt. De Lamar in 1886 is traced in the prospectus. At first he worked them tentatively, and only in Oct., 1889, put up a small mill, which some 10 months later he enlarged to its present capacity of 20 stamps, and to the end of Oct. had sold ore to the value of 140,000*l*., out of which he purchased adjoining locations, and consolidated the whole of the property into the form in which it is now offered to the public. His expenses in this way are estimated at 60,000*l*.

The works, so far carried on, may be briefly described. There are two tunnels, with connecting shafts and winzes, which have developed the ground to a depth of 250 ft., and for a length of about 1,000 ft., and another tunnel, 200 ft. below the second, is rapidly approaching the ore bodies, the existence of which is known as well as their unusual size—"the reserves being sufficient to run the present mill for three years." The mode of occurrence of these ore bodies promise for them continuity of yield and increase of richness in depth—the average mill returns for the last 12 months, ending Oct. 31, will show $18 17c. in gold, $13 19c. in silver, and during this period the silver ores shipped to the smelters are stated to have been of the value of $120,000. The net profits on the present basis of working are given at 66,000*l*., but by economies and improvements can be raised to 75,000*l*. or 80,000*l*. per annum, and, moreover, the engineers who have examined the property recommend the enlargement of the present mill, which is incapable of doing full justice to the produce of the mine. Amongst these engineers we observe the well known names of Mr. T. A. Bennett, Mr. H. Bratnober, and Mr. Wartenweiler. But not satisfied even with these reports, the directors took the precaution to obtain one from Capt. Plummer, the manager of the successful Elkhorn Co., which is in every respect encouraging. He is sure "that this is a mine with a great future before it." The amount payable for the property under the contract is 125,000*l*. in cash, and 205,000*l*. in fully paid shares, with a balance of 20,000*l*., either in cash or shares, at the option of the company. The total capital is 400,000*l*., payable by easy instalments. The prospectus is entitled to careful consideration, for the property has every appearance of being one of exceptional merit.

JUBILEE GOLD CO., LIMITED.

THE fourth annual report of the directors shows the gross available earnings for the year 1890 to have been 46,754*l*. 18s., which, with the amount carried forward from the previous year (6,756*l*. 9s. 9d.), makes a total of 53,511*l*. 7s. 9d. The working expenses have been 26,547*l*. 15s. 1d., thereby leaving a nett profit of 26,963*l*. 12s. 8d. The directors in this report state that they see no reason to anticipate any less successful issue to the current year than that which has pertained to the past year. As the levels have advanced, it has been found necessary to increase the pumping power, and the directors obtained an excellent pump in exchange for the tailings. It is anticipated that arrangements will be made for the future disposal of the tailings to the company's advantage. With regard to the financial position, the report states :—"During the past year there has been no reason for issuing the 4,000 shares held in reserve for issue at the discretion of your directors. The financial position of the company has been, and is, highly satisfactory, a sum of 5,000*l*. having been placed on deposit at Natal Bank at 4 per cent. per annum until June next."

THE KADUR-MYSORE GOLD MINES, LIMITED.

THIS company has been formed. with a capital of 100,000*l*. in 100,000 shares of 1*l*. each, for the purpose of acquiring the Government leases of two blocks of about 1,300 acres of auriferous ground, situated in the Mysore Territory, India. One of these is at Ajimpur, about 4½ miles north-west from the village of that name, and the other Tarikeri, the same distance from the Tarikeri Bungalow. The information with respect to these blocks is based on reports by Messrs. A. Mervyn Smith, C.E., M.S.A., and A. S. B. Oakley, M.I.C.E., Manager of the Balaghat Mysore Gold Mining Co., Limited. The latter gentleman in particular is favourably known to English investors in Indian mines, and the publication of his full report would have strengthened a prospectus in some respects not over strong. The company has certainly a large extent of auriferous ground, and the extracts from the report of Mr. Mervyn Smith are encouraging, but when an analogy is sought to be drawn between this concern and the Mysore Mine, it fails for the simple reason that the respective properties are widely remote from each other. A fair amount of exploratory work has been done, and Mr. Mervyn Smith is thoroughly satisfied as to the good results its further extension will produce. The purchase price is 70,000*l*., of which 2,000*l*. is payable in cash, and the balance in cash or shares at the option of the directors. The list of applications for shares closes on Monday next at 4 p.m. for both town and country.

MR. THOMAS THOMPSON'S MINING AND INVESTMENT CIRCULAR.

MR. THOMAS THOMPSON'S circular for March merits the enconiums we have passed upon former issues. Whilst not ignoring the general stock markets, he naturally gives the most of his space to the Mining Market, of the ramifications of which few are better informed than he. He refers to Loma shares, and predicts for them a speedy and phenomenal rise. As this company is fully dealt with in our leader columns, and its meeting reported verbatim in our present issue, we need only say here that we do not grudge the almost appalling demand Loma has made this week upon our space, because we think that the mine will do well, and the shares rise in value. We have also wished, as far as possible, to exhaust the subject for another reason, viz., because we are contiuually receiviug letters from our readers with reference to its affairs. All the points in those letters may be said to be covered by the explanations given at the recent meeting. There is one remark in Mr. Thompson's circular with which we are very much struck :—"It is difficult to say what to advise at the moment, prices never moving upon intrinsic merits, but being influenced rather like most other things, only by the laws of supply and demand." He points out that the news received by the Colombian mail is favourable, and that the company of that name has declared its fourteenth dividend of 1s. per share. Whilst he thinks that Lomas will advance above all other shares he recommends, he is also of opinion that Tesoros will go "sky high," and adds, "let them be carefully watched"—that is, we suppose, now and before they quite become heavenly bodies. The circular is replete with valuable information with regard to mines—information which is condensed into an easily digested form, and which puts the reader in possession of all the facts neccssary to guide him in his choice of mining investments.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

THE Money Market, after being very firm iudeed, has weakened materially within the past few days, partly owing to an increased supply of capital from Railway dividends, Government disbursements, and the release of some of the Couuty Council's money, but also partly from the worst of the rumours affecting South American financial houses not having proved true, and the Bills due on the 4th of the month having been duly met. Bills have thus fallen from fully Bank rate to 2¾ for all good paper, and money from 3½ to 2 per cent. It has been notified that Messrs. Newgass, who had made an arrangement last October, when their total liabilities were 1,312,000*l*., of which over 1,000,000*l*. was secured, and the assets 583,000*l*., have converted their business into a limited company. Messrs. Murietta and Co., again, are said to have registered themselves into a limited liability company, but nothing official has transpired. The difficulty is that several of the South American houses are loaded with securities, which at present, owing to the discredited position of affairs in the Argentine and other republics of South America, are quite unmarketable, and as the banks will not lend on such securities, assistance has to be sought where required elsewhere. Until, however, the state of suspense is ended, no improvement can be expected in business. The Bank return with the export of 100,000*l*. in gold and an increased circulation of coin and notes shows a decrease of 777,000*l*. in the reserve to 15,370,000*l*., against 16,300,000*l*. last year, or 36¾ per cent. of the liabilities.

Dealings at the Stock Exchange during the past week have been on the smallest possible scale, and prices in the absence of the public have shown a decided tendency to shrink. The news from South

America and the Caledonian Railway dividend tended to increase the feeling of depression, and a certain amount of uneasiness has been noticeable in some quarters. This fully accounts for the state of inactivity in all departments. The rise in the premium on gold at Buenos Ayres to 258 per cent. coupled with certain adverse rumours from the Republic; the revival of the opinion that the dividend on the Deferred Stock of the North British Co. will be "passed;" the action of the Midland Co. in view of the Board of Trade Schedule Rates, the repetition of the rumours current some time back respecting the Mexican (Vera Cruz) Line, and the introduction of a new American Brewery undertaking, were the leading factors for the depression in the respective departments. On balance there has been a reduction of about ½ in the Funds, and ¾ per cent. in Indian Government securities. Foreign Government loans show a general loss of about ¼, but Peruvian and Mexican were ½ lower, while Turkish Defence Loan was exceptionally strong. The report that the Argentine Funding Scheme contract had been signed caused a general recovery in the securities specially affected. The greatest declines in Home Railway stocks were in North British issues. Caledonian Ordinary and Great Northern "A" with losses of 3 to 4, but the rest were only a trifle lower. One or two dollars covers the loss in the American Railroad Market, the weakest being Atchison, Denver Preferred, Louisville and Reading Preferred; Grand Trunk stocks record a loss of 2 to 3, and Mexican 3 to 4 per cent. In Breweries there has also been a reduction, but Hotchkiss Ordnance, Hudson's Bay, and several other miscellaneous securities were also firmer.

The Money Market to-day has been easy loans at call opened at 2 to 2½ per cent., and fell to 2 per cent. The 800,000*l.* from Treasury Bills paid off having apparently come into the open market. Discount was still lower at 2⅛, 2⅛ per cent. The sharp fall that has taken place this week in the value is premature and anticipating events.

At the Bank 70,000*l.* was withdrawn for Lisbon, while 40,000*l.* was bought, leaving an efflux on balance of 30,000*l.* Bar silver was ⅛ easier, and Rupee Paper receded ¼ to ½, with a good deal of fluctuation in connection with the difficulties of a house at Liverpool.

With but few exceptions the changes at the Stock Exchange to-day have been of an adverse character. The Funds, however, were firm and nearly ¼ higher, and India Three per Cent. also improved. Argentine securities were heavily sold owing to various adverse rumours, and the further advance in the premium on gold to 274 per cent., but the latest prices were much above the worst, and only ¼ to ½ below yesterday's values. Amongst Home Railways the greatest decline has again been in the Scotch Stocks, notably North British which fell 2 to 3 per cent. Great Northern Deferred Ordinary was equally as weak at 79xd. In other cases, however, the fall was limited to ¼, or at most ½ per cent. In the American Railroad Market, Atchison Issues, Canada Pacific, New York Central, Norfolk and Reading shares were higher on the day, especially Canada Pacific, which rose 1¼, the rest, however, were lower, Illinois being exceptionally 3½ down, and Reading Income bonds, $2. Grand Trunk stocks were rather easier, but Mexican (Vere Cruz) stocks were exceptionally flat, and 1 to 1¾ down on the revival of bad rumours. Miscellaneous securities as a rule were firmer, but with unimportant alterations.

Annexed are the final quotations to-day:—Consols Account, 96⅜, 96½xd; Egyptian Preference, 93⅞, 94; Egyptian Unified, 97 15/16, 98 1/16; French Four-and-Half per Cents., 103¼, 103⅜; Hungarian, 91⅝, 91⅞; Italian, 94, 94⅛; Mexican, 90½, 91; Peru Corporation, 10½, 11; Ditto Preferred, 29⅜, 29⅝; Russian, 1873, 99½, 100; Portuguese, 56 11/16, 56 13/16; Spanish, 76 13/16, 76 15/16; Turkish, 1871, 98⅜, 99¼; Turkish Defence, 103¼, 103¾; Caledonian Railway, 112⅜, 112⅝; Great Eastern, 92⅝, 92⅞; Great Western, 160⅜, 160⅝; Brighton "A," 154⅜, 154⅝; North Western, 174, 174¼; Metropolitan, 77½, 78; Metropolitan District, 30, 30½; Midland, 147¼, 147½; North British, 43⅜, 43⅝; North Easteru, 162⅞, 163⅛; South Eastern "A," 94⅛, 94⅞; Mexican Railway Ordinary, 40⅜, 40⅝; Grand Trunk 8⅞, 9; Grand Trunk First Preference, 59⅛, 59⅜; Grand Trunk Second, 38⅛, 38⅜; Grand Trunk Third, 20⅞, 21⅛; Canadian Pacific, 78½, 78¾; Denver, 17, 17¼; Erie, 19¼, 19½; Milwaukee, 54⅞, 55⅛; Lake Shore, 112½, 112¾; Louisville, 74⅝, 74⅞; Atlantic First, 31¾, 32; Ontario, 16⅛, 16⅜; Ohio, 16½, 17; Norfolk and Western, 55⅛, 55⅜; Reading, 16, 16¼; Reading 5 per Cent. Bonds, 53, 54; Union Pacific, 45⅜, 45⅝; Wabash Preference, 17¾, 18¼; Ottoman Bank, 14 15/16, 15 1/16; Anglo-Telegraph, 47¾, 48¼ National Telephone, 4⅜, 4⅞; Hudson's Bay, 18¾, 19¼; Suez Canal, 96¾, 97¼; Guinness 306, 309; Allsopp's, 31, 34; Bryant and May, 13¾, 14; Eastmans 11⅞, 12⅛; Hotchkiss, Preference, 3, 3½.

THE ROBURITE EXPLOSIVES CO., LIMITED.

DIRECTORS ISSUE A REPORT SHOWING THAT THE COMPANY HAS TURNED THE CORNER.

THE directors are able to report that while the business of the company has increased by more than 50 per cent., the general expenditure has been reduced, and savings have also been effected in the process of manufacture. They are thus enabled to show a profit of 1,088*l.* on the year's transactions. The company's home trade is in a thoroughly sound state, and its further development may be awaited with confidence. The expansion of the business during the year has been most marked in the Wigan district, but the sales through agents have also made steady progress. As regards export trade, contracts with Australia, British Columbia, Canada, China, and Spain, are now in force, and quantities amounting to four times the previous year's consignments were exported to those countries in 1890. Operations have also been continued in South Africa and India, and begun in Brazil, Italy, Persia, Peru, Portugal, and the U.S. of Colombia. For some of these countries orders have been executed, or are in hand, and regular relations with all are in course of establishment. The Roburite manufactured during the year was throughout of the highest quality. In no case did it fail to pass the regular Government tests, and complaints from customers were of very rare occurrence. Those that were received were due to defective packing and storing, after the explosive had left the company's magazines. The directors have initiated the manufacture of nitrate of ammonia at the factory, and during the last three months of the year about 30 per cent. of the quantity required for roburite has been produced on the premises.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

MYSORE GOLD CO.

SIR,—The directors, the manager and the secretary were unanimous in assuring the Mysore shareholders at the recent meeting that they possess a very rich and valuable property, and the various newspapers confirm these views, and consider the shares far below their real value—in fact, a financial paper firmly believes that by next year, when the additional stamps are in full swing, the shares will be "*nearly double their present price.*"

Surely no more powerful argument than this can be adduced to prove that the purchase of the Goldfields block should be made in *cash* and not *shares*. Yet, we who suggest this mode of payment are laughed at and described as "weak" and "wrongheaded!" Funny! isn't it?—I am, &c.,

W.

ST. JOHN DEL REY.

SIR,—Now that the debentures are taken up in the St. John del Rey Co., I most earnestly advise shareholders not to part with their shares at the present low price, as I am certain they will be 2*l.* by the end of the current year.

If anyone intends having an interest in the above famous company, now is their time—now or never—as the shares are advancing every day.

Another thing I am pleased to say is that the directors do not intend calling up the remaining liability on the shares, viz., eighteenpence. Of all shares on the Mining market there are none that hold out such splendid prospects as St. John del Rey.

Since the debentures have been taken up I have considerably increased my holding, and shall continue to buy as far as my means will allow, not for speculation, but for investment. We all know what St. John del Rey has done in the past, and I am certain when the great work in hand is finished, and in full working order on the lode, that her future will be even greater than the past.—I am, &c.,

ST. JOHN DEL REY.

[We are glad to inform our readers that the full amount of debentures to 60,000*l.* has now been made up.—ED. *M. W.*]

REPORTS OF MEETINGS.

THE LOMA GOLD MINES, LIMITED.

A SATISFACTORY MEETING, AT WHICH THE SHAREHOLDERS ADOPT THE PLAN RECOMMENDED BY THE BOARD, AND LEARN WITH GRATIFICATION THAT THE MINE WILL PROBABLY YIELD £30,000 A YEAR WHEN THE WATER IS LAID ON, AND MEANWHILE MAY BE EXPECTED TO PAY ITS WAY AND LEAVE A MARGIN.

An extraordinary general meeting was held at the Guildhall Tavern, Gresham Street, on Monday, "for the purpose of laying before the proprietors the reports from the mines, and the plans for their future working, having especial regard to the proposals for dealing with the large water supply at command."

Mr. Stuart Sankey (chairman of the company) presided.

Mr. H. Parker Creasey (secretary) read the notice of meeting.

DIRECTORS CONFER WITH SHAREHOLDERS.

The Chairman: Ladies and gentlemen, I met an old friend on Saturday who said, "Why are you holding a meeting of Loma Co.? It is uot an ordinary meeting. You are not going to ask the shareholders to pass accounts. You have not an extraordinary resolution to submit which will in any way alter the special constitution of the company, and you should never call a meeting of shareholders when you do not want anything from them. It is a great mistake." (Laughter.) I rather differed from my friend, because although there may be reasons in industrial companies, where there is competition to be feared, and where therefore details are not always desirable; aud although there may be trust companies in which investments have been made which it is not wise to show the general public (as events have specially proved of late with regard to South America), yet in this company, which is a gold mining company only, and therefore fearless of competition, I think there is no reason at all why we should not be anxious to meet our shareholders in public meeting when there is anything to tell them. and ask the advantage of their advice and assistance upon the plans and other matters we may have to put before them. I hope that is your opinion too. (Cheers.) I hope, further, you will not grudge the short time that you may be devoting to-day by coming to this meeting. There are no special resolutious to be passed, and, therefore, those who have not been able to come will find that nothing will be passed behind their backs which will bind them or in any way alter the constitution of the company, and, no doubt, they will see in print what to-day we have put before you and discussed with you as well as if they were here, except that we on this side of the table shall not have the advantage of any of the hints and suggestions which their experience might lead them to make. As I have said this cannot be an ordinary meeting of the company, because the meeting, which was held shortly after the company was incorporated, commonly called the statutory meeting, has already taken place.

CAUSE OF THE MEETING.

Nor can it be an ordinary meeting to pass the accounts, because the company has only been incorporated rather more than half a year, and as we do not seek to alter the constitution of the company by raising capital in any way, there is no formal resolution to be passed; but, gentlemen, we have just received the latest plans and surveys for laying on the water supply to this mine, and we shall bc glad to be strengtheued hy any suggestions you may have to make upon it, and to submit those plans and surveys to the inspection of the meeting. The plaus to which I refer have been prepared with great accuracy and skill by Mr. Welton, whose name is well-known in Colombia, where he has laboured in mines for a considerable part of his life. and especially in hydraulic mincs in Colombia. I hold here completc specifications, and every detail he has takeu out for the surveys of the ditch. These have met the careful attention of the board, who propose to recommend to you one of the three plans which he sets forth, and I hope that one may have your sauction.

A SPEECH WITH FOUR HEADS.

It may interest you to hear a few words, first of all, by way of a description of the property we own; next, as to what we have done from the time of our incorporation to the present date; and. lastly, to discuss the water question, fiuishing up, perhaps, with a few words, based upon statistics and upon the reports we have, of what we may reasonably hope to do in the future. I do not mean to indulge in wild speculations, but taking the figures and past returns of similar mines, to show on a reasoned basis what we may expect to do in future. Well, gentlemen, the miues we possess are seven in number, and one of them is the Loma, from which the company takes its name. There are other mines including the El Salto, the Sileucio, and three others, but especially the Tablazo. The Tablazo Mine has been a name which has beeu known in Colombia and amongst Colombians in London for many years, but the great difficulty in working it was that it lay at the top of a very high ridge. This ridge which separates the Guali from the Guarino River is 10 miles long, and although the gold was knowu to be both plentiful and coarse (as you would expect from its being so high and near the head of the alluvial deposit) yet there has been no water available to work it. Hence no working on any large scale has ever been done. So far as European companies went, the mine has never been touched, and was not considered attainable because of the large expenditure for laying on water. For a great many years it has been worked by natives only, who have collected rain water which fell in rivulets and pools, and they have used it by sluicing, and have got out a marvellous amount of gold cousidering the supply of water at their commaud upon which they have managed to make a living. This gold has been obtained at almost nominal expense, because the water expressed in miner's inches has never exceeded 15 miner's inches, if it has done that. Mr. Oakes, who is superintendent of the Colombian Hydraulic Mine, has stated that he has had in his possession on his table before him

A BAR OF GOLD WORTH 1,650*l*.,

which has been got from this Tablazo Mine by a native, working in this primitive way, at an expeuse of 85*l*. Now, for a short time of working there was a nett profit of 1,600*l*. obtained in this primitive way. The mines are near a market town in the department of Tolima. The name of the town is Fresuo; it is 25 miles from Honda, which is the port where the river steamers come to from the coast. The mines are situated another 6 miles away, and between Fresno and them there is a very practicable track over which stores and everything necessary for the mines can beibrought.

PROPERTY FURTHER DESCRIBED.

Our property consists of 750 acres, of which 300 are good alluvial paying deposits, and the rest is covered with timber and other accessories necessary for the mines. Therc is plenty of labour, and the altitude is 6,000 ft. above sea level. The climate is very temperate, and work can be carried on with comfort. The altitude of the Colombian Hydraulic Mines is something under 3,000 ft., so that the altitude of our mines is double that. When you have to employ a large number of men in making a ditch, and afterwards a smaller number in mining, it becomes of importance to consider the climate in which those men are working. The mines are practically unworked, except in the tentative way I have spoken of. There is no mass of tailings to go through to keep the ground poor until they are passed over. There are plenty of excellent outlets to the river Guarino, which runs 2,000 ft. below; and, best of all, there is no sandstone aud pipe-clay to impede the working, which is found so to detract from the profits of other mines. Some of you may know that in 1889 I was in Colombia. I had not the pleasure of seeing these mines, which then, indeed, were thought to be unworkable by an English company, because of the water difficulty, but I heard of their richuess and saw nuggets weighing ½ oz. to an ounce, and wished that I could have put my foot in the promised land. but that was all. I little thought that one day I should have the pleasure of addressing you as shareholders of the Loma Gold Mines. (Cheers.) At that time the project was not dreamt of.

REPORTS FROM FIRST-CLASS MEN.

I very much regret not having seen the mines, but we have had comprehensive reports about them from such men as Mr. Oakes, superintendent of the Colombian Mines, and Mr. Welton, who was at oue time superintendent of those mines, and who now has the development of the Gravel Gold Mines, so far as construction of the ditch is concerned, and we have had other reports from Mr. Prender, who has been the superintendent at Oritá for some time. It would be a presumption on my part to speak of the high reputation of the authors of these reports. I will only say that we regard them as of exceptioual weight. because they are froun three practical men, superintendents of the mines of English companies in Colombia, and working in the very district where our properties are situated. In additiou to that, Mr. Griffith, who is now in London, aud who has just been appointed superintendent of the Gravel Gold Miues (which works deposits just next to ours) has been good enough to make a report on our mines. He, together with Mr. Welton, has been all over our mines. He has assisted Mr. Welton in taking out the surveys of the ditch, and has had better opportunities than anybody of telling us what he has seen. Mr. Griffith is not a shareholder in the company,and is independent in every way, but at our request he has written a report, three days ago, which I will read:—

"In accordance with your request, I have much pleasure in forwarding you a short report on your property. The Alluviau Gold Mines belonging to the Loma Gold Mines, Limited, are situated on the south-east bank of the River Guarino, in the State of Tolima, Republic of Colombia, about 6 miles from the market town of Fresno, which has one of the best markets in the district; a good supply of food is easily obtained there, and labour is plentiful; the port of Honda on the River Magdalena, where steamers frequently arrive from the coast, is distant about 25 miles. The climate is cool and healthy, the elevation of the mines being 6,000 ft. above the sea level. The miue of Tablazo, one of the seven mines owned by the company, is part of the gravel deposits which run parallel to the properties now being worked by the Gravel Gold Co., Colombian Hydraulic and Oritá Companies, but is at a much higher altitude. The nature of the gravel is soft, aud free from pipe clay, so can be easily run off by the hydraulic process, and is exceptionally rich. Near the bed rock large nuggets have often been found, which is a very rare occurrence in the mines lower down. When I was at Tablazo, the mine was being worked by a native, and he had done so for some years with a very small supply of water, aud the mine then gave extraordinary returns. It is quite impossible to estimate what the returns will be when a good supply of water is laid on. The mine has a splendid outlet for its tailings, as the Guarino river runs some 2,000 ft. below it. In the neighbourhood of Tablazo there are many other mines which have been prospected aud have been found to be very rich, but they are unable to be worked owing to the entire absence of water, private individuals not having the means for laying on a good water supply from a distance, so the Loma Co. will with their water supply be masters of the situation, and must have a fine future before them. As the property is very extensive there is no fear of it being worked out for many ycars. In many of the new mines that are floated in the present day the estimates of results arc based ou the prospecting with a pan, but in this case you are able to form your calculations upon actual results obtained by working. With regard to the proposed new ditch to carry 3,000 ins. to the mine from the River Misones and other streams, it would be as well to make rough estimate of the probable yield from the mines with this amount of water. Leaving the rich "cintas" out of the question altogether, let us suppose the gravel only to be worth 10c. a yard, the amount of grouud 3,000 ins. of water would move in one day would be about 10,000 tons of gravel, which would produce $1,000 worth of gold, which is equal to 200*l*. sterling. Say the expenses of washing a cubic yard to be equal to 5c., we have a uet profit of 100*l*. per day; supposing the mine works for 25 days in the month, we have a gross profit of 2,500*l*. per month, this is taking the value of the gravel at less than the other hydraulic mines now being worked in the district. The late proprietor told me he generally got 15c. per yd.. and from the especial advautages the mine has for working I should say his calculations are within the mark. I understand the company intend to employ Mr. W. S. Welton to lay on the new water supply to the mine; from my personal association with him for the last three years, I can say with confidence a better man

cannot be found anywhere. Meanwhile, from the arrangements Mr. Prender is making to increase the temporary water supply, the present returns will be considerably increased. Mr. Prender's capabilities as superintendent of the Oritá Mines have been so thoroughly tested and appreciated, that it would be a presumption on my part to say more about him than that, and that I heartily congratulate the company on having obtained his services. In my position as superintendent of the adjoining Gravel Gold Mines I shall watch with great interest the progress of the Loma Gold Mines.—(Signed) WM. ST. DAVID GRIFFITH, A.M.I.C.E., Superintendent of the Gravel Gold Mines, Limited."

I think that that report is satisfactory. (Cheers.) From the information we have received I think Mr. Griffith has taken the amount of gold per cubic yard of gravel at too low a figure, and that we should be able to see more than 15c. a yard. The next point is—

WHAT HAVE WE DONE?

After the incorporation of the company we had first to find a superintendent. We have been fortunate in obtaining the services of Mr. Henry Prender, who is manager of Oritá, and whom we have obtained through the aid of my gallant colleague, Major Ross. Mr. Prender is now at work in laying on as much water as he can without making a regular ditch, such as we are proposing to construct. He is preparing reservoirs in order to work the mine at a small expense until the ditches are laid, and meanwhile should make a steady profit.

WE HAVE OBTAINED SOME PROFIT ALREADY,

because we have advices of 43 ozs. of gold, worth 130*l*., obtained by 260 hours run only. We have had $800 (160*l*.) in 500 hours, or 24 days, and, lastly, a cable notifying $1,400 (280*l*.), so that the returns are gradually going up. They cannot do so to an unlimited extent in consequence of the small supply of water, which is ridiculously small at the present time, but he is, at all events, getting an increased profit every month. We have already sent out stores (valued at 2,000*l*.), and amongst those stores Mr. Prender has requisitioned four monitors. Now,

MR. PRENDER DOES NOT REQUISITION MONITORS FOR NOTHING.

It is because he thinks he can open the mine at four different points with the present supply of water, and when he has a fair supply of water stored up he will work them, and with these monitors at work I think he should not make us a return of less than 500*l*. a month net. That will be very satisfactory if in this first year, before we can get the water supply laid on, we can obtain a profit of anything like 6,000*l*. The mine is a new one, and we must wait until it is in working order before we can reap our reward. So that, if we can pay working expenses, and get a return before that, we shall be extremely fortunate. (Cheers.) With regard to the gold already obtained, we have not realised it, because we thought you would like to see it, and

IT IS HERE IN A CASE UPON THE TABLE.

I hope you will look at it afterwards. It is not only because it is gold, and that ocular demonstration is perhaps even better than hearsay, but also you will find a bottle of gold here not melted down into a bar at all, showing the coarseness of the gold obtained from these mines. As you may be shareholders in Colombian Hydraulic and Oritá and other mines, you will know that the gold there is very much distributed. The Colombian is 3,000 ft. lower down than we are, and further from the source of the alluvial deposits where the gold is originally placed by the action of the old river beds—from that you would expect the gold there to be very fine, and expect it here to be found in nuggets and coarse gold which pays better. Our expectations in that respect are fully confirmed by the samples. (Cheers.) Besides the profits to be obtained from ordinary working, based upon statistics, I have no doubt we shall from time to time

COME UPON LITTLE BONANZAS

of nuggets, that is to say, we shall find quite little heaps in the "cintas," and get an unexpected profit from these. I have not based any estimate upon that source of revenue, but it should not be ignored. (Hear, hear.) But the main object for which we have asked you to come here to-day is to discuss the water supply of the mine. As I have said, that has always been a difficult question, and perhaps if it had not been for the professional skill of Mr. Welton and other engineers in the country we should not have seen our way to laying on the water at all. Mr. Welton has sent home three plans which he suggests for our consideration, specially recommending the one which the board, after consideration, are also of opinion would be the best for this company to follow. There are fully detailed drawings to scale hung up in the room, from which proprietors will clearly see what I mean. The three plans are these:—It is proposed to lay on the water to the highest point above the Tablazo Mine, in order that the water, when there, may command not only the whole of the district of our mines, but the mines down below, in order that if we think fit hereafter we will be able to sell them some of the water at a profit. We have taken the precaution to

SECURE THE WHOLE OF THE WATER IN THE DISTRICT.

(Hear, hear.) The lower mines are very rich, but have no water, and if they want it they must come to us and make the best bargain they can. Our company will, therefore, be not only a mining, but

A WATER COMPANY,

and we may hope for a considerable revenue from that source alone. The water having to be laid on to a point called Partidas, where we propose to put the bulk-head of the water supply, it is proposed to make a ditch to that point from the river Misones to take up this water. This stream will give us 1,000 ins. of water in any season. That amount, with no pipe clay or sandstone to contend with, will do as much work as 2,000 ins. would do in many other mines where they have these difficulties to contend with in no small measure.

WE CAN MAKE THAT DITCH FOR 24,000*l*.

It is an expensive but absolutely necessary work, and considering what has to be done the amount named is not at all large—in fact, experts have said when they have heard the figure that they wonder if he can do it. If Mr. Welton takes the contract we know he will do it, whether he loses by it or not. I think it is a fair offer, and one that the company should accept. The amount of work comprises this—it is 11⅓ miles—a great deal of it is through solid rock at a high gradient. There are 8,102 ft. of solid rock, five bridges, a syphon of 4,200 ft. (26 ins. in diameter, which will weigh 60 tons), and there are two other syphons of an 18-in. pipe, which, together, will be 5,000 ft., so that is a work of considerable engineering extent. The larger syphon has to cross a depression of 80 ft., and it is so arranged that it will have a head of 50 ft. of water. That is plan B. The ditch will be (although we only propose to take up 1,000 ins. of water to begin with) constructed to hold 3,000 ins. of water, in order that we may afterwards continue it to a point beyond so as to take up 3,000 ins., or arrange with another company to make the continuation, paying a rent. Plan A is to take only 1,000 ins. of water, and make a ditch to carry that from the River Misones. That plan will cost something like 19,000*l*., so that the advantage of the second plan seems to be very great, and it only costs 5,000*l*. more. We shall have a ditch for that money which will carry 3,000 ins. of water, and this we may want to lay on at a future time. It would be impossible afterwards to enlarge the 1,000-in. ditch to 3,000, because the outside wall would not bear it, and it would cost a great deal to make a new one. The third plan (C) is to make the ditch the whole of the way beyond the Misones river, taking up the waters of the Santos and of the Aguacatal rivers. That will cost a large amount (over 40,000*l*.) and, moreover, will be a work that will take a considerable time. I have thought this a plan we might defer for the present, as we are not prepared to spend so much. (Hear, hear.) We believe the class of gravel we have to work is such that very likely the 1,000 ins. of water will be as much as 2,000 in lower-lying mines, and hence will be sufficient, and if not we shall have our ditch made to carry 3,000 ins., and have the whole of the water available. Therefore, if that plan seems to you to be the right one for working the mine, as it seems to us and the engineers and experts in Colombia, that is the plan we propose to adopt, and, with your sanction, we shall at once communicate with Mr. Weltou, saying that we accept the contract. The only thing left to consider is the amount of profit we may reasonably expect. As far as I have worked it out, with 1,000 ins., we may treat about 4 tons of Tablazo gravel per day per miner's inch. We may, I think, assume that we have gravel worth 20c. a cubic yard, which we take generally as being about equivalent to a ton of gravel—Mr. Oakes, in his report, says "at Malpaso we are only getting 11c. or 14c. per cubic yd.," and he expects to get much more here—I say you may take it at 20c., I believe this to be within the mark. A gentleman, who knows the mine, said, "Why do you base your estimate on 20c.? I should take it at a dollar," and he said so from having made tests, and from a knowledge of the mines. Now,

I HOPE TO MEET YOU ON OTHER OCCASIONS,

and do not wish you hereafter to sing in chorus, "Where is your gravel worth a dollar?" I should rather take a much smaller estimate, and improve upon that, and therefore I have only taken 20c., but in my own mind I shall be disappointed if the result is not more. If we have that amount of profit I think we shall be very well satisfied. We must not, however, expect it until the ditch is made. We may expect a fair profit from the water now on the mine of about 500*l*. a month, and when the ditch is laid on (from what Mr. Welton has said) I think we ought to be making and

DISTRIBUTING IN DIVIDENDS AT LEAST 30,000*l*. A YEAR.

(Cheers.) If that be so, it would be a very satisfactory result, even if you bought shares at 1*l*. each. The shares are now something like 3s., or a little less; therefore, you have only to make a little sum for yourselves, and if you get seven shares to the £, multiply your dividends by seven and you will see whether the price of the market makes it a good investment or not. (Cheers.) I should call Loma one of the best mining investments in the market. (Hear, hear, and cheers.)

VIEWS OF ONE WHO UNDERSTANDS THE SUBJECT.

Mr. THOMAS THOMPSON: I hold a very large interest in this company, and having also had a very large interest in mining industries generally connected with Colombia, I hope you will forgive me the egotism which induces me to rise and address you immediately following the chairman. (Hear, hear.) I think I may say that we have all listened with a great deal of satisfaction to the remarks Mr. Sankey has made. (Hear, hear.) You will agree with me that those remarks show evidence, in the first place, that we have a superlatively rich property, and, in the second place, that

WE HAVE EXCEEDINGLY GOOD DIRECTORS

who thoroughly understand their business, and who also are determined to carry out that business to the best of their ability. In that connection I think it may be worth while to direct attention to the fact that the worthy chairman is a director of the celebrated Tolima Mine, which is making large profits; also a director of the Colombian Hydraulic Co., which is one of the best properties of its kind in Colombia, and I think I may also say (though I do not feel sure) that he is likewise on the board of the Gravel Gold Co., which is now conducting, for the purpose of bringing on to its mine an adequate supply of water, one of the largest engineering projects of the day. I think, under these circumstances, you will agree with me it would be utterly impossible that we could have a better chairman than Mr. Sankey is who has just addressed us. But now, gentlemen, as having had considerable experience of Colombia and Colombian mines, I would like to follow the chairman by making a few remarks with regard to this particular property. (Hear, hear.) I have been connected with Colombian mines even longer than the chairman.

MINES TO BE PROUD OF.

I took some share in the promotion of the Tolima Co., the Colombian Hydraulic Co., Oritá, and others, which have been equally successful. My connection with Colombia commenced in 1870, and I venture to think that there are few mines in that territory that I do not know something about. (Hear, hear.) In fact, I flatter myself that, with the exception of our chairman, who has seen these properties, and one or two other gentlemen, who have been equally fortunate, I may say that I know more about Colombian mines than anyone else. (Hear, hear.) Under these circumstances, I hope you will forgive me if I tell you something from my knowledge, particularly with reference to the Tablazo Mine, which is the chief property belonging to this company. I first heard of it about the

year 1883 or 1884, and can tell you that even at that time Tablazo held the reputation of being one of the very richest of all the mines in Colombia, and that people who knew anything about your property were lamenting the fact, not only that there was practically no water there, but that it seemed at that time an utter impossibility to get it. Notwithstanding it was impossible to get water in any large quantity, they still had a little, and I think I am stating what is correct when I tell you that in a comparatively limited period the late owner of this property

CLEARED SOMETHING LIKE $125,000 OF PROFIT OUT OF IT.

Even last year, before you became in any way interested in it, the Tablazo alone turned out 2,500*l.* worth of gold. (Cheers.) Now, that was exclusive altogether of the gold which we have taken out. That was taken out alone by the late owners, and on that occasion, when there was 1,650*l.* worth of gold taken out it cost only 80*l.* to do it, and was extracted somewhere about Jan. or Feb. in last year. Under these circumstances I think you will agree with me that you have a very valuable property indeed. (Cheers.) Now, let us consider for a moment how these mines have been worked hitherto, and how they are being worked at the present moment.

FACTS TO REMEMBER.

A thousand miner's ins. represents 50,000 tons of water per day — 12 million gals. per day — and if you reckon that out I think you will find it comes to about 140 to 145 gals. of water per second. But at this mine I will direct your attention to the fact that they have a very equable climate as far as heat is concerned, but they have two wet seasons and two dry seasons. The system of working at this mine has been during the wet season, as the chairman has told you, to make little pools, and collect water in that way for working, when they could get any quantity together. By that means they have succeeded in collecting as much as 15 ins. at a time, and I think you will find that instead of working out 140 to 150 gals. per second, that the average is about 30 gals. per minute, which is a very different thing. (Cheers.) I would also mention that Mr. Oakes, the superintendent of the Colombian Hydraulic, tells us that by making such pools and letting the rain fall for as many as 14 days they have been able to run a hydraulic minitor for as long as 10 minutes. (Laughter.) It is under these circumstances that the gold you see in the case before you has within the last eight or ten months been taken out of your mine. I hardly think it possible to say more for the mine than that gold says. That relates to what the former owner said, and I think you will consider the "proof of the pudding is in the eating." He has told you that the gold you have extracted, and has pointed out that our last return, the largest yet received, amounted to $1,440. So much for the present, but if that be the proof of our pudding, if I may so term it, there is one question which you may properly ask, and it is this—whether, while you say "the proof of the pudding is in the eating, how much of the pudding have we left?" (Laughter.) Well, what we have heard from Mr. Griffith on the subject is important, and I may also mention that I have another report of a corroborative nature. Last year, a gentleman, very well known in the mining world, Mr. J. S. Skertchley, a member of the Royal Geological Society, called upon me to say that he was going out to Colombia. He asked me if there were any mines that I would like him to report upon. I had every confidence in the directors; I had every confidence in those eminent engineers of Colombia, who have reported on this mine, but having a big interest in this company, not only personally as a shareholder, but relatively through many clients, I thought it would be as well that I should have

A REPORT FOR MY OWN PRIVATE GUIDANCE.

Gentlemen, in connection with that report there is one thing that has struck me very forcibly indeed, and that is that so far as I could follow the report of Mr. Griffith (with whom Mr. Skertchley is in no way connected), the report of the latter gentleman goes almost in parallel lines with that of the former. (Cheers.) I do not propose to read that report at all, but with the chairman's permission I should like to read to you two or three sentences only. The rest of the report goes nearly in parallel lines with that which has been read by the chairman, and I will read, with his permission, two or three sentences from it.

MR. THOMPSON COMPLIMENTED.

The CHAIRMAN: We shall be only too happy to hear the report Mr. Thompson has obtained, for it is not often we have a shareholder who takes such an interest in his company as to obtain a special report by an independent person at his own expense. (Cheers.) The board have not seen the report, but will be very glad to hear it now.

Mr. THOMPSON: I shall not trouble you with the whole of it, but will simply read the sentences to which I referred:—

CONFIRMATORY REPORT.

"Probable results: In endeavouring to arrive at any estimate of what results may be expected from the working of the mines owned by the Loma Company, it is very difficult to avoid oneself being carried away into the regions of romance. There have been most extraordinary finds in Tablazo, equalling the very best of the "good old times" of Ballarat and Bendigo. Although these have usually been made in the "pay channels," yet they have been found in all parts of the deposit, and the quantity washed is very insignificant compared to what still remains. This is speaking solely of the rich bedrock deposits. There still remain the enormous masses overlying this bottom stratum, and which are as rich at least as any other in the country. With 3,000 miners ins. of water, 10,000 cubic yds. of gravel could easily be worked on these properties, as the gravel is readily brought down by a moderate pressure. Leaving out of all consideration the rich bed-rock channels, supposing this gravel only to contain 10c. a yard, which is *less* than is found in other mines on the same ranges below this property, and, therefore, not so likely to be as rich, this would give us a gross return of a thousand dollars, or, say, 200*l.* a day. The cost of producing this must only be a moderate percentage of this, but we will say it takes as much as 5c. to wash a single yard. We then get a net profit of 100*l.* a day, and this should go on day after day for years—only interrupted when it is necessary to clean and repair up the sluices. The average yield of these mines is much more than 10c. a yard. Hence, taking this into account, and supposing the pay channels yield nothing at all, there is a very large margin for handsome profits. When the probabilities of the yield of the rich pay channels are added to this, it seems certain that these mines should shortly stand amongst the best paying mines of the world." (Cheers.)

THE POSITION SUCCINCTLY STATED.

Now we have to consider the proposition made to us by our chairman. I am not quite certain whether I am correct, but if I understand him aright, the plans which we have before us are these—that we may content ourselves with 1,000 ins. of water to work these mines, at a cost of 19,000*l.*; or we may, if we choose, have 3,000 miner's ins. of water to work these mines, at a cost of something over 40,000*l.*; or—and I take it that this is the plan our chairman suggests for adoption—that we should make our ditch sufficiently large to carry 3,000 miner's ins. of water up to the point where 1,000 can be obtained, and under these circumstances we shall have a sufficiency of water for all purposes, and yet we shall be able, if we choose to do so, to carry our ditch further ahead, and obtain the additional 2,000 ins. of water. We can get, I believe, altogether 5,000 ins. of water, and that is, no doubt, very important to us; but I think you will agree with me that in all matters extremes are not altogether good, and that in these companies we shall do well, if possible, to adopt the happy medium. In connection with this matter, as our chairman has told you, 1,000 ins. of water will thoroughly prove our mines, and bring us profits of from 30,000*l.* to 35,000*l.* per annum. Gentlemen, that is good enough. (Cheers.) If we could work with another 2,000 ins. so much the better for us. But I would point out to you in somewhat stronger terms than our chairman has used, that this Loma Mine is, if I may so call it,

THE CENTRE OF A WHOLE DISTRICT OF RICH MINES.

(Applause.) The chairman has told us that he, or his company, have monopolised the whole water supply of that district; consequently you have every one of those rich mines under your hands.

Mr. WEBSTER, M.P.: They have not monopolised all the water supply. I have just come from Colombia and I know it.

Mr. THOMPSON: I am speaking to the best of my belief, and I know there are other districts adjoining ours. I am referring to the Tablazo district which covers a very large area all round the mines. I think you will agree with me in saying that it covers a large number of mines in the neighbourhood. There is one mine of which I have heard lately, which, rich as our Loma mine is, I think is far richer still; and it is quite within the range of probability that when we have the water on our mine, the owners of that property and others will practically have to come to us on bended knees, and pay us for the water we shall have at command. (Cheers). Gentlemen, I think I have nearly said enough, but I would point out what is said to us of our mines by Mr. Oakes and Mr. Welton.

LOMA SHARES—A SAFE INVESTMENT.

Mr. Oakes says: "The mine has the reputation, and I believe justly, of being the richest mine in Colombia." Mr. Welton says "The investment of money in this property is as safe an investment as railway or waterworks shares, with the advantage that in this case there is a monopoly of the water supply as there is no other source of supply." (Cheers.) You must thoroughly understand that I do not endorse these words or adopt them as my own; but I do say this, that judging by what we have heard from our chairman, by what the mines have done in the past, and what we know of them at the present time, there seems every probability that the statements made by Mr. Oakes and Mr. Welton, both as regards the past and the future, will be in every sense fulfilled. (Loud applause.)

A RECENT EYE-WITNESS.

Mr. R. G. WEBSTER, M.P.: Mr. Chairman, I hope that the meeting will allow me to make one or two remarks, because I have just returned from Colombia, and I have actually seen the mines that have been referred to. I went out simply on my own account—not as a paid officer, nor in any way connected with the board; but having large interests in various mines in Colombia, I thought I would like to see the properties on that account, and also because I have the personal friendship of several gentlemen connected with mining in that country. I quite endorse what has been said by Mr. Thompson regarding the advantage this company possesses in having such an excellent chairman—(hear, hear)—and I quite endorse all that the chairman has said with regard to the prospects of the Loma Mine. I travelled by the river to Honda (which is 10 days' journey from the coast) in the most uncomfortable boat I ever sailed in. I visited first the Colombian Hydraulic Mine, and I there had the advantage of Mr. Oakes' guidance. He told me the quantity of gold they get per square yard from that mine. He told me that a yield of 12c. actually enables that company to pay, as it is doing at the present time, 20 per cent. I travelled with Mr. Oakes and several other engineers over the fearfully bad road across Tablazo, which has been alluded to. We were on several occasions up to the girth of our mules in mud and slush, travelling over these mountains. There is a movement on foot to extend and improve the road, which will make travelling much easier. But, notwithstanding that the roads are so bad at the present time, the mules take enormous burdens over them. My friends and I visited several mines in the immediate neighbourhood, and I should be almost afraid to tell you what we saw.

IMPORTANT TESTIMONY.

The estimate of the chairman's friend at $1 per cubic yd. was certainly very well within the mark; indeed, in my opinion Mr. Sankey has minimised the facts concerning that district. (Cheers). This mine is situated on one of the higher ranges of the Andes. I was told by a number of experts, including Mr. Oakes, Mr. Russell and others, that the higher up the range you go the richer are the deposits. It is on the higher ranges that you get the rich nuggets; and lower down—at the Colombian Hydraulic Mine, for instance—you get only a few tiny specks in the bottom of the pan. I saw a man panning in one of the mines up above, and he actually threw away as refuse the specks of gold. That is a fact, and it was seen also by Mr. Oakes and Mr. Fitzgerald, a resident miner in that district.

THE WATER SUPPLY.

I would like to point out to the chairman that he is not quite accurate when he says that we have got the whole water supply of the district. There is no doubt we have ample, but there are other mines, notably the Pavia, a French company, and others that are working only in a small way, which also have water supplies. When once you get the water power put on you can work the mines day and night. Now, I think there is considerable waste in the way that a great many mines in Colombia are working, and if I were on the board of any of the companies I would advocate a change. At present during the night they are only firing away at the bank, aided by one small lantern, and not removing the monitors from point to point, so that the result is they are not doing as much work in the 24 hours as they ought to do. The monitors are going night and day, including Sundays. I think they ought to have electric light in all these mines, and then they could work by night as well as by day.

A SUGGESTION.

Another point has struck me very strongly, and that is with regard to the way the accounts are kept of nearly all these mines. The rate of exchange is greatly to our advantage at the present time. We get for 1*l*., $10, not $5. But the result is sent to England in this way: They send the quantity of gold collected in American gold dollars, but they charge the amount of the expenditure as if those dollars were worth 4s. where they are only worth 2s. I think in all the accounts of these companies they should keep the expenditure in the actual rate of exchange. It is, no doubt, a very satisfactory thing for the chairman, at the end of the financial year, to point out very much better results than have been shown on postcards or reports ; but still, it would be simpler and clearer if the accounts were kept in such a way as that the production and expenditure would be in the same currency. (Hear, hear.) I have very little else to say, gentlemen.

MR. PRENDER'S POSITION.

I can only wonder how Mr. Prender is to superintend the construction of the ditch. You must judge of distances, not by the mileage according to the map, but by the length of time it takes to get from place to place. Now, Mr. Prender, on a good mule, could not get from Oritá to this mine under 10 or 12 hours. If we are to spend all this money (24,000*l*.) in making an 11 mile ditch, would it not be advisable to have it superintended by someone on the spot? Mr. Welton is a man of great experience in Colombia. All his mines, however, have to have syphons, and I cannot quite see the necessity for so many in our case, as there appears to be a gradient from the high mountains down to this Loma Mine. If our directors are well advised that the plans are good ones, and that Mr. Welton cannot make this ditch simply by cutting, and hence has to have these syphons, we shall probably have to spend all this money. I hoped that we should have been able to do it in a much less expensive way.

A WORD ON BEHALF OF THE STAFF.

I must take this opportunity of saying that when I went out I found all the engineers and managers doing their very best, and working hard to earn dividends for their respective companies. (Hear, hear.) They have to contend with many difficulties ; the heat is very great, the roads bad, and they are far from home. But their only wish, so far as I could judge, was to do their best for the companies they belong to, and if they are as kind to all shareholders who visit the properties as they were to me, I think you will say they are very good fellows. (Applause.)

A CORRECTION.

The CHAIRMAN : Gentlemen, I should like to add that Mr. Griffith has been kind enough to come here to-day, and if any shareholders would like to question him with regard to the ditch we propose to make, or upon any other technical point, he will be pleased to afford the fullest information. You will remember that Mr. Griffith has been three years in the immediate vicinity of this mine, and his answers will be extremely valuable. Mr. Webster has said something which tends to imply that it is not necessary to go to the expense of making this ditch or putting in syphons. I am sure that Mr. Welton, who has made some extremely careful surveys, together with Mr. Carleton, another mining engineer, would not have specified syphons if they were not necessary ; but as Mr. Griffith is here we shall be thankful if he will say a few words with regard to it.

VIEWS OF AN EXPERT.

Mr. GRIFFITH, who was received with applause, said: Mr. Chairman, ladies, and gentlemen, it is difficult for me to add anything to the very full statements that have been made to-day ; but I may tell you that I went carefully over the plans and estimates with Mr. Welton. We found it very difficult to get the water on from the Pevillo ; and eventually we found it better to survey the Misones ditch. The ground is very bad in places and the rock difficult to blast ; that is the reason why it will cost so much. There is a good supply of labour, but wages have gone up lately in consequence of the great amount of work that is being done. I think myself that the best plan would be to start with 3,000 miner's ins. With regard to the property itself—I think the shareholders are to be congratulated upon having a very valuable property. Hitherto the Colombian Hydraulic has been by far the richest mine in the district. The various mine superintendents are, as a rule, very jealous of each other ; but I am afraid they will all have to

TAKE A BACK SEAT

when the Loma gets to work. (Cheers.) Our gravel lower down is very small, and we have no nuggets, but on the higher ground very large nuggets have been found. I should like you to guard against one danger. Many shareholders in hydraulic mines think that when the water is once laid on there is no further difficulty, but I would ask you to remember that occasionally a break happens, and then the mine has to stop work for a time. If the chairman or one of the directors could be induced to visit the mines, I am sure it would be a great advantage to this company at home. I have nothing further to add, but I shall be pleased to answer any questions.

The CHAIRMAN : It has been suggested that the syphon was not necessary.

Mr. GRIFFITH : With the Misones ditch it would be quite impossible to get to the mine without a syphon, although it is difficult to get the pipe up the country, and freights are expensive. Personally, I do not care for the syphon myself, as it causes a lot of bother, and gets out of order. We have two at Oritá.

A SHAREHOLDER : Is there no alternative way of doing it ?

Mr. GRIFFITH : This was the only plan made when I left, but I understand that since then Mr. Welton has re-considered the matter, and has come to the conclusion that

THE MISONES DITCH IS THE BEST.

Mr. THOMPSON : That is on his second survey, is it ?

Mr. GRIFFITH : Yes. Mr. Welton knows that the freights are expensive, and he would much sooner cut the ditch if possible. The roads are very bad. Directly it rains they are full of clay, and bullocks have the greatest difficulty in travelling.

Mr. MILLER : Do you think 24,000*l*. a fair estimate as the cost of making the ditch ?

Mr. GRIFFITH : I think it is.

Mr. WEBSTER : I beg to move that the scheme as proposed be adopted.

Mr. THOMPSON : I have much pleasure in seconding that. There can be no doubt, from all we have heard, that the scheme now suggested is the very best that can possibly be adopted for our company —at least, it appears to me to be the scheme from which the best possible advantage is to be derived, and that is what we have to think of more than anything else.

THE CHAIRMAN'S REPLY.

The CHAIRMAN : Before putting this resolution, assuming that no other shareholder has any questions, I should like to take this opportunity of replying, in two or three brief words, to some of the points that have been raised. First of all, with regard to the speech Mr. Thompson has made, I think we are all greatly indebted to him for going to the expense of having an independent report on this mine for his own and the shareholders' satisfaction. The board had not seen that report, and, for all we knew, it might have been an adverse one. My colleagues and I were confident, however, that it could not be adverse ; but even if it had been, we would have been glad to have had it read to-day. The extracts Mr. Thompson has read to us, however, go so well with the report that Mr. Griffith has made to us and other reports, that I think it is extremely valuable as an independent corroboration. With regard to Mr. Webster's remarks—I am sure we are all glad to have him amongst us to-day, and to welcome him on his safe return from Colombia. I did not expect that he would have been here to-day, and I am very pleased to have such a late report from the mine as he has given us. I think he must have misunderstood me with regard to the water supply. I did not mean to say that we had the whole of the water in the district, and that the Gravel Gold and other properties could not work without getting our permission ; what I meant to say was that there are other mines immediately below us who have not the water, and, therefore, will have to come to us. I referred to the district below our mines.

THE FOREIGN CURRENCY.

As to the method of keeping accounts, of course, up to the present we have had no accounts out there to keep ; but the question has been raised in various companies as to whether the accounts should be kept in the fluctuating currency of the country or in one uniform standard of dollars. I think myself that the only practical way of keeping the accounts is to keep them in one uniform standard of gold dollars—five to the pound. Any profit on exchange will at the end of the year be calculated and put down as such. It would be impossible to keep the accounts in an accurate form in any other way.

ELECTRIC LIGHTING.

With regard to electric lighting—that too has been considered. But coal is not obtainable except at a very high price, and power is required to work a dynamo. Wood may be used, but a very large quantity would be required, and fuel has to be brought to the spot. If water power were used, then it would have to be taken from the mine. Up to the present I do not think any Colombian mine is lighted by electricity, but the matter is being considered by the Tolima Co., and some electric lighting plant has already been sent out. Mr. Webster has mentioned the fact that Mr. Prender is engaged at a mine at some little distance from ours, and therefore could not superintend the making of this ditch. Mr. Prender will, however, have nothing whatever to do with the actual construction of the ditch. Mr. Welton has offered it take it on contract, and he alone will be responsible for it. It will take at least a year to construct. At the end of that period Mr. Prender will take the ditch over, and then whether he can conveniently manage two companies, I do not think it is necessary to go into at present. (Hear, hear.) That, of course, will be for future consideration. I am glad Mr. Griffith has been here to-day, because he has been able to tell us how the syphons are needed, and that it is really impossible to do the work without them. Mr. Griffith is just going out to the Gravel Gold Mines, and although he says he will be prepared to take a back seat, from what I know of him I do not think he will ever do so willingly.

The CHAIRMAN then put the motion, as moved by Mr. WEBSTER and seconded by Mr. THOMPSON, and it was carried unanimously.

A vote of thanks to the chairman terminated the proceedings.

RAILWAY PASSENGERS' ASSURANCE.

PREMIUMS INCREASED, BUT LESS COMPENSATION PAID—THE LATE MR. W. J. VIAN.

THE forty-second annual general meeting of the Railway Passengers' Assurance Company was held on Wednesday at the Offices, 64, Cornhill.

The **Hon. Evelyn Ashley** presided.

The CHAIRMAN said : I cannot help remembering that last time we met I had on my left hand a gentleman who had been long associated with this company, namely, Mr. W. J. Vian. His name had become synonymous with the prosperity of this company, and

he had for a period of nearly 40 years contributed as secretary to its advancement. Very

SHORTLY AFTER LAST MEETING WE LOST MR. VIAN,

and I need hardly say that the formal expression in the report merely chronicling his death is not an adequate measure of the feeling which the board and the shareholders entertain of the great services he rendered, and of the great loss we have sustained by his death. However much we may lament it, we shall always remember the services he rendered. I am able to state to you that we have appointed in his stead

MR. W. D. MASSY AND MR. A. VIAN,

both of whom will carry on the traditions of the company, and one of whom—Mr. Vian, the brother of the deceased—will also carry on the name which has so long been associated with the company. Now, gentlemen, as to the report; you will see that our premium income for the past year has increased by 2,000*l*., as compared with the preceding year. That, you will also notice, is greatly owing to the fact that there have been more renewals and fewer insurers who have abandoned their position. We have not got so great an increase in new premiums as in the previous year. This is a regrettable fact, no doubt; at the same time, I think there is some small explanation to be given for it, and that is, that during the early part of last year, which is the period of the year when new policies are principally taken out, the whole of this part of the world was subjected to an attack of influenza, which seemed to have destroyed the energy of people, not only to take out policies, but also to incur accidents, because curiously enough we had not only fewer policies taken out, but also fewer accidents incurred. I suppose they took a rather depressing view of life, and seemed to think that life itself was only an accident. But to prove that the influenza had the effect of considerably diminishing the number of new policies, I may say that during the early part of this year we have a sensible increase over the numher of policies taken out last year. Our compensation, you will notice, has diminished. You know perfectly well that, as far as the amount of compensation is concerned,

WE DO NOT WISH FOR VERY SMALL FIGURES;

we would like to be paying a million a year so long as the proportion of the premiums is kept low. It is not the amount but the proportion that we look at with interest. Before the expiry of this year I think we shall have reached the large total of 3,000,000*l*. sterling paid in compensation. This is a large sum, and I cannot help thinking, although we do not pose in any sense as a philanthropic company, that 3,000,000*l*. distributed in the way in which our compensation is paid—in small amounts to different classes of people at times when they want it—is of infinitely more value than 3,000,000*l*. sunk by capitalists in investments in whatever part of the world. In the past year our compensation has been diminished from 59.54 to 56.98. That is a satisfactory diminution, more especially as the long frost that we experienced during the winter has had a very serious effect upon the amount of compensation we had to pay. Of course the main portion of what we had to pay has not come in to these accounts; it will come into the accounts of the present year, and that will explain to the shareholders why we have thought it our duty to set aside an extra 5,000*l*. to meet any contingent loss that may have accrued at the end of the year. Although we have not yet ascertained what the full amount of increased compensation devolving upon us by the effect of the frost will be, still we think we can say that it approaches very nearly 7,000*l*. That is to say, that is the increased amount which, during the first months of the year, we shall have to pay

OWING TO THE PROLONGED FROST

that took place during the winter. There was an amusing paragraph appeared the other day in a Belgium paper, in which it was stated that a lady on the death of her husband went to the office of some accident insurance company in which he was insured and obtained 10,000f. Shortly afterwards she saw a paragraph in a paper which stated that a friend of hers who had lost his leg had obtained compensation to the extent of 20,000f. She was so very indignant that she went and remonstrated with the people who had paid her the 10,000f., and pointed out that whereas she had only received 10,000f. her friend had got 20,000. "Yes," said the astute manager of the insurance company, "but 20,000f. won't buy you a new leg, but 10,000f. will get you a new husband," so

SHE WENT AWAY SATISFIED.

(Laughter.) Whether that was the view taken by our managers or not I cannot say, but you will find that in a prominent position in the list there is the losses of eye or limb, and it comes to a substantial sum during the year. I want to say one word about another line of accident. We have had some trouble with a gentleman named Mr. Webb, who came on the outset of a journey and took a ticket insuring himself against accident to the train or steamboat by which he was travelling. He crossed over without his sea legs, and in the course of an ordinary passage he fell down and bruised his knee. The consequence was that he claimed compensation, but in the interests of our shareholders we refused to pay it, and he took the case before an arbitrator, who unhesitatingly gave it in our favour. I simply mention this because it is absurd to suppose that we could give a general accident policy for a ridiculously small premium to people who take out a ticket merely insuring them against accident to the train or steamboat by which they are travelling. There are some people who think that a policy of insurance should be turned into money irrespective of the conditions under which it is issued. There was the case of a Scotch crofter, who got a fire policy. Some time after he secured it his cow died from swallowing paint, for which he claimed compensation. (Laughter.) That, of course, was refused, but shortly afterwards his father died, and he wanted compensation for that. (Renewed laughter.) It seemed to him, utterly irrespective of the conditions under which the policy was issued, or on which the premiums were paid, he had a policy which guaranteed him from all evils, and he claimed accordingly. Our friend, Mr. Webb, got nothing by his pains, and I am very sorry that he should have gone before the Court. We have had the usual variety of cases to deal with, and I will merely illustrate the great moral I want to deduce from this list of accidents that is annually put before the shareholders and the public at large. It is that there is

NO EMPLOYMENT SAFE FROM ACCIDENT.

We have had the case of a farmer who died from the consequences of a puncture from his own barbed wire on his farm. We have had three fatal cases in houses, and a great number of accidents to people who were riding, and the moral, I think, is this—that you never can be certain that you will not be exposed to accident. We have also had one curious case. We extended our policies of insurance to India, and we have had to deal with the claim of an artillery officer who suffered from the bite of a scorpion. There is one case which I would like to mention, not only because it illustrates what I have stated, but also shows the expedition with which we seek to meet our claims. There was a Lloyds' surveyor who was engaged in inspecting a vessel, and he fell down the hold. The fall took place on Feb. 5 of this year, and he died on Feb. 6. On the following board day, namely, Feb. 17, we passed his claim, and directed the money to be paid to his executors. Whenever a case is perfectly clear

WE IMMEDIATELY MEET THE NECESSITIES OF THE FAMILY.

I can only congratulate you now that we have returned after two or three years interval to a dividend of 8s. per share. We paid a preliminary dividend of 3s., and the 5s. which we propose to pay now makes 8s. for the year. I consider that our prospects are as good as they ever were. I have also to state, as I have stated on former occasions, that the increase of new policies is not so great as we would like, nor is it similar to the great advances that this company made in the early part of its career, but that is only due to the natural course of events, and as long as we have so many competitors coming into the field, and until such times as these competitors retire and own themselves vanquished—I think there are some symptoms that some of them will not continue very much longer on the horizon—but, whether they continue or not, I feel confident that the Railway Passengers' Assurance Co. will, if conducted on the lines hitherto pursued, have a long career of prosperity and usefulness before it. I beg now to propose "That the report and accounts as laid before the shareholders be received and adopted."

The resolution was then put and carried unanimously, and the proceedings terminated with the usual votes of thanks.

MARBELLA IRON ORE CO., LIMITED.

A SATISFACTORY MEETING—9 PER CENT. DIVIDEND ON THE YEAR.

The ordinary general meeting of this company was held at the Office, No. 78, Queen Victoria Street, on Tuesday, Mar. 3.

Mr. P. W. Spence (chairman of the company) presided.

The Secretary read the notice convening the meeting, and the minutes of the previous meeting were read and confirmed.

THE YEAR'S OPERATIONS.

The Chairman in moving the adoption of the report and accounts, said, although the output (71,466 tons) did not amount to what was anticipated this time last year, yet they could not but be well satisfied with the result of the year's operations, which showed a profit of 26,126*l*. 0s. 3d., and which, added to the balance brought forward from 1889, made 26,522*l*. 19s. 7d. This was the sum they had to deal with to-day, and they proposed to divide it in the following manner:—To pay the shareholders (free of income tax) a further dividend of 10s. per share, which, with the interim divideud paid in August last, will make a total return for the year of 18s. per share, or say 9 per cent. This will absorb 22,500*l*. To add to reserve fund for depreciation, 3,000*l*. To carry forward to current year, 1,022*l*. 19s. 7d. A dividend of 9 per cent. on the 10*l*. shares was in reality a dividend of 20 per cent. and upwards to the majority of the shareholders, who had not paid so much as 10*l*. for their shares. The addition of 3,000*l*. to the reserve fund needed no reference. It was an investment that would yield interest and would add to the value of the shares. The reserve fund would now stand at 15,000*l*.

THE LEASE.

The lease with Messrs. Heredia would terminate in two years time (Feb. 28, 1893), but they trusted before that period arrived they would have succeeded in makiug a new lease on equitable terms. They looked forward to a good output this year, and as it was all sold at last year's prices they anticipated a prosperous year. They were now carrying on underground works on the plan pursued in the Cumberland district, but they had not pushed it on to any great extent. As regarded the future, he had the satisfaction of informing the shareholders that, in pursuing the investigations suggested by Mr. Kendall, they had

FOUND ORE IN THEIR OWN MINE

of San Juan Bantista on the level of the railway adit, which was about 150 ft. below the level of the first floors. The ore had been found in the heading of the railway adit, and also in a cross-cut about 80 ft. from the level. San Juan Bantista was a block of land of an oblong shape, and measuring 160 metres by 80 metres that was 500 ft. long by 250 ft. broad, and ran parallel with and alongside Messrs. Heredia's mine. They hoped that the lode would follow the course or direction of the geological or ore-bearing ground, in which case it would run along the length of San Juan Bantista, which would add very much to the value and prospects of this company. From their other mine (the San Nicolas) they extracted last year upwards of 18,000 tons.

Mr. J. C. Wakefield (director) seconded the motion, and said as regards the lease there would be no difficulty whatever.

The motion was carried unanimously.

The Chairman then proposed a dividend at the rate of 10s. a share, payable on Mar. 13.

Mr. Macpherson seconded the motion, which was carried unanimously.

Mr. Kincaid proposed the re-election of Mr. J. C. Wakefield as a director of the company.

Mr. Malcolm seconded the motion, which was carried.

Mr. Cheney proposed the re-election of the auditors, Messrs. Turquand, Youngs, Weise, Bishop and Clarke.

Mr. TAYLOR seconded the motion, which was carried.

DIRECTORS REWARDED.

Mr. WILDE proposed an honorarium of 200 guineas be presented to the directors in consideration of the good results of the present year and the future prospects.

Mr. MALCOLM seconded the motion, which was carried unanimously.

The CHAIRMAN thanked the shareholders for their kindness, which had been quite unexpected. He trusted they (the directors) would merit what they had received to-day by their future services.

The proceedings closed with a vote of thanks to the chairman.

WEST SETON.

CALL OF 1*l.* PER SHARE,

THE four-monthly meeting of adventurers in West Wheal Seton was held on the mine on Thursday.

Mr. T. Pryor (the purser) presided.

The statement of accounts showed:—Labour costs, 3,981*l.* 0*s.* 4d.; merchants' bills, 2,608*l.* 18*s.* 5d.; bankers' charges, 67*l.* 16*s.* 11d.; rates and taxes, 4*l.* 2*s.* 6d.; total debits, 6,661*l.* 18*s.* 2d. Black tin sold, 45 tons 9 cwt. for 2,268*l.* 17*s.* 10d.; arsenic sold, 156*l.* 0*s.* 2d.; total credits, 2,424*l.* 18*s.* Loss on the four months' working, 4,237*l.* 0*s.* 2d.; with a balance against the mine of 4,997*l.* 9*s.* 11d.

The CHAIRMAN said the labour costs were more than usual on account of the use of extensive boring machinery, the expenditure on which amounted to about 500*l.* The bills were also very heavy. This was explained by the fact that they were burning over 500 tons of coal a month. The returns of tin were 8 tons 15 cwt. less than last time, and the sales were 2,268*l.* as against 2,972*l.*—a difference of 700*l.* The average price that day compared with last meeting was 5*l.* lower, and that made a difference of 225*l.* The committee had met regularly since the meeting every fortnight, and sometimes oftener. They had gone into the whole matter of accounts and to open up a discussion they had suggested that a call of 1*l.* per share should be made to clear the book.

Captain JAMES presented a report, and in some supplementary remarks expressed the opinion that it was worth while to sink the shaft 30 fms. deeper, and see what they could get by driving east.

Mr. G. S. BRAY: Do the committee make any report on the past four months, or have they any scheme for the future working of the mine? (Applause.)

Mr. A. K. BARNETT replied that the committee had brought up no definite report. They were in the unfortunate position of not knowing exactly what to report on—(hear, hear)—and they had at their meetings been in a very despondent frame of mind. There aim had been merely to consult with the agents, but everything that was undertaken seem to turn out badly.

Capt. PENBERTHY did not wish to say anything unpleasant, nor to depress the spirits of the shareholders, but he was afraid the little he had to say

WOULD NOT BE OF A VERY CHEERING NATURE.

He considered the construction of the tramroad, the additional dressing appliances, and the skip-road in Harvey's shaft were equivalent to ordering a coffin for West Wheal Seton, there never was anything to justify the outlay. He did not want to be invidious, and he did not want to be "down" on any man, but he was not satisfied with the management of West Seton. (Applause.)

Mr. HEARD wished to know what would be the probable result of sinking the shaft. Cornish shareholders were quite willing to venture as long as there was a chance of success, but they would be reluctant to throw good money after bad.

The CHAIRMAN said he saw Capt. Josiah Thomas, who was strongly in favour of sinking the shaft 20 or 30 fms. further.

Mr. G. S. BRAY proposed a call of 1*l.* a share.

Mr. HOLMAN seconded.

The CHAIRMAN said 1,098 shares had been relinquished, but their holders would be responsible for this call.

The motion was carried.

Capt. JAMES defended himself from the observations of Capt. Penberthy, and said that with regard to his energy no less than

687 FMS. OF GROUND HAD BEEN OPENED UP

since he was appointed manager, and 78 in the last 16 weeks.

Mr. HEARD proposed that, having regard to the heavy loss and the large number of relinquishments, the affairs of the company be wound up, and the mining materials be offered to the lord in the usual way, and in case of his refusal sold in such way as the committee thought best.

Mr. D. W. BAIN seconded, and the resolution was carried.

Mr. VINCENT proposed that the adjourned meeting be held on Thursday, 26th inst., and Mr. BARNETT having seconded, this was agreed to. It was also resolved to obtain the opinion of two mining experts on the prospects of carrying on the mine.

The proceedings then closed.

INTERNATIONAL EXHIBITION OF MINING AND METALLURGY, LONDON, 1890.

THE success of this Exhibition, organised by the editor of the *Mining Journal*, and carried out under his supervision, has been so pronounced that at a recent meeting the council could consider the subject of how they would dispose of the surplus. This they propose to do as follows:—1. Grant of 75*l.* to the governing body of the Royal College of Science, to be used in providing a prize of 25*l.* for three years to the students of the Mining and Metallurgical Classes of the Royal School of Mines Section thereof, the executive council of the Exhibition or their nominees to approve of the subjects proposed to be chosen for competition, 75*l.*; 2. Grant of 25*l.* to the council of the Mining Association and Institute of Cornwall, to be used in providing prizes for local competition in connection with that institution, the subjects and the arrangements concerning them to be approved by the executive council of the Exhibition or their nominees, 25*l.*; 3. Grant of 100*l.* to the London Chamber of Mines now about to be formed if it should have come into existence before the next meeting of the council, failing which, as an alternative proposal, that the same sum be utilised as the basis of a fund for enabling a representation of the metalliferous mining resources of the United Kingdom being prepared for exhibition at the World's Fair at Chicago in 1893, 100*l.*; 4. Grant of 100*l.* to the proposed London Institute of Mining and Metallurgy if it should have come into existence before the date of next council meeting; failing which the same sum to be granted to the council of the Federated Mining Institutes of Great Britain, with a view to assisting them in promoting the speedy establishment of a central home in London, 100*l.*; 5. Grant of 100*l.* to be devoted to founding a prize essay fund, the prizes to take the form of two awards of 25*l.* each for the best essays on, say, the following subjects:—(1.) "The best means of reviving and developing the metalliferous mining resources of the United Kingdom and of rendering home mining industries a popular form of investment;" and (2.) "A comparison of the mining laws of this and of other countries, with a practicable scheme for the reformation of the mining laws of the United Kingdom." The balance, over and above the 50*l.* thus appropriated shall be used in advertising the essays and in meeting incidental expenses connected therewith, 100*l.*; total, 400*l.*

REPORTS OF MEETINGS.

MEXICAN SANTA BARBARA MINING CO., LIMITED.

THE DIRECTORS PROPOUND A SCHEME TO SAVE THE COMPANY, WHICH THE SHAREHOLDERS ADOPT — THE MANAGERS AGREE WITH MR. DAVEY IN THINKING THE MINE CAN BE PROFITABLY WORKED.

A SPECIAL MEETING was held on Monday, at the Offices No. 6 Queen's Street Place, to consider the financial and general position of the company.

Mr. Arthur Holland (chairman of the company) presided.

Mr. HENRY WARD (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, we have asked you to meet us here to-day, because the position of the company is such that we have thought that a scheme, similar to the one we proposed in the note which accompanied the notice, is the only way of extricating it from its present difficulties. Before calling your especial attention to the points of that scheme, I think it might be well if I were to revert to the programme we had in our minds when we altered the arrangements in Mexico, and decided to erect La Solidad mill at the entrance of Del Oro Mine. It was found that the Bosque mill did not prove profitable. The expenses of transport were so great that there was nothing left for the shareholders. We decided, therefore, to erect the mill at the Del Oro Mine, and put up 20 stamps, for which there was, according to Mr. Varden, sufficient water. That mill was commenced early last year and got fairly to work about June.

MR. DAVEY REPORTS FOR THE MANAGERS.

It was from the first on our programme that when that mill had worked for a time steadily the Messrs. Taylor should send out one of their staff to report upon the property, and see how far we should be justified in extending the milling power. In the autumn the Messrs. Taylor intimated that they were about to send to one of their Mexican properties a gentleman whom they regarded as a most trusted agent, and we availed ourselves of that opportunity to get Mr. Davey, the gentleman in question, to visit our mines. Mr. Davey went out in October, and arrived at the property on Nov. 12. He spent six weeks going thoroughly through the property and studying the process of treating the ore, and he was about to prepare his report when he was taken seriously ill. Hence it is only a fortnight ago since we received that report. We immediately took into consideration the position of the company, and it seemed to us best to promulgate the scheme we have set forth in the notice. That scheme is to this effect, that a Salvage Co. (I call it that for brevity) be formed to find about 20,000*l.* to pay off the outstanding liabilities to the bank in Mexico, the liabilities in London, and provide working capital for the erection of 10 more stamps at La Solidad mill, so that the company might get a certain revenue therefrom. But what we had to consider was this—if we carried out this scheme, which, according to Mr. Davey and the Messrs. Taylor, seemed likely to result in a revenue of something like 10,000*l.*, this, after payment of the interest to the debenture-holders would not leave anything for the ordinary shareholders. Therefore, this scheme is coupled with the condition that the bondholders will have to be arranged with in some manner that will be satisfactory to the company. It seemed to us that we might justifiably go to the bondholders with this scheme and ask them to forego some of their interest for a time in order that the property might be preserved, and their interests, as well as those of the shareholders, protected. Our scheme is that the overdue payment on the debenture bonds be funded; that in due time the bondholders receive interest on the original amount of their bond, plus the funded amount, at 3 per cent., and that subsequently, when the Salvage Co. is liquidated and get their money back under the arrangement suggested, that the bondholders should have 5 per cent. The Messrs. Taylor have gone thoroughly into the question of the possible profits as shadowed forth in Mr. Davey's report, and think they can safely put them at 9,000*l.* a year when the additional 10 stamps are erected. There will be other profits in addition, as, for example, those from the lease of the Bosque mill, and the returns arising from the Del Agua Mine, which is

OPENING UP MUCH RICHER THAN WE EVER ANTICIPATED.

That is briefly the scheme—that we should form this Salvage Co., with a capital of 20,000*l.*, to supply the necessary funds to carry on with. As regards Mr. Davey's report, it only confirms what we have heard both from Mr. Rathbone and Mr. Varden, that there is any quantity of silver in the Del Oro Mine, and also in the Del Agua Mine. We know there is sufficient water for 20 stamps, and he has also found water for 10 additional stamps. He says by sinking the shaft another 50 ft. he anticipates there will be a considerably greater quantity of water. We are only now going upon ascertained facts—that there is sufficient water for 30 stamps; that there is plenty of silver; and that we know how to treat the ore. Mr. Davey says the present system does not yield the amount of silver it ought to do, and he attributes the loss to the fact that Mr. Varden is overworked. He cannot give the personal supervision that is necessary to the treatment, and he suggests that we should have additional aid on the spot for Mr. Varden. I think I am right in saying this in regard to the Messrs. Taylor's report, that

10,000*l.* A YEAR PROFIT CAN BE SAFELY CALCULATED UPON,

even allowing for this large percentage of loss, namely 20 to 30 per cent. If we can modify that loss, which we fully expect to do, then there ought to be a larger profit than 10,000*l.* The report of Mr. Davey we consider satisfactory, although the profits which are indicated now on the erection of 10 more stamps are not quite so large as we should have hoped. It seems to us that this Salvage scheme is a practical one. I am told that it is often adopted in crises of this kind.

ADVANTAGES TO "SALVAGE" SHAREHOLDERS.

It seems to me that anyone investing their money in it will be sure to get it back, because it is a plan where the capital is to be returned to the shareholders in the Salvage Co., and not only that, but with 100 per cent. more. We should go on working until the Salvage Co. got that back. In addition to that we propose to give them a 1*l.* share in the existing company for every 1*l.* invested in the Salvage Co. When the Salvage Co. ceases to exist, old shareholders will come into their property with the advantage of all the money the Salvage Co. has subscribed having been expended upon it, and the shareholders in the Salvage Co. will seem, therefore, to be quite safe in investing their mouey, and would benefit both themselves and the original shareholders. That is the position of affairs, except as regards the liabilities we have, as shown by a telegram we had from the other side, which indicates that the overdraft from the bank is somewhat larger than we anticipated when we first issued the report, but included in that overdraft is a large amount that has been spent on timber for burning and roasting for the furnace. We put the overdraft to the bank at 4,500*l.*, and it comes to rather more. Part of it has been expended, as I have said, and is, therefore, the same practically as working capital. and so will reduce the requirements of the mine. There are certain liabilities in London which will also have to be met, and these we have included in the 7,800*l.*, and the Messrs. Taylor estimate the cost of erecting 10 additional stamps and sinking the new shaft at the entrance of the mine, and developing the mine, will cost 9,000*l.*, which would leave a balance for working capital of 3,000*l.* for carrying on with. It is proposed that the management of the Salvage Co. should rest in the hands of the present directors.

WE DO NOT PROPOSE TO TAKE FEES,

and do not imagine that anyone will agree to join a board without remuneration. I went to Liverpool on Thursday last and met a large and influential body of shareholders. I was glad to find that Mr. Montgomery would be quite willing to join the board, and strengthen the hands of all concerned. (Cheers.) His promise is subject to his being satisfied that the Salvage scheme will go through satisfactorily. I therefore move the resolution of which we have given notice, which is as follows:—"That the directors be authorised to form a company to acquire a lease of the San Francisco Del Oro Mine, and La Solidad Mill, and to work the same on the terms and conditions specified in the scheme proposed to this meeting, and approved as initialled by the chairman, with such variation and modification, if any, as the directors may deem necessary or expedient."

Mr. JASPER W. JOHNS (director): I beg to second the motion.

A SHAREHOLDER suggested that the meeting would be greatly enlightened if Mr. John Taylor gave a summary of Mr. Davey's report, and the wish was generally expressed that afterwards the full text of that document should be circulated amongst the shareholders.

Mr. MCGEORGE: It was stated (*vide* the prospectus) that very large quantities of ore of high value are in the mine. Is that (to Mr. Taylor) your deliberate professional opinion?

HOPE FOR THE COMPANY IF ALL PUT THEIR SHOULDERS TO THE WHEEL.

Mr. JOHN TAYLOR: Certainly. The figures are given in the report. You have three or four special points mentioned, and the first is that there are very large quantities of ore in the San Francisco Del Oro Mine of the high value stated in the prospectus. The result of the examination made by our agent (and he went carefully into all the facts, and gave us in the notes from which our report was prepared the measurements of the different places in which the ore is to be seen)—the result, I say, is that he estimates there are 14,473 tons containing rather more than 35 ozs. of silver per ton, or

EQUAL TO ABOUT 512,000 OZS.

There is also other ore at the surface, which he describes, and an extensive vein north of the shaft, the produce of which is not included in the 512,000 ozs., along with a considerable proportion left in pillars, which can be taken away as the mines are worked further in advance, which it is impossible to estimate. He urges that the development of the San Francisco Del Oro Mine should be pushed on

with great vigour by sinking the shafts and driving the levels which have opened up such very good ground as is described. There is a large quantity of ore, and the average is nearly 40 ozs. of silver. Then there is a second point. We have always been in doubt as to the quantity of water we might reckon upon. Now, Mr. Davey has gone carefully into that, and tells us there is no doubt about the present quantity of water being sufficient for the stamps, and he is also clear that more water will be obtained by the further sinking of the shaft, which he recommends as part of your mining operations. That removes a doubt that we all have felt. The last and most important point is with regard to

THE TREATMENT OF THE ORES.

He says that by the present method of leaching "the company sustains some loss of silver which can be obviated." Instead of following that method, which entails the considerable loss the chairman mentioned of 30 per cent., we must try to obviate it. Mr. Holland said that Mr. Davey "thinks" this can be done, but I fancy he may be said to go beyond "thinking," because he has pointed out very definitely certain matters which require alteration. He tells us that more supervision is required. He also tells us it is necessary to increase the number of furnaces for the more perfect chloridising of the ore. That is a very important point, because it is perfectly useless to go on with the second part of the process unless the first is made complete. The supervision required we can easily understand. The supervision of men, for the most part ignorant workpeople, is very important, and we cannot suppose that Mr. Varden can follow up all that is going on, and connected with the supervision is the business, I understand, of sufficiently accurate weighing necessitated by the different processes as they are carried on, which I look upon as most important. Mr. Davey (the gentleman to whom we entrusted this mission) was at the head of a department in some large silver works that my firm had the management of in Spain—works put up with a view to the treatment of silver ores obtained from local companies, and sent to us for the purpose. The reduction works there had a process similar to that you employ in Mexico, and was carried on with great success, but it was only by extremely close attention, and the most careful conduct of the business, that the success obtained there was brought about, and as Mr. Davey was at the head of the works he is well qualified to speak upon the present subject. The amount estimated to carry out these different works is given in tabular form, and is placed at 9,200*l*., which, I think, would be amply sufficient to cover all that we require, and I certainly feel that the Salvage Co. ought to be one which should start with a very good prospect of success. (Cheers.) I also feel that it may be, and ought to be (if it is properly conducted), the means of saving this company, which is what we all desire. (Cheers.) I have a considerable interest in it as a debenture-holder (though I have not many shares) and I think we ought to put our shoulders to the wheel and make a good business of this matter in the end. I am very much disappointed so far, because I felt a year or two ago we were much nearer the approach of success than has proved to be the case, but I think we should face this matter boldly, and that we are not going to be disappointed after another year or two—at least, that is the impression I have. (Cheers.)

NO LOCUS STANDI.

Mr. PRITCHARD complained that no meeting had been called for the purpose of consulting the debenture-holders, and there seemed to be no independent action on their behalf on the part of the directors.

The CHAIRMAN: We had a debenture-holders' meeting some time last year.

Mr. PRITCHARD said he thought the trustees should be independent of the directors, but, as at prerent arranged, two members of the board were actually the trustees, and it was proposed that the Salvage Co. shonld be in the hands of the directors of this company, whereas he would rather a receiver should be appointed.

Mr. SNELL: How do you propose to bind the debenture-holders to come into this scheme? I think you must get the consent of every individual, or the scheme falls through, and, in fact, I do not think for a moment it will work. What is the amount now due to the Bank of Mexico?

Mr. DALTON: No reference is made to the debenture-holders, and it would have been much better if the directors had, having regard for the position of the company, called a meeting first of the bondholders and ascertained their views, and then called a meeting of the shareholders.

IMPORTANT FACTS.

The CHAIRMAN: We are quite aware that we must have the consent of the bondholders. The amount due to the bank in Mexico is 5,500*l*. The overdraft is for working the mine. The bank has a preference over the debenture-holders, and the amount of the debenture issue is 66,700*l*.

A SHAREHOLDER: Can you tell me if the mine were sold what it would realise?

The CHAIRMAN: That is a very difficult matter to say.

A SHAREHOLDER WHOSE VIEWS MEET WITH NO SUPPORT.

A SHAREHOLDER: I have a reason for asking, though the question seems absurd. The panacea for this mine is to sell it and return to the debenture-holders what they are entitled to receive—the balance being divided amongst the shareholders. (Laughter.)

The CHAIRMAN: I do not think there will be enough even to satisfy the bondholders.

The SHAREHOLDER: It is a long way from here to Mexico, and though I am sure you have made no statement you connot substantiate, yet I have been in communication with a mining engineer who has returned, and told me that putting more money into mines of this character is throwing good money after bad, and that the only people who make anything out of them are the gentlemen who are so fortunate as to sell them.

Mr. KIMBER: Have you taken the opinion of counsel in Mexico as to whether the bank has a prior claim; and if so, what is the name of the counsel?

The CHAIRMAN: Mr. Lancaster Jones has given his opinion, and he is a Mexican barrister at the top of his profession.

Mr. FRANCIS (Francis and Johnson, solicitors to the company): The opinion was received through our agents.

SCHEME JUDICIALLY CONSIDERED.

Mr. JOHN MACFARLANE: What are the chances of the scheme being carried out? We have had a good deal of criticism. It is very easy to criticise a scheme, but when any of these critics are asked to bring forward a better one they generally retire. (Hear, hear.) It seems to me that if this mine could be sold for anything like a reasonable sum which would give the debenture-holders a return on what they have invested, it would be a good thing to do it, but without knowing very much on that point, I should think that probably we should get as much from those persons coming forward as shareholders in the proposed Salvage Co. as we should get from any purchaser of the mine. (Hear, hear.) If that be so, it seems to me that the scheme is the best that can be brought forward. I quite agree with some here as to the position of the bondholders, who ought to be consulted before the scheme is finally passed, and some arrangement made with them by which they may be satisfied. It is perfectly clear that whatever position bankers and creditors may occupy in Mexico, the bondholders have to be considered before the shareholders, and must be satisfied that this is a plan by which they are doing the best they can for themselves. Before the Salvage scheme is quite matured it would be well for the trustees of the debenture-holders, or the directors, to make an arrangement by which they will bring the debenture-holders together, and see they are satisfied with what is proposed. I should like to know what are the chances of this, or a similar scheme, being carried through.

THE SIMPLE FACTS.

Mr. JOHNS: The meeting to-day is simply the first step in an endeavour to carry this scheme. It is not in the interests of one class alone, but of everybody who has any holding in this company. One shareholder said the best thing (and he did not say he was a debenture-holder as well) we could do with this mine was to sell it. We are endeavouring to carry through something that will make your shares valuable, and give you the mine back in a very much improved position, but he says he hopes nobody will put anything into it, or words to that effect. Then if you do not, all that you have put into it up to the present time will be lost. It is not the usual custom with Englishmen to throw up their hands and say—let it all go. You can let it all go, and not vote in any way, but why damage a property which may come back to you in an improved position? (Cheers.)

The SHAREHOLDER: Because the property has produced nothing but promises.

Mr. JOHNS: Did you never hear of any properties resuscitated successfully in this world? There have been plenty of them, and mines conspicuously. (Cheers.) You must make a beginning, and this is a beginning. At present the bondholders are the people who are in the saddle. They have a debenture that ought to give them 10 per cent. but does not, and we say if we can arrange with the debenture-holders to let somebody come in and put up a new mill, work this concern, and pay themselves back, that the debenture-holders will then be in possession of a very much improved property, in possession of another mill, and it will be much more valuable to them to have a live debenture paying 5 per cent. than a dead debenture paying nothing. That is the argument with regard to the bondholders, but there is this further inducement. The debenture-holders may say we will do nothing. Then if they do they have to find the money to put up a new mill themselves and carry on this mine, and if they do not find that money they will lose the mine, in which event I say that is a bad position for them. It is far better, as business men, if they cannot get 10 per cent. to take 5. (Cheers.) Supposing a set of men come in and find 20,000*l*.—the offer would be made first to the present share and bondholders. If they did not take it the board would have to offer the capital to somebody else, and some gentlemen to whom I have spoken, and who hold debentures, say, "Not only as debenture-holders will we take some of that capital, but as shareholders. We believe that with a big mine, with any amount of ore that only wants proper treatment, and with plenty of machinery, it would be unwise not to do something to try and help ourselves." If you do not, then the debenture-holders come in, but they must first pay off the bank overdraft in Mexico, and though the priority of that claim may be denied in this room, it is well known to practical men, and is in accordance with Mexican law. If everybody will be reasonable and carry through some scheme like that we suggest we will get the bank to stand by until they are paid off. If not, they will take the mine, and the debenture-holders will have to

BUY IT FROM THEM AND FIND THE MONEY TO WORK IT.

It is no use one class saying—I am going to have my pound of flesh. That means only disaster, and the lock-up of this concern for many years—perhaps for ever—as far as we in this room are concerned. I, as a debenture-holder, would rather have a bond paying 5 per cent. than one promising to pay 10, and paying nothing. You have the ball in your own hands, and we can only do our best by advising you not to destroy it. (Cheers.)

AN ASSERTION AND A REJOINDER.

Mr. PRITCHARD: The directors have not strong faith, or they would put their money into the scheme.

Mr. JOHNS: I am prepared to put my money into it, and yon, Mr. Pritchard, are not going to put a farthing into it. (Cheers.) Gentlemen, he is a solicitor representing a person who is supposed to have debentures, and has not got them. (Oh.)

VIEWS OF A LARGE SHAREHOLDER.

Mr. ELWES: I should like to say something from the point of view of the shareholders. In dealing with this matter you must begin at one end or the other. I think, as a shareholder, it was natural for the directors to call us together at first, because, after all, we are the owners of the property, though I admit the consent of the debenture-holders must be obtained to any scheme we should propose. My partner, my brother and I hold between us 4,000 and 5,000 shares, and we are not debenture-holders. The way this scheme strikes me is that, not having the money to work this mine, we are leasing it through other people for a royalty of from 17 to 40 per cent. of the profits. The new company must make 40,000*l*.—20,000*l*. to repay

themselves and 20,000*l.* profit, for the privilege of which they are going to pay us 17,000*l.*, and it seems to me it is a handsome royalty, and that this proposal is a good one for the shareholders. If the property is sold we shall get nothing. If we find money ourselves we shall be working it for a long time for the debenture-holders, and creditors; but as it is we are asked to stand by for a while so that others may work it at their risk, and then the property will be handed back to us. As far as I and my immediate friends are concerned, we will support the scheme.

Mr. SNELL: Has the trustee deed been registered in Mexico?

The CHAIRMAN: Yes, before the debentures were issued.

Mr. YOUNGER: I move "That the meeting be adjourned for one month, and that the full report of the Messrs. Taylor be submitted to the shareholders." At the present moment all the knowledge is on your side of the table.

The CHAIRMAN: We have not the addresses of all the debenture-holders; and as to the delay of a month, that will be prejudicial to your interests. The bank is pressing us. We do not want to protect one interest more than another, but to protect all alike. Our chief desire is to get this company out of its difficulties. We have consulted the debenture-holders as far as we could, and my resolution is only a preliminary step, and the suggestion made to call a meeting of bondholders would not hasten matters.

Mr. KIMBER: You have the facts now before you, and this is the gravamen of the whole position. The chairman has told you that there is a debt due to the bank, which, he admits, has priority over everything, and he is a trustee. According to Mexican law it is so, and by that law you are bound. If you dispute the question you have to fight it out.

Mr. PRITCHARD: This is an English company.

THE REAL POSITION.

Mr. KIMBER: Do not talk nonsense. You are a solicitor, and ought to know these things. You have now the bones and marrow of the whole thing. Unless you impute to the chairman a falsehood then he has told you the truth, and the truth is this—that you have a telegram from Mexico telling you that unless you liquidate the claim, which has a priority over everything, you will lose your property. Your alternative is that you must go to Mexico to fight the question, which you are not prepared to do. In the meantime, you can pay under protest and fight later on if you choose. They claim their money, and who is going to provide it? Will anybody here? No one replies, and I tell you frankly I am not going to do it. Then that brings us to the Salvage Co. I was not in favour of it when I came into the room, but that is the alternative, unless some better scheme can be proposed. Will Mr. McGeorge or anybody else submit a better scheme?

Mr. MCGEORGE: The counter proposal is that the trustees should sell.

Mr. KIMBER: Will that give the money to the bank? What you have now to provide for is that prior claim of the bank.

IT IS SO.

It is Mexican law; now I like English law—I live on it. (Laughter.) An opinion has been taken—that of Mr. Lancaster Jones, and he says they have a prior claim. Unless any gentleman here has a better scheme to propose I do not think you can do better than accept the one the directors submit.

Mr. SNELL: Mr. Lancaster Jones is standing counsel to the Bank of Mexico. I think it is quite necessary that this meeting of shareholders should first have been called, for if it had not, the debenture-holders would naturally have asked—what are the shareholders prepared to do? I have already said that there must be unanimous consent on the part of the debenture-holders to enable the shareholders to consider the scheme. The report of Mr. Davey should be seut out, and also a statement of affairs as they stand at the present time and the liabilities, and I will move, "That this meeting do stand adjourned for a week or a fortnight."

Mr. INSULL: I have great respect for the lawyers, particularly those present, but I advise the directors to be careful. (Laughter.) At the same time the latter ought to have treated the shareholders better than they have done. The full report should have been sent out to us, and then we could have better grasped the whole situation. I move: "That this meeting stand adjourned to Mar. 16, and in the meantime a full copy of the Messrs. Taylor's report be furnished to the shareholders."

Mr. SNELL: My resolution is almost the same.

HE DOES NOT.

Mr. MCGEORGE: I hope the resolution will be adopted. Mr. Taylor, I understand, endorses the prospectus.

Mr. TAYLOR: By no manner of means do I endorse the prospectus. (Laughter and cheers.) The prospectus stated that the average value of the ore was $35 or $37 a ton, and *that* is what I endorse, but there are other statements in that prospectus which I do not endorse. (Hear, hear.)

Mr. MCGEORGE: I hope that new directors will be appointed for the Salvage Co., for the present ones, though they have had the property four years in their hands, have done nothing with it.

VIEWS OF A POSSIBLE DIRECTOR.

Mr. MONTGOMERY: We have had a good many legal opinions, but ought to consider the matter as business men rather than lawyers. The question comes to this—shall we throw away our property or shall we not? We have heard it is a good one, and, no doubt, the development expenditure has gone far beyond what is anticipated. Money is needed for further developments, and, therefore, if you take any step which will have the effect of wrecking the company, we shall be simply cutting our own throats. Our duty is to pass the resolution, which has refcrence only to Del Oro Mine, so that the Del Agua will continue in the hands of the company as at present. I think Mr. Taylor and Mr. Davey have both understated the value of the ore rather than the reverse, and have put the expenditure at the maximum rather than the minimum. I have heard a statement that 143 ozs. to the ton was found to be the richness of certain ore at the Del Agua Mine, and should like to know whether that is corrcct or not. Then there is valuable machinery at Del Agua Mine, valued, I believe, at 9,000*l.* or 10,000*l.*, but how much money are shareholders rcady to find to develop it? If the machinery could be put to use by expending 700*l.* or 1,000*l.* upon it, then, instead of being worth what I have said, we shall probably have an asset of 20,000*l.* to deal with. It appears to me the

PROPERTY IS WORTH A GOOD DEAL MORE THAN HAS BEEN STATED

from the chair, and it is only a question of finding money to develop it. I support the proposition strongly, for it will be for the benefit of all concerned if carried out.

The CHAIRMAN: As regards the promises periodically made, we have been guided by Mr. Varden, and at the meeting of Nov. 11 I told those present our disappointments and the cause. Since then Mr. Davey has been six weeks on the spot, and has absorbed the time of Mr. Varden, but I will read you the latest advices, dated Feb. 1. (These were read.) We have had a telegram on Saturday showing what the overdraft to the bank is, and how it is arrived at.

Mr. JOHNS: If you pass the amendment it will cause unnccessary delay and frighten the bank, in which case they will seize the property and you will get nothing. It seems to me that our resolution meets the whole case. The telegram of Saturday said that the bank will refrain from taking steps to foreclose until they know the result of this meeting. If the resolution be passed they will wait.

Mr. MCGEORGE: Can they foreclose at once?

Mr. JOHNS: You do not imagine that a bank in Mexico would lend this money without any mortgage or security if it did not perfectly well know that it came in under the wages law. With all due deference to the debenture-holders, they have no right to be present in this room, but we have not said a word about it, because we want to carry all with us. Let me read to you the end of the last telegram, dated Feb. 28:—"The bank have commenced proceedings, but will not move finally until you telegraph the result of the meeting." You now see the position, and I hope Mr. Snell, as a business man, will withdraw his amendment.

RESOLUTION CARRIED ALL BUT UNANIMOUSLY.

Mr. SNELL was willing to do so, but his seconder refused, and it was then put to the meeting and lost by a large majority. The original motion was then put and carried practically with unanimity.

Mr. JOHN TAYLOR said he was very anxious to help the company, and although his firm had not even been paid the travelling expenses of their agent, much less their fee for preparing the report, they would allow that document to be circulated *in extenso* amongst the shareholders. (Hear, hear.)

Mr. MCGEORGE: I will agree to the Salvage scheme if the Messrs. Taylor are to remain the managers of the mine. (Hear, hear.)

A vote of thanks to the chairman closed a protracted meeting.

NORTH'S NAVIGATION COLLIERIES (1889), LIMITED.

A SUCCESSFUL YEAR, AND A GOOD DIVIDEND—FRESH CAPITAL RAISED FOR DEFINITE PURPOSES.

THE third ordinary general meeting was held at Winchester House, on Tuesday, to receive a report of the directors and balance-sheet, and for the transaction of the ordinary business.

Col. North (chairman of the company) presided.

Mr. WILLIAM BRIGGS (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, you have the statement of accounts and the report of the last half-year, and I suppose you will take them as read. (Hear, hear.) In moving their adoption, I think you are all aware that the last time we met here we promised to do great things, and I think I may tell you that we have succeeded. (Hear, hear.) You have seen by the balance-sheet what we have made, and the accounts are even a little better than the balance-sheet shows. Our engineer explains that the 50,000*l.* required to develop the property will, when spent, greatly increase our dividends. We have such a big property, and so many more shafts to sink, that this money will be required to do justice to them, and when it is spent everything will be finished with the result I have named. The 50,000*l.* is to finish mines that are to give us, as Mr. Forster Brown tells us, and he, in his own country, is supposed to be a very able engineer, at least

300,000 TONS OF COAL MORE PER YEAR.

We are selling all the coal we can get, and we are selling it at a fair price, whilst you will see that since we have had this property we have not neglected development work. We have also coke which is giving very good results, and we are sinking these pits, though I am afraid they have taken a little out of revenue, independent of your dividends. Still, as far as we see, we never had such a prospect as we have at present, and I am pleased to add that we have just concluded a contract for 6,800 tons of large steam coal sold to the Admiralty. It is the first time we have sold to the Admiralty, so that this may be regarded as the "thin end of the wedge," because once you get on the Admiralty list they are large customers, and I do not think many collieries can do more for them than we can. I now ask you to approve the statement of accounts and to adopt it. (Cheers.)

Mr. J. J. SMITH (director): I second the motion.

The CHAIRMAN, in inviting the fullest and freest discussion, said: Our engineer has been paid for his services, and you are entitled to ask him any questions you like. (Laughter.) I, as a shareholder, should like to ask him concerning the statement that was made to me to the effect that these mines were about played out. I should like to ask whether that is a proper representation of the case.

The report was unanimously adopted.

The CHAIRMAN proposed "That a dividend at the rate of 10 per cent. per annum, or 5s. per share, free of income tax, be, and is hereby, declared out of the profits for the half-year ending Dec. 27, 1890."

Mr. ROBERT HARVEY seconded the motion, which was carried.

STATE OF THE PROPERTY.

Mr. FORSTER BROWN: I do not know that I have a great deal to add to the report that my firm have made, and which is printed with the balance-sheet. That clearly indicates the policy the board are

adopting. I do not know that you are all aware that this property, so far as its resources are concerned, is a very large one indeed. It is about 10,000 acres, and is full of coal. It has been but little worked, excepting in the upper measures, so that, speaklng off hand, I should say

IT CONTAINS 150,000,000 TONS OF COAL

at least—probably a great deal more. It has been a property that has been more or less worked for many years—the upper but not the lower or steam coal measures. It has been worked as a colliery, which is an adjunct to ironworks, and not as a steam coal colliery, which is really the most profitable form of coal mining in South Wales. The iron trade fell off some years ago when iron had to be converted into steel. That put this particular property rather under water, where for years and years it remained along with all other collieries similarly placed. The machinery got out of order, and the boilers became worn, so that the policy forced upon us has been to resuscitate and put things into order, making it as profitable as possible, whilst at the same time applying our powers to developing the steam coal, which is really the most valuable part of the property, by developing our existing steam coal pit. I am now referring to the Wyndham Colliery, in the Ogmore district, and the Maesteg. We have much improved the Coegnant Colliery, which is now producing 30 per cent. more than it did half a-year ago, and is steadily improving. The Wyndham is also in a good condition, and we have been spending a large sum in sinking to a lower seam so as to have additional resources. Then it was clear that the steam coal being the most valuable part of the property, it was very desirable that we should develop the large area we had that was undeveloped, and for that reason we made up our minds when this company was formed to sink two new pits to win the large undeveloped area, where we believe the colliery is better than either of those we now possess. We had to spend more money than we thought, because wages, materials, &c., are higher. We believe that when we get this developed the output will be more than doubled of steam coal, and assuming the times are of an average kind, we believe the profits will be larger than they are now. Having plenty of resources, that forecast is very reasonable. We should

LIKE TO GET OUR RATES DOWN.

We are rather a long way from the port, and our rates are high. We should like to have them reduced, and that is one of the points to which we wish to apply our mines to get carried through what is indicated in the scheme of a railway. I may only add that we have three kinds of property. We have the Tondu Iron Works and the colliery called Parkslip, with bituminous coal. It is a colliery with steep measures, and we have a slope of about 900 yds. The coal is extremely good, and we have doubled the slope, so as to increase our powers of production. We have also done away with the effete washing arrangements we had, and put down a new one, and the result is that we are now getting an exceedingly clean steam coal, which produces very good coke for our ironworks. We have spent something like 20,000*l*. in improveing our ironworks. I do not profess to know anything about them, but only mention them to show you what we have. At Ogmore, which produces steam coal and bituminous also—the works are going on satisfactorily. At Maesteg we have the Coegnant property with bituminous coal and 60 coppée coke ovens, and are producing coke containing only 6 per cent. on assay, and less than ½ per cent. of sulphur—in fact the coke is second to none in the kingdom. We wish to get these pits down as fast as we can. (Cheers.)

The CHAIRMAN: Our coke will compare with any in the kingdom. I propose the re-election of Mr. Evan Thomas.

Mr. FORSTER BROWN seconded the motion, which was carried.

A like resolution with reference to Mr. Robert Harvey, proposed by the CHAIRMAN, and seconded by Mr. J. J. SMITH, was carried.

Mr. GELLATLY proposed, and Mr. KEEN seconded, the re-election of the auditors, Messrs. Chadwick and Son, which was agreed to.

Mr. CHADWICK: The sheet of figures placed before you and adopted is my speech. I am proud to say that the statement of figures there presented is a very strong one. It is

POSSIBLE FOR A STATEMENT OF ACCOUNTS TO BE "SCREWED UP"

in order to show results, but that has not been the case on this occasion. Your accounts are not only faithfully stated, but many works, especially renewals and replacements, and no small share of additions, are actually met out of the revenue of the year. You have a large sum put down for the cost of additions and new works, as to which you have decided that 6,000*l*. shall be written off this last half-year. All necessary replacements are done out of revenue before profits are divided.

THE EXTRAORDINARY MEETING.

The meeting was then made extraordinary for the purpose of passing the following resolutions:—(1.) "That the directors be and they are hereby authorised to issue the 10,000 original shares of the company at present unissued." (2.) "That such shares shall be entitled to a fixed preferential dividend at the rate of 10 per cent. per annum, and that if in any year the net profits of the company shall not be sufficient to pay the whole of such preferential dividend for that year, the balance shall be paid (but without interest) out of the profits of the next year, and, if need be, of succeeding years." (3.) "That the shareholders be offered in the first instance (*pro rata*) as nearly as may be to the members of the company registered at the date of this meeting, and that the directors may dispose of any shares which are not accepted by the members or their nominees, as and when fixed by the board, to such persons, and at such times, and upon such conditions, not being inconsistent with the foregoing resolutions, as they may think proper."

The CHAIRMAN: We want 50,000*l*., which we shall offer first to the shareholders, and which we think will be subscribed by them. As far as possible they will be allotted *pro rata*. I think we shall extend the payments over two years, so as to let you down as easily as possible. (Laughter.) We shall of course be subject to Mr. Forster Brown's requirements. We shall issue them at 10 per cent., and the inducement to subscribe is strong, for you cannot make a better investment. We might have issued them at a lower rate, but thought we would like to give the turn to the shareholders. I understand that some people are buying shares now so as to get a *pro rata* allotment.

A SHAREHOLDER: Could not the shares be sold at a premium outside?

The CHAIRMAN: You can take the shares and the premium too.

The SOLICITOR stated, in reply to questions, that the right to allotment might be renounced at the option of shareholders, and the form for the purpose would be sent out. The shares bore a cumulative dividend, but had no prior rights in regard to the assets.

The CHAIRMAN: I am a large shareholder. I hold over 25 per cent. of the capital, and shall be glad to take my proportion and that of any other shareholder who does not wish to have his. (Laughter.)

The resolutions were carried unanimously.

A cordial vote of thanks to the chairman having been carried,

Col. NORTH, in reply, said: We are doing the best we can to make all the profit possible out of this property, and, as I said before, when we are making money for you we are making it for ourselves.

THE KNYSNA CONCESSION GOLD MINING CO., LIMITED.

SHAREHOLDERS REVERT TO THE BOARD'S ORIGINAL SCHEME, AND CARRY IT UNANIMOUSLY—CHAIRMAN EXPRESSES CONFIDENCE IN THE FUTURE OF THE MINE, AND IN THE SUPPORT TO BE GIVEN BY THE SHAREHOLDERS.

THE extraordinary general meeting of the above-named company, which was held on Wednesday, Feb. 18, and adjourned, was held at No. 6, Queen Street Place, on Thursday, "to pass the subjoined or such other resolutions the meeting may deem expedient as special resolutions":—

(1.) "That the Knysna Concession Gold Mining Co., Limited, be wound up voluntarily, under the provisions of the Companies Acts, 1862 and 1867." 2. "That pursuant to section 161 of the Companies' Act, 1862, the liquidators be, and they are hereby authorised to sell and transfer (subject to due provision being made for dissentient shareholders, if any) all the property and assets of the company to a new company upon the terms of the scheme of re-construction now submitted to the meeting and identified by the signature of the chairman, and to enter into all necessary agreements for that purpose."

We have already printed the scheme of re-construction, but, as submitted on this occasion, it contained one alteration, viz., 2,746*l*. to be paid to the liquidators in cash instead of 1,373*l*.

Mr. H. Houldsworth Grierson presided.

Mr. W. F. GARLAND (secretary) read the notice of the meeting.

CONSULTATIVE COMMITTEE'S ACTION.

The CHAIRMAN: Gentlemen, you will remember that at the last meeting two or three shareholders were appointed as a consultative committee with the directors upon the scheme of re-construction we then put forth, and immediately after that meeting we saw the committee and talked the matter over with them. We then had a second meeting with them, and went into the subject very carefully, and in the result it was agreed we should proceed with the scheme as submitted by the directors in their original plan. It was considered that the scheme proposed by the shareholders who consulted with us was not one that we could recommend you to adopt. It resolves itself into this—that to-day we have to ask you to re-consider the same scheme as was submitted formerly, and if you approve of it, to give your assent to it.

Mr. THOMAS: I think it might be as well for you to tell us what the proposals were as brought forward by those gentlemen, who, I understand, were in the minority and out-voted.

The CHAIRMAN: The proposals were that it should be a forced scheme of re-construction; that a large number of shares should be created of 5s. each, with 4s. credited as paid up, or something of that kind—leaving a shilling to call. By this scheme present shareholders would be either forced to forfeit their shares, or to come into the re-construction. Now,

OURS IS A VOLUNTARY SCHEME.

I think we showed the committee that their plan was not one that could well be carried out, and that on the whole the plan we propose was the better of the two. There was no contrary voting.

Mr. THOMAS: I understood that Mr. Kelly (who is not present, though he said he would meet me here) made a proposal which was over-ruled, but I do not know whether I correctly understood him.

The CHAIRMAN: I do not know that Mr. Kelly absolutely agreed that ours was the best plan, for he remained of the opinion that a forced scheme of re-construction would be the best.

Mr. THOMAS: I am only a small shareholder in this company, but having known the Cape for so many years, and this particular district, I am bound to say I should not like the property to go to the wall or let it be sold to others for a mere song.

The CHAIRMAN: Our proposals are voluntary. We think the company is sufficiently good; that the mine has been proved to a certain extent, that the machinery has been put down, and that the money already furnished has been fairly expended upon it, and that there is good value for it; but to get that value depends entirely upon whether the shareholders are willing to find more money to develop the mine. It is not as if it were a new company about to be floated, where there are all the chances to be taken of success or non-success.

WE THINK IT A CERTAINTY,

as far as anything can be called so in mining. We have proved there is a reef there and that it increases in richness as it goes down. We have the mine thoroughly equipped, but have no money to sink our shaft further, or to extend our explorations and developments. We think we should put the position straight before the shareholders, and ask them to find money to realise the value of the mine. If they do not do so, the first resolution will still proceed, and it will be a case of liquidation, and although there is all that value in the mine—if there is not more money found—that value cannot be realised for the present shareholders. We could not hope to sell it so as to return any thing to them. If it would clear all its debts that would be as much as it

could be expected to do. I think it is such a fair venture, and so far proved that there is very little risk in finding more money, and that the shareholders by doing so will, in the course of 12 or 18 months at the outside, be almost certain to be reaping dividends. With the large body of shareholders that we have I think the bulk will come forward and subscribe; and if they do not we hope outside friends will be induced to find the money we want. It is not a large sum, and we think the present plan feasible. In the forced plan it would be very hard for a certain number of shareholders to be obliged to double their holdings, because that is practically what it would mean.

WHAT THE PLAN INVOLVES.

We are asking for about one-half more capital than we have. We have written down the capital to 60,000*l*. Now the value of what we are paying in shares is about 26,000*l*. or 27,000*l*., and we want the balance raised in cash, which would virtually mean that every shareholder would have to find about as much capital as he has hitherto done. Any shareholder having a very large holding would scarcely care to double it, and that was one of the principal objections to the forced re-construction scheme. I think the present shareholders will come in.

Mr. THOMAS: Now that Mr. Kelly has arrived, we should like to have the benefit of his opinion.

Mr. Kelly took no part in the meeting.

Mr. FREDERICK BINCKES: I am not acquainted with the articles of association, but see that provision is made for dissentient shareholders. What would be their position?

Mr. PULBROOK (solicitor): That is provided by sections 161 and 162 of the Act.

Mr. BINCKES: I became a shareholder in 1888—paying for my shares at the market price of the day. Since then I have been called upon to pay instalments, beginning in August, 1889, and extending to July, 1890. I thought those payments were to find the additional capital required, but no sooner is that done than we are called upon for other payments on behalf of a further re-construction.

The CHAIRMAN: There was a re-construction before, and the capital has proved not to be sufficient. If you read the reports carefully, it comes to the question, will you abandon all that you have already done, or find money to realise its value? If the shareholders throw the thing away, then it cannot be helped, but we, knowing what it is and being backed up by the Messrs. Taylor's report, think it looks like a promising venture, and we wish to go on. I think shareholders would be very foolish to throw the whole thing up. Every penny that is now provided will go to fairly work the mine, and produce results.

MR. EDGAR TAYLOR'S REPORT.

All the money of the last re-construction has gone into the mine, and been fairly and properly expended, and you will find it stated in the report of Mr. Edgar Taylor, he considers the expenditure has been fairly and wisely made. As to the first floating of the original company—we have nothing to do with that.

Mr. BINCKES: I think it wrong that when the company is in a crisis like this the directors should take 962*l*. 10s. for 17 months' service. That does not seem to show self-sacrifice.

The CHAIRMAN: That is not the question. The directors do their work, and are entitled to their remuneration.

Mr. LAKEMAN: I thoroughly agree with the voluntary plan now proposed. At the last meeting Mr. Kelly said that one portion of the shareholders cannot, and another quarter will not, join a forced re-construction, and that means half the whole number. According to the ordinary re-construction, those shareholders would be simply robbed of their property.

A FAIR AND HONEST SCHEME.

Now, I think this is a fair re-construction scheme, and the only fair one I ever heard of. Many of the public wait for a re-construction, and say, "Stay till they are re-constructed, and we will come in cheap." At all events, this re-construction scheme is honest. (Hear, hear.)

Mr. SMITH: Who will transfer the property?

The CHAIRMAN: Knysna will transfer to the new company, because Knysna Consolidated Co. is this company.

Mr. LAKEMAN: Who is to be liquidator of the old and directors of the new company?

The CHAIRMAN: The appointment of the former will be made at the next meeting, and as regards the latter the board has not yet been formed.

Mr. SMITH: Can the ore be easily treated? Will it have to be panned for concentrators? Would it not be well to decide that point before re-construction? You might have great difficulty in treating the ore. We have not up to the present had even a mill run—only technical reports in place of practical results.

Mr. JOHN TAYLOR: I spoke on that subject very definitely at the last meeting, and told the shareholders that in our opinion pans would be required in addition to the present machinery.

RESOLUTIONS CARRIED.

The CHAIRMAN (in reply to Mr. Binckes) said: For your new shares you will get share for share, and for your old shares one for every five. I now move the first resolution (as above).

Mr. SMITH seconded the motion, and it was carried unanimously.

The CHAIRMAN proposed, and Mr. LAKEMAN seconded, the second resolution (as above).

The proceedings closed in the usual way.

HOLLOWAY'S PILLS.—Nervous Irritability.—No part of the human machine requires more constant supervision than the nervous system—for upon it our health—and even life—depends. These Pills strengthen the nerves and are the safest general purifiers of the blood. Nausea, headache, giddiness, numbness and mental apathy yield to them. They relieve in a summary manner those distressing dyspeptic symptoms, stomachic pains, fulness at the pit of the stomach, abdominal distension, and regulate alike capricious appetites and confined bowels—the commonly accompanying signs of defective or diminished nerve tone. Holloway's Pills are particularly recommended to persons of studious and sedentary habits, who gradually fall into a nervous and irritable state, unless some such restorative be occasionally taken.

POTOSI, LIMITED.

THE NECESSITY SHOWN FOR THE COMPANY TO HAVE ITS OWN MILL, AND A RE-CONSTRUCTION DEVISED IN ONE CLASS OF SHARES ONLY.

Mar. 3.—The funds obtained when the company was re-constructed in 1887 have been expended in opening up the mines, &c., and considerable liabilities incurred. The directors are glad to state that the extensive explorations which have been carried out give every encouragement to continue working the lodes, two of which, viz., Potosi Viejo and Socorro, have produced during the last 12 months, as stated in the annual report, 5,692 ozs. of gold, which realised 21,064*l*.; and it is indispensable for more successful operations that the company should have its own mill of the most approved design, with all modern appliances for saving the gold. Attention is called to the enclosed extract from Mr. Pryor's letter, just received. It will be seen that it is necessary and most desirable, without further delay, to raise additional capital by re-construction, and after well weighing the matter the directors have decided to recommend the following scheme for adoption by the shareholders, viz.:—That the re-constructed company shall have a capital of 360,000*l*., *in one class of shares only*. The present nominal capital of the company is 400,000*l*., divided into 67,310 10 per cent. preference shares of 1*l*. each and 332,690 ordinary shares of 1*l*. each, of which there have been allotted and are now existing 65,558 10 per cent. preference shares and 289,819 ordinary shares; total, 355,377. It is proposed to allot in exchange for each preference share in the present company one fully paid-up share of 1*l*. in the new company, and in exchange for each ordinary share in the present company one share in the new company of 1*l*., marked with 17s. 6d. as being paid thereon. The sum of 1s. per share to be paid with the application; the sum of 6d. to be paid on the allotment; the balance of 1s. to be paid by two calls of 6d. each, at intervals of not less than three months, the first of such calls not to be made payable before Sept. 1 next. Although preference shareholders will, under the proposed re-construction, lose the preference which they at present possess, the directors earnestly invite their consent to this arrangement. All preference shareholders who have so far been consulted, and who represent more than 50,000 of said shares, have given their adhesion. Without such concession on the part of the preference shareholders it is felt that it would be unreasonable to expect the present holders of ordinary shares to incur the liability which will be imposed upon them by the acceptance of contributory shares in the new company in extinguishment of the ordinary shares which they hold in the old company. The foregoing scheme should produce 36,227*l*. which sum it is reckoned will be sufficient to clear off present liabilities; to provide and erect a new mill of 40 stamps; and leave a good margin for contingencies. There is every reason to expect that as milling meantime progresses under the arrangement with Yuruari sufficient gold will be won to at least meet current expenses.—J. BRYCE WILKINSON, Secretary.

VIEWS OF MR. J. PRYOR.

— Feb. 2.—I am in receipt of your favour of 6th ult., as also of mining papers reporting the general meeting on Dec. 30. I have been greatly encouraged by the expressions of confidence used by the chairman, reciprocated by the shareholders and reflected in your letter now under reply. Such confidence assures me that my labour and anxiety have not been spent in vain, and that I need not fear the want of support at this most trying season, when to afford that support is to fulfil my brightest predictions, and to deny it is failure utter and complete. To carry on works, as I have used my best efforts to carry on these works, without capital, and dependent on each month's proceeds furnishing sustenance for the following month, not only experience has been necessary and unremitting care, but an indispensable element which I cannot command, and which has been denied me—"Luck." Always uncertain what changes a month may produce in the character of his mine, the miner's uncertainty is increased tenfold when for want of means he is debarred from the ordinary scientific methods of sinking and driving well ahead of his stopes, and thus from forecasting the quality of ore on which he is about to enter, and from selecting the richest portions for the mill, and leaving the poorer as a constructional support for the roof of the mine. If I were to blast away the present bottom of the open stope at Old Potosi at this moment, I cannot say but that I should find ore which would by its richness lift me out of my present difficulties and proclaim the mine more valuable than I have ever dared to assert it. The bold and strongly marked nature of the quartz now laid bare at the lowest point demonstrates, in my opinion, that we are on the verge of a great and speedy improvement. But in my present position, deprived of funds by the barren quality of the floor of bluestone from which I have but just emerged, I have no right to involve the company in debt on a mere chance, however strongly I may believe that chance to be in my favour.

THE MONTANA CO., LIMITED.

MONTHLY RETURN.

THE secretary of the Montana Co., Limited, begs to state that the following information has been received by cablegram from the resident director at the mine:—Total weight of ore crushed during Feb., 5,981 tons; yield from the mills, $88,600; working expenses for the month, $53,200.

N.B.—The estimated number of ounces contained in returns by assay being, gold, 3,290 ozs.; silver, 15,969 ozs.

The directors have pleasure in informing the shareholders that Mr. R. T. Bayliss has just arrived in England, and will address the shareholders at the general meeting, which will take place on or about the 24th inst.

THE directors of the Delhi, Umballa, Kalka Railway Co., Limited, intimate that the line has been opened throughout for traffic.

PALMAREJO MINING CO., LIMITED.—The secretary states that the sum of 75,000*l*. on 7 per cent. mortgage debentures—prospectus of which was sent to shareholders with the last circular—has been fully arranged for this company through the Mexican Explorations, Limited. The reports from the mines, and works continue to be most satisfactory.

FOUNDED 1871. Bankers:—ALLIANCE.

CORRECT INFORMATION is the basis of successful dealing in Mining Shares.

THE AGENCY CAN COMMAND AND SUPPLY THIS TO INVESTORS.

GENERAL FOREIGN MINES.

Many of these deserve special attention. Profits may be secured by acting upon sound advice in Buying certain Shares, whilst losses may be avoided by timely sales.

RE-CONSTRUCTIONS.

BEFORE making further Investments Write for Advice.

A similar remark applies to joining new Mining or other enterprises.

INDIAN MINES.

The upward movement has commenced. The information possessed by the Agency is invaluable for those wishing to Buy or Sell Shares in this Market.

KAFFIR MINES.

Special efforts have been made to secure the best and most reliable information as to the management, resources, and prospects of South African Mines in which the profits and losses have been alike phenomenal.

GREAT CARE IS NEEDED BEFORE INVESTING.

Those doing business through the Agency are kept informed as to any exceptional news in connection with the Companies in whose Shares they are interested. Purchases can be made for forward delivery, and sales effected for cash.

THE MYSORE GOLD MINING COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN that the ELEVENTH ORDINARY GENERAL MEETING of the members of the above-named Company will be held at the Cannon Street Hotel, in the City of London, on THURSDAY, the 19th day of March, 1891, at Twelve o'clock at noon, for the transaction of the ordinary business of the Company.

Dated this 4th day of March, 1891.

By order of the Board,
W. H. ROWSE,
Secretary.

N.B.—The Transfer Books will be closed, in conformity with the articles of association, from the 5th to the 19th March, both days inclusive.

And Notice is also Hereby Given that immediately after the conclusion of the above meeting on Thursday, the 19th March, 1891, an EXTRAORDINARY GENERAL MEETING of the members of the Mysore Gold Mining Company, Limited, will be held at the Cannon Street Hotel, in the City of London, for the purpose of confirming the following resolution, which was passed at the Extraordinary General Meeting of the members of the Company, held on the 27th day of February, 1891, that is to say:—

"That the capital of this Company be, and the same is hereby, increased to £225,000 by the creation and issue of 25,000 ordinary shares of £1 each."

Dated this 4th day of March, 1891.

By Order of the Board,
W. H. ROWSE,
Secretary.

Registered Offices:—
6 and 7, Queen Street Place,
London, E.C.

THE LIST OF APPLICATIONS WILL CLOSE ON OR BEFORE MONDAY, MARCH 9th, 1891.

THE MILWAUKEE AND CHICAGO BREWERIES, LIMITED.

SHARE CAPITAL - £1,550,000.

77,500 Eight per cent. Cumulative Preference Shares of £10 each £775,000
77,500 Ordinary Shares of £10 each £775,000

There will be issued $3,500,000 (equivalent to about £721,000) of 5 per cent. bonds of $1,00) (equivalent of £205) each, at par, which will be secured by a first mortgage upon the freehold properties, fixed plant, and machinery of the American Corporation hereinafter referred to. Shares payable—£1 on Application ; £1 on Allotment ; remainder in Two Instalments of £2 10s. per Share at Two and Four Months. The American Vendors take and subscribe the entire issue of bonds, and of the share capital $1,650,000. The remainder of the £10 Shares ar now offered for Subscription in London, Chicago, and Milwaukee.

LONDON : 1, COPTHALL AVENUE, E.C.

ABRIDGED PROSPECTUS.

THIS Company has been formed for the purpose of acquiring the shares of the capital stock of an American Corporation, which will acquire the title to the property of the celebrated Valentin Blatz Brewery, of Milwaukee, together with five of the large breweries in the City of Chicago.

Among the city's most prosperous industries is the beer trade, and the following table, taken from the returns compiled for the Chicago and Milwaukee Brewers' Association, shows the rapid increase in the consumption of beer in Chicago and Cook County :—

For the association year	1881	766,866 barrels.
,, ,,	1883	963,652 ,,
,, ,,	1885	1,115,623 ,,
,, ,,	1887	1,671,656 ,,
,, ,,	1889	1,848,243 ,,
For 12 months ending June 30,	1890	2,079,313 ,,

VALENTIN BLATZ BREWING COMPANY.—This Company was organised under the laws of Wisconsin, October 1st, 1889, to take over and continue the business of Mr. V. Blatz, who, in the year 1851, founded this splendid business, which from that date to the present time has been rapidly increasing its trade until it is now one of the largest breweries in the United States. Its special brands are of acknowledged excellence.

The total sales of the Company for the last year were over 240,000 barrels, its bottling trade consumed more than 36,000 barrels. In Chicago alone the Company sells over 60,000 barrels per annum.

UNITED STATES BREWING COMPANY.—This Company was organised June 1, 1889, by the consolidation of the M. Brand Brewing Company, the Bartholomae and Leicht Brewing Company, and the Ernst Brothers Brewing Company, all of the City of Chicago.

The M. Brand Brewery is the oldest established brewery in Chicago. It is located in the northern part of the city, covering about twelve (12) acres of freehold land, and has ample railroad facilities. The buildings are large, and being built of iron, stone, and brick, are practically fire-proof. The plant has all the modern improvements, including ice machines of modern design. The malthouse has a capacity of more than 250,000 bushels. The output now is at the rate of about 115,000 barrels annually.

The Bartholomae and Leicht Brewery was built in 1871, and has a capacity of more than 100,000 barrels. The malt house has a capacity of more than 100,000 bushels. The sales are now at the rate of over 65,000 barrels annually. The brewery has an excellent reputation for the quality of its beer, and its trade has constantly increased since its establishment.

The Ernst Brothers Brewery was organised in 1884, and by its energy and reputation has made rapid strides in securing trade during the period of its existence. The sales are now at the annual rate of over 70,000 barrels. The buildings are all new, having a modern plant, with a capacity of 100,000 barrels per annum.

BARTHOLOMAE AND ROESING BREWERY.—The brewery is well and substantially built, having been remodelled and largely extended within the last few years, and is supplied with machinery and appliances of the latest and most improved construction.

The malthouse and extensive elevator storage system have a capacity for malting and storing of upward of 100,000 bushels annually. The sales for the year ending June 1, 1890, amounted to more than 49,000 barrels.

K. G. SCHMIDT BREWING COMPANY.—The buildings are of the most substantial character. The sales of the brewery are now about 70,000 barrels per annum, and its books show a constant increase in sales. The brewery has a splendid reputation for its beers.

One of the advantages of this combination of brewery properties is the amalgamation of the Blatz Brewery, one of the largest "shipping" businesses in the United States, with the five Chicago breweries, which sell almost entirely within the city limits, thereby strengthening the position of all.

The number of barrels of beer sold by the combined breweries, as shown by the United States Internal Revenue returns, taken annually on the 30th day of September, was as follows :—

For the year	1887-1888	517,939 barrels.
,,	1888-1889	542,038 ,,
,,	1889-1890	610,421 ,,

The internal revenue returns show that the sales of the combined breweries for the eight months from June 1, 1890, to January 31, 1891, are more than 15 per cent. in excess of the corresponding eight months of the previous year.

The books of the breweries have been examined by Messrs. Price, Waterhouse and Co., whose certificate attached shows that the annual profits of the four businesses, based on the profits of the last year, or on the average profits for two years where ascertained, amounted to $1,230,974.10, or at $4.85 to the £ = £253,809 1s. 10d.

To pay interest on £721,000 ($3,500,000) bonds at 5 per cent. will require	$175,000	£36,050
To pay interest on £775,000 preference shares at 8 per cent. will require	$300,700	£62,000
To pay interest on £775,000 ordinary shares at 15 per cent. will require...	$563,812	£116,250
	$1,039,521	£214,300

Leaving a surplus of $191,462, or £39,509 per annum for management, expenses, reserves, &c.

The several properties have been surveyed and valued by Mr. S. B. Chase, who for the last 10 years has held the position of public assessor, having been elected by the citizens of North Chicago, and whose report has been obtained by and submitted by the vendor corporation to the directors. Mr. Chase appraises the real estate, buildings, fixed plant and machinery, with their several dock and railroad facilities, at the aggregate valuation of $7,080,000 (equivalent of about £1,450,000. This is exclusive of such of the property of the Blatz Company as is outside of the City of Milwaukee.

The businesses and assets acquired by such Illinois Corporation are to be taken over (subject to customers' deposits, certain taxes and assessments, and World Fairs subscriptions) as from the various dates stipulated in the contracts, and the profits derived from such dates (less interest and dividends reserved by such contracts) are also acquired by the Company. The vendor corporation guarantees that on the completion of the purchase, the rolling stock, cooperage, stock of beer, malt, hops, hook debts, bills receivable, cash, and other materials and assets not included in the valuation of Mr. Chase, shall amount to the book value of £500,000 in excess of current business accounts, the interest payable under the contracts, customers' deposits, and dividends due but not paid, &c.

All the expenses attending the incorporation and registration of the Company, and all commissions and brokerages, printing, advertising and other expenses attending its formation, up to allotment, will be paid by the vendor corporation.

The following contracts have been entered into :—Two contracts, dated October 7, 1890, between Valentin Blatz and Henry M. Bigelow, a contract between same parties, dated December 1, 1890 ; two contracts dated August 23, 1890, between Michael Brand, Virgil M. Brand, Rudolf Brand, George Bartholomae, Philipp Bartholomae, Andrew E. Leicbt, Jacob Rehm, Leo Ernst, Charles E. Ernst, Otto Ernst, Rollo Butterfield, Ernst Heldmaier, and Adolph Georg, and H. M. Bigelow, and three contracts dated October 6, November 1, and November 25, 1890, between the same parties; contract dated August 23, 1890, between Jacob Rehm and Rudolf Brand, and H. M. Bigelow; a contract dated August 23, 1890, between Kasper G. Schmidt, George W. Kellner, Charles J. Schmidt, F. A. Charles Canisius and Martin Herbert, and H. M. Bigelow; and three contracts dated respectively October 8, 1890, November 1, 1890, and November 28, 1890, between the same parties; two contracts dated August 25, 1890, between Bernard Roesing of the one part, and H. M. Bigelow : and three contracts dated October 6, October 27, and November 29, 1890, between the same parties; four contracts dated October 21, 1890, between H. M. Bigelow, and the London and Chicago Contract Corporation, Limited; contract dated February 25, 1891, between the said The London and Chicago Contract Corporation, Limited, and the Company.

The following contracts for conducting the business of the American Company have also been entered into :—A contract dated October 7, 1890, between Valentin Blatz. Albert C. Blatz, Emil Blatz, Valentin Blatz, jun., and John Kremer of the one part, and Henry M. Bigelow, of the other; a contract dated August 23, 1890, between Rudolf Brand, George Bartholomae, and Leo Ernst, of the one part, and Henry M. Bigelow, of the other; a contract dated August 23, 1890, between George W. Kellner, of the one part, and Henry M. Bigelow, of the other; a contract dated August 25, 1890, between Frank Bartholomae, of the one part, and Henry M. Bigelow, of the other.

A Stock Exchange quotation will be applied for both in London and Chicago.

Prospectuses and forms of application can be obtained at the offices of the company, or of the bankers, brokers, and solicitors.

London : Printed for the Proprietors by Straker Brothers and Co., and Published at the Offices, 234, 5, & 6, Gresham House, Old Broad St., E.C., Saturday, Mar. 7, 1891

THE LIST OF APPLICATIONS WILL CLOSE ON MONDAY NEXT, 9th INST., AT 4 P.M., FOR TOWN AND COUNTRY.

The following comparative statement will show that the area possessed by this Company is capitalised at a much cheaper rate than that of any of the undermentioned companies.

ABRIDGED PROSPECTUS.

THIS Company has been formed for the purpose of acquiring the Government leases of two extensive blocks of auriferous ground situated in the Mysore territory, India.

The two blocks cover a total area of about 1,300 acres, situated in the Taluk of Tarikeri, close to public roads and within a few miles of a station on the main line of the Southern Mahratta Railway, which affords direct communication with the coast and interior.

The history of mining in the Mysore territory shows conclusively the existence of extensive and valuable gold deposits, which were worked on a large scale under the old native rulers, and modern operations in the Colar and other districts have proved that the largest returns may be looked for beneath those portions of the ground upon which "old workings" are found.

The ancient workings on this company's property are amongst the most extensive in area and depth of any found in Mysore, as will be seen from the following details:—

Hondonna (Golden Pit), width 101 ft. from east to west by 140 ft. from north to south, and depth to the present bottom 135 ft. This working, owing to the action of the weather during the time which has elapsed, has been much broken down, and so its original depth cannot be ascertained. It appears to be connected with other underground workings which are at present inaccessible.

Hukkedonna (Pigeon Pit), width between 40 and 50 ft., length 50 ft., depth, as far as can at present be ascertained, 170 ft. This shaft, according to native tradition, is connected by underground workings with the Hondona, a distance of about 150 ft.

Tarikeri:—Extensive old workings consisting of pits extending for over 200 yds.

These workings were made on the course of reefs distinctly traceable for many hundred yards with out-crops of quartz, and indicate the existence of large reserves of auriferous ground.

A tunnel is being driven 400 ft. (the first 50 ft. being an open cutting) which will cut the Hukkedonna workings at about 170 ft. from the mouth of the old shaft, and will not only drain the mine, but will serve to bring the quartz to grass without the heavy expense of hauling. It is also intended to drive several short adits from the sides of the hills below the old workings in other places, for the purpose of unwatering the mines and giving access to the untouched portions of the lodes. This will enable the Company to ascertain the extent and nature of its reserves, and determine the most favourable position for the erection of the necessary machinery for working the areas intended to be reserved.

With such a large area of auriferous land to deal with it is not easy to form adequate estimates of the future returns of the Company or the value of its shares, but there is every probability that the success of this undertaking will be equal to that of any similar enterprise in the Mysore or elsewhere.

The purchase price is £70,000, of which £2,000 is payable in cash, and the balance in cash or shares at the option of the directors.

For contracts see full prospectus.

Full prospectuses and forms of application may be obtained from the bankers and solicitors, or at the offices of the Company.

ABRIDGED PROSPECTUS.

THIS Company has been formed for the purpose of acquiring and working a group of gold and silver mines, situated in Owyhee County, Idaho, U.S.A., now being worked by Captain J. R. De Lamar.

The property is a going concern, now making large profits, which are capable of immediate extension. It will be taken over by the Company with all stores and supplies on hand at the date of completion of the purchase, so that no delays need occur, and the Company can be earning an income from the day of obtaining possession.

It is situated about 55 miles from Nampa, a station on the Oregon Short Line Railway, and consists of about 250 acres of mining ground, a large area of non-mineral ground, numerous water rights, an amalgamation mill of 20 stamps, tramway, houses, offices, and a very complete equipment, forming altogether one of the largest and most valuable mining properties in the United States.

The present developments on the mine consist of two tunnels, with connecting shafts and winzes, which develop the ground to a depth of 250 ft., and for a length of about 1,000 ft. Another tunnel, 200 ft. perpendicularly below the second, is rapidly approaching the ore-bodies.

These developments prove the existence of five ore-bodies of unusual size. Only three of these have been developed to any extent, and the reserves in these three above the levels are sufficient to run the present mill for upwards of three years. The two other ore-bodies are proved to be of great size, and to contain good ore, but sufficient work has not yet been done to justify an estimate of reserves.

The mode of occurrence of these ore-bodies which lie parallel to each other, separated by narrow bands of porphyry, gives promise that others will be found as development proceeds; and while only about one thousand feet in length has yet been explored, the property covers upwards of three-quarters of a mile in length along the course which this series of ore-bodies appears to take.

Outside this principal course there is a large extent of ground covering, many acres, and showing most promising prospects.

The mill returns for the twelve months ending October 31, 1890, show an average gross value of $18.17 in gold and $13.19 in silver per ton; and during the same period rich silver ores to the value of $120,000 were shipped to smelters.

Taking the value of the ore as shown by these figures, which are fully confirmed by an exhaustive sampling of the mine, and taking the percentage of saving in the mill, and expenses as shown by the books, there appears an annual profit of £66,000 per annum, but by means of improvements and economies now being introduced, this income should be raised to £75,000 to £80,000, with the present mill capacity. Based on the value of the ore in the mill returns for the last four months of the period named, the income would be yet larger.

The milling capacity (19,000 to 20,000 tons per annum), however, is small for the size of the property, and the engineers recommend its enlargement during the coming summer.

The great value of the property consists not so much in what is already known or being produced as in the remarkable prospects for the future, which seem to justify the opinion that the De Lamar Mines will rank amongst the greatest and most profitable of similar enterprises in America.

The foregoing statements are based on the reports of Mr. T. A. Bennett and Mr. H. Bratnober, managers of the Mining and Financial Trust Syndicate, Limited, and of Mr. A. Wartenweiler, an engineer of the highest reputation both in Europe and America, who examined the property on behalf of the vendors. (These reports, with maps, can be obtained at the Company's offices.)

The directors, before agreeing to accept office, determined to send another engineer—not in any way interested in the sale—to view the property, and selected for that purpose Capt. J. W. Plummer, manager of the Elkhorn Mine, who has accordingly done so, and cables the following satisfactory confirmation of the reports:—

"Estimated amount of available ore, 75,000 to 80,000 tons, containing, judging by the work done for the last 15 months, $33.19, of which value fully 80 per cent. (I think higher) can be saved at a cost of $13.50 per ton, which will give a net yield of $12.80. With regard to smelting ore, I can confirm Bennett and Wartenweiler's statements, and there are strong indications of an increase. There is a great improvement in bottom of the second incline in the '77-ft.' vein, which shows a large body of ore and high assays. An extremely large property. Am sure it is a mine with a great future before it."—Mr. Wartenweiler's estimate was 63,800 tons, worth 10 dols. net per ton with the present heavy costs; and Mr. Bennett's 60,000 to 80,000 tons, worth 13.15 dols. net per ton.

The directors have decided to set aside £50,000 as working capital, for, although the present proposed expenditure will not be heavy, the developments of the mine, it is expected, will justify in the near future the erection of much larger reduction works than are now proposed.

Applications for shares should be made on the forms accompanying the prospectus, and sent with the amount of the deposit to the Company's bankers.

Should no allotment be made the deposit will be returned in full, and if the number of shares allotted is less than the number applied for, the balance of the deposit will be credited in reduction of the amount payable on allotment.

Prospectuses and forms of application can be obtained at the Company's bankers, brokers, and solicitors, and at the Company's Offices, 6, Drapers' Gardens, London, E.C.

The Gold Recovery Syndicate cable under date 6th March, that 1,574 ozs. have been recovered from 1,350 tons of Robinson Company Tailings, for the month of February, leaving an approximate profit of £2,070.

Subscription Lists will be opened simultaneously in London, Liverpool, Manchester, Glasgow, and Edinburgh, on Monday, the 16th March, and Close at or before 4 p.m. on Tuesday, the 17th March, for Town and Country.

The following Bankers will receive Applications:—In LONDON: The Capital and Counties Bank, Limited, 39, Threadneedle Street, E.C. In LIVERPOOL and MANCHESTER: The Manchester and Liverpool District Banking Company, Limited. In GLASGOW and EDINBURGH: The Clydesdale Bank, Limited, Glasgow, Edinburgh and Branches.

THE AFRICAN GOLD RECOVERY COMPANY, LIMITED.

(MacArthur-Forrest Patents.)

INCORPORATED UNDER THE COMPANIES ACTS, 1862 TO 1890.

CAPITAL, £200,000, IN 200,000 SHARES OF £1 EACH,

PRESENT ISSUE 175,000 SHARES. Of which 80,000 Shares are offered for Public Subscription. Payable 2s. 6d. on Application; 2s. 6d. on Allotment; 5s. at Two Months; 5s. at Four Months; and 5s. Six Months after Allotment.

DIRECTORS.

CHARLES McCULLOCH, Esq. (Director Caledonia Steamship Co., Limited), Liverpool.
ROBT. SMITH, Esq., J.P. (Director Cassel Gold Extracting Co., Limited, Glasgow), Brentham Park, Stirling.
Sir CHARLES W. F. CRAUFURD, Bart., 10 Warwick Square, London, S.W.
JOHN S. MACARTHUR, Esq. (Technical Manager, Cassel Gold Extracting Co., Limited), Glasgow.
EDWARD A. PRESTON, Esq., The Hollies, Woking, Surrey.
WOLSTAN TRUBSHAWE, Esq., 6, St. Bene't Place, London; and Natal.

SOLICITORS.

Messrs. DAVIDSON and MORRISS, 40-42, Queen Victoria Street, London.

AUDITORS.—Messrs. THOMSON, JACKSON, GOURLAY and TAYLOR, Glasgow and London.
SECRETARY (*pro tem.*)—L. J. LANGMEAD, Esq.
TEMPORARY OFFICES.—17, OLD BROAD STREET, LONDON.

PROSPECTUS.

This Company is formed for the purpose of acquiring from the Gold Recovery Syndicate, Johanneshurg, the valuable South African patents and rights, including the Transvaal, Orange Free State, Cape Colony, Natal, and others, of the Cassel Gold Extracting Co., Limited (MacArthur-Forrest process), for extracting gold from refractory and other ores, concentrates and tailings, and generally to work or license their use. The Company will also take over the plant and business already acquired and in course of negotiation hy the Syndicate in connection with tbese patents.

The question of profitably treating refractory gold-bearing ores, especially of low grade, has long engaged the attention of scientists, but hitherto with only qualified success, owing to the loss of time and excessive cost entailed by preliminary calcining and complicated means of treatmeut. The MacArthur-Forrest process overcomes these serious drawbacks, being effective, without previous roasting, on both high and low grade ores, with plant of the simplest description and at a comparatively low cost. The features of the process are simplicity, efficiency and economy, as well as rapidity of treatment.

The Transvaal Goldfields alone offer practically unlimited scope for working and licensing these patents, as in these goldfields refractory auriferous ores which cannot he worked profitably by amalgamation abound, and numerous mines are at a standstill for want of effective means to treat pyritic ores and tailings at a reasonahle cost. The value of this process in the Transvaal can scarcely therefore be over-estimated, especially when it is calculated that nearly half the gold is at present being lost tbrougb imperfect extraction.

Statistics show that the Raudt goldfields have alone produced since 1887 about 1,100,000 ozs. of gold from about 1,800,000 tons of ore, and experts have expressed tbe opinion that an average of 50 to 55 per cent. only of the gold assay value has been extracted. It is computed there are over 1,000,000 tons of tailings from this ore available for treatment.

Apart from this, and even of more importance, is the fact that most of the Randt reefs become refractory at a depth of about 200 ft., making treatment by ordinary methods difficult, expensive, and only partially successful. Large and augmenting returns may therefore be expected, as the workings deepen and the necessity for the process increases throughout the goldfields.

With tbe view of satisfying tbe mining interests in South Africa of the efficiency of the MacArthur-Forrest process, public trials were conducted by the Cassel Gold Extracting Co., Limited, at tbe Salisbury Co.'s Works, near Johannesburg, who certify that working quantities were treated of tailings, concentrates, and very refractory pyritic ores from various mines and districts, and that results were obtained varying from 80 per cent. to 98 per cent. of assay values running from 8 dwts. to 26 ozs. per ton.

Tbe Cassel Co. also report that similar results were obtained in trials made at their Glasgow works of other South African ores, as well as of very refractory ores from the New Zealand Crown Mines. With the latter, all other methods of treatment hitherto used had notably failed.

Particulars of these trials furnished by the Cassel Gold Extracting Co., Limited, are enclosed with the prospectus.

In America, after careful investigation, an influential company, with Senator Tabor as President, has been formed to secure and work the patents for the United States, and the process has been most favourably received in American mining circles.

The Gold Recovery Syndicate, Johannesburg, since tbe acquisition of their interest in the patents and rights now to be sold by them to this Company, have been purchasing plant, &c., and licensing the process and undertaking contracts to purchase and treat refractory ore. The syndicate's plant will be purchased at cost price, and the benefit of these licenses and contracts will be taken over by this Company, who, in consideration of their undertaking tbe obligations and outgoings of tbe syndicate thereunder, will he entitled to all profit arising therefrom which, as estimated by the syndicate, will amount to about £40,000.

Tbe following are some particulars of the business to be taken over by the company.

1.—Sheba Gold Mining Co.—About 9,000 tons of rich tailings have been purchased by the syndicate from Mr. W. Trubsbawe, for treatment hy the process, and the plant is about starting work. Numerous samples taken by the Sheba Co. from various parts of the stacks with the view of ascertaining the approximate value, were assayed hy them and gave the high average of over 3 ozs. per ton. After paying for these tailings and making liberal allowance for working expenses, a large profit is expected, confidently estimated at many thousand pounds.

2.—Rohinson Gold Mining Co.—A contract has been concluded with this important Randt company to purchase and treat 10,000 tons of valuable tailings. It is reported by cahle dated February 7, that with only half plant running, 610 ozs. of gold have been won from 1,050 tons of these tailings, assaying 15 dwts. fine gold per ton, and by subsequent cables that a partial clean up from 1,600 tons treated in all to February 14, had yielded 1,200 ozs., the full extraction being roughly estimated at 1,300 ozs. It may he safely asserted that such remarkahle results, from low-grade refractory ore, which the syndicate state have been obtained at a working cost of about 10s. per ton, are unequalled in the history of gold mining. The full plant, whicb is capahle of treating 80 tons daily, is now working satisfactorily, and these returns show that a profit of quite £1 per ton may be anticipated.

3.—Salisbury Gold Mining Co.—This company has taken a license to use the process on royalty, and Mr. Mitchell, the manager, reports the first two workiugs of low grade pyritic sand have given the following excellent results:—

307 tons assaying only 13 dwts. 19 grs. yielded 202 ozs. = about 82% extraction.			
258 "	"	10 "	3 " " 109 " " 80% "

4.—Ferreira Gold Mining Co.—This company has also adopted the process subject to royalty, and is erecting plant for the treatment of concentrates of high assay value.

5.—Jubilee Gold Mining Co.—License, subject to royalty on the gold recovered, has also been granted to a syndicate which has purchased about 13,000 tons of this Company's tailings for treatment by the process. The license provides for a minimum royalty of £100 per month.

6.—Meyer and Charlton Co. and Royal Gold Mining Co.—License on similar terms has also been granted a syndicate on royalty to treat tailings of these companies.

7.—Meyer and Charlton Co.—An agreement is also reported to have been made in connection with this Company's concentrates, preliminary trials of which show that 80 to 90 per cent. of gold assay can he extracted.

Advices are to hand that other important mining companies are negotiating for tbe use of the process. Large profits may also be expected from selling or leasing the process to subsidiary companies for limited districts, a course which will probably be necessary, as the gold bearing territory over which rights have been secured is of vast extent and practically beyond the administrative control of one company.

Annexed are reports furnished to the Cassel Gold Extracting Co., Limited, by Robert R. Tatlock, F.R.S.E., F.I.C., F.C.S., Public Analyst for the City of Glasgow, and Edmund J. Mills, D.Sc., F.R.S., Professor of Technical Chemistry in the Glasgow and West of Scotland Technical College, and to the Syndicate by Mr Michell, of the Salisbury Mine.

It is worthy of note that the £1 shares of the Cassel Gold Extracting Co., Limited, Glasgow, which has developed this process are quoted in the market at over 100 per cent. premium.

The purchase price of the patents, patent rights, and licenses (exclusive of the above-mentioned tailings contracts), has been fixed by the syndicate who are vendors to the Company, at £150,000 payable as to £30,000 in cash, £95,000 in fully-paid shares, and the balance in fully-paid shares, or partly in cash and partly in fully-paid shares, in terms of agreement. The tailings contracts and licenses will be acquired on the terms before indicated, and it is estimated tbat £25,000 will, in view of the early returns anticipated from tbe business to be taken over, form a capital sufficient for the immediate requirements of the Company. 25,000 shares are, however, held in reserve.

The following contracts bave been entered into:—(1) Agreement dated November 21, 1889, between the Cassel Gold Extracting Co., Limited, of Glasgow, and Wolstan Trubshawe, of 6, St. Bene't Place, London, E.C., on behalf of the Gold Recovery Syndicate, Johannesburg, and agreement dated February 12, 1891, between same parties endorsed; (2) An agreement dated September 15, 1890, between the Cassel Gold Extracting Co., Limited, of Glasgow, represented by John Stewart MacArthur, and the Gold Recovery Syndicate of Johannesburg; (3) Agreement dated October 14, 1890, between the Sheba Gold Mining Co., Limited, and Wolstan Trubshawe, for the purchase of tailings; (4) Agreement dated Decemher 31, 1890, between Wolstan Trubshawe and the Gold Recovery Syndicate, Johannesburg, for re-sale of these tailings at an incrased price; (5) An agreement dated February 23, 1891, between the Gold Recovery Syndicate, Jonannesburg, Wolstan Truhshawe, and Lydstone Joseph Langmead as trustee for this Company, for the resale, at an increased price, of the above-mentioned patents and rights to the purebase of tbe plant and macbinery, and the assignment of the above-mentioned contracts and licenses.

These contracts, together with the memorandum and articles of association, and scbedule of patents, may be inspected at the offices of the solicitors of the Company. In addition to the above, there are tbe contracts and licenses above referred to, and there are or may be arrangements entered into relating to the acquisition and conduct of business in South Africa, tbe formation of this Company, and to the subscription of a portion of its capital, wbich may be considered contracts within the meaning of the 38th section of tbe Companies' Act, 1867. Applications for shares will be received only on the footing that the applicants waive the specification or further specification of the dates and names of parties to the above or auy other contracts, and waive all complaint or remedy under Sect. 38 of the Companies' Act, 1867, or otherwise by reason of the dates of and names of parties to these contracts, or further particulars of any contracts not heing set out in this prospectus.

All expenses of the formation and promotion of the Company up to allotment, other than the legal expenses, and costs of registration, and acquisition of the property, will be paid by the vendors.

Where no allotment is made the deposit will be returned in full, and if the number of shares allotted be less than that applied for the surplus will be credited in reduction of the payment on allotmeut.

Prospectuses and forms of application may be ohtained from the bankers, brokers, solicitors, and at the temporary offices of the Company, 17, Old Broad Street, London, E.C.

Gates Rock and Ore Breaker

TO BE SEEN IN OPERATION AT LONDON OFFICE.

The Head does not Revolve when Breaking.

Capacity in Tons of 2,000 Pounds.

Size 0	2 to 4	tons per hour	
„ 1	4 to 8	„	„
„ 2	6 to 12	„	„
„ 3	10 to 20	„	„

QUINLAND—LONDON.

MINING MARKET.

City, Friday Evening.

BROKERS STAND IDLY IN THE MARKET—NO BUYERS—SOUTH AFRICAN CRUSHINGS — GENERAL FALL OF PRICES.

The Mining Market has certainly not realised the forecast we made last week that "on the whole the outlook was encouraging." This week it has been the reverse of encouraging. With but few exceptions, shares have been pressed for sale. It is all very well to say that the account interfered with business, and no doubt that is true ; and it is equally true to say the blizzard interrupted regular communication with certain parts of the country, but it is also the case that righteousness and peace have not kissed each other — in other words buyers and sellers have not met in proportionate numbers, and when the one class or the other predominates prices rise or fall accordingly.

The state of the market has this week been very much what those who sport themselves upon the light fantastic toe tell us they often see in the ball-room at a "shilling hop" :— there are a number of "wall-flowers"—in other words, ladies and gentlemen, as the case may be, who cannot find partners. Now on the Mining Market the sellers could not find buyers, nor could the enticement of ever-cheapening prices tempt them into the open, and hence the mining "Cinderella" of the week has not been an over-cheerful function.

It is hard, very hard, for brokers to come to their offices every day, particularly in such weather as we have had this week, and find awaiting them only bills payable and charitable appeals, instead of orders to buy or sell the stocks they have recommended in their announcements.

On the Mining Market this week there were three brokers with 10 orders between them for the whole day. A state of things like this is unusual it is true, but, as we have said, it was hard, very hard, to bear.

At the same time the news from the mines continues extremely good. The Indian market has presented the boldest front, and had the Mysore report, issued to-night, been published earlier in the week, it might have given some sort of vitality to the dry bones of the market as a whole. 75 per cent. dividend ; reserves increased by 30,000 tons ; discoveries here, and improvements there, and a disposable balance of 212,000*l.* are facts which stagger the imagination and shake the determination of the firmest "never to have anything more to do with mining." The telegrams of the week principally notify the sales of the Jan. gold, Mysore leading off with 21,189*l.* All Indian shares are down (notably Champion Reefs) with the exception of Mysores, which are a shade firmer.

In the Kaffir market shares have moved unevenly, but the falls have predominated.

The output of gold from the Witwatersrandt for Feb. is 50,075 ozs., which compares favonrably with the corresponding month of the three preceding years. The following figures tell their own tale :—

	1888.	1889.	1890.	1891.
Jan.	11,269	24,986	35,036	53,205
Feb.	12,161	25,800	36,886	50,073
Mar.	14,706	23,705	37,600	
Apl.	15,853	27,131	38,799	
May	19,002	38,298	38,844	
June	16,328	31,272	37,412	
July	19,966	32,407	39,452	
Aug.	19,877	32,142	42,861	
Sept.	20,219	34,369	45,467	
Oct.	27,775	31,914	45,250	
Nov.	27,336	36,116	46,795	
Dec.	26,148	39,600	50,352	
Totals	230,640	377,740	494,756	

Land shares are all down, but there is a slight firmness in diamond descriptions—a firmness that follows the serious fall that has been reported weekly for some time past. The position of De Beers mine as an investment or speculation is carefully considered in the leader this week specially devoted to its affairs.

The General Foreign market has been most disappointing. Buyers have not supported it in any observable measure. Almost to a man those who have put in an appearance on the market have been "for sale intent." Frontinos have fallen on the announcement of the profit of the month, which is not up to expectation. Pahang Corporations have lost some of the recent rise, and other descriptions are also down, including Flagstaffs, Oritas, Golden Gate, &c. Colons have fallen on a circular issued by the secretary as to some proceedings to be taken against the company for alleged damage to pasture land, but generally this threatened action is not regarded as serious. There has been a big business to-day in Lisbon Berlyn shares which only fractionally advanced in price, and Port Phillips are also a shade firmer. Particular importance is attached by the New Russell manager to the telegram as to the treatment of their first 100 tons of ore by the Gold Ores Reduction Co. The profit is small, it is true, but it is said that it can be made daily, and it is well known that first crushings are never so satisfactory as subsequent ones. The gratifying progress hitherto made in sinking the St. John Del Rey shafts is continued by the telegram received this week. Twenty-five fathoms for the month is by no means bad work. A number of telegrams have been received from Elkhorn, which go to emphasise the facts we were at pains to set forth last week. Dividends have been declared by those three gems of mines—Fortuna, Alamillos, and Linares. The latter company paid no less than 12s. per share. Mesquital Del Oro has sent a good telegram—the Feb. result giving 6,000*l.*, and Almada reports $2,000 profit for the same period.

The Australian market calls for no particular mention.

The Paris financial crisis has affected adversely copper shares, and notably Rio Tintos, which are largely dealt in on the Bourse. All these descriptions, with the exception of Quebradas, are down, but after the explanations at the meeting we cannot help thinking that Libiola shares are worth attention.

Carn Breas are up 1*l.*, and Tincrofts even more. Generally speaking, Cornish shares this week are somewhat better than we were able to report in our last. Accidentally last week the fall attributed to West Kitty took place in the shares of Wheal Kitty, and we can only express regret at this involuntary mistake. The first allotment of shares in South Darren will be 20,163, and further applications are expected. The present allottees will have the right to Sept. 1 next, to take up on the same

terms shares in the new company not exceeding in number those allotted to them respectively.

It is difficult to forecast what the position of affairs will be next week, but if there be any consolation in this thought the market is entitled to it, that matters can scarcely be worse than during the currency of that whose proceedings we have now chronicled.

Kaffirs.

Business has been somewhat restricted, and this market has as usual suffered. Since the settlement prices have hardened somewhat, and hence close with very few changes. Durban Roodepoorts have had a good rise, but prices it is thought will recede. Free dealing has taken place in Pigg's Peak.

Business.—The following have dropped :—Bankets, 6d.; Bantjes, 1s.; Black Reef, 6d.; Bothas Reef, 6d.; City and Suburban, 1/8; Crœsus, 1s. 6d.; Durban Roodepoort, 1/16; Forbes Reef, 1/16; Henry Nourse, 1/8; Moss Rose, 1/8; Spes Bona, 1/4; and Wemmer, 1/8. Those up are Pigg's Peak of 1s.; Ditto Preference, 1/8; Jubilee, 1/8; Langlaagte, Block B, 1/16; and Vogelstruis, 1/16.

7/8	Wolhuters	3/4 — 7/8

Indians.

There is no doubt that this is, for the time, the most lively market. Large numbers of shares have changed hands although there is no important alteration in prices. Mysore Gold is somewhat firmer, but Champions are offered at lower figures. The market closes firm.

Business :—A rise has to be noted in Mysore Gold of 1/8, whilst those closing lower are Balaghat of 6d.; Champion Reefs, 3s.; Mysore Reefs, 1s.; Ditto Wynaad. 3d.; and Nine Reefs, 6d.

South African Lands.

There has been a very restricted market in this class, although the change has not been heavy. Goldfields of South Africa have fallen, not so much in stock offered as a want of business.

Business : The falls are as follows : Bechuanaland, 1/16; British South Africa, 1/16; Goldfields of South Africa, 1/4; Johannesburg Estates, 1/8; Moodies, 1/16; Oceana, 1/8; Transvaal Gold, 6d. No rise to record.

Making-up Prices. Mar. 10, 1891.		To-night's Prices.

Diamonds.

A somewhat restricted market has been experienced in this class, and De Beers especially have been changeable, and the market closes decidedly weak.

Business.—The rises are as under :—De Beers, 5/16; Griqualand West, 1/8; New Jagersfontein, 1/8; and Burma Ruby, 1/8. The only fall is in Gordon of 6d.

Making-up Prices. Mar. 10th, 1891.	Diamond Shares.	To-night's Prices.
21/3	Bultfontein Consolidated ...	20/6 — 21/
15 5/16	De Beers Consolidated ..	15 3/8 — 15 1/2
3/	Gordon	2/3 — 2/9
5 1/2	Griqualand West	5 3/8 — 5 5/8

1	North-Eastern Bultfontein ...	3/4 — 1
—	United Jagersfontein ...	3/8 — 1/2
1 5/16	Burma Ruby Mines	1/4 — 3/8 pm.

Australians.

The only feature has been the activity in Australian Broken Hill Consols shares. The news continues good.

Business :—A rise is recorded in Australian Broken Hill of 3s.; whilst a fall is to be noted in Cumberland of 3d.; Day Dawn Block, 3d.; Day Dawn P.C., 6d.; Gympie Golden Crown, 6d.; and Kangarilla, 1/16.

Copper.

The recent Paris failure has restricted business, and prices have fallen, Rio Tinto, as usual, being the chief sufferer while others are down to a less degree.

Business.—A fall is shown in Bratsberg, of 6d.; Capes, 1/8; Copiapo, 1/8; Libiola, 1/8; Namaqua, 1/4; and Rio Tinto, 3/8; whilst the only rise is in Quebrada, of 1/8.

General Foreign Shares.

The settlement has shown several changes in this class. Flagstaff, Golden Gate, and Frontino have fallen, the last-mentioned on the return, and the first on selling from Scotland. Pahang Corporation are somewhat lower in consequence of holders taking profits.

Business:—Those showing a fall are as under: Amador 6d., American Belle, 6d.; Callao Bis, 6d.; Colon, 9d.; Emma, 3d., Esmeralda, 3d.; Flagstaff, 1s.; Frontino and Bolivia, 8s.; Golden Feather, 6d.; Golden Gate, 1/8; Golden Leaf, 6d.; Gravel Gold, 6d.; Idaho, 3d.; Loma, 6d.; Montana, 6d.; New Gold Hill, 3d.; Orita, 1s.; Pahang Corporation, 3/16; Pestarena, 6d.; Potosi, 3d.; Silver Mines of La

Luz, 3d.; Spitzkop, 6d.; St. Augustine, 3d.; Tetuan, 3d.; Victory, 3d.; and Yankee Girl, 6d.

The only rises to note are in Lisbon-Berlyn and Port Phillip of 3d. each; whilst others remain at last week's quotation.

The following list shows the principal changes which have taken place :—

LATEST FROM THE MINES.

INDIAN MINES.

BALAGHAT MYSORE.—The directors have sold, through Messrs. Johnson, Matthey and Co., the gold obtained in the month of Jan., which realised 1,811*l.* 19s. 6d.

MYSORE.—The directors have sold, through Messrs. Johnson, Matthey and Co., the gold obtained in the month of Jan., which realised 21,189*l.* 8s. 3d.

MYSORE REEFS.—The gold produced in Jan. has been sold for 294*l.* 9s. 7d.

NUNDYDROOG.—The directors have sold, through Messrs. Johnson, Matthey and Co., the gold obtained in the month of Jan., which realised 5,559*l.* 1s. 9d.

OOREGUM.—The company has sold the gold produced in Jan. for 11,046*l.* 6s. 8d.

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—Telegram from the managing director, resident at Broken Hill, dated Mar. 6 :—"4 tons of ore, containing 32,000 ozs. of silver, raised during the fortnight. Sixth shipment, consisting of 4 tons of ore, containing 32,000 ozs. of silver, will be shipped for London per steamer leaving Adelaide on Mar. 18."

BRILLIANT.—A cablegram from Charters Towers, Mar. 7, reports "that the company has crushed 884 tons stone for 1,729 ozs. gold, value 6,500*l.* The usual dividend of 2s. per share declared."

HARRIETVILLE.—A telegram from Mr. T. G. Davey, dated Mar. 7, states :—"Cleaned up Mar. 5. 21 days. Mons Meg Mine, 600 tons, 310 ozs.; new shoot, 125 tons, 14 ozs.; new leaso, 343 tons, 80 ozs.; amalgamating pans, 32 tons, 211 ozs."

MIDAS.—Cable from the mine :—"Yield for week, 53 ozs."

MOUNT LEYSHON.—A cable, dated 5th inst., from the manager at Charters Towers, gives the fortnightly crushing :—"760 tons crushed 240 ozs. gold; 20-stamps mill ran 288 hours; estimated value, 550*l.* Immediate falling off on account of mining inspector's orders."

FOREIGN MINES.

ALAMILLOS.—A dividend of 1s. 9d. per share, free of income tax, has been declared, payable on Thursday, the 26th inst.

ALMADA AND TIRITO.—Telegram : "Month's profit for Feb., $2,000; much deadwork done."

CORTEZ.—A cablegram from the superintendent shows the results for the month of Feb. :—"Production, 47,163 ozs.; expenses, $14,250; tons crushed, 863; development expenditure, $3,500."

ELKHORN.—Cable information from Capt. Plummer :—"Bullion shipped for week ending Mar. 7 was $8,000. Mill worked 28 days during month of Feb., and crushed 940 tons of ore, producing bullion amounting to $35,725; smelting ore produced 240 tons, of the valne of $14,000; total produce, $49,725; total expenses, $20,235. Have cut a ledge with diamond drill, 650 ft. north, 2 ft. wide, 90 ozs. silver per ton, new branch." The directors have declared an interim dividend of 2s. per share, free of income tax, for the three months ending Feb. 28, 1891, making a total distribution for the first year's working of 6s. 6d. per share. A balance of about 8,500*l.* is carried forward. Dividend warrants will be posted on the 16th inst. to all shareholders appearing on the company's books on the 9th inst.

FORTUNA.—A dividend of 3s. 9d. per share, free of income tax, has been declared, payable on Thursday, the 26th inst.

FRONTINO AND BOLIVIA.—A telegram from the superintendent states :—"Feb. returns, 7,200*l.*; cost, 4,200*l.*—EUSTICE." This points to a profit of about 2,700*l.* after the usual expenses in London shall have been added to the above statement of cost.

KETCHAU (PAHANG).—Latest advices from Singapore state that the last delivery of bullion to the bank averaged as follows :—Fine gold, 919.25; fine silver, 51.35; copper and other metallic impurities, 29.4; total, 1,000.

LINARES.—A dividend of 12s. per share, free of income-tax, has been declared, payable on Thursday, the 26th inst.

MESQUITAL DEL ORO.—A cablegram gives the result of the Feb. mill-run :—"50 stamps crushed 2,283 tons of ore; bullion produced at clean up 1,616 ozs.; value about 6,000*l.*"

NEW EBERHARDT.—Cable :—"Mine weekly output quantity, 30 tons. The average is $29 per ton. Expenses during the month of Feb., $3,000." The secretary adds that the manager, Capt. Read, is now in San Francisco getting in materials, stores, &c., preparatory to resuming work at Eberhardt.

NEW GOLD HILL.—A cablegram gives results of crushing for Feb. :—"160-ft. level, ½ oz. per ton; Martin's (shaft), 1 oz. per ton; total amount (from crushing), 62 ozs."

NEW PIERREFITTE.—The company has sold 150 tons silver-lead ore to La Société des Mines de Pontgibaud at 13*l.* 1s. 4d. per ton, f.o.b. Bordeaux.

NEW RUSSELL.—A telegram states that "the result of the first 100 tons of ore treated by the Gold Ores Reduction Co.'s process has yielded a profit of $84 (16*l.*) from gold only." This result is exclusive of the copper contained in the ore, which, it is estimated, would about double the return.

ORITA.—A cablegram from the superintendent relates to run No. 54 :—"We have cleaned-up from Mondeco, 200*l.*"

ST. JOHN DEL REY.—The directors have received the following telegram from the mines, dated Rio de Janeiro, Mar. 10 :—"25 fms. sunk; 2 fms. driven, during Feb."

TOLIMA.—Telegram from the superintendent as to Feb. returns :—"Returns, 9,000*l.*; profit over 6,000*l.* Engine shaft worth over $2,000 per fm.; very rich. 100 west worth $1,000 per fm."

VALLEY.—The manager cables :—"Have advanced 180 ft. The thickness of the gravel in face of the hydraulic cut is 5 ft., and the cement bedrock is sinking."

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

NIGEL.—Result of last month's crushing is 1,012 ozs. of gold.

STANHOPE.—Result of last month's crushing is 606 ozs. of gold.

LUIPAARDS VLEI.—The income from licenses for Jan. was 400*l.*

CITY AND SUBURBAN.—Result of last month's crushing is 690 ozs. of gold.

WORCESTER EXPLORATION.—Result of last month's crushing is 864 ozs. of gold.

MAY DEEP LEVEL.—Cable :—"Mine again dry; hauling and milling recommended."

SALISBURY.—The total crushing for last month was 720 ozs.; the battery worked 17 days.

GEORGE GOCH.—The company advise the receipt of 121 ozs. 3 dwts of gold ex Athenian s.s. from Cape.

WEMMER.—The company advise the receipt of 1,035 ozs. of smelted gold ex Athenian s.s. from Cape.

MOODIES.—347 claims rented or leased; 1,777 tons crushed by claimholders, yielded 843 ozs. of gold.

GRASKOP MILL.—A cablegram announces the result of the Feb. crushing as follows :—"Crushed 700 tons; yield, 235 ozs.; estimated cost, 500*l.*"

CENTRAL MONTROSE.—Crushings for Feb., with a 10-stamp battery, were 382 tons, yielding 268 ozs. of gold; expenses on revenue account, 560*l.*

MASHONALAND AGENCY.—Mr. H. L. Currey, of Kimberley, has joined the board, and sailed last week *en route* for Mashonaland, as resident director.

WENTWORTH GOLDFIELDS PROPRIETARY.—Mr. Hislop, the secretary, writes that the transfer of the property to the company has been completed, and that work on the mines will now be proceeded with.

Wemmer.—The London Agency has received the following cablegram, giving the result of working for Feb.:—"740 tons crushed; 700 ozs. of gold won; 18 working days of 24 hours; 15 stamps." The general meeting of shareholders will be held in Johannesburg on Apl. 9.

Transvaal Mortgage Loan and Finance.—The company announces an interim dividend on the ordinary shares for the half-year ending Jan. 31 last, at the rate of 10 per cent. per annum, free of income-tax. The transfer books will be closed from the 16th to to the 20th inst., and dividend warrants will be posted on the 21st inst.

Crown Reef.—The crushing for Feb., during 24 days 15 hours of 24 hours, was 4,532 tons, yieldiug 2,433 ozs. of smelted gold. The revenue for the month was 8,697*l.* 19s. 6d., and the working expenditure was 5,426*l.*, leaving a profit for the month of 3,271*l.* 19s. 6d. The expenditure on capital account for the month was 285*l.*, making a total expenditure for the month of 5,711*l.*

Durban Roodepoort.—Advice by cable of the crushings since Feb. 5 last states as follows: "2,180 tons crushed, 24 working days, 1,091 ozs. of retorted gold." The company is without an explanation of this return, but judging from the latest letters received, dated Feb. 4, assume that the new battery, which was not at that date in full working order, has since caused more trouble and delay in the general working. The letters also show that the manager and his principal assistants have, owing to the severe floods, had their time and attention very much occupied in protecting the most important parts of the property. This may probably account for the smaller return than was anticipated.

Thomas' Reef.—An extraordinary general meeting of the shareholders will be held at the office on Friday, Apl. 17, at three o'clock, "For the purpose of receiving a statement of the affairs of the company made up to Dec. 31, 1890; but more particularly to take into consideration the advisability of either placing the company in liquidation, or otherwise re-constructing the same upon such terms as shall be agreed upon." If shareholders desire to submit proposals to the meeting to be held at Port Elizabeth on Friday, Apl. 17 next, and will communicate same to Messrs. John Taylor and Sons, of 6, Queen Street Place, E.C., the London agents, not later than Mar. 19, such proposals will be forwarded to the company.

Pigg's Peak Estate.—The secretary states that in view of the falling off in the return of gold, announced in the cable message which was received and published on the 5th inst., the board directed that further information should be immediately cabled for, and the following reply has been received, viz.:—"Mill is running on ore from Devil's (Reef) from the surface, scattered, payable, cannot estimate the quantity of ore. Impossible to estimate the value. Weather permitting, we shall push ahead with crushing." The board have also applied to the local management for a further statement in explanation of the recent cablegrams, and this will be laid before the shareholders when received. It is evident that the character of the discovery at the Devil's Reef is unique and that the gold is so irregularly distributed as to render it impossible, until after further exploration and development, to estimate its extent and value. The directors can assure the shareholders that every effort is being made to urge on these works, as well as those upon the other portions of the company's property, so far as the scarcity of labour and the weather will permit. The company has sold, through Messrs. Johnson, Matthey and Co., the gold obtained in the month of Jan., which realised 3,471*l.* 0s. 9d.

Clutha.—Report for week ending Feb. 10. Northern Reef: Measurement at date 26 ft., work done for week 11 ft. In the early part of the week the lode was split up by a horse of barren rock, but this has been driven through, and prospects are improving now with every shot. 100 ft. level north: Measurement at date, 190 ft. 6 in., work done for week, 5 ft. 6 in. This is still in hard rock, but better progress has been made during the last fortnight. 100 ft. level north, drift east: Measurement at date, 2 ft. 6 in.; work done for week, nil. Drift west: Measurement at date, 3 ft.; work done for week, 3 ft. We are getting light prospects of gold from these drifts, and the rock is very tough. 50 ft. level west: Measurement at date, 110 ft. 6 in.; work done for week, 18 ft. 6 in. A falling off in the value of the rock was noticeable during last week, but at the time of writing a great improvement has set in, and the appearance of the face in this level is now very promising. 50-ft. level west winze: Measurement at date, 4 ft. 8 ins; work done for week, 4 ft. 8 ins. This was started on a promising shoot of gold, chiefly for prospecting purposes, but will probably be continued to the next level, and utilised for sending down ore from this level. The prospects of free gold are improving, and some of the rock shows visible gold. No. 3 winze: Measurement at date 38 ft.; work done for week, 9 ft.; is holding down about the same width, and value as at date of last report. Prospecting cutting: Measurement at date, 10 ft.; work done for week, 6 ft. This has been abandoned, as the leaders carrying the gold have split up and thinned out.

Roodepoort.—This Kimberley company has, in the past, been unfortunate in point both of management and direction. With a board of inexperienced men at Kimberley, with a local committee powerless to a great extent because of their hands being tied, and with other drawbacks which need not here be mentioned, the wonder is that this company stands even in the good position which it occupies to-day. The ground consists of two separate mynpacht, rendering it one of the most extensive properties on the fields. There are 26 claims on the main reef; the southern boundary is about 2 miles from the main reef outcrop; and as the reef lies at an angle of about 45 degs., it will be a long time before any deep level intruders can venture upon exploitation here. Only one block of twelve claims has so far been worked; but the other—the Eastern block—has been developed to the first level, and the reef is proved to be as good there and as regular as in the western block, which is adjacent (the single claim of the Ethel interveuing) to the Durban Roodeport ground. The stuff so far milled has been main reef, and it has gone more than 10 dwts. to the ton; but the south reef (or, at any rate, a reef which is south of the main reef) has lately been struck and found to be both powerful and rich. The mill consisting of 40 head Sandycroft, is situate some 200 yds. below the mine, to the north, and about midway between the poppet head and the water supply, which is being augmented by the construction of an extensive dam. The ore is sent from the main shaft to the mill by a self-acting tram, which is in perfectly good order, and lit along its entire course (as are the mine and the battery) by the electric light. In the battery-house are sixteen fruevanners, not working yet because the supply of free-milling ore is not so far exhausted; but pyritic stuff has been encountered at the third level (which is 160 ft. from the surface on the vertical, and about 200 ft. on the incline), and the need for these appliances will soon be recognised. The financial position of the company is excellent, the issued capital being only 100,000*l.*, and the debt so small—only about 3,000*l.* in fact—that the present month's return will enable the directors to effect a complete equilibrium in that respect. The managing director is Mr. Thomas Robinson, and, as already stated, the management is in the hands of Mr. Z. Williams, whose record at the Jumpers is more than sustained by the fact that his work has not been improved upon by the gentlemen in whose favour he resigned. Mr. Robinson and Mr. Williams are devoting their best and undivided energies to the task of bringing the Kimberley Roodepoort into the position which it ought to occupy upon these fields, and the present appearances are that their efforts will be crowned with success.—*Johannesburg Star*, Feb. 14, 1891.

COMMERCIAL NOTES.

Metals.

Copper has further declined during the week. G.M.B. Warrants have been pressed for sale, and declined from 52*l.* 10s. cash to 51*l.* for both cash and three mouhs. A large business has been done. To-day's prices are 51*l.* 5s. cash, and 51*l.* 5s. three months. We quote English tough, 56*l.* to 57*l.*; best selected, 57*l.* 10s. to 58*l.* 10s.; strong sheets, 65*l.* to 66*l.*; India sheets, 60*l.* to 61*l.*; yellow metal, 5¾d. to 6d.; ore, 9s. 6d. to 10s. 6d. per unit.

Tin has been quiet, Straits selling at from 90*l.* 7s. 6d. to 90*l.* 2s. 6d. cash, and 90*l.* 15s. to 90*l.* 10s. three months. To-day prices are 90*l.* 5s. cash, and 90*l.* 12s. 6d. three months. The Dutch market has been quiet. Banca quoted 54½fl.; Billiton, 54¼fl. English ingots, 93*l.* 10s.

Tinplates, after being easier, have gone in seller's favour, and we quote ordinary coke, 17s. 9d. to 18s., Liverpool.

Spelter has been easier, and we now quote ordinary brands 23*l.* 7s. 6d. ex ship here.

Lead has been very quiet. We quote soft Spanish, 12*l.* 8s. 9d. to 12*l.* 10s.; soft English, 12*l.* 10s. to 12*l.* 15s.; L.B. China pigs, 13*l.*; sheets, 13*l.* 10s. to 13*l.* 15s. export, and 14*l.* home trade.

Quicksilver.—Rothschild reduced his price on the 10th inst. to 8*l.*, at which a fair business was done, and next day advanced it to 8*l.* 2s. 6d.; we quote, seconds about 8*l.*; Rothschild to-day, 8*l.* 5s.

Antimony easy.—Halletts price for America is 67*l.* 10s.; ordinary brands and delivery, 63*l.* to 65*l.*

Tramways of Germany	7s. 6d. per share.
Union Steam	7½ per cent.

BRITISH MINING INTELLIGENCE.

LEADHILLS (Mar. 9).—Brown's vein: The 145-fm. level north of Jeffrey's is in a vein above, 4 ft. wide, of encouraging constituents, but only stones of ore yet. The stope above the 145 south of Jeffrey's shaft is worth 15 cwt. of ore per fm. The stope above the 145 south of Wilson's shaft is worth 20 cwt. of ore per fm. The stope above the 145 north of Wilson's shaft is worth 50 cwt. of ore per fm. No. 4 winze below 130 north of Jeffrey's shaft is without ore in the portion we are taking with us. The three stopes above the 130 north of Jeffrey's shaft are each worth 25 cwt. of ore per fm. The stope above the 130 south of Jeffrey's shaft is worth 35 cwt. of ore per fm. The stope above the 130 north of Wilson's shaft is worth 15 cwt. of ore per fm. The stope below 115 north of Jeffrey's is worth 10 cwt. of ore per fm. The stope above 115 north of Jeffrey's shaft is worth 30 cwt. of ore per fm. The stope above the 115 south of Wilson's shaft is worth 30 cwt. of ore per fm. The 85 north of Jeffrey's shaft is in a vein 4 ft. wide, with 15 ins. of quartz, and improving appearance, although without ore. The 70 south of Wilson's shaft is in a vein 4¾ ft. wide, charged with improving quartz, but too dried for bearing ore. The 35 south of Flat Rod shaft is in a vein 9 ft. wide, worth 40 cwt. of ore per fm. The stope above the 85 south of Flat Rod shaft is worth 50 cwt. of ore per fm. Sarrowcole vein: The rise above Gripp's adit north of George's Roust is in a vein 4 ft. wide, charged with stones of ore scarcely to value.—T. NEWBIGGING.

MID-DEVON.—Report for week ending Mar. 7:—Surface: It still takes four revolutions of wheel per minute to cope with influx of water into shaft. A shaft: Water drained to the 80. C shaft—The 50 east, No. 3 stope: Stoping was recommenced at this point on Monday last by six men. The strata, although rather hard, is very promising, and contains large deposits of chlorite and axinite, which points to an improvement in the yield of ore; it at present yields 2¾ tons per cubic fm.—J. NEILL.

NEW MORGAN.—It will be remembered that on Jan. 13 last the directors informed the shareholders that as soon as possible there would be a clean up of quartz broken, to that date, namely, 800 tons. This has been effected, and 874 tons have produced 220 ozs. 6 dwts. 8 grs., being an average of 5 dwts. 1 gr. per ton. Of the ore broken to date 2 tons 16 cwt. of rich quartz has been crushed, yielding 282 ozs. 13 dwts. 16 grs. being average of 100 ozs. 19 dwts. 4 grs. per ton. The manager anticipates that regular crushing will now take place.

PRINCE OF WALES (Mar. 11).—In the bottom of the shaft the shaftmen are still sinking by the side of the lode, and as far as seen there is no material change since last week. We shall be taking it down again in a few days. In the cross-cut south towards the Good Luck lode there is no change worthy of notice. In the tribute pitches throughout the mine there is no alteration. At surface our progress, in consequence of the severe frost and snow, is greatly impeded.—J. PROWSE.

ROMAN GRAVELS (Mar. 12).—The 155-fm. level is now driven 6 fms. south from the shaft cross-cut, and the forebreast is still in the centre division only of the vein. The matrix continues to be of very favourable character indeed, and if we may judge at all by appearances we are bound to predict the coming in of productive ground here very shortly. The 140 north is driven 83 fms. 2 ft. 6 ins. There is no material change in the vein here since last report, and we value the forebreast at 2 tons per fm. The winze coming down at a point 3 to 4 fms. in front of said forebeast is 11½ fms. deep; vein at said depth producing 2 tons per fm. The 140 south is driven 83½ fms.; lode in present forebreast in two divisions, and showing no recent change. If the winze coming down in front of this end from the level above does not shortly reach the vein we shall take steps in the 140 south to prove whether another part of the vein exists on the west side of the drivage. This winze is now 5 fms. 2 ft. deep. With the exception of the two stopes in back of the drivage south of Jones' winze in the 80-fm. level, which have improved during the week, and are to-day producing 3½ tons of lead ore and 1 ton of blende each per fm., the remaining points throughout the mine are just as when last reported to you. The 20 tons of blende sold to-day realised 130/., and we sampled 50 tons of lead ore to-day for sale next Thursday.—A. WATERS.

SOUTH DARREN (Mar. 12).—There is not much change to report this week. The severe weather has hindered part of the work. We are drawing, and since midday to-day have been dressing. The 15 tons of lead ore sold on the 6th inst. realised 186/.—I. MITCHELL.

WEARDALE.—Report on mines for week ending Mar. 7:—Ore raised for week, 74 tons; ore dressed for week, 78 tons: ore slag and fume smelted for week 131 tons, producing 66 tons of pig lead.

WHEAL CREBOR (Mar. 10).—The lode in the 156 end driving east of new shaft is producing saving work, and showing signs of further improvement. In the 144 west of cross-cut we have cut through the crossing referred to in last week's report. There is an improvement in the appearance of the lode, and as we get a little further away from the crossing it may again be of good value. All other points in the mine are of the same value as reported last week. Owing to the tremendous snow storm now blowing all surface work on the mine is stopped. The flow of water in the canal is blocked with snow and ice, and the wheels are all but idle.—P. D. HOLMAN.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO (Feb. 17).—Extracts from a letter from the superintendent:—Mine: Little ore was extracted during the last fortnight, the hoisting engine having been most of the time employed in hoisting water and *débris* from the Balvanera shaft, in order to clean it down to the 62-fm. cross-cut, so that Mr. Davey can examine the lode at that point. The drive at the 24-fm. level on the 100 lode was advanced 27 ft. in the past fortnight, on barren ground. The breast is about 5,363′ north, 4,934′ east, 75 ft. beyond the ore body, and yesterday it broke through the cross-cut that had been driven west from the main lode for communication. We are now going to further cross-cut to the wall (western) of the 100 lode before continuing the driving northward. The west cross-cut at tunnel level was driven 21.8 ft., the last 11 or 12 ft. on lode matter mixed with porphyry, and containing occasional eyes of rich ore. The breast reached a very beautiful wall, which is supposed to be the western wall of the 100 lode; the eastern one seems to have been broken up into the horse matter. We intend to drive a few feet further west to prove the country rock. The new west cross-cut at 12-fm. level, at about 45 ft. north of No. 5 winze, has been driven 11.1 ft., and we expect to get at the 100 lode within another 30 ft. of drivage. At the 50-fm. level there is a cross-cut driven east at about 100 ft. from the Balvanera shaft (north); it was driven another 9.4 ft. to prove the eastern country. I regret to inform you that the main stope has become worthless for a distance of about 70 ft. in this northern part. For about 80 ft. southward it is still productive, but I am afraid it will give out entirely in a short time. The failure of this stope will be a severe blow to our finances, as it has been for some time the principal source of our ore supply, and more especially of our better grade. In consequence of this unfortunate change it becomes indispensable to develop the new ore body as rapidly as possible in order to make it available for stoping with the least possible delay. The other stopes are looking about the same as last reported. Reduction: The mill has been stopped most of the time in the past fortnight owing to the suppression of ore extraction for clearing the bottom of the shaft. The chlorination furnaces have been working as usual, the amount of ore roasted in the fortnight was 589 charges, estimated at 294.5 tons. The roasted ore served to the vats for leaching was 304 tons. The precipitate obtained in the week ending Feb. 7 was worth, in silver. $5,333.53 (gross). The clean-up obtained on Feb. 14 is being calcined, and its value is not known yet. From the refinery we obtained, Feb. 7, 6 bars silver, worth $6,152.47; Feb. 14, 6 bars silver, worth (about) $6,500. Mine: I very much regret that my expectations concerning the ore body at the 24 on the 100 lode have not been realised. I hope, however, that we may still find ore on driving further north.

ARGENTELLA (Mar. 5).—Weekly report:—No. 2 Marine: Six men: Driven since last report 6 metres; passing through very kiudly killas, carbonate of lime and quartz, producing iron pyrites and spots of lead. At the commencement of the contract, we had the hanging and heading walls. After driving 2½ metres we had to leave the footwall, as the lode was getting wide. The hanging-wall is very regular, now dipping about 1 ft. 6 ins. to the fm. Set again at 70f. per metre. I find that in order to further our work here, it is necessary to build a miner's hut, about 10 metres by 4 metres. Set at 3f. 50c. per square metre; to raise and carry all stone and materials. Quartz reefs: Now under cover 3½ metres. The north killas is now up the forebreast about 1½ metres. As soon as we have the killas to the top of the end, I shall set to four men, which will be on Monday next. From present appearances we shall be able to make good progress here. The mule path is complete. The tramway will be laid to-morrow. Ogliastrone Valley: This level will be under cover in two or three days. We have now a hard killas, not unlike what is in the cross-cut at No. 3 Rowe's workings. The killas contains a very large quantity of iron pyrites. We shall have cut into the body of pyrites after a few metres more. Will set to four men on Monday. No. 3 Rowe's workings: Six men: Driven since last report 3½ metres. Passed through hard bastard of killas and quartz, producing iron pyrites, the ground this week being harder. Set again at 107f. per metre. The smithy and machine rooms are finished ready for roofing. All other work, cleaning machines, repairing buildiugs, &c., are satisfactory; we have a good deal of work yet before finishing.—J. B. ROBERTS.

ASIA MINOR (Feb. 21).—Ara Dere: In driving north on the cross course which cut off our lode, we have come into a little ore. The lode in the winze, as we had anticipated, is improving, being worth 22 cwt. silver-lead ore and some copper ore. Chief Mine: The lode in Petri air shaft is carrying some very fair lead, and we are hoping that it will widen out and further improve. The end east, from long cross-cut, is now worth 18 cwt. of rich silver-lead ore. The winze and rise are worth 15 and 16 cwt. respectively. A trial rise in the back of Savalan is producing good ore worth 25 cwt. The long Savalan Pass is at last cleared, and levels have been started east and west. These drives are regarded as being very promising for good discoveries. We have 60 men stoping in the fine block of ground, worth in the aggregate 25 cwt., east and west of Savalan Pass, and 38 men in union on improving ground, now worth 23 cwt. The other stopes and trials have shown no material change since last report.

AUSTRALIAN BROKEN HILL CONSOLS (Jan. 22).—The mine manager reports:—I consider your company has one of the best mining properties in the Australian Colonies, and our developments are rapidly proving this. Ore is showing at almost every point west of the engine shaft, and the rich ore, being a sulphide, is of a permanent character, and may be expected, from the experience of other mines containing the same class of minerals, to carry to considerable depth.

— The managing director, resident at Broken Hill, also reports by mail on Jan. 24, as follows:—The sulphide of silver ore, or copper silver glance, and the fahlerz, which form the main body of our rich vein, usually run to great depths. I am told that in the Manhattan Mine in America a fahlerz vein has been followed down to 2,000 ft., and is still being worked, while sulphide ores have attained much greater depths.

BALAGHAT-MYSORE (Feb. 18)—North engine shaft: I am sorry to say we have again been greatly inconvenienced with the water, so much so that we have scarcely seen the bottom of the shaft during the past fortnight. There is, therefore, no particular change to report, the shaft being only now about 95 ft. below the 500-ft. level; the quartz is still small, but assays a little better, viz., 19 dwts. 7 grs. of gold per ton. I trust much better progress will be made during the ensuing fortnight. The 500-ft. level north has been driven 12 ft., or 446 ft. 6 ins. from the shaft; the quartz is from 4 to 6 ins. wide, and assays 1 oz. 0 dwts. 11 grs. of gold per ton. The No. 1 winze in the bottom of this level has been sunk 5 ft., or 41 ft. 8 ins. below the level; the quartz is about 2 ft. wide, and assays 1 oz. 5 dwts. 23 grs. of gold per ton. The stopes in the back of this level yield quartz of about 1 ft. wide, and assay on an average 2 ozs. 7 dwts. 13 grs. of gold per ton. The 500-ft. level south has been advanced 3 ft., or 88 ft. 6 ins. from the shaft; the quartz is about 6 ins. wide, and assays 2 ozs. 19 dwts. 22 grs. of gold per ton. The stopes in the back of this level produce quartz of about 9 ins. wide, and assay about 2½ ozs. of gold per ton. In consequence of a considerable quantity of ground having fallen down from the hanging-wall in the stopes in the back of the 410-ft. level north, and blocking the level with stuff, timber, &c., we have not been able to resume the driving of the 410-ft. level north; this end is, therefore, still about 837 ft. from the shaft, and without change since the last report. No. 2 winze in the bottom of this level being down to about the depth of the level below, the further sink-

ing has been suspended until such time as it is communicated with the 500-ft. level; this I hope to accomplish within a month. The No. 3 winze has been sunk about 2 ft., or 57 ft. below the level; the lode is at present poor. This winze is also now idle owing to the breakdown in the level referred to above, but I hope to resume the sinking in the course of a few days. The stopes in the back of the 410-ft. level produce quartz of about 1 ft. wide, and assay, on an average, 2 ozs. 2 dwts. of gold per ton. The plat stopes in the back of this level yield quartz of about 6 ins. wide, and assay 4 dwts. 21 grs. of gold per ton. The machine winze in the bottom of the 330-ft. level north has been sunk 10 ft. 6 ins., or 33 ft. below the level; the quartz is about 6 ins. wide, and assays 18 dwts. 13 grs. of gold per ton. The stopes in the back of this level yield quartz of about 10 ins. wide, and assay, on an average, 2 ozs. 14 dwts. 9 grs. of gold per ton. The plat stopes also in the back of this level produce quartz of about 9 ins. wide, and assay 3 ozs. 7 dwts. 22 grs. of gold per ton. The 270-ft. level south has been extended 3 ft., or 644 ft. 6 ins. from the shaft; the lode is still unproductive. The stopes in the back of the 270-ft. level south yield quartz of about 9 ins. wide, and assay 1 oz. 9 dwts. 21 grs. of gold per ton. The stopes in the back of the 270-ft. level north produce quartz of about 10 ins. wide, and assay 1 oz. 7 dwts. 6 grs. of gold per ton. Haines' shaft: Operations at this shaft are now being pushed forward, and the shaft is securely timbered within about 20 ft. of the 270-ft. level, and we are now engaged cutting the necessary ground for the cistern plat, &c., and shall proceed with the shaft below this level in the course of a day or so. Surface: The general surface work is progressing fairly satisfactorily. —J. PRYOR.

BRATSBERG.—Report for week ending Feb. 28.—Hoffnung Mine: At No. 2 adit level the lode continues to yield about ½ ton per fm. No. 1 rise in the back of this level is worth 1½ tons per fm., and No. 2 rise, 1 ton per fm. No. 3 adit level has improved very considerably in value and appearance during the past week, being now worth ¾ ton per fm., and showing strong indications of a further improvement. We shall resume the rise here forthwith. At No. 4 level the lode maintains a value of 1 ton per fm. The necessary excavation for sinking Ball's shaft below No. 4 level is now almost completed, and this work will be taken in hand forthwith, the necessary fixtures for hoisting being as far as possible ready. For the past month 60 miners have been employed at this mine. Johannes Mine: The level driving east on Howard lode is at present yielding only saving stuff, but we have every reason for expecting to meet with a good lode here, as its general character is favourable for the formation of ore, and the stopes in the back of the level are yielding fully 1 ton per fm. The cross-cut to Johannes lode appears to have just struck the footwall, but until the lode itself is cut through we cannot say anything of its value, although it is encouraging to be able to say that some strong patches of ore are to be seen against the footwall. 10 miners employed here during Feb. Moberg Mine: I regret to have to report that having found the lode on which we drove from surface to a point close under the old workings entirely valueless, and, in fact, very considerably changed for the worse in appearance from that shown at surface, and having driven into the footwall to such a distance as to satisfy ourselves that we are on the right vein without meeting with anything of the character of the lode, we think that ample has now been done here, and have suspended operations, and are now removing the tram rails and materials whilst there is an opportunity. Surface work and remarks: The re-erecting of the dressing buildings and machinery is proceeding with good despatch, the weather having been very much in our favour, as also for the transport of goods from Strengen, and I trust that the necessary machine pieces despatched from England have duly arrived so that we may get them here this week, and all the work go on without delay. The quantity of 20 per cent. ore mined during Feb. I estimate at 120 tons.—J. D. HOLMAN.

BRITISH BROKEN HILL PROPRIETARY.—Report for week ending Jan. 28.—No. 1 shaft, 2nd level: The work on the new section of timber has been continued steadily all the week. The pressure against the breast of our new section is still terrific, but we are steadily advancing the work, and more cannot be done. No. 2 shaft, 1st level: The timbering is being extended, and a shoot has been put in for use, when the upper floors are being taken out. No. 7 shaft, 50-ft. level: The shoot of lead ore is not worked completely out yet. The broken ore is being stacked in the stopes for the present, as our surface storage room is getting crowded. No. 5 shaft: Sinking is now being pushed on, but, as yet, we have only two shifts of men in the shaft; 4 ft. has been sunk during the week, making the total 46 ft. below the first station. The rock is hard. The stope in the south drive has been continued, and ore obtained all the week. Surface: The furnace plant is still waiting for machinery from Adelaide. The re-construction of the ore dressing mill is now being pushed on with a strong force of mechanics.—J. HOWELL.

CALLAO BIS (Feb. 15).—Independiente: Since the 1st inst. the shaft has been continued a further distance of 4 ft.; from surface, 142 ft. No change has taken place since last reported. The ground is very hard, besides a quantity of water to contend with, which keeps the two No. 9 Cameron pumps constantly at work. No. 3 cross-cut advanced 10 ft. from shaft; ground very hard indeed. However, I am in hopes of meeting softer ground, when better progress can be made. We are pushing it as fast as possible to intersect the lode at the earliest date. No. 2 level west has been continued a further distance of 18 ft.; from shaft, 183 ft.; lode 2 ft. wide, but at present poor. Still, it has a very good appearance between two splendid walls. There is every hope of meeting another good payshoot as we continue the driving of this level. No. 1 stope has been extended 10 ft.; from raise 25 ft.; lode 16 ft. wide, of good value. Surface work: We have commenced to lay our timbers for Cornish pump, which will be pushed with all possible energy. New mill: Owing to the continuous rain which we have had very little progress has been made. However, during the rain the carpenters have been employed about the tressle work. I am very pleased to say the heaviest part of this work is accomplished. The weather at present is more favourable, and I hope, by the next mail, we shall have some of the mortar blocks in their places.

— The superintendent, who has been at Ciudad Bolivar on the company's business, writes from there on Feb. 23:—I have just received a telegram from the Independiente mine advising me that the No. 2 level west is turning to be very rich.

— A remittance of 696 ozs. of gold has been received, this being the yield for Feb.; already advised by telegram.

CANTABRIAN (Mar. 7.)—Hastings' engine shaft: It is with very much pleasure I am able to state that the collaring up of this shaft is now completed. McKeand's shaft: The stope in back of the 12-metre level west of cross-cut, east of shaft, will yield about 4 cwt. of rich copper ore per fm. Carter's shaft: In the 24-metre level, driving east of shaft, the lode is 1 ft. wide, and producing beautiful stones of ore; a kindly lode, set to two men at 35 pesetas a metre. The lode in the 12-metre level, east of shaft, is a little improved, and will yield at present 10 cwt. of copper ore per fm., and presenting a good appearance, set to four men at 40 pesetas per metre. The dressing of copper ore is again being proceeded with, and in view of making a shipment from Santandar to Swansea direct. I have instructed our agents there to charter a vessel for the same.—Capt. ROSKILLEY.

CHAMPION REEF (Feb. 18).—Fortnightly report:—Mysore section—Carmichael's shaft: At a depth of 225 ft. a cross-cut has been commenced and driven west 5 ft. 6 ins. This drivage should in a short distance intersect the lode. The sinking of the shaft will be resumed, and after a few feet more is obtained in depth it will necessitate another drawing lift, as the present lift of pumps below the plunger pole will not admit of going any deeper with safety, owing to its length and weight. Ribblesdale's shaft: Sinking 3 ft. 6 ins.; total depth, 219 ft. We have two rock-drills at work in this shaft, but the results up to the present are not very satisfactory. We have great difficulty in getting the natives to remain long enough to be taught. It is to be hoped, however, that better results will be obtained during the next fortnight. During the last 2 ft. of sinking we have passed through a branch of mineral, about 6 ins. wide, carrying a little quartz, which contains a trace of gold in the assay. Garland's shaft has been sunk 9 ft.; total depth, 204 ft.; the ground is very favourable for sinking, consequently good progress has been made. The lode in the bottom of shaft is small and carries very little quartz. We have passed through the shoot of ore which is dipping north, and we do not expect any very great improvement in the lode until we get the shaft to the 240 ft., and a drift extended about 60 ft. north to cut the shoot of ore that was passed through in sinking. Dalyell's shaft: Sinking 2 ft. 6 ins.; total depth, 208 ft. 6 ins. We have the same difficulties to contend with here as we have at Ribblesdale's shaft, that is, we have not succeeded in getting natives who can work the rock-drills to any great advantage in sinking. The drift north at the 160-ft. level has been extended 10 ft. 6 ins.; total length, 72 ft. The lode is a little smaller, and the assay value is a little less than last reported. The surrounding rock is very favourable, and it is to be hoped that the lode will open out again to its former width. Prospect shaft: The 320 drive south from the bottom of the old workings below the 260 level has been driven 6 ft. 6 ins., and we have communicated this drive with the 320 level, which has been extended 4½ ft. We are now driving north on the lode at the 320 level, just below the bottom of the old workings; the lode is 3 ft. wide, carrying a good footwall, while the hanging portion of the lode is disordered. The 290 end south has been driven 5 ft. 6 ins.; total length, 124 ft. 9 ins.; the lode is pinched very small, and impoverished. The winze below this level has been sunk 3 ft., the result of one week's work only. A cross-cut has been driven west 3 ft., but up to date nothing of importance has been discovered. Surface work: At Coromaudel section costeaning has been continued at different places on the lodes running through the property. At Mysore section the large water tank and also a small tank for the condensing engine at Ribblesdale's shaft are near completion. The excavation for bob pit is complete, and the buildings will be commenced in the course of a few days.—R. C. JONES.

COLAR CENTRAL (Feb. 18).—Eastern section, north division, new shaft: We have cut the plat at the 200-ft. level, and driven north 16 ft. The end is still in country. South division, main shaft, west cross-cut: The 260 ft. has been driven 3 ft.; total, 52 ft. The end is now hard, and quite dry. Drift north: The 260 ft. has been advanced 13 ft.; total, 45 ft.; lode about 8 ins. wide, consisting of quartz and a soft seam. Drift south: The 260 ft. has been driven 16 ft.; total, 45 ft. The end is carrying lode matter, mixed with a little quartz, about 1 ft. wide. Marden's shaft, drift north: The 240 ft. has been driven 16 ft.; total, 133 ft. There are about 6 ins. of quartz in the end, giving only a trace of gold. Drift south: The 240 ft. has been advanced 17 ft., or a total of 87 ft. There are about 20 ins. of quartz in the forebreast, which shows a little gold in the pan.—A. S. B. OAKLEY.

CORTEZ (Feb. 21).—Run into ore house, 249 tons of ore; trammed to mill, 279 tons of ore; worked at mill, 216 tons of ore; average assay for the week, 66 30-100 ozs. silver.

CUMBERLAND (Jan. 3).—I hereby submit progress report for the month of Dec. Sinking No. 2 shaft: This work has not advanced near so well during the past month as was anticipated. The principal cause of hindrance has been on account of the formation becoming smaller, which made it necessary to break through the dyke (which was very hard) to get room for full size of shaft, and likewise a greater influx of water; the depth sunk for past month being only 23 ft., whereas the month previous it was 39 ft. There is 10 ft. more to sink to complete the contract of 110 ft., which will take till about the 17th inst.; then it will take a week to clean boiler and flues, and a little repairs required to winding plant, before driving north can be started. The same body of ore as mentioned in last report is still going down; it carries a little mineral, but is not of a payable nature as yet; but I think payable ore will be found within the distance of 150 ft. north of shaft. The drive will be carried in a small size to that point, so as to get in that distance as quickly as possible. No. 1 winze, No. 6 level: This winze was started at a point 57 ft. north of shaft. It has been sunk during the month 28 ft., making the total depth below No. 6, 70 ft. A fortnight ago much softer ground was met with on footwall side of lode, and the influx of water from it was so great that the contractors could not make further progress, and were obliged to cease working. During the last week of sinking a small patch of ore was got on the footwall, showing very good mineral. As the No. 7 drive north advances the water will leave this winze, when communication can be effected without further trouble. Battery: The whole of the grinding appliances have been running during the month on tailings. They are yielding a fair profit over the cost. The gold will be smelted to-day, and the result cabled you. On the 16th ult. Cumberland was visited by a most terrific storm. It only lasted about 15 minutes, but during that time it unroofed nearly the whole of the battery shed, carrying some of the iron halfway to the mine, and

breaking some of the roofing timbers 6 ins. thick into splinters. It is now all re-placed again.—W. STRAUGHAN.

EMERALD MINES OF COLUMBIA.—The manager at the mine writing on Jan. 18, says as follows: This week I have removed the greater part of the hauds below the point "Fruto Tovar," and from there upwards towards the veins to establish more fall in the canal. The many mines, up to 50 and 60 daily, together with the widening of the upper part had caused such an accumulation of *débris* that it was impossible with the sudden change of the weather to continue the lowering of the veins. However, we have succeeded in clearing them all, though we have only two to three empties of the pond daily, and I think I shall be able to go on again lowering the veins, leaving 40 hands to work in the lower part of the canal.

EMMA (Feb. 23).—It gives me great pleasure to be able to report a considerable improvement in the different levels of the mine during the past week. In the north-west part of the mine the drift from point of connection has been extended 25 ft., working four men; total distance, 112 ft. The vein matter continues the full width of the drift, oxidised iron appears to be pinching, and instead galena and carbouite ore coming in. The ledge matter is now thoroughly impregnated with this ore, which is an excellent ore for concentrating, but as yet too low grade for first-class ore. This vein matter improves daily, and I have every reason for hoping to cut a body of marketable ore. In the top of the drift some 6 ins. to 8 ins. galena ore appears, and on the south side of the drift we have about 3 ins. to 5 ins. carbonate ore; these two seams have been uncovered the past few days, and I am pushing development work fast as possible, and will start cross-cutting and raising in a few days. The cross-cut from Illinois or Cincinnati level also shows a marked improvement. This cross-cut has been exteuded 14 ft.; total, 70 ft. We still have a large vein of oxidised iron, carrying a small per centage of silver and lead. Yesterday we cut into a seam or pocket of galena, carbonitc and iron ore, mixed, and to-day it shows fully 8 ins. good ore, and gives every indication of widening, so that with this Cincinnati level and the No. 4 level we have every reason for anticipating satisfactory results. We have a considerable block of unexplored ground here which will, I fully believe, produce ore in quantity; on this level I am also pushing work as rapidly as can be done at present. The south-east part of the mine being developed from Emma tunnel also is improving. The hanging-wall drift shows a narrow vein of galena ore, but it is not yet of sufficient width to admit of saving any considerable quantity of first-class ore; we are, therefore, running it into the milling ore. The footwall cross-cut shows about 20 ins. milling ore, from which we mined about 80 tons; this is second grade ore, not fillings, and we have good reasons for expecting the quality to improve as we advance. The mine the past week gives great encouragement. The weather is simply terrible, suowing all the time, snow slides in order, mails few and far between, so it is hard telling when this letter will reach you. Telephone line is also down, so that all connection with Salt Lake City is cut off —H. C. WALLACE.

ETHERIDGE UNITED (Jan. 10).— Fortnightly report: The Caledonian Mine, No. 1 south: In the No. 1 shaft the cross-cut at the 80-ft. level has been advanced 22 ft., and the level south on the reef has been driven 19 ft.; the lode in this shaft is all mundic ore and is 7 ft. between the walls, but there is a considerable amount of mullock or formation to be picked out, which reduces the crushing ore to about 2 ft. 6 ins. Nos. 2 and 3 shafts are on brown ore. and that will average 4 ft. in thickness. We are at present sinking No. 2 shaft for the purpose of getting more stopes overhead. No. 3 shaft was sunk to raise the ore more conveniently during the sinking of No. 2, and is only 8 ft. from the surface. We will be able to raise about 100 tons of ore from this shaft alone. The stoping done in Nos. 2 and 3 shafts, since last reported on, is 6 ft. by 50 ft. No. 2 shaft has been sunk a further depth of 15 ft., making the total depth 37 ft. I shall have the sinking completed in another week. We are at present crushing mundic ore from No. 1 shaft with five stamps, and brown ore from two and three shafts with five stamps.—M. FERGUSON.

GOLDFIELDS OF MYSORE (Feb. 18).—Fortnightly report: The mining operations for the fortnight ending Feb. 16 have been confined to south shaft. The shaft has been sunk 3 ft. 6 ins.; total depth, 218 ft. 9 ins.; besides this an additional piece of ground has been blasted away for a plat at the 206-ft. level. The rock is very hard in the shaft, and 24 coolies are employed iu the 24 hours. The winze below the 206-ft. level has been sunk 3 ft. 6 ins.; total depth, 37 ft.; we are carrying 5 ft. of the width of the lode in the winze; the remaining quartz, which is about 3 ft. wide, is left on the footwall, as the hanging portion of the lode is the most productive. Assays from the lode the width of winze give an average of 15 dwts. of gold per ton. The water has increased considerably which accounts for the falling off in the rate of sinking. This difficulty will no doubt soon be got over, for by sinking the shaft below this point we shall probably drain a large proportion of the water.—R. C. JONES.

GYMPIE GREAT EASTERN (Jan. 22).—Fortnightly report.—During the past fortnight the rise on the Orient reef has been extended 15 ft.; total, 392 ft. from the shaft. or 42 ft. from where we cut the reef. The reef in the rise is small, being not more than from 3 ins. to 6 ins.; it shows a little gold. There is good slate country in the hanging-wall, but there is about 18 ins. of grey mullock between it and the reef. But for this there would be better gold in the reef. The cross-cut has been extended 6 ft.; total, 383 ft. from shaft. In this we cannot make much headway on account of the reef being so flat; the broken mullock from the rise keeps coming down into the cross-cut, and it will be about a fortnight before we get the cross-cut clear of it. The north drive has been extended 9 ft.; total, 16 ft. There is about 15 ins. of crushing stuff, showing a little gold. The south drive has been extended 10 ft.; total, 17 ft. The reef is small here, being not more than 4 ins.; I saw no gold in it. The 690-ft. level: I have started to break quartz on the Great Eastern reef; in the stopes above this level north and south they are all showing a little gold. The 634-ft. level: In the back stopes going north above this level the leaders in the hanging-wall show a little gold, but they are nearly worked ont. Everything about the mine, winding-engine, and battery is in good working order. There are 50 men employed, 43 on the mine and seven at the battery.—J. JAMES.

INDIAN CONSOLIDATED (Feb. 17).—Phœnix section: No. 1 level advanced 8 ft.; ground much harder; hanging-wall of lode continues very defined and clean. The lodestuff is at present 1 ft. 6 ins. wide, and getting more solid, but shows of poor value by pan washings. Tramway level driven 12 ft.; the irregular quartz reported in my last cut out as was expected, and after driving a few feet of barren ground a nice make of stone was struck, which is now 1 ft. 6 ins. wide; it shows colours of gold by washing, and gives promise of somethiug better. Stoping throughout is going on regularly. We are breaking more stone than usual from underhand stope east, the lode there having again widened out at one part; the stone is not so highly mineralised as before, but looks of milling value. At block F we have put up a short rise, and succeeded in opening out a splice of quartz that appears worth taking out, although the doing so will be slow. Quartz is also being got from the north end of stope K, but the lode being small and spary, the quantity is but small. An improvement is noticeable in the lode at stope E, the quartz being much cleaner, and quite 3 ft. wide. Tramway stopes in several places are not quite so productive as they were, either in quantity of stone or quality of same. At the highest point towards the north end, however, the lode is becoming wider and cleaner, and with the view to see if this continues we have started to drive still further north.—J. FRY.

—(Feb. 18).—Colar section:—No. 1 new shaft: Since fixing the donkey pump in this shaft we have been enabled to resume sinking. We have sunk 11 ft. 6 ins., making the total depth now 200 ft.; the ground still remains unchanged, and the water is nearly all in the bottom. No. 2 new shaft, 210 ft. north, has been driven 11 ft.; distauce from shaft, 95 ft. 6 ins. We have been keeping more to the east, and the ground now appears to be coming in somewhat softer and more regular. The 210 ft. south driven 13 ft.; total, 96 ft. 3 ins., and suspended for the present. We have taken the drill away to cross-cut east, and see if we cannot find auything more encouraging in that direction. The 210 ft. south-east cross-cut has been driven 5 ft. by hand labour; total, 12 ft. We have cut several strings of quartz, which all carried a little gold, but nothing to value. The 210 ft. south-west cross-cut driveu 12 ft. 3 ins.; total, 19 ft. There is a little water in the end. Main shaft: The 240 ft. north drive driven 14 ft. 3 ins.; total, 92 ft. 6 ins. The end is still in hard barren ground, and should we not soon discover something we shall have to cross-cut. No. 5 shaft: The 156 ft. north driven 3 ft. 9 ins.; total 182 ft. 9 ins. No chauge since last report. The 156 ft. north-east cross-cut No. 2 has been driven 18 ft. 6 ins.; total, 83 ft. 6 ins. The end is still in barren ground. The 425 ft. winze south drift: Progress made 5 ft. 3 ins.; total, 35 ft. Quartz all the size of the drift, giving 1 dwt. 7 grs. of gold. The 450 winze sunk 3 ft. 6 ins.; total, 17 ft. 6 ins., with lode 1 ft. wide, assaying 1 dwt. 7 grs. The 450 ft. back stope: Lode 2 ft., assaying 1 dwt. 23 grs. Machinery: Parts of the new air-compressor machinery are arriving on the mine, as also parts of the pumping engine for the No. 2 new shaft.—A. S. B. OAKLEY.

LA LUZ (Feb. 9).—I saw the mule train loaded with the goods of the compauy and started the day following for this place. Three days after my arrival the mule train arrived and delivered the goods in good condition. I have looked over the surface grounds of the San Miguel mine since my arrival, and find by chauging the course of the preseut drift somewhat that I can cut the ore body at a much less distance thau reported to you. Next week I will make survey and plan, and will be able to state exactly how much work will be required before reaching the ore. We are putting the old pumps in repair, so as to pump out the "Zapopan Mine" and reach the ore at bottom of shaft, and I trust that from now on we will begiu to show progress satisfactory to all concerned.—H. A. HILTON.

MOUNT ZEEHAN (Jan. 26).—The manager writes:—I have bagged ready for delivery 38 tons first-class ore. There are also 60 tons secoud-class ore not bagged, and 10 tous of ore not sorted. Montana section: Open cast. Duriug the past week we have put down the shaft 7 ft., making total, 24 ft. A stope has been commenced 7 ft. high, 5 ft. wide; 6 ft. driven. The lode is looking well, carrying 2 ft. solid ore. The wiuze on the south cross-cut we have opened out, and the ore is improving driving north, but on account of the cost of keeping down water I am discontinuing this stope. This winze is 21 ft. deep, and 8 ft. have been driven on lode north. The west cross-cut has been extended a further distance of 8 ft., making total distance from approach, 275 ft. In the end of the cross-cut a splendid lode has been cut, and is 8 ft. wide as far as we have gone, and yet we have not got through the lode. It carries galena intermixed with slate and lode matter, and we have taken from it about 2 tons first-class ore, and about an equal quantity of second-class. Our ground outside the mine is very limited for accommodation of secoud-class ore, so much so that I am almost blocked up. Queen Extended section: The 110-ft. cross-cut west has been extended a further distance of 8 ft., making total distance, 145 ft.; ground hard slate, much disturbed, and making more water. A drive has been started from the 110-ft. cross-cut on the course of No. 1 lode runuing north; 8 ft. have been driven and timbered. The formation is slate and clay. The air shaft ou course of No. 1 lode has been sunk 6 ft.; total depth, 39 ft., and timbered. The lode looks better here than it does in the drive, being iutermixed with carbouate of iron, quartz and slate. No. 2 lode, air shaft: As I find that this shaft has become drained by the working from No. 1 shaft, and with a view to extracting some ore therefrom, I have placed two men here to open out this shaft. I find there is some ore in the south end of the shaft. During the last five days two men have been employed in cleaning up, and squaring and timbering the shaft down. Its present depth is 16 ft. The ground is very tight, and slate formation.

— The following telegram was received from the local committee, dated Hobart, Mar. 9:—"50 tons of ore shipped for England, per s.s. Murrumbidgee."

MYSORE (Feb. 18).—Mining operations for the fortnight ending Feb. 14:—The 780 north of Rowse's shaft has been driven 22 ft. 3 ins.; total distance, 72 ft.; the ground is easier for driving, and there is a little quartz getting mixed with the country rock, and judging from indications the lode should be met with here very soon. The 700 north of Rowse's shaft has been driven 37 ft. 3 ins.; total distance, 283 ft.; the lode is 2 ft. wide, and assaying 6 ozs. 4 dwts. The 550 south of the incline shaft has beeu driven on the west lode 2 ft. 8 ins.; the lode is 2 ft. wide, and assayiug 1 oz. The 466 cross-cut north-west of Rowse's shaft has been driven 17 ft. 10 ins.; total distance, 386 ft. 10 ins.; the rock is letting out a little water, but very hard and spare for driving. The 236 north of Rowse's shaft has beeu driven 2 ft. 6 ins. (on No. 3 fold); total distance, 30 ft. 6 ins.; the lode is 3½ ft. wide, and assaying 1 dwt. 12 grs. Glen's shaft: The 250 north of shaft has been driven 30 ft.; the grouud is mixed with veins of quartz, but broken up and disordered; we shall continue this level a little further north, but if there is no improvement we shall cross-cut east

to see if there is any other part of the lode standing in that direction. Schaw's shaft: The 450 north of shaft has been driven 26 ft.; total distance, 148 ft. 6 ins.; the lode is 3 ft. wide, and assaying 2 dwts.; it is rather unsettled at present, but looking promising to improve. The 450 south of shaft has been driven 2 ft. 6 ins.; total distance, 56 ft. 6 ins.; the lode is 9 ins. wide, and assayiug 4 dwts. The 320 south of shaft has been driven 4 ft. 6 ins.; total distance, 182 ft. 6 ins.; the lode is 9 ins. wide, and assaying 12 dwts. The 320 north of shaft has been driven 3 ft. 3 ins.; total distance, 141 ft.; the lode is small and unproductive. Tennant's shaft: The 360 cross-cut north of shaft has been driven east 26 ft., at which point it intersected the main part of the lode; since then we have driven north 5 ft. 5 ins. in a lode 3 ft. wide, well defined and presenting a very promising appearance, and yielding quartz of low quality, but this level is not far enough north to intersect the rich run of quartz discovered in the levels above. The 290 south of shaft has been driven 33 ft. 6 ins.; total distance, 234 ft.; the lode is small but yielding occasional stones of quartz, and carrying a very firm and regular footwall. The 290 north of shaft has been driven 36 ft. 10 ins.; total distance, 569 ft. 10 ins.; the lode is 1 ft. 6 ins. wide, and assaying 2 ozs. 0 dwts. 8 grs. The 180 north of Tennant's has been driven 33 ft. 6 ins.; total distance, 721 ft.; the lode is 3 ft. wide, and assaying 3 dwts. 6 grs. I think this level has just entered another run of quartz, and no doubt the quality will improve as the level gets further advanced. Stopes: The lode in stope in back of the 770 south of the incline shaft is 2½ ft. wide and assaying 18 dwts. The lode in stope in back of the 700 south of Rowse's shaft is 2 ft. wide, and assaying 2 ozs. 1 dwt. The lode in stope in back of the 700 north of Rowse's shaft on the fold is 3 ft. wide, and assaying 1 oz. 10 dwts. No. 2 stope in back of this level north of shaft (on the main lode) is 2 ft. wide, and assaying 1 oz. 9 dwts. 9 grs. The lode in stope in back of the 700 south of incline shaft (on the wide lode) is 4 ft. wide, and assaying 1 oz. 19 dwts. 4 grs. The lode in No. 1 stope in back of the 620 south of the cross-cut from incline shaft is 3 ft. wide, and assaying 1 oz. 6 dwts. 4 grs. The lode in No. 1 stope north of Rowse's shaft is 1 ft. 6 ins. wide, and assaying 6 dwts. 12 grs. The lode in No. 2 stope north of shaft is 1 ft. wide, and assaying 1 oz. 19 dwts. The lode in stope in back of the 600 south of Rowse's shaft is 3 ft. wide, and estimated to be worth 1 oz. The lode in No. 1 stope in back of the 550 north of Rowse's shaft is 5 ft. wide, and assaying 2 ozs. 5 dwts. 12 grs. The lode in No. 2 stope in back of this level is 2 ft. 6 ins. wide, and assaying 3 ozs. 5 dwts. 8 grs. The lode in stope in bottom of the 550 north of inclinc shaft is 1 ft. wide, and assaying 6 dwts. 12 grs. The lode in stope in back of the 550 south of Rowse's shaft is 3 ft. wide, and assaying 4 dwts. The lode in stope in back of the 400 north of Rowse's shaft is 3 ft. wide, and assaying 6 dwts. 12 grs. The lode in stope in back of the 400 south of Taylor's shaft on south fold is 4 ft. wide, and assaying 1 dwt. 23 grs. The lode in stope in back of the 400 south of Plummer's is 3½ ft. wide, and assaying 3 dwts. 6 grs. The lode in stope in back of the 360 south of Plummer's is 2 ft. wide, and assaying 5 dwts. The lode in stope in back of the 296 north of Rowse's shaft is 2 ft. 6 ins. wide, and assaying 9 dwts. 15 grs. The lode in stope in back of the 296 north of Plummer's is 1 ft. 6 ins. wide, and assaying 7 dwts. Rising: The rise in back of the 290 north of Tennant's shaft has been put up 18 ft.; the lode is 5 ft. wide, and assaying 1 oz. 19 dwts. 14 grs. The lode in rise in back of the 180 south of Tennant's shaft is 1 ft. 6 ins. wide, and assaying 2 dwts. 14 grs. The lode in No. 1 rise in back of the 180 north of shaft is 4 ft. wide, and assaying 1 oz. 5 dwts. 17 grs. The lode in No. 2 rise in back of this level is 3 ft. wide, and assaying 2 ozs. 0 dwt. 4 grs. The lode in No. 3 rise is 2½ ft. wide, and assaying 3 ozs. 5 dwts. 8 grs. Sinking: Rowse's shaft has been sunk 12 ft. below the 780-ft. level. This shaft is at present in the trap rock, and is very hard and spare for sinkiug. We have commenced a new shaft (12 ft. by 6 ft.) to the north of Tennant's, which we purpose to sink perpendicularly to the 180-ft. level, at which point it will intersect the lode. The winze in bottom of the 320 south of Schaw's shaf has been sunk 3 ft. 3 ins.; total distance, 110 ft.; the lode is 6 ins. wide, yielding stones of quartz, but nothing to value. All the surface operations are going on with their usual regularity. The mills and tailings machinery are doing good duty, and the engineers are erecting the Cornish pumping engine on Glen's shaft.—J. Gilbert.

NAMAQUA.—Abstract of superintendent's report for Jan.—Tweefontein Mine.—The 73-fm. level east: There is no change since last report in the character of the ground in this driving. The 73-fm. level west: There is a little change in the appearance of the ground in this direction. It is more stained with iron, and shows a little yellow ore. The 58-fm. level east: This is being worked as a stope and driving combined, the ore ground being a little above the level, but probably it will be found that it reaches the bottom. There are indications of further improvement; worth 4 tons of ore per fm. The 58-fm. level—No. 13 winze: This is now down the required depth to meet the 73-fm. level and is suspended. As soon as the level is communicated with it, the sinking of the shaft will be resumed. The 43-fm. level: Appearances are improving here; worth 1 ton of ore per fm. The 43-fm. level—Stope in bottom on north part of lode: There is a falling off in this stope, and consequently it has been decided to drive through to the shaft on the course of the ore body; worth 6 tons of ore per fm. The 33-fm. level—Stope No. 1: This stope is still yielding ore of good quality; worth 7 tons of ore per fm. The 33-fm. level—Stope No. 2: This stope is leading into new ground; worth 8 tons of ore per fm. Wheal Julia Mine: Very little work has been done here since last report. New East Centre: There is scarcely any change to report in the appearance of the ground. It continues to present a favourable appearance. Shipping: The Victoria arrived at Swansea with 1,048 tons of ore on Feb. 26. Output for Dec.: 403 tons of 31 per cent.

NEW-DEVALA MOYAR (Feb. 17).—The 116-ft. level—Drive west: This drive has been extended 6 ft.; total length, 132 ft. This point has been stopped temporarily, and the drill removed. In the stope in this level the reef continues to open out well eastwards, where we have a large body of good milling quartz. In the stope in the 78 level we have driven westwards with a rock-drill, and extended the stope 20 ft. in length. Here we have a large reef of milling quartz, from 10 to 12 ft. thick. The battery is crushing daily for two shifts owing to scarcity of water. We have completed our stack of fuel at the compressor, and have finished thatching it. All our machinery is working well.—R. B. Johnston.

NEW EBERHARDT (Feb. 22).—The mine manager reports:—Total amount of ore extracted and assorted for the week 30 tons; assay value of the same as per mine samples, $40 per ton. No change in the mine worthy of note. The decrease in the output of ore for the week was occasioned by one of the ore assorters being sick during the greater part of the week.

NEW GOLD HILL (Feb. 26).—In the 160-ft. level west I have stopped the back stoping, and commenced to sink a winze in the shoot, which is looking better in the bottom, and showing better in gold than it does upwards, and we find in milling that it is showing much better at the level where we first cut the ore. The prospects in Martin shaft are looking quite favourable; the vein improves in quality and size as we sink. Unfortunately, we have some water to contend with. The 435-ft. level and the 300-ft. level west of Barnhardt shaft are showing much the same as per last report. Results of stamping I hope to be able to let you know about Mar. 12.

NEW RUSSELL.—Work in the Big lode is still being carried on with a small force of men, who are leasing the No. 1 stope north-east from the winze. During the two weeks under report 162.75 tons of ore were hoisted to the surface from the point. The ore is of fair grade, showing a nice point of gold in panning as an average. It is in my opinion a good deal better than any we have had in Riggon Hill for a long time, and will, I believe, average $5 per ton by assay, some streaks, of course, being richer and some poorer. The only other work in the mine is the keeping of water at Riggon Hill shaft, which is being effected by the engineer daily as usual, although the water has been considerably stronger of late, owing to extremely heavy rains. (A telegram from the mines appears in the usual place).

NUNDYDROOG (Feb. 18).—The 450 north, winze in bottom: Depth sunk, 15 ft., by two Englishmen with a rock-drill; present depth, 50 ft.; the lode looks as well as ever, being 3 ft. wide and assaying 2 ozs. 18 dwts. per ton. The 450 north, rise and stope in back: Ground stoped, 5 fms. 3 ft., by two natives with a rock-drill; the lode is a strong one here, being 6 ft. in width; the quartz is rather white, and assays 1¼ ozs. per ton. The 450 south, winze and stope in bottom: Distance sunk, 14 ft., and ground stoped, 3 fms., by one Englishman with a rock-drill; depth below the 450, 56 ft.: the lode is 4 ft. wide, and assays 2 ozs. 6 dwts. 12 grs. per ton. The 370 south, stope in bottom: Ground stoped, 8 fms., by one Italian with a rock-drill; the lode is 3 ft. wide, and worth nearly 2 ozs. per ton. The 370 north, cross-cut west: Distance driven, 23 ft., by two Italians with a rock-drill; present length of cross-cut, 43 ft.; the water issuing from the end has increased considerably, and there are a good many strings of quartz in the face. The 370 north, stope in back: Ground stoped, 3 fms., by two natives with a rock-drill; The lode here is 2 ft. 6 ins. wide, and assays 2 ozs. 11 dwts. 6 grs. per ton. Taylor's shaft, north drive: We have driven 10 ft. north from the shaft, and have now commenced to cross-cut east to the lode. We have also sunk 2 ft., and cut 2 fms. of ground for cistern plat, &c. We shall have another rock-drill at work here on Monday. North shaft, cross-cut west to Kennedy's: This has been driven 23 ft., by one Italian with a rock-drill; the ground is hard, and we have some water to contend with. Health: All the Europeans at work; we are still short of coolie labour, owing to the cholera. Mill samples: Rough quartz, 2 ozs. 15 dwts. 12 grs.; smalls, 1 oz. 18 dwts.—F. W. Grey.

OSCAR (Mar. 4).—Hodgkinson's lode: The shaft has been sunk 8 ft.; total depth, 283 ft. from surface. The disturbance reported on the 25th ult. has passed away, and we have now a run of quartz on the footwall about 10 ins. in width, assaying 7½ dwts. to the ton. There is also a good deal of refractory ore, which shows a high value for gold. A mill test of 10 tons gave 3 ozs. 7 dwts., or 7 dwts. to the ton. As we are lengthening the skip road we have reduced the number of men to three for the present. The 200-ft. level north: Driven by two men. The quartz is 12 ins. wide, often showing specks of gold, and occasionally well mixed with copper and iron pyrites. A mill test of 15 tons gave 4 ozs. 6 dwts. gold, or 6 dwts. to the ton. The 200-ft. level south is being driven by two men; quartz 3 ft. wide, with a small run about 10 ins. wide on the footwall. Of this latter we crushed 15 tons, which gave 3 ozs. 14 dwts. gold, or about ¼ oz. to the ton. Winze in bottom of 150-ft. level is 35 ft. deep, and the quartz is more compact, of a bluish colour with a little pyrites; 10 tons passed through the mill gave 2¼ ozs. gold, or 4½ dwts. to the ton. Sinking with three men. Stope in back of 200-ft. level has been worked by six men. The quartz has varied in width from a few inches to nearly 2 ft. We have crushed 29 tons; which gave 8 ozs. 6 dwts. gold or 6 dwts. to the ton. Rise in 150-ft. level. The men have just passed through a depressiou, and are in a good lode of quartz. No assays have been made. Stopes in back of 150-ft. level have produced a mixture of quartz and country rock. We have crushed 67 tons of quartz, which gave 10 ozs. 2 dwts. bullion, or 3 dwts. to the ton. Hewlett lode: The men are in a different strata of rock, which is mixed with strings of quartz, containing a quantity of mineral, but we have not seen any separate walls, hence conclude that we may at any moment cut into the lode proper. Our next report will we think give more information on this point. Other places no alteration.—J. Daw, jun.

OOREGUM.—Fortnightly report of the superintendent, dated Feb. 18:—During the week we have had a few cases of cholera among the local coolies and servants. The Moplahs have nearly returned, and commenced work a few days ago, but not sufficient done in the majority of workings for measurement and report to-day. We hope from this date that operations will proceed with regularity. We have put back several rock-drills on development work during the past few days. During the fortnight Wallroth's shaft has been sunk 12 ft.; total, 59 ft. 2 ins. below the 280-ft. level; the lode has improved in size, now 2 ft. 6 ins., value 5 ozs. 18 dwts. per ton. The 280-ft. level south advanced 6 ft. 6 ins.; total from shaft, 532 ft.; lode 1 ft. wide, value 1 oz. 12 dwts. 16 grs. per ton. The 215-ft. level north advanced 8 ins.; total, 66 ft. 5 ins.; lode 2 ft. wide, value 6 ozs. 19 dwts. 3 grs. per ton. The 215-ft. level south advanced 1 ft. 6 ins.; total 256 ft. 8 ins.; lode 9 ins. wide, assaying 10 dwts. 2 grs. per ton. Low's shaft: The 350-ft. level north advanced 23 ft. 6 ins.; total, 58 ft. 9 ins.; lode 1 ft. 6 ins. wide, value 5 ozs. 14 dwts. 5 grs. per ton. The 350-ft. level south extended 27 ft. 8 ins.; total, 55 ft.; lode still pinched; 9 ins. wide, value 1 oz. 1 dwt. 19 grs. per ton. Winze in bottom 270-ft. level south sunk 2 ft. 6 ins.; total, 23 ft. 6 ins. In consequence of water no sample was taken last week. Probyn's shaft: Sunk 8 ft. 6 ins.; total below 450-ft. level, 25 ft.; lode 1 ft. 6 ins., assaying 5 ozs. 5 dwts. 2 grs. per ton. Surface: Coolies are now engaged excavating ground for the new tailings machinery.

PAHANG (Jan. 24).—The mines: When I arrived at Sungei

Lembing, after writing you last, I found that the bottom drive in Pollock's had improved beyond all expectations. There was when I left (Jan. 21) 6 ft. 2 ins. of 15 per cent. stone there. The best thing by far I have seen yet and more especially encouraging, as that is the lowest working upon this lode. Our new mine manager, Mr. McKenzie, entertains the same opinions as regards Jeram Balang as myself. I hope to cross-cut this lode in February, and if it proves at all promising, shall at once erect a 10-head battery there. I intend, as soon as I can get hold of a suitable man, to prospect the country up at Ulu Reman, and have great hopes of opening another place in that direction. To make this place a success, we must first show a profit upon Sungei Lembing, which carries, and is capable of carrying, the whole expenses of management of the corporation. I see my way to doing this, and am, therefore, looking further afield.—A. H. Neild.

PITTSBURG CONSOLIDATED (Feb. 22).—During the week we mill 210 tons of ore (estimated) of average assay value of $13.43 per ton in gold, saving 87 6-10 per cent. of assay value. The weather continues cold and stormy, so that we can only run half the mill. The mill and mine are in good condition, and as soon as the weather moderates good results will be given.

RUBY.—Report upon the mines for week ending Feb. 21.—Dunderberg : We have six men on day's pay aud 13 tributers at work here. The ore in the Home Ticket continues about the same. The 700 ft. incline sunk 12 ft. during the week; total, 130 ft. ; and to-day I started a drift under the old chambers. Lord Byron : We have 21 tributers and four contractors and two men on day's pay at work here. Contract drift advanced 12 ft. ; total, 40 ft. I will continue this drift some distance further, as the ore in the winze is pitching away from the drift, and we may be able to connect in ore. Bullwhacker Mine : We have six men at work here. The Williamsburgh shaft is down 400 ft., and they are about to drift to make connection with our miue for air, which will be a benefit to us also.

SOUTH-EAST MYSORE.—Fortnightly report of the superintendent, dated Feb. 18 :—The following progress has been made in the fortnight ending the 14th inst. :—The 500 level north of main shaft : An advance of 13 ft. was made up to the 10th inst., making the total length of the drift from the shaft 227 ft. The lode matter in the end is about 1 ft. wide. but without any quartz. It was decided to suspend this end for a time, and on the 10th inst. the drill was taken out and put to cross-cut east. The 500 level north cross-cut east has been advanced 11 ft. 6 ins. ; nothing has been discovered so far. The 500 level north cross-cut west : This cross-cut has been started by hand labour, and an advance of 4 ft. made. The 500 level south of main shaft has been advanced 10 ft. ; total, 67 ft. A branch of quartz about 6 ins. wide has been intersected. An assay of the quartz gave 1 dwt. 7 grs. The health of the camp continues good. The machinery is working satisfactorily.

WEST INDIAN (NEW).—Extract of a letter received from the compauy's manager at San Domingo, dated Feb. 10, received Mar. 13, about 10 days delayed. The first square yard of bed rock we cleaned produced 1½ ozs. of gold. It has uot all been as good as the first, but some places have been very good. In one boka taken from the bed rock we had $1 52 cents gold. We ship by this steamer 10 ozs. of gold as a sample of the quality we are now getting. The company are in receipt of the bill of lading for the above amount of gold.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

NEW VICTORY MINING CO.

To the Editor of the Mining World and Engineering Record.

Sir,—Can any shareholder in this company enlighten me as to the position of the two opposing parties? It seems to me on a par with the game of battledore and shuttlecock.

The sooner all paid servants—directors included—are disqualified from voting, the better it will be for the majority of investors.—I am, &c.,

L. H. R.

Production of Phosphorus by Electricity. — Another advance in the practical application of electric power has been made at the Wennesfield Works of the Phosphorus Co., Limited, who now depend exclusively upon that power for their supply of phosphorus. A new plant of 700-horse power was officially inspected in full work on Monday last by the directors and officers of the Phosphorus Co., Limited, and of the Electric Construction Corporation, Limited (the contractors for the plant), when the results, both as to quality of material and cost of production, were considered to be eminently satisfactory.

Loma.—These shares have again been largely dealt in. and close firm at last week's prices—a favourable fact which applies, by the way, to only some half-dozen mines of the very large number mentioned upon the official price lists of the Stock and Mining Exchanges. Recommended in this circular a few weeks ago at 1s. 6d., Loma shares have risen by easy stages—first to 1s. 9d. then 2s., again to 2s. 3d., then to 2s. 6d., and lastly to 2s. 9d., which is the present price, and the writer still ventures to predict that an immense rise will take place, and that even the coming week will see a further advance in quotations. He accordingly recommends his readers and clients to buy immediately.—From Mr. Thos. Thompson's Circular.

Holloway's Ointment and Pills.—A frequent cause of gout and rheumatism is the inflammatory state of the blood, attended with bad digestion and general debility. A few doses of the Pills taken in time are an effectual preventive against gout and rheumatism. Anyone who has an attack of either should use Holloway's Ointment also, the powerful action of which, combined with the operation of the Pills, must infallibly effect a cure. These Pills act directly on the blood, which they purify and improve. Having once subdued the severity of these diseases, perseverance with the Ointment, after fomenting the affected joints with warm brine, will speedily relax all stiffness and prevent any permanent contraction.

REPORT OF MEETING.

POTOSI, LIMITED.

RE-CONSTRUCTION ADOPTED WITH UNANIMITY BY THE SHAREHOLDERS—SUCCESS ASSURED.

AN extraordinary general meeting was held yesterday, at Winchester House, for the purpose of receiviug a report of the directors, and for the purpose of considering, and, if deemed expedient, passing, the subjoined resolutions :—

RESOLUTIONS.

1. " That it is expedient to re-construct the company, and accordingly that the company be wound up voluntarily, and that Mr. John Bryce Wilkinson be and he is hereby appointed liquidator for the purposes of such winding up." (2.) " That the liquidator be and he is hereby authorised to consent to the registration of a new company to be named ' Potosi Consols, Limited,' with a memorandum and articles of association, which have already been prepared with the privity and approval of the directors of this company." (3.) " That the draft re-construction agreement submitted to this meeting, and expressed to be made between this company and its liquidator of the one part, and Potosi Consols, Limited, of the other part, be and the same is hereby approved ; and that the liquidator be and he is hereby authorised, pursuant to section 161 of the Companies Act, 1862, to enter iuto an agreement with such new company, when incorporated, in the terms of the said draft, and to carry the same into effect with such (if any) modifications as may seem to him expedient."

Mr. S. F. Somes

(chairman of the company) presided.

Mr. J. Bryce Wilkinson (secretary) read the notice of meeting.

NEED OF RE-CONSTRUCTION.

The Chairman : Gentlemen, I need not tell you that it is with the greatest regret we have found ourselves called upon to propose to you another re-construction. But there was no other course open to us. The voluntary system is worse than useless in such a case as this. If we had appealed to the principal shareholders they would naturally say, " Why should we put our hands into the fire to get the chesnuts for the rest?" It has been tried over and over again, and found utterly useless. To have attempted to issue the debentures upon a property of this nature would have been quite futile, because when we did so before only a small amount was taken up, and that chiefly by myself and the board, and, therefore, in the present position of the company, there was no other course open to us than to put this proposal for re-construction before you, and I cau assure you that if we were hopeless about the concern, if we had come to the conclusion, after all our experience of it, and all our disappointments with it, that it was not worth putting more money into, we should not have proposed it, but should have faced the inevitable at once and advised you, as shareholders, for your own sakes, and for ours who hold very largely in it, that the company should be would up at once without further attempt to resuscitate. But here we are with a property that certainly has hitherto given nothing but disappointment, but the reports that we now have and that we have been receiving for some time, show that the mine is improving, and we now should be doing fairly well if we had a little more capital. That is what we have to get now. I would say

A FEW WORDS TO THE PREFERENCE SHAREHOLDERS.

We think (I hold more than half of said shares myself) that the ordinary shareholders have done a great deal for the preference shareholders, as well as for themselves, inasmuch as they have fouud 9s. per share by previous re-constructions. I should explain to those not aware of the fact that the preference shareholders are those who came forward years ago, when no one else would do anything for the company, and subscribed for debentures, so as to help it out of its difficulties. Then, when the money was not found sufficient, there was a re-construction, and it was thought fair that we should have our capital made, at any rate, into a preference, and so we were given 10 per cent. preference shares, the interest not cumulative, and, therefore, up to the present time, since the last re-construction, the company has had our money to the extent of 65,558*l.* without our getting a penny interest, nor have we any claim for it. The preference shareholders also have a preference over assets, but I put it before you, gentlemen, those who are preference shareholders—What would you get, supposing the company were left to its fate, and no efforts were made to get it reconstructed, and in order to obtain further mouey, of which we find a great deal ourselves, being also large holders of ordinary shares, as are most of the preference shareholders? There are liabilities on the property, not to any formidable amount, but still, there they are, and if it came to be an abandoned gold mining property in Venezuela, you may suppose, if it were put up for sale, it would fetch very little indeed—in fact, probably not enough to pay the liabilities, but we wish to avoid such an extremity. Therefore, there would be nothing for the preference shareholders out of the assets, and so we thought it was not fair to ask the ordinary shareholders again to find money to the extent of 2s. 6d. a share to help on the company unless the

PREFERENCE SHAREHOLDERS GAVE UP THEIR PRIOR RIGHTS.

That is what we propose, and I may mention that out of the 65,558 preference shares we have the consent of holders of at least 60,000. (Cheers.) That is a positive fact—(Renewed cheers)—aud probably those who would dissent ultimately would be very few, if any. There have been a few adverse letters received, but the whole of the shares represented would not exceed 1,000 shares, both preference and ordinary. When this scheme is carried, any preference shareholders who may object to give up their rights, must not think they will get anything by holding out. I say plainly, it will be of no use to stand out against the re-coustruction, nor do I auticipate that there will be

any substantial difficulty. Then, with regard to ordinary shareholders, the position of affairs is this—there is the property. As I told you, the directors, the managers, and all those who know it are not hopeless by any means. There are the four lodes, and more than that number—the Potosi in particular. According to recent letters, in Potosi we came upon a bed of blue stone just as we were apparently getting into the good portion of the Potosi lode. The manager states that he is now through, and the lode is looking well underneath. It would be interesting to read the letters from Mr. Pryor, which we received this morning, dated Feb. 15 and 20. Samples sent home from Socorro were exhibited at the annual meetiug, and there was also a splendid one from Potosi.

BIG ASSAYS.

The one from Socorro we had tested, and there, of course, you get every bit of gold that is in the quartz, and the results of that were so astounding that we did not publish them, for it would be thought rediculous, but the facts are as follows:—Mr. Griffith (assayer to the Bank of England), after assaying the specimens, gave two reports as follows:—"I have examined the one sample of quartz received, and found the following to be the result—gold, 350 ozs. 18 dwts. 8 grs. per ton. After it was pulverized as fine as it could be, it was passed through a very fine sieve, the result of this was that as the stuff is pulverized, the gold, of which there was such a great quantity, got flattened; consequently the small pieces produced could not pass through the fine sieve, and left in the sieve at the rate of 103 ozs. 5 dwts. 9 grs. of pure gold. Then came the assay when it was put through the ordinary process 247.9 ozs., or giving 351 ozs. to the ton, and the other is very much the same. It shows 343 ozs. Those are the results of the two samples you saw at the last meeting. I am not, of course, pretending to say that in very great quantity this exists in the lode, but this quartz was taken from the surface, and can be worked cheaply, as you will see further on. Getting such stones (and especially the one from Potosi as large as an ordinary sized hat), it is not reasonable to suppose that where a large piece of such extraordiuary quartz appears in a big lode, that that is the only piece that exists therein; we know it cannot be, but a little of that would

BRING UP THE AVERAGE TO AN ENORMOUS PERCENTAGE.

Experts may differ from Mr. Pryor on the subject of the mill, but there is the gentleman on the spot, who has had experience of the pulverser, so that we may believe there is justice in what he says. The lode is hardening as it goes down, and it may be that he will find the mill will be just as good for treating Socorro quartz as Potosi by and by, and all we want to get is a good mill aud for that purpose, amongst others, we are askiug you for this money. I will now read the letters.

IMPORTANT LETTER.

Feb. 15.—My No. 97 was dated 6th inst., and I am now in receipt of your favour No. 68, dated 20th ult. Tailings: I will report fully on this subject as soon as I can send you samples promised in my No. 96. As to screens, I am now using the finest that are made (40 mesh). The sledge-hammer action of the stamps, driving everything by main force through the screen, is entirely different to the gentle wash of the pulveriser. You would be astonished were you to examine under a glass the relative sizes of the discharged pulp from the two sources. This fact is perfectly familiar to experts conversant with the two systems, though, of course, there are no bounds to the prejudice of those acquainted only with one. However desirable a mill may be for the hard rock of Potosi, and the two new lodes, I am certain that stamps will never do justice to the gossany and friable quartz and light float gold of Socorro. To crush such material in a mill is like crushing so much mud, and yields little better results, rich as the quartz is, and as you have proved it to be. Work for this month at least will be confined to Socorro and the two lodes. I can do no justice to Potosi until I can lower a pump and sink the shaft. Meanwhile if I can, as I think I can, do a cheap and satisfactory month's work on the other three lodes, it will be pleasing to know that our bow has more than one string. The general outlook of these three lodes is highly encouraging. On No. 1 lode, it is true, very little has been done, but the quartz is of good quality and the lode well defined. In No. 2 lode the quality of quartz is fully as good, and its great width offers the opportunity of stoping away large quantities at a cheap rate. The quartz of Socorro hardens comparatively with depth, though, for reasons I have stated, returns in proportion to its real value cannot be hoped for in the mill. All these works being on the surface, I have proposed to the miners a further reduction of their pay to $2\frac{1}{2}$ a day. Labour is scarce at the best, and Carnival has made it scarcer for the past few days, but I have a few working already, and expect more to-morrow. I was not surprised at the brilliant results from the assay of Socorro samples. I knew that the gossan, or decomposed pyrites, was extremely rich in very fine laminated gold. This is just what floats away, and is infallibly lost in the mill, but on the contrary is preserved in the assay and in the pulverizer.

ANOTHER IMPORTANT LETTER.

Feb. 20.—My No. 98 was dated 15th inst. I am glad to say that the miners, after some natural reluctance, have acceded to my terms, and I have now all the labour that I want. I forward you by this mail the plan of Socorro referred to in my last. I am extremely pleased with the look of the lode. I have now driven 252 ft. in the deep tunnel, and find all the quartz of good milling quality; the width of the lode varies from $2\frac{1}{2}$ to 4 ft. The latter dimension is that of the furthest point reached. The walls are thoroughly well-defined, the material admits of easy extraction, and I have every reason to believe that we have here a lode of rich promise. It must be remembered that we are so far merely trifling with the surface. The true quality of the mine has to declare itself at a greater depth. The length of the pay shoot is still undetermined, but, so far as I can judge, will extend to at least 300 ft. No bluestone has been encountered, nor is any water to be expected for a considerable depth. You must not found too sanguine hopes on the samples you have lately tested. The decomposed pyrites, which contain most of the gold found in such abundance in those samples, is only found near the surface where the quartz has long been exposed to the action of the weather. Nevertheless, this is a most hopeful sign of a lasting lode, and when we come to consider the large quantity of quartz presented, and the cheapness and ease with which it can be taken away, we must look upon this lode as a most valuable feature of the property. I have already said enough on the especial treatment necessary for this soft and friable quartz. I need only confirm my previous assertion, that the ordinary mill is inadequate to show its value. To prove this mine, I should recommend sinking a shaft on the incline of the lode, and driving to the full extent of the payshoot. Forming, as it does, the backbone of a hill, ventilation is simple by means of adit, which will also serve for drainage should water occur.—J. PRYOR.

Those, gentlemen, are the latest advices. There have been continuous similar reports for a long time, but, unfortunately, in the working from various causes we have not proved the quartz to be so good as he anticipated. This month will very likely be disappointing for he will be working on Socorro quartz chiefly, while erecting a pump and sinking on Potosi lode. We have, however, come to the end of our tether. It is for you to say whether with this property before you, notwithstanding all our disappointments hitherto, you will let it go and not pay half-a-crown per share, not only to save it, but perhaps to reap as your reward a good many half-crowns in the course of time. I, as chairman, and I am sure my co-directors with me, strongly urge upon you to accept the proposal we put before you. We feel sure it is the only thing to be done, and, as I have said, if we were not very hopeful that the property would yet turn out well we would not have submitted this proposal to you to-day. (Cheers.)

Mr. LATTEY (solicitor) here read the heads of the agreement, which is open for the inspection of shareholders at the office.

VIEWS OF ONE WHO HAS SEEN THE MINE.

Major SCRIVEN (director): The proposals you have heard from the chairman it is my duty to second. In doing so, I can assure you that I feel a great deal of responsibility, and you may be sure that the whole of the board share that feeling. (Hear, hear.) There is not one of us who would not have honestly stood up before you, and said "Gentlemen, I advise you to abandon your property, there is no hope for it," if we had honestly thought that the best counsel to give; but it seems to me we have to face this position, and this is the view we should take of it. I will not go iuto the details of the scheme, as they have been so plainly put before you by the chairman, but we want more money, or we must abandon the property. The half-crown a share will be sufficient for our purposes, and we consider that the preference shareholders must do something towards getting this money, which they do by giving up their claims over the assets in the event of winding-up, and also their claims to preference dividends. The preference shareholders represent the money which the debenture-holders placed into the concern on behalf of the ordinary shareholders. The way I look upon the matter is this—that were we a commercial or industrial company, before we could ask you for more capital, it would be necessary that we should explain the probable results of its expenditure, and show that it would give a substantial return, but in a gold mine that cannot be done. I suppose nobody joins a gold mining company who does not feel he is entering upou a scheme whose chief, if not entire, element is speculation or uncertaiuty?

THE REAL QUESTION.

The question for us to consider, as ordinary shareholders, is (and we represent on the board a large proportion of ordinary shares)—I say, the question we have to consider is this: Is it better to sacrifice our 1*l.* share nominal value, or to put another half crown in addition, to perhaps get the whole amount back. (Hear, hear.) Is this a fair mining venture? We have before us our managers' reports, and you have had them before you for the last 18 months or two years. This is not like a new concern. We know we have several lodes, and we know there is quartz which has yielded an average of nearly $\frac{3}{4}$ oz. to the ton. We know also that our present expense of workiug is a little more probably than $\frac{3}{4}$ oz. to the ton, aud thus we are just what I may call "balancing." Some eight or ten years ago, when I was in Venezuela on the company's business, the expeuse of working quartz was 2 ozs. a ton, but

THREE-QUARTERS OF AN OUNCE NOW COVERS THE OUTLAY

at both ends, and there is a possibility, there is a probability even, of a railway being completed to the miue from the river, which will lessen the expense, and gradually, as the country develops, the expense will be lessened still further. Therefore we have that important element iu our favour. With more stamps running and with a mill of our own our expenditure will be less and might turn this "balancing" into profit. Again, the lodes as they get deeper in that country become better. I do not predict that it will be so, but I say positively that the slightest turn for the better in the value of the quartz (say another $\frac{1}{4}$ oz. to the tou) would make your shares worth par. This is the elemeut of chance for which we are going to speculate if we go iuto this scheme. Although it would be very unwise to say that because the Callao miue which is only 5 or 6 miles from ours in the Caratal district rau 12 ozs. to the ton, and averaged I believe for many years $4\frac{1}{2}$, that we shall have a lode like Callao; but I think it would be more absurd if we were to say that there is only one rich lode in the Caratal district which has a pay shoot worth more than $\frac{3}{4}$ oz. per ton. As long as we are not losing money, I think it would be folly to throw away the chance of finding better stuff and reducing our expeuses as we go on. That is the real question we have to consider—

IS THIS A FAIR MINING VENTURE?

(Hear, hear.) I say, honestly, I, for one, think it is. I am a large shareholder, holding about au equal amouut of ordinary and preference shares, and shall certainly join in this scheme, and should be sorry if it fell through. I shall not throw away my present holding with all the experience I have had of the company from the beginning. The chairman, in part of his speech, referred to Mr. Pryor's reports. I should like to draw your attentiou to this point, that although no doubt he has been too sanguine, that is to say, he told us plainly that he believed if the quartz ran up to $\frac{3}{4}$ oz., he would not only pay expenses but be able to put by enough to build a mill himself, and further develop the property—for a mine manager, his reports have been fairly carried out and proved correct. He has not, however, sufficiently estimated the difficulties that beset a mine out there, such as long and bad rainy seasons, indifferent roads and the like but the quartz has certainly averaged within a small decimal the $\frac{3}{4}$ oz.

we estimated it would, and probably the little differeuce has gone away iu the tailings from inadequate crushing, and that that has more than made up the deficit. That Mr. Pryor is economical we thoroughly believe, and also that he has done a great deal of mining for the money he has spent. This point should be borne in mind when you come to consider whether this is a fair venture for the extra half-crown we ask. Personally, I would much rather put my extra half-crown into this company than put into a new enterprise in which the lodes were unproved, and possibly unfound. You have the lodes, and apparently no paucity of quartz. With these few remarks I honestly recommend the scheme, and with great pleasure second the proposition. (Cheers.)

Mr. J. W. LEDGER: What are the liabilities of the present company?

The CHAIRMAN: They are about the same as named in the report submitted in Dec. In that report they were given at 12,776*l.*, which is within a thousand pounds or two of what they are now. We cannot tell exactly what exists on the other side, but know they are not excessive. Thus we have been able to go on working the property, getting on with the trams, and completing thc surface work, &c., in spite of great difficulties. In Potosi we came upon the bluestone, which reduced our returns. We are now through it, and want a pump to drain it and go down with the shaft. We have carried on without increasing the liabilitics above 1,000*l.* or 2,000*l.* for eight months, for the statement referred to only goes down to June 30.

A SHAREHOLDER: What will the mill cost?

The CHAIRMAN: If we send one out from here it would cost about 10,000*l.* including carriage, putting up, and all expenses, but there may be a good opportunity of getting a mill out there by-and-by. If this proposal is carried, and the capital is found, we are not going recklessly to spend the money, but shall be able to keep the company going as we propose, in order to confirm our belief in what Mr. Pryor writes, that we shall get one or two independent reports before we go into great outlays for a mill or anything else. If we get the money we shall husband it, and be careful before we spend it. We have 20 stamps of Yuruari with which we can go on working, put the pump into Potosi, when wc shall see whether the cost of a mill is warranted.

A SHAREHOLDER: How long has Mr. Pryor been manager. Has it been during the previous re-construction?

The CHAIRMAN: He has been with us less than three years.

The SHAREHOLDER: Have you any decided confirmation of his work? It would have been more desirable to have obtained the report of experts outside before than after asking for this money.

The CHAIRMAN: It is always easy to be wise after the event. (Hear, hear.) The money has gone more quickly than we anticipated, but we have faith in Mr. Pryor's reports, and everybody who knows him confirms this, that he is economical, that he is honest, and that he is a good miner.

A SHAREHOLDER: Would it be possible to adjourn the meeting until we have this additional evidence?

The CHAIRMAN: It is impossible. How are we to carry on in the meantime?

A SHAREHOLDER: You said in the report you hoped to be able to get enough to pay current expenses.

The CHAIRMAN: Yes, but we have not done so. There are liabilites to be met, and further ones to be incurred in working thc mine. Action must be taken at once or it will be useless.

In reply to further questions,

The CHAIRMAN repeated his statement as to the preference shares giving up their priority, not only in the matter of dividends, but in that in respect of the assets of the company. The preference shareholders also held largely of the ordinary shares, and were prepared to go in for the latter on the half-crown basis, the same as the other proprietors.

Major SCRIVEN: The board hold between them 20,000 or 30,000 ordinary shares. (Hear, hear.)

Mr. BALL: I am a fairly large ordinary shareholder, and when this scheme came before me I first thought that the preference shareholders ought to contribute, but when I made iuquiry of the secretary as to their position, and found that they were also entitled to priority over assets, and that therefore the mine was in their hands, and that if we did not find money they would take it, I came to the conclusion that it was not reasonable to expect them to subscribe upon more than the basis of their ordinary shares. If we get them to give up their preference in every sense, I think that is as much as we can reasonably ask.

A SHAREHOLDER: Do the directors receive fees?

The CHAIRMAN: Yes; you can see what they receive in the accounts.

The SHAREHOLDER: Do they still intend to receive fees whether the mine pays or not?

The CHAIRMAN: Yes; we receive half of what we are entitled to, and have only received that from the commencement. I do not see that directors are in a different position from the clerks and *employes*. If the company is to be carried on it must have directors, and directors, if they deserve their remuneration at any time, deserve it especially so when under almost unheard of difficulties they are doing their utmost to bring an unsuccessful and troublesome company to a dividend-paying issue. (Loud cheers.) There is nothing that can be brought against the directors in any way. It is not our fault that the mine has not paid. We have done everything within the last 10 years to bring it to a success, but success has not come yet. The amount paid is 100*l.* for each of the directors, and 150*l.* for the chairman.

Major SCRIVEN: And our 1*l.* share has cost some of us (certainly they have cost me) between 3*l.* and 4*l.* I have sunk 4,000*l.* or 5,000*l.* in this concern, and the present call will swallow up many years' remuneration. I do not think anyone will fancy it is for the sake of the fees that we are giving this advice. (Cheers.)

The CHAIRMAN: If the directors had not a substantial interest in the company they would not trouble themselves any further about it. It is not for the sake of the fees I can assure you that they retain office. (Hear, hear.)

Mr. TREDGOLD: You have told us the debts and liabilities are between 12,000*l.* and 14,000*l.*, but would the creditors make an arrangement with us.

The CHAIRMAN: That would be impossible. Some of them are in Venezuela.

Mr. TREDGOLD: What will you do if a sufficient number do not join the re-construction?

The CHAIRMAN: We shall not go on with it. (Cheers.) In regard to those who do not come in by the date fixed in the agreement the liquidator will have the right to sell their right to allotment for what it will fetch and give them the proceeds. We shall not have the trouble this time that we had before.

Mr. TREDGOLD: I think we ought to have the meeting adjourned. (Loud cries of "No.")

The CHAIRMAN: I have explained the urgency of the case. If the meeting does not adopt the scheme proposed it is a case of throwing away the property.

Major SCRIVEN: We meet to pass the resolutions, and not to bind the shareholders to take the new shares. The questions whether it is worth while to come in or not each shareholder can decide for himself, but we have given sufficient reasons to show why you should do so in the affirmative. The scheme is purely voluntary. Those who wish to join it can do so, and those who do not still have the value of shares given to them whatever that value may be. (Hear, hear, and cheers.)

A SHAREHOLDER: Have you proxies enough to override the meeting? (Oh, oh.)

The CHAIRMAN: We certainly have proxtes, but we have no wish to override the meeting, but rather to consult its views.

Thc SOLICITOR: This is a very representative meeting, and unless you are somewhat unanimous the scheme must fail. It is a question of liquidation or re-construction. If the meeting were in any large sense against it I should advise the directors to withdraw the re-construction as being practically hopeless, but I hope that that is not the feeling of the meeting.

A SHAREHOLDER: I am certainly inclined to go into the re-construction after the explanations I have heard, and trust the other shareholders will do the same.

Mr. WALTER JACOB: I hope that we will not depart from the simple proposition that ought to be considered by the meeting, Is it worth our while to find the half-crown to carry on the concern? Do not let us have side issues of directors' fees and the like, for which I have no doubt the board has given full consideration in the way of anxiety and work, for that has nothing to do with it. (Cheers.) We have to consider whether in the present position we are wise to find half-a-crown to carry on with, and I do not think it is fair to assume that the preference shareholders are doing other than making a sacrifice to help us, particularly as they are prepared to pay on the same basis as we do on their ordinary shares.

The CHAIRMAN: That is the one issue before the meeting, and I now put the three resolutions which have been read.

Carried, with one dissentient.

Mr. BALL: I do not think we ought to disperse without passing a vote of thanks to the chairman for the able manner in which he has conducted these proceedings to-day. He has put the scheme fully and clearly before us, and although it is an unpleasaut thing for him to have to do, yet he has shown the necessity.

A SHAREHOLDER seconded the motion, which was carried by acclamation, and the proceedings closed with the brief reply of the CHAIRMAN.

REVIEWS.

THE DIRECTORY OF DIRECTORS FOR 1891. By Thomas Skinner. London: The Royal Exchauge Buildings, E.C.; 10s.

We have received a copy of the twelfth yearly issue of this useful publication, which quite comes up to the standard of the previous issues as regards efficiency and accuracy, and which has gained for it an ever increasing circulation. The work contains a list of the directors of the principal joint stock companies of the United Kingdom, and has been compiled from particulars furnished by the different companies or other equally authoritative sources. It can, therefore, be relied upon as a correct record.

THE RULES AND USAGES OF THE STOCK EXCHANGE, by G. Herbert Stutfield, B.A. London: Effingham, Wilson and Co., Royal Exchange. 5s.

This book contains the text of the rules and an explanation of the general course of business, together with a full exposition of all decided law cases affecting thc Stock Exchange, and cannot fail to be useful to all persons who transact business in stocks and shares. The chapter on the relations between broker and client will be especially useful.

GOLD ORES REDUCTION CO., LIMITED.—This company report that they have successfully completed the treatment of 6 tons of pyritous ore, containing iron, sulphur, arsenic, silver, and gold. The object of the test was to ascertain the practicability of extracting the copper in a pure state apart from the gold and silver, and this was accomplished so economically that 3 per cent. of copper more than covers the whole expense of the mining, milling, concentration, calcination, and reduction of the ore. The residue was afterwards amalgamated by the ordinary method for the gold and silver, and these metals were obtained in the pure *state practically free of cost.* —*Financier.*

PRODUCTION OF PRECIOUS METALS IN THE STATES.—The director of the United States Mint reports that during 1890 the gold product of the country was 1,588,880 ozs., of the value of 6,569,000*l.*, an increase of 9,000*l.* over the product of the preceding year. The silver produced from the mines was about 54,000,000 ozs., an increase of 4,500,000 ozs. At the average price of silver during the year, the product would be worth 11,445,000*l.* The amount of silver offered to the Government was 68,130,457 ozs., and the amount purchased 37,594,373 ozs., at a cost of 7,998,000*l.* The range of prices fluctuated no less than 26 per cent. The amount of precious metals used in the arts is returned as: gold, 3,621,000*l.*; silver, 1,846,000*l.* The coiuage of the year was: gold, 4,093,000*l.*; silver, 7,608,000*l.* The metallic stock of the country was approximately on Jan. 1, 1891: gold, 140,919,000*l.*; silver, 97,309,000*l.*
